U. S. Congress

Appendix

Military Government Association Awards

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. THURMOND. Mr. President, on June 13, 1959, the Military Government Association held its 12th annual conference at the Shoreham Hotel in Washington, D.C.

One of the feature events of the conference banquet was the presentation of the association's distinguished service award to five leaders of the Congress and one former Member of Congress, all of whom have rendered distinguished service on behalf of the national defense and in furtherance of the objectives of the Military Government Association.

The awards were presented by Dr. Eli E. Nobleman, the able national president of the association and a member, for many years, of the professional staff of the Senate Committee on Government Operations. The receipients of the awards, with the remarks of President Nobleman about each, are appended.

I ask unanimous consent that the remarks of Dr. Nobleman about each recipient be inserted in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

LYNDON B. JOHNSON, senior Senator from Texas, majority leader of the U.S. Senate, member of the Senate Committee on Armed Services, and chairman of its Preparedness Investigating Subcommittee, chairman of the Senate Aeronautical and Space Sciences Committee:

First elected to the 75th Congress in a special election in 1937, Senator JOHNSON was reelected to five successive terms in the House of Representatives. He was elected to the U.S. Senate in 1948, and reelected in 1954.

Senator JOHNSON was elected minority whip in the 82d Congress, minority leader in the 83d Congress, and majority leader in the 84th, 85th, and 86th Congresses. As majority leader he is also chairman of the Democratic policy committee, the Democratic steering committee, and the Democratic Conference of the U.S. Senate.

As a member of the Naval Reserve, Senator JOHNSON was the first Member of the U.S. Congress to enter active duty following the outbreak of World War II. He was decorated with the Silver Star by Gen. Douglas MacArthur for gallantry in action over hostile positions in New Guinea.

He has been a firm advocate of adequate military preparedness and a foe of extravagance and waste. His contributions to the national defense of our Nation, as a Member of the Senate, and as chairman of the Preparedness Subcommittee of the Senate Committee on Armed Services are well known.

For your distinguished service on behalf of national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

STYLES BRIDGES, senior Senator from New Hampshire, ranking Republican Member of the U.S. Senate; ranking Republican member of the Senate Committee on Armed Services and ranking Republican on its Preparedness Investigating Subcommittee; ranking minority member of the Senate Aeronautical and Space Sciences Subcommittee; ranking minority member of the Senate Committee on Appropriations; and one of the small group of Senators who attend weekly conferences with the President of the United States:

Senator BRIDGES served as a member of the New Hampshire State Public Service Commission from 1930 to 1934. In 1934, he was elected Governor of New Hampshire at the age of 36—the youngest Governor in the country at that time.

On the national scene, Senator BRIDGES was elected to the U.S. Senate in 1936. He was reelected in 1942, 1948, and 1954, and is now serving his fourth consecutive term. During the 80th and 83d Congresses, he served with distinction as chairman of the Senate Appropriations Committee. He holds many other important offices in the U.S. Senate and has served as minority leader and President pro tempore of the Senate.

Senator BRIDGES has served continuously since 1937 as a member of the Senate committee concerned with military matters and has worked tirelessly these many years in the interest of our national defense. More specifically, he has been an outstanding supporter of strong naval and air power and a powerful defense setup. During the years preceding World War II, Senator BRIDGES worked continuously for preparedness and for a militarily strong America, sounding the alarm again and again.

For your distinguished service on behalf of national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

HENRY M. JACKSON, junior Senator from the State of Washington:

Senator JACKSON first entered public life when he was elected prosecuting attorney of Snohomish County at the age of 26. His success as rackets buster paved the way for his election to the 77th Congress in 1940 at the age of 28. He was subsequently reelected to five succeeding Congresses, serving in the House of Representatives with such distinction that he was selected, in 1952, by a national magazine as one of the 10 top House Members on the basis of independence, honesty, and leadership. His career in the House was further highlighted by his membership on the original Joint Committee on Atomic Energy, during which time he joined with the late Senator Brian McMahon in leading the fight for an all-out expansion of our peaceful atomic energy program. He also participated in the crucial decision to proceed with the manufacture of the H-bomb.

Elected to the Senate in 1952, and reelected in 1958, Senator JACKSON serves as a member of the Senate Committee on Armed Services, the Senate Committee on Government Operations and its permanent Subcommittee on Investigations, in addition, he is a member of the Joint Committee on Atomic Energy and chairman of its Military Applications Subcommittee. As chairman of a Special NATO Scientific and Technical Committee, he first proposed and then steered to realization the new NATO science program of scholarships and advanced research institutions.

Senator JACKSON will soon head a subcommittee of the Senate Committee on Government Operations which will study the effectiveness of present governmental organizations and procedures for the development and execution of national policy for survival in the contest with world communism.

He is a major, Infantry, USAR, and trains regularly with an organized Reserve unit.

He is our principal speaker this evening.

For your distinguished service on behalf of the national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

Representative CARL VINSON from the Sixth Congressional District of Georgia:

Mr. VINSON first entered public life in 1905, when he became prosecuting attorney for Baldwin County, Ga., serving in that capacity for 3 years. He then served two terms in the Georgia Legislature, serving as speaker pro tempore for 2 years. Thereafter, he was appointed county judge of Baldwin County.

On the national scene, Mr. VINSON was elected to the 63d Congress in 1914. He has since been reelected to 23 consecutive terms in the House of Representatives. He served as chairman of the Naval Affairs Committee from December 1931, through January 1947. He was chairman of the Armed Services Committee in the 81st, 82d, 84th, 85th, and 86th Congresses, a position which he continues to fill with great distinction.

Mr. VINSON has devoted his life and his outstanding talents to the defense of our Nation and has held public office for over 50 consecutive years, 45 of which have been in the House of Representatives, where he is the second ranking Member.

For your distinguished service on behalf of national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

Representative LESLIE C. ARENDS, from the 17th District of Illinois:

Mr. ARENDS is now serving is 13th consecutive term in the House of Representatives. He has risen to a position of leadership in the House where he is the Republican whip, having been elected to this position in 1944. As party whip, he acts as assistant floor leader on the Republican side of the aisle. He also serves on the Republican policy committee and has an important voice in the determination of party policy on the various measures which come before the Congress. Mr. ARENDS is one of three leaders in the House of Representatives who attend the weekly conferences with the President of the United States.

As ranking Republican member of the Committee on Armed Services, Mr. ARENDS has rendered outstanding service to the Nation and in support of our national defense.

He is a veteran of World War I, having served in the Navy and has taken an active interest in Veterans' affairs. Prior to his

AUTHENTICATED
U.S. GOVERNMENT
INFORMATION
GPO

election to Congress in 1934, Mr. ARENDS was District Commander of the American Legion and continues to be an active Legionnaire.

His interest, hard work, and many contributions to our national defense have long been a matter of public record.

For your distinguished service on behalf of national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

Dewey Short, Assistant Secretary of the Army for Manpower, Personnel and Reserve Affairs:

Mr. Short has had several separate careers. First, he was professor of psychology and moral and political philosophy at Southwestern College in Kansas for 3 years. Thereafter, he occupied the pulpit at Grace Methodist Church in Springfield, Mo.

On the national scene, Mr. Short was elected to the 71st Congress in 1929, serving until 1931. Thereafter, in 1935, he was elected to the 74th Congress from the Seventh Missouri District, serving until 1957, a total of 24 years.

Mr. Short served for 22 years as a member of the House Military Affairs Committee, later known as the Armed Services Committee, and was chairman of that committee during the 83d Congress.

During his service in the House of Representatives, Mr. Short was a delegate to two sessions of the Interparliamentary Union, an official congressional observer at the signing of the Japanese Peace Treaty in San Francisco, and a member of the Select Committee for Postwar Policy.

His wisdom, foresight, and tremendous capacity for hard work have contributed much to the defense posture of the United States.

For your distinguished service on behalf of national defense and in furtherance of the objectives of the Military Government Association, we award you this distinguished service citation.

All-Out Medical Offensive Against Cancer

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 30, 1959

Mr. HILL. Mr. President, two excellent editorials in support of an all-out medical offensive against cancer and the other killers and cripplers of mankind have appeared recently in the Washington Post and the Washington Sunday Star.

These publications are to be commended for their excellent and incisive presentations expounding the vital need for a continuous and constantly accelerated fight against diseases and disabilities that cost this Nation millions of lives, untold human suffering, and billions of dollars in lost taxes and workmen's compensation payments yearly.

Mr. President, I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 26, 1959]

SPENDING TO SAVE

The $4 billion appropriation bill passed by the Senate on Wednesday for the Departments of Labor and Health, Education, and Welfare is essentially a conservation measure. Although it exceeds the budget recommendations made by the President, it is in no sense a spendthrift proposal. We hope that when it reaches the White House Mr. Eisenhower will review it not solely in arithmetical terms but in the light of the real congressional concern it reflects for pushing the fight against killing and crippling diseases.

The bulk of the increase over the administration budget recommendations came in the form of added funds for the research programs of the National Institutes of Health. The President would have confined these programs to a total appropriation of $294,279,000. Not long ago the House voted to increase this amount by $50 million. To a distinguished list of nongovernmental experts in the fields of cancer and heart disease and arthritis and mental illness and other scourges of the human family, the budget sum seemed pitifully inadequate. They pleaded with the Senate to raise it dramatically. Spurred by the leadership of Senator LISTER HILL, who argued that people are more important than dollars, the Senate voted to give the Institutes $480 million.

If that sum is finally appropriated, it can pay rich dividends. Research sparked and financed by the Institutes has already won spectacular gains in the war on disease. For example, as Dr. Sidney Farber of Harvard told the Appropriations subcommittee when he testified, "the actual cancer cure rate * * * has changed in the last 3 years from 1 in 4 to 1 in 3." The American Cancer Society estimates that the lives of 75,000 additional Americans could be saved if the latest and best means for diagnosis and treatment for cancer could be made more widely available. Dr. Isidor Ravdin, one of President Eisenhower's physicians and one of the country's leading pathologists, said to the subcommittee: "I cannot accurately predict the future for cancer treatment, I might be so bold, however, to assert that I believe we shall see a vast reduction in the mortality from cancer in the lifetime of the oldest of us here." There is a sort of saving here which is worth the expenditure of some money.

[From the Washington Sunday Star, June 28, 1959]

MEDICAL RESEARCH PAYS

Medical research costs a lot of money—but there is dramatic proof that it pays big dividends, too. It would seem logical that the more money spent on such research, the more lives will be saved and the more the Nation will benefit accordingly. But there is a limit, of course, to the amount which the Government can afford to invest, at this time of growing deficits, in even so important a health program. It is not surprising that there should be differences of opinion on the subject between those concerned with maintaining the financial strength of the Government and those responsible for maintaining the physical and mental strength of the people.

The question of how much to spend during the next fiscal year on scientific studies designed to combat cancer, heart disease and the many other disabling and killing ailments of mankind has come to a head as a result of congressional action to increase health appropriations substantially above the figures recommended by the President—$294 million. The House voted to give the National Institutes of Health $50 million more. The Senate, upon the urging especially of Senators LYNDON JOHNSON and LISTER HILL, approved an increase of $186 million. A conference committee now must resolve the difference between the two appropriation measures.

Meanwhile, administration supporters in Congress have warned of the possibility of a presidential veto of any material increase over the budgeted figures for health. Whatever the final amount agreed to in conference, the increase would add to the Government's fiscal difficulties. And it is the duty of the President to consider the economic welfare of the country as well as the state of its health. However, as Senator JOHNSON told the Senate, medical research has proved profitable from an economic as well as a humanitarian standpoint. He pointed out that it has been estimated that citizens whose lives have been saved by new medicines and techniques during the past 14 years pay Federal taxes annually of about $623 million. Judged from a dollars-and-cents angle alone, the money invested in medical research is, in effect, returning to the Treasury in large amounts each year.

We hope, therefore, that the President will give most serious consideration to all the persuasive arguments for an enlarged research program before deciding whether to approve or veto the bill as it is passed by Congress.

Statement of George J. Burger, Before Senate Committee on Labor and Public Welfare

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by George J. Burger, vice president, National Federation of Independent Business, Inc., Washington, D.C., before the Senate Committee on Labor and Public Welfare, May 14, 1959, relating to Senate bill 1046.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, INC., WASHINGTON, D.C., BEFORE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, MAY 14, 1959

I am George J. Burger, vice president, legislative activities, National Federation of Independent Business.

We are the largest business organization in the Nation, from the standpoint of directly supporting business and professional enterprisers. Our membership is exclusively among small, independent enterprisers. These people, who are your constituents, and they alone, set our stand on bills and issues by direct, signed ballots which they send to their congressional Representatives on the House side, in our mandate polls. I mention this only to emphasize the fact that what I say here is intended to reflect their collective thinking, just as though they were here to speak for themselves.

I might mention here that the federation is the only independent business organization performing this function for smaller firms and their Congressmen.

Now, we have not polled our members on S. 1046. But we have polled them on three occasions over the past 4 years on earlier bills that touch on the points at issue in S. 1046. The results of these polls are my authority to speak before you on this bill, S. 1046.

For instance, in Mandate No. 215 (September (1955) we polled our members as follows:

S. 662 (Lehman, New York). Extend Federal minimum wage and maximum hour control to larger retail, wholesale, and service firms which operate four or more outlets.

And this is how they voted on this bill:

Following is the national summary of votes cast on issues carried in the Mandate No. 215. This summary has been forwarded to Members of Congress, to members of the permanent Senate Small Business Committee, to members of the House Small Business Committee, to other interested congressional committees, members of administrative government and Government agencies.

[In percent]

	For	Against	No vote
1. Use Robinson-Patman Act to check discounters, co-ops	77	19	4
2. Tax cut on earnings of American firm foreign branches if they resell in the United States	16	79	5
3. S. 2247. Central control of surplus property disposal	82	13	5
4. H.R. 5684. Flat 5 percent excise tax on all manufactured goods	44	50	6
5. S. 662. Extend wage-hour law to larger retail firms	42	54	4

H.R. 585. Federal wage-hour controls: Extend Federal wage and hour controls to all retailers and service establishments (Representative CELLER, New York).

And this is how they voted on this bill:

Here's the national summary of votes on issues in Mandate 235. This has been sent to all Congressmen and Senators, all congressional committees, and all agencies and individuals in the executive branch of our Government for their information.

[In percent]

	For	Against	No vote
1. Cut back other activities to finance guided missile programs	84	12	4
2. H.R. 6027. Tax deductions for losses on business investments	74	22	4
3. Government investigation into discount house price competition	73	22	5
4. H.R. 5826. Congress let Government agencies close down business-type activities as they want	65	22	13
5. H.R. 585. Extend wage-hour law to all retail-service concerns	28	67	5

H.R. 83. $1.25 minimum wage: Require all businesses subject to Federal regulation to pay their employees at least $1.25 an hour, instead of the $1 an hour minimum required now (Representative CELLER, of New York).

And this is how they voted on this bill:

Here's the national summary of votes on issues in Mandate 245. This has been sent to all Congressmen and Senators, all congressional committees, and all agencies and individuals in the executive branch of our Government, for their information.

[In percent]

	For	Against	No vote
1. H.R. 2. Tax allowance for inventory increases	71	25	4
2. H.R. 9. Private retirement plans	76	20	4
3. H.R. 83. $1.25 minimum wage	30	66	4
4. H.R. 99. Reduce Government competition	88	9	3
5. H.R. 63. Permit social security pensioners to earn up to $1,800 yearly in private employment	81	17	2

The results of these polls, none of which evoked an overwhelming "for" or "against", tell us that by and large our members are opposed to (1) wholesale inclusion of all businesses under Federal wage-hour control; (2) expansion of this control to a limited number of larger independent firms; and (3) any further increase in the Federal minimum wage, at least to the $1.25 an hour level.

These results are especially interesting when considered against the background of federation membership. Of course, we have all sizes and types of independent business and professional man operations among this membership. Some of them, for one reason or another, are already subject to Federal wage and hour control. Others are in the category of the larger independents thus far exempt from these controls. Many operate under contracts with labor unions. But by and large the greatest proportion are the smaller-sized independents generally proposed for continued exemption from Federal wage-hour controls.

This might explain the two-thirds vote "against" the proposal for wholesale inclusion of all businesses under Federal wage-hour controls. But it doesn't explain the majorities against the proposals for limited expansion and for the new $1.25 minimum hourly wage, except in the light of these important considerations: That among these smaller independents are many who fear that if their larger brethren go under control now, they may be next, that they fear this is part of a trend that will in time deprive them of necessary freedom of judgment in running their own businesses, and that it amounts to another step in the direction of complete Government controls.

Frankly, I can understand these fears. The history of past years has been one of constantly expanding Federal controls. I do not mean to say that these businessmen have been deprived of their freedoms. I do mean that the controls have become more extensive, to the point where no one can be sure when they will stop spreading.

And let me say that as a former independent businessman, for 25 years the owner and operator of a retail tire firm with six or more in employ, I know what freedom of judgment can mean in the operation of a business, particularly in the field of wages. I can tell you that many times during the depression years I was faced between making across-the-board reductions or of eliminating entirely hard-to-find jobs.

Now, consider these business and professional men federation members. From my own experience, and from observations now and then, I can safely say that most of those who opposed these earlier bills were, and are, paying at least the Federal minimum wage rate, many even more. As practical men they realize it costs money to live, to marry and to raise families. They realize that employees burdened by financial difficulties are not most efficient. They know that to attract and hold the kind of worthwhile employees a good business needs, they have to meet wage-rate competition from other firms, some bound by the Federal standards, others by union contracts. Besides this, due to their size they have to live in intimate daily contact with their employees whom they know as human beings, not as mere statistics on a weekly payroll.

Of course, I don't ignore the fact that there are some who may be paying so-called substandard wages. But I think, and I feel the facts will bear me out, that most in this category are doing so for reasons beyond their control. I know that in my own business, when sales and profits were good, our wages and bonuses were good. But once the giant automobile manufacturers stepped in and snapped up a goodly share of my customers, and once the depression struck, I had to cut, and cut all along the line. Given the opportunity I would have done better, and I think that given an opportunity they would be doing better. Denied the right to private judgment, I might have been driven to the wall. Denied this right, they could be driven to the wall.

Nevertheless, there's no denying the fact that there are, always have been, and likely always will be, a small minority of "chiselers" interested in getting the most for the very least. To the extent employees of these people need protection, it should be given them.

But these protections should not be fashioned in such manner that they act as a deterrent to, or threaten the freedom of, businessmen who are honestly doing their level best to keep afloat and pay the best wages they can.

You know, our system of justice holds that it is better, in terms of legal safeguards, for 99 wrongdoers to escape punishment than it is for 1 innocent man to be convicted unjustly.

I do think it is the sense of our members, based on the polls cited, that this is the principle that should be applied in connection with the basic issues raised in this bill. In order to convict and control the guilty we must not sacrifice, or endanger, the welfare of the innocents. Further, I think the majority of our members, as indicated in these polls, are flatly opposed to any further expansion in these Government controls.

Finally, if it is your desire, as a further aid to this committee we will be glad to make an up-to-date poll of our members on the control expansion feature of this bill (we have already polled them on the minimum wage increase portion), and to advise you of the results as soon as they are recorded.

Pacific Coast High School Students Trail History on American Heritage Association Eastern Tour

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1, 1959

Mr. NEUBERGER. Mr. President, high school students in our eastern

United States have a distinct advantage over their contemporaries in other parts of our Nation. Because of their relatively close proximity to Washington, D.C., they can enjoy a first-hand lesson in history and government which students in our Western States, like Oregon, can rarely experience.

The American Heritage Association, a nonprofit organization in Oswego, Oreg., has attempted to change this situation for a number of outstanding students in my home State. This year, for the third consecutive year, American Heritage Association tours are bringing high school students from may parts of Oregon and from neighboring Washington and California cities to the East for visits to historical points of interest.

Again this year I have had the pleasure of meeting these students for a question and answer session shortly after their arrival in Washington. Despite the fact that they had just come from a long, cross-country train trip, the students were eager and alert. They posed questions far more penetrating than the average tourist. Indeed, the youths on the AHA tours are not just average tourists. They have spent some time, prior to their departure from Oregon and while en route, studying history and government texts so that their visit here will be the more meaningful. In addition, their time is not spent only in gawking at monuments or tip-toeing through marble halls—far from it.

Through arrangements made by my office, the students have had seminars with officials at the National Park Service, the Organization of American States, and the State Department. They have met with members of their Senate and House delegations in Congress.

From their 8-day visit in Washington, the groups are touring other points of interest in the East before returning home to Oregon. Their activities are well described in an article by Malcolm Bauer in the Christian Science Monitor for June 29, 1959, entitled "Students 'Relive' History on Tour." I ask unanimous consent that this article, together with the names of the 47 students and their 8 chaperones be printed in the Appendix of the RECORD.

There being no objection, the article and list were ordered to be printed in the RECORD, as follows:

STUDENTS RELIVE HISTORY ON TOUR

(By Malcolm Bauer)

PORTLAND, OREG.—Oregon high-school students are studying their American history firsthand this summer in a program that is unique in the West.

The first of two groups has already departed here by rail for a month's tour of the historic spots and metropolitan centers of the East. A second will start before the end of June.

These are the American Heritage Tours, originally organized in Oswego High School in a Portland suburb in the summer of 1957.

An American Heritage Tour is no summer vacation lark for its teen-age participants. Most of them have just finished their junior year in high school, curriculum of which includes American history. In addition, they have prepared themselves in the weeks before departure to appreciate the significance of the places to be visited. Chaperons include teachers and school administrators, at least one to each nine youngsters.

COST SET AT $444

In the beginning, 2 years ago, the tours were for 21 days, 5 of which were spent in the train journey to and from the Atlantic seaboard. This year's tours have been extended 1 week, giving additional time for study. Cost per youngster is $444, a part of which must be earned by the applicant to qualify for selection. All participants must also have a high level of academic and extracurricular achievement.

"We should be proud of these Oregon pioneers," said Felix Calkins, a teacher at Oswego High School and one of the founders of the sponsoring American Heritage Association of Oswego. "Their purposeful approach to learning through traveling was (in the first two seasons) refreshing to those easterners who had seen many groups take routine trips only for the lark they might offer. The fine citizenship displayed by our young men and women made it possible for them to gain even more than they had expected from their itinerary."

The young travelers have been uniformly enthusiastic about their experience. Here are comments typical of those volunteered by Oregon high-school students who have participated:

"We learned so much that can't be found in books."

"The greatest value of the tour lies in its making the tour member feel that he has visited the past and has been close to great Americans who are shaping the future."

"I will never forget the thrill of meeting the Vice President (RICHARD M. NIXON) and shaking his hand."

The 1959 itinerary is a challenge to the most ambitious traveler. It includes:

Eight days in Washington, D.C., and vicinity, including visits to Mount Vernon, Gettysburg, Arlington National Cemetery, and such capital landmarks as the Washington Monument, Jefferson and Lincoln Memorials, the White House, Capitol Hill, the Supreme Court, the National Art Gallery, and the Smithsonian Institution. A moonlight cruise on the Potomac will provide a period of relaxation.

In and around Williamsburg, Va., the students will visit the reconstructed colonial capital, Jamestown Island, and Yorktown Battlefield.

They will visit Richmond to see relics of the Confederacy, and in Philadelphia will spend a day viewing such points of interest as Independence Hall and the Betsy Ross House.

In Massachusetts, the youngsters will explore the roots of U.S. history at Plymouth, Lexington, and Concord. In Boston, they will visit nearly a score of historic places.

BACK IN OREGON

In New York, the young travelers will relax for an afternoon or two with some contemporary history on Broadway. Members of the 1959 tours have tickets for "My fair Lady" and "A Raisin in the Sun." They will visit the United Nations, New York Housing Authority projects, the Federal Reserve Bank, and New York Stock Exchange.

After a day visiting Fort McHenry in Baltimore, the U.S. Naval Academy, and Johns Hopkins University, the students will turn homeward. On the way, they will stop over a day in Chicago to visit the Board of Trade.

Back home in Oregon, which this year is celebrating its 100th year of statehood, the students of the American Heritage Tours will this fall have the means of relating the history of their home State to that of the Union of which it became a part in 1859.

NINETEEN FIFTY-NINE AMERICAN HERITAGE ASSOCIATION TOURS

TOUR NO. 1

Sharon Blomquist, Walla Walla, Wash.; Crystel Bradley, Eugene, Oreg.; Debbie Brewer, Portland, Oreg.; Molly Campbell, Florence, Oreg.; Gayla Collar, Lake Grove, Oreg.; Janet Cousins, Oswego, Oreg.; Rettie Crum, Oswego, Oreg.; Jeanne Deremiah, Oswego, Oreg.; Alice Dickie, Oswego, Oreg.; Marilyn Duke, Oswego, Oreg.; Debby Earle, Lake Grove, Oreg.; Gina Elliott, Oswego, Oreg.; Geri Gainer, Newberg, Oreg.; Susie Geist, Oswego, Oreg.; Thomas Hatch, Portland, Oreg.; Faye Henderson, Florence, Oreg.; Beth Henkle, Lake Grove, Oreg.; Lisbeth Holbrook, Portland, Oreg.; Lisabeth Huff, Oswego, Oreg.; Rosalie Johnston, Oswego, Oreg.; Linda Kiser, Oswego, Oreg.; Bill Lang, Portland, Oreg.; Margo Maris, Portland, Oreg.; Patricia Moll, Astoria, Oreg.; Mary Nelson, Oswego, Oreg.; Beverly Riley, Walla Walla, Wash.; Lynn Rohde, Oswego, Oreg.; Judith Stebinger, Portland, Oreg.; Gretchen Van Orsdel, Lake Grove, Oreg.; Betsy Webb, Oswego, Oreg.; Kent Worsham, Oswego, Oreg.

Chaperones: Mr. and Mrs. Lloyd R. Barker, Portland, Oreg.; Mr. and Mrs. Roy D. Pierce, Milwaukie, Oreg.; Mrs. Joe D. Kiser, Oswego, Oreg., and Mr. Donald R. Brand, Florence, Oreg.

TOUR NO. 2

Barbara Beck, Mapleton, Oreg.; Sandra Bowles, Oswego, Oreg.; Joan Brennan, Portland, Oreg.; Grace Copernoll, Portland, Oreg.; Barbara Finklea, Oswego, Oreg.; Judy Gainer, Newberg, Oreg.; Sue Hall, Longview, Wash.; Don Hogan, Mapleton, Oreg.; Joan Mallon, Lake Grove, Oreg.; Mary Patterson, Portland, Oreg.; Judith Rogers, Portland, Oreg.; Kay Sweet, Orland, Calif.; Linda West, Oswego, Oreg.; Kathy West, Portland, Oreg.; and Tom Wicks, Dorena, Oreg.

Chaperones: Mr. and Mrs. Robert B. Sweet, Portland, Oreg.

A Message for Independence Day

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1, 1959

Mr. WILEY. Mr. President, on July 4, we will commemorate our country's struggle for independence. Across the land, there will be a wide variety of Fourth of July celebrations.

As a Nation, we have inherited vast reservoirs of rich resources; an idealistic, but also a realistic and practical philosophy of life; the best governmental system in the world; and a climate of freedom in which to seek and obtain our personal and national goals.

Historically, our freedom has been safeguarded not only by eternal vigilance, but also by the willingness of our people to sacrifice to protect that freedom; by a dedication to continuous improvement of our system of Government and climate of opportunity; and by fervent patriotism by which our citizens dedicate their God-given ingenuities and capabilities to meeting the challenges and problems confronting the Nation.

Recently, it was my pleasure to receive a copy of "A Message for Independence Day," by J. Edgar Hoover, Director of the Federal Bureau of Investigation.

As we all appreciate, the life of Mr. Hoover and his work as Director of the Federal Bureau of Investigation, has been in itself an example of splendid dedication to service for the country.

I ask unanimous consent to have the message printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

A MESSAGE FOR INDEPENDENCE DAY

(By J. Edgar Hoover, Director, Federal Bureau of Investigation)

The American ideal is woven of unfaltering faith in God, of faith in the destiny of this Nation, of heroic battles such as Bunker Hill and Gettysburg and the Marne and Anzio and Iwo Jima. Threaded through the fabric is the patience of Washington, the wisdom of Franklin, the humility and compassion of Lincoln, the integrity of Eisenhower, the courage of an unknown soldier, the vision of Jefferson, and the sacrifice of Nathan Hale.

It is laced with the memory of men's words: "I have not yet begun to fight" and "I only regret that I have but one life to lose for my country."

The American ideal is embodied in our Nation's integrity and honor, and in our homes where respect for the rights of others is taught by precept and example. It is part and parcel of our Bill of Rights, and the constitutional concepts which recognize that all men are created equal.

The American ideal embodies the wisdom, the courage, and the sacrifices of our Founding Fathers. It includes gratitude for our many blessings and a firm resolve to be worthy of them.

Finally, the American ideal has its roots in religion. Without religious inspiration, the American ideal would die. It is the American precept that men shall live as equals under a government by law, which is embodied in the greatest of all laws: "Whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets."

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup, prepared by the GTA public relations department, St. Paul, Minn., of June 23, 1959.

There being no objection, the roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

Congress has passed a good wheat bill, but what will the President do to it and, in the process, to farmers.

That is the big question now in Washington, where farm prices are made. Congress has passed the wheat bill which the House passed last week and the Senate yesterday.

Now this is the big decision the President must make: Does President Eisenhower really mean what he says when he says he is concerned about cutting down on farm surpluses? Or is the President only talking for his Secretary of Agriculture, who wants to cut down on farm price supports and farm income? The President is the only one who can sign (or veto) the wheat bill that will cut production 300 million bushels next year and the year after (1960 and 1961) reduce the cost of the wheat program in 2 years by about $500 million, and at the same time protect the farmer's income by assuring him $2.20 a bushel and payments in wheat surpluses from Government stock on the reduced acres.

This bill is good for both farmers and taxpayers. It cuts surplus—it cuts the cost to taxpayers—and while it does not improve the wheat farmer's income, it at least does not cut it any more. Will the President sign that bill? Or will the President veto the bill, because the Secretary of Agriculture is against any increase in wheat support prices? That's one decision the President cannot duck.

The radio and newspaper men in Washington say it is a foregone conclusion the President will veto the wheat bill. The news reports all say that both President Eisenhower and the Secretary of Agriculture have "repeatedly warned that any measure raising farm price supports, no matter if the surplus is cut and taxes reduced, would be vetoed." It is generally believed, too, that the Secretary of Agriculture wants to use wheat farmers as whipping boys to punish them for backing firm price supports and marketing quotas in the past.

There you have the picture of what is happening in Washington. Headway has been made in the last 30 days since Thatcher of GTA and the Farmers Union told Congress to cut out the alibis and stalling and to report out a good wheat bill. Pass the wheat bill, Congress was told. Don't alibi that the President will veto it. That is his decision to make. Get the votes to override the veto.

Last week the House swung into action. They said it could not be done (the old-time professional politicians) but three new stalwarts, Congressmen MCGOVERN of South Dakota, BURDICK of North Dakota, and ANDERSON of Montana got enough city congressmen to join them to push through the good wheat bill. Then yesterday, in what the newspapers call a gesture of bitter defiance to the Eisenhower administration the Senate passed the House wheat bill (25 percent cut in acres, 90 percent support price, and $35,000 ceiling.)

It went through on a 44 to 40 vote. Again the spring wheat States where GTA farmers operate led with flying colors. It took courage for the Republicans to hold the farmers in the face of powerful administration threats.

Senators LANGER and YOUNG of North Dakota, and MUNDT of South Dakota had courage to defy powerful administration pressure. They stood by their farmers and voted "yes." Defections were Senator CASE of South Dakota and WILEY of Wisconsin.

Republican Senators in other wheat States like Kansas and Nebraska and Colorado caved in to the Secretary of Agriculture. Now the campaign is to get enough votes to pass the wheat bill over the President's veto if he decides to make a mess out of the whole farm program.

Big job for Senators YOUNG and LANGER and MUNDT is to rally more wheat-State Republican Senators to stick with them. The big job in the House is for BURDICK and MCGOVERN and ANDERSON to get even more big-city Congressmen to override the President. Don't be mistaken, this is a big day for wheat farmers in Congress. Bigger than most of us may realize. As M. W. Thatcher said, "This may be the strategic move that will save our farm program." Then we can start building again. In the meantime, remember you have a date on July 23 to vote in the wheat referendum.

Maryland's British Champion

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1, 1959

Mr. BEALL. Mr. President, it was my privilege today to be present at a special luncheon to honor the Maryland boy who recently went over to England to play a little golf against some stiff opposition and returned the British amateur champion. I am referring to Mr. Deane Beman of the great free State of Maryland.

The testimonial luncheon in honor of Deane Beman was sponsored by the Bethesda-Chevy Chase Chamber of Commerce, the Silver Spring Board of Trade, the University of Maryland and its "M" Club, the Washington Board of Trade, the Terrapin Club, the District of Columbia Golf Association, the Maryland State Golf Association, the Middle Atlantic Golf Association and the Touchdown Club.

In attendance were many notables including both British and American officials. Dr. Wilson Elkins, president of the University of Maryland, where Deane Beman is attending school, spoke briefly.

The menu was as follows:

Melon balls a la tee, breast of chicken a la hazard, string beans with mushrooms a la slice, potatoes a la divot, sherbet a la hook, coffee a la green, and rolls a la putt.

Mr. Frank Emmet gave the invocation. It was as follows:

Heavenly Father, Look down with favor upon this gathering of sports people gathered together through the medium of the great game of golf. Bless them, and forever keep them in the fairways of virtue, and forever keep them from the rough of sin. Look with special favor on our honored guest, Deane Beman, and his angelic wife, Miriam. Keep them together, happy through life. Dear Father, for all here present, I ask, bless us, O Lord, for these and all the gifts which we are to receive from thy bounty. Amen.

Mr. E. K. Morris, president of the Washington Board of Trade, presented a scroll, reading:

DEANE BEMAN, BRITISH AMATEUR CHAMPION

In recognition of his outstanding performance in winning the British Amateur Golf Championship at the Royal St. George Golf Club in Sandwich, England, May 30, 1959, the golfers of the Washington Metropolitan area offer this testimonial of their admiration and pride in his achievement.

By his victory, he has brought honor to the Nation's Capital and its environs and has set an example of successful endeavor and becoming modesty that will be an inspiration to the thousands of young American golfers who will follow in his footsteps on the fairways of the Nation and the world.

Time To Put Warren Court Into Its Proper Function

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. THURMOND. Mr. President, much editorial comment has appeared on the recent modification by the Supreme Court of its decision in the Jencks case. While the modification was encouraging, it is by no means a correction of the many missteps of the Warren Court and should be viewed in its proper perspective. In this regard, I ask unanimous consent that a most realistic editorial, entitled "Time To Put Warren Court Into Its Proper Function," which appeared in the State, a newspaper published in Columbia, S.C., on June 27, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO PUT WARREN COURT INTO ITS PROPER FUNCTION

The New York Daily News has a favorite name for the U.S. Supreme Court—the Warren court. And it's news nowadays, the News says, when the Warren court "upholds an act of Congress, instead of overruling it or finding that it doesn't mean what Congress thought it meant."

In its June 24 issue, the News comments on the Court's recent ruling in the Clinton F. Jencks case and sees a ray of hope that the Court at long last is showing some reaction to the criticism that has been heaped upon it.

"On Monday of this week," the News wrote, "the Warren court—though by divided votes, to be sure—upheld a 1957 act of Congress aimed at undoing some of the damage wrought by the Warren court's decision in the Clinton E. Jencks case.

"In that affair, the Court ruled that Jencks, a union leader convicted of falsely swearing that he wasn't a Red, should have been allowed to see, before his trial, reports on him sent to the FBI by a couple of FBI plants inside the Communist Party.

"This decision obviously threatened the FBI's effectiveness in fighting the criminal Communist conspiracy. Congress made haste to limit strictly the types of pretrial statements of witnesses which persons may inspect.

"Day before yesterday, the Warren court politely obeyed this act of Congress, by upholding convictions of seven assorted characters whose attorneys claimed that they had been unjustly prevented from forcing the prosecutors to tip their hands before trial.

"It looks as if the Warren court is at last properly impressed by the storm of bench, bar, press and everyday-citizen criticism of its long string of pro-Red decisions. That's a gain; but we hope Congress will not assume that a few pullbacks by this Court mean that the tribunal has mended its ways completely."

The News makes a point which the State has made on more than one occasion lately—that any "letting up" by the Court should not be taken to mean that there has been permanent reform. Congress should not be deterred, and the House in its passage of H.R. 3 last week didn't seem to have been affected, we are glad to say, by the recent decisions. This bill "clips the claws which the Warren court stuck out in the Steve Nelson case and has withdrawn only a little way. In that decision, the Court denied the right of States to prosecute subversives plotting against the Government."

The News says, "It's time to stop this trend toward Government by the Supreme Court, and restore the Court to its proper function of interpreting laws instead of making them."

How National Parks Help Tourist Trade

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. NEUBERGER. Mr. President, the Astoria Budget is published at the heart of one of the great scenic and recreational areas of the Nation—at the mouth of the majestic Columbia River.

In its issue of June 26, 1959, the Budget has stressed how mighty a boon a national park in the Oregon Dunes could be to the tourist trade along the entire Oregon seacoast, which is one of the most beautiful shorelines in the world.

Declares the Budget editorial, in part:

Anything that draws tourists to any part of the Oregon coast is going to help the whole coast area. We look with favor on this national park project for the same reason the Oregon Coast Association supports the Astoria Bridge.

This reference is to the proposed bridge across the Columbia between Astoria, Oreg., and Megler, Wash. I endorse the bridge, too, Mr. President, and I hope that the Budget's fine editorial is read far and wide by both friends and foes of my Oregon Dunes and Sea Lion Caves National Seashore Park proposal.

I ask unanimous consent that the June 26 editorial from the Budget of Astoria, Oreg., be printed in the Appendix of the RECORD:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARKS HELP OUR TOURIST TRADE

Senator NEUBERGER's proposal for a national seashore park along 23 miles of the southern Oregon coast between the Siuslaw and Umpqua has generated a surprising amount of hostility among western Lane County property owners.

Offsetting this, it is noteworthy that one newspaper in the area, the Port Umpqua Courier, is supporting the proposal that on the grounds that creation of the national park would produce an increased tourist business more than compensating for the limited adverse effect on agriculture and loss of taxable property.

The Courier cites figures on attendance at other national parks as evidence.

National parks get national attention, to a far greater extent than do State parks, and hence logically are more likely to draw visitors from all over the Nation.

The Port Umpqua Courier argues that development of the tourist business is needed to develop and balance the economy of the Oregon coast, which has only limited agricultural possibilities and is too dependent on the up-and-down lumber business, its one large industry.

This is sound argument, and it is the reason why we up here in Clatsop County, at the far north end of the coast, are interested in this development down in western Lane County.

Anything that draws tourists to any part of the Oregon coast is going to help the whole coast area. We look with favor on this national park project for the same reason the Oregon Coast Association supports the Astoria bridge.

The Importance of Gold

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. CHENOWETH. Mr. Speaker, the House Subcommittee on Mines and Mining is holding some very important hearings on our domestic mining industry. We have been hearing expert witnesses from all parts of the United States and from every segment of our mining industry. This morning Mr. Merrill E. Shoup of Colorado Springs, Colo., presented a statement on our gold situation, which I wish to include in my remarks. Mr. Shoup has been connected with the gold mining industry in Colorado for a quarter of a century. He is now president of the Golden Cycle Corp. in Cripple Creek, Colo., and is recognized as an authority on gold. I am sure that the observations of Mr. Shoup will be of intense interest to every Member of the House.

In his statement, Mr. Shoup calls attention to the rapid withdrawal of gold from this country. Our gold reserves have now dropped to below $20 billion which is the lowest point in many years. There is genuine concern over the continuing large exports of gold from the United States, and it is obvious that these stocks must be replenished if we are to maintain sound fiscal policies. The practical way to build up our gold stocks is to encourage the production of gold in this country. We have the gold deposits and the mines with which to produce the gold. Mr. Shoup suggests a program under which our gold mines can resume operations, and again produce the gold which is so vitally needed.

The statement of Mr. Shoup follows:

Mr. Chairman and gentlemen of the committee, my name is Merrill E. Shoup. I reside at 17 Broadmoor Avenue, Colorado Springs, Colo. I am the president and a director of both the First National Bank of Canon City and the First National Bank of Cripple Creek, Colo. I am a director of the First National Bank in Grand Junction and the First National Bank of Colorado Springs; a director of the Denver & Rio Grande Western Railroad; a director and the president of the Golden Cycle Corp. and Holly Sugar Corp., and an executive of other enterprises. I taught economics at Dartmouth College from 1921 to 1922 and was an instructor in economics at Brown University from 1922 to 1924. I subsequently

studied law, then engaged in a general legal practice in Colorado Springs before becoming a corporation executive.

I appear before this fine committee in two capacities: First, and most important, as a patriotic American citizen genuinely concerned with the welfare of our Nation and where it is headed; secondly, as an individual who has been closely associated with the Colorado gold mining industry for more than 25 years, on behalf of the Colorado Mining Association and other similar organizations.

I want to thank the Honorable WAYNE N. ASPINALL, chairman of the Committee on Interior and Insular Affairs, and his fellow Congressmen for their recognition of the desperate condition in which the domestic mining industry is in today. I am sure you all know that the one-time virile domestic gold mining industry of the United States today is practically nonexistent. The demise of the gold mining industry dates back to the war period immediately preceding the year 1942 and the closing of the gold mines in the United States and Alaska by the provisions of the unnecessary War Production Order L–208, decreed October 8, 1942, from the results of which directive the industry has never recovered. If domestic gold producers were considering only their own sorry plight and the terrific cost to rehabilitate and restore their gold mining properties, they need a bonus of at least $70 per ounce on all newly mined domestic gold or a monetary gold price of at least $100 per ounce, either of which events would raise immediately a lound chorus of objections.

If the monetary gold price were raised to $100 per ounce, the argument immediately would be made that it would be of great aid to Russia. As a matter of fact, the payment of a bonus of $70 per ounce on all newly mined domestic gold could not in any manner help Russia. It would cost about $100 million per year to pay this bonus, which sum, compared to the billions of dollars our Nation has paid out in the past years and will pay in future years in farm subsidies, is insignificant. The bonus payment would aid in the rehabilitation and restoration of the gold mining industry and, in addition, help to carry the costs of producing copper, lead, zinc, and other complex ores of the type which carry a small gold content. The bonus would stimulate gold production, help rebuild our rapidly dwindling gold supply, help restore people's confidence in our continually deteriorating and depreciating dollar, help check our continuing inflation and be to the best long-range economic and financial interest of our people. In addition to the payment of a bonus, the following measures should concurrently be put into effect:

1. Convertibility should be restored. An American statesman, after the Civil War, discussing a return to gold convertibility, once said, "The way to resume is to resume."

2. A free market for gold should be established and the producer permitted to sell his gold either to the U.S. Treasury at $35 per ounce or to any other purchaser at any price he can get. The $70 per ounce bonus should be paid only on newly mined gold sold to the Treasury.

3. Ownership of gold is a private property right which has been taken away from citizens of the United States and should be restored to them at the earliest possible moment.

I turn now to one of the most fundamental issues confronting our Nation, the solution to which must be worked out by the Congress and the administration. I respectfully call your attention to the basic underlying factors vitally affecting our Nation's present and future financial and economic welfare:

1. The U.S. gold stock is at its lowest point in 13 years, approximately $20 billion compared to $25 billion in 1949, and the drain on our gold continues. To date in 1959, it amounts to almost $400 million, during the past 16 months to more than $2,500 million. Of the $20 billion more than $12 billion (the required gold reserves fixed by law to back our currency) is earmarked as the minimum amount necessary. Best available estimates are that from $13 billion to $16 billion are now held in net claims of foreign countries against our gold, which indicates a possible gold deficit against our gold stock of between $5 billion and $8 billion.

2. The ratio of claims (U.S. required gold reserves plus foreign short-term dollar balances) to U.S. gold reserves is now about 145 percent, which shows the greatest deficiency of gold reserves in this country since the end of World War I. Considering our net gold position (the ratio of U.S. required gold reserves plus foreign short-term dollar balances to U.S., gold reserves, or claims to reserves) since the end of World War I, we note the following: gold flowed toward the United States to 1925; away from the United States to 1929; toward the United States until 1934; away from the United States to 1944; toward the United States to 1949; and away from the United States for the last 10 years, or since 1949. Since the end of World War I, total claims on the U.S. gold reserve have exceeded U.S. gold reserves only during 1927–29, in 1944 and 1953–59. Today's excess of 45 percent of claims over gold reserves holds the record of deficiencies; the year 1934, when claims were only 41 percent of reserves, holds the record on the plus side. The outflow of gold contracts credit, thus raising interest rates and depressing bond prices.

3. Gold, the basis of all good money, both historically and in the world of today, has been taken from our gold reserve by foreigners in record amounts since the end of 1957 because foreigners apparently consider our $35 selling price as a great bargain. If no further gold drain to foreigners from our Treasury occurs, our additional contribution of $344 million in gold to the International Monetary Fund will shortly reduce our gold reserves to about $19.8 billion and at the same time raise foreign claims on our gold reserves to about $18 billion. Should the gold drain then progress, we will shortly see our reserves to be insufficient even to meet foreign claims.

4. We continue to permit foreigners to buy our gold at the bargain price of $35 per ounce, while this same right is denied to American citizens.

5. No one in our national administration will admit that our national financial and fiscal policy is one of giveaway, but the fact remains that we have continued to lose gold since 1949 despite the fact that the United States during this period has continuously exported more goods and services than she has imported.

6. Americans now are burdened with taxes approximating 37 percent of their income. Our Nation's debts and guarantees amount almost to the unbelievable sum of $600 billion. Our Government is having difficulty to sell its long-term bonds to the public. Americans appear to be moving from the dollar into the stock market in an apparent attempt to hedge against inflation, and, as above pointed out, foreigners continue to buy our gold at what they no doubt consider a bargain price—$35 per ounce, all of which continues to feed the fires of inflation. Russia appears to have substantial gold reserves, is a substantial gold producer, and it is now well known that a gold ruble for use in external trade is very high in Khrushchev's plans, that this ruble can be backed by Russia's large gold horde which, at this time when U.S. gold stocks are down and rapidly declining further, may seem to Moscow to be the propitious time to enter a gold ruble into competition with the deteriorating American dollar which can lead to the ruble displacing the dollar as the No. 1 currency in international trade and relegate the United States to a secondary power insofar as world commerce is concerned.

7. Our high taxes cannot be raised higher. The Treasury is having difficulty in selling bonds even at historical bargain prices; and paper money has been issued in amounts to depress its value. U.S. Government bonds are now at new historic low prices which means that everyone, individual and institution, who bought a government obligation at any time over the years now has a substantial loss.

Because the gold problem has become so vitally important to the present and future welfare of our Nation, we respectfully urge your committee at the earliest possible date to ask that the Senate Banking and Currency Committee call public hearings and take prompt action using all its congressional powers to restore our dollar to its one-time high leadership which, if it is not done, will mean the American citizens can unconfidently look forward to—

(a) The further deterioration and decline in the purchasing power of the American dollar;

(b) The loss of billions of dollars in income and principal to persons dependent for their livelihood upon income from pensions, savings, retirement funds, life insurance, bonds and preferred stocks with a fixed return and other similar assets;

(c) The further worsening of our trade balances with an increasingly greater loss to our American producers who, because of increasing inflation and cheaper dollars, are finding it increasingly difficult to compete with foreign Nations. This inevitably must lead to greater imports, smaller exports, curtailment of industry, less employment and detriment and loss to our entire economic system;

(d) Increasing difficulties for the U.S. Treasury to finance and refinance our huge Government debt and to higher interest costs and all other attendant difficulties.

I am indebted to my friend and associate, B. Barret Griffith, of Colorado Springs, Colo., one of the Nation's foremost gold and monetary students for his help in assembling data for this statement.

I could discuss the gold problem and its effect upon the lives and happiness of our people for hours, but the committee has many other witnesses to be heard, and I thank you for your courtesy and patient attention.

Investigations Are Useful

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jackson (Mich.) Citizens Patriot of June 29, 1959:

INVESTIGATIONS ARE USEFUL

Do investigations by congressional committees really do any good? Are all those junkets to faraway lands at public expense truly necessary?

These questions frequently are asked, and Representative GEORGE MEADER, of the Mich-

igan Second District, now uses the results of one investigation to supply the answers.

Mr. MEADER has done much traveling around the world as a member of the Foreign Operations and Monetary Affairs Subcommittee of the House Committee on Government Operations which recently reported on the foreign aid program in Laos. The Congressman points to the results of the investigation and says:

"That the State Department and the International Cooperation Administration (in charge of foreign aid) followed our report with 45 pages of comment admitting existence of some deficiencies and promising improvements.

"That the case of Edward T. McNamara, who received $13,000 in bribes from contractors, is in the hands of the Department of Justice which has the additional advantage of sworn testimony taken by the subcommittee.

"That the chairman of the subcommittee, together with other members, appeared before the Foreign Affairs Committee of the House summarizing our inquiry and suggesting amendments to the foreign aid program in an effort to tighten up its administration. Some were incorporated in the bill and reported to the House floor.

"That the chairman of the subcommittee, supported by other members, submitted still other amendments on the floor of the House in addition to those accepted by the committee.

"And that, perhaps most important, information developed by the subcommittee and included in its report was available to other Members of Congress; was utilized during the debates and thus forms a part of the knowledge upon which legislative decisions are made."

Mr. MEADER certainly makes a good case, if one really is needed, for the investigations and the junkets.

Much of the criticism of the committee comes from persons who would like to see Congress keep its fingers out of the administrative branch of Government. Their strategy is to confuse the issue by belittling the investigative procedures.

The case of wasteful foreign aid spending in Laos shows why these critics of Congress are so anxious to succeed—and why they must fail.

How Travel and Communication Taxes Discriminate Against Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. NEUBERGER. Mr. President, one of the grievous disappointments over the conference report on Federal excise taxes was the elimination from the Senate bill of the repeal of the 10 percent levies on passenger travel and on telephone and telegraph service.

These proposals were particularly important to us of the Pacific Northwest. The travel tax repeal was sponsored by the able Senator from Florida [Mr. SMATHERS], and the telephone and telegraph repeal was sponsored by the eminent Senator from Oklahoma [Mr. KERR].

Let me express why we of the Northwest have such a stake in these proposals. The Pacific Northwest is located some 3,000 miles from the governmental, industrial, and commercial citadels of the United States. This imposes upon our people in business and industry the need for extensive journeying across the continent, as well as for many telephone calls and telegrams to such places as Washington, D.C., and New York City. We suffer disproportionately from these particular taxes.

A thoughtful editorial which analyzes these levies was published in the Coos Bay World of June 26, 1959. The author of the editorial is Mr. Forest W. Amsden, executive editor of the World, which is published in the seacoast lumbering community of Coos Bay, Oreg. The title of Mr. Amsden's editorial is "Repeal of Two U.S. Taxes." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPEAL OF TWO U.S. TAXES

A possibility exists that the 10-percent Federal tax on passenger tickets (rail, air, and bus) may be repealed almost immediately and that the 10-percent tax on telephone and telegraph service may be repealed in about a year.

The U.S. Senate passed a bill yesterday extending many war-caused excise taxes, due to expire at the end of this year. The Senate, however, adopted amendments which would do away with the passenger and communication taxes. The House passed the bill earlier, without the repeal amendments. Observers believe the House will refuse to go along with the Senate version, although there is much pressure being brought by transportation and communications firms to do so.

It would be conducive to increased travel, telephone, and telegraph use if the repeals stick.

However, Congress and the administration must also look to the loss in revenue in a precariously balanced budget, and this is a telling factor. President Eisenhower recommended that both taxes be continued. If they aren't, his narrowly balanced budget for the next fiscal year will quickly become a deficit—on paper at least.

These taxes were instituted during the Korean war to help pay for that conflict. They were patterned after similar—but twice as heavy—taxes use to increase revenue and hold down travel and line overloading during World War II.

The most potent argument being used for repeal now is that the Korean war is long over. The measures were instituted to help pay the cost of that conflict. They were temporary. How come they are being continued again, 7 years afterward?

The answer is that almost all taxes are temporary, instituted for the duration of some emergency. Seldom are they repealed or allowed to lapse. And the temporary argument being used to end transportation and communication taxes applies just as effectively against the other temporary revenues—against corporate profits and liquor—which would be continued by the same measure which seeks to stop the two taxes under discussion.

Still, it cannot be denied that repeal will be beneficial for the public—who pays the tax—and for the companies, who presumably would be helped through increased use of their facilities.

Nor is there any reason to fear the tax cut would be quickly added onto prices, making a 10-percent revenue hike for the companies. Fares and tariffs are regulated by either Federal or State agencies. The benefit, this time, will go to the consumer or user and not to the owners.

If the revenue loss estimates are not too prohibitive, the taxes should be dropped.

The Senate amendment to the extension bill should be likewise adopted by the House of Representatives.

White Man Found Guilty of Assault of Negro Woman

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. THURMOND. Mr. President, from time to time the critics of the South have alleged that there is a double standard of justice for the white and the colored races in the South. Much attention and publicity was focused on a recent criminal trial in Jacksonville, Fla. The result in Jacksonville was one of the many examples that disproves such allegations. The result of the Jacksonville trial was not an isolated incident. Although there was no national publicity attending it, a very similar trial took place in Beaufort, S.C., this week. It was the trial of a white man for the rape of a colored woman. The verdict of the jury was guilty without recommendation of mercy, which verdict carries a mandatory death sentence. I ask unanimous consent that the report of this trial which appeared in the June 30 issue of the Greenville News, a newspaper in Greenville, S.C., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITE MAN FOUND GUILTY OF ASSAULT ON NEGRO WOMAN

BEAUFORT.—A 19-year-old white marine private was convicted here Monday in the rape of a 47-year-old Negro woman.

The all-white jury did not recommend mercy, making the death sentence mandatory.

The marine, Fred Davis of Atlanta, will be sentenced Tuesday by General Sessions Judge J. Henry Johnson.

If he should be executed, it would be the first recorded case of the execution of a white man for raping a Negro woman in the United States.

CHARGE IS DENIED

Davis, an electrician at the Marine air station here, denied the assault charge in testifying in his own behalf. He said the woman consented.

Sheriff J. E. McTeer testified, however, that Davis admitted attacking the woman. The sheriff quoted Davis as saying he sometimes had "an overpowering sex urge and got pleasure out of using force with women."

The victim also testified.

She said he dragged her into some bushes near the National Cemetery here and attacked her.

Several law officers, including a military policeman, testified for the prosecution.

Their testimony was to the effect that two Negro boys saw the attack. When Davis spotted the boys, the officers testified, he ran and the boys followed.

The military policeman, W. R. Hartley, said Davis asked for help, insisting the boys were following him.

Further investigation disclosed the attack on the woman, the officers testified.

Miles Randall and E. F. Sineath, Beaufort police officers, and Deputy Sheriff C. E. Bessinger, Jr., corroborated the sheriff's testimony that Davis admitted attacking the woman.

Davis also admitted, the sheriff said, that he attempted to attack two women in his native Atlanta but their screams scared him away. The officer said the two cases are being checked out in Atlanta.

McTeer said the case is the first in his 33 years as a sheriff that a white man has been charged with raping a Negro woman.

McTeer said Davis' mother lives in Atlanta, but his father is dead.

DELIBERATE OVER HOUR

The jury deliberated an hour and 10 minutes.

Beaufort is an old, coastal South Carolina town of 5,000 about midway between Charleston, S.C., and Savannah, Ga. The Parris Island Marine Recruit Depot is nearby.

The prospective jurors were asked by the judge and Solicitor Randall Murtaugh if they objected to capital punishment. Some were discharged when they said they did.

Ben Carter, defense attorney, disqualified five Negro men and two white men from serving on the jury.

Meanwhile, a 20-year-old Negro, Israel Sharpe, is to be tried in the same court Tuesday on a charge of attempted rape of a white woman. He is charged with attempting an attack on the wife of a marine.

The Spenders' New Line

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Green Bay Press-Gazette of June 15, 1959:

THE SPENDERS' NEW LINE

One of our most interesting political developments during this relatively uneventful nonelection year has been the emergence of a new line of reasoning on the part of those who want the Federal Government to spend, spend, spend no matter what the circumstances or the time. For the first time in our memory the politicians, editorial writers, cartoonists, and other distributors of the spenders' philosophy are openly ridiculing the very idea of a balanced budget, of economy in any shape or form. The new war cry is that we as a Nation are not realizing our economic potential—whatever that is—and it is usually added or implied that Russia is beating us in this respect. Advocates of holding down the size of the Federal budget are pictured as unimaginative old fogies clinging blindly to outmoded economic dogmas; the implication is made that any effort to save the taxpayers a dime will result in a failure to meet the needs of the Nation in such fields as education, housing, defense, and so on.

Since the spending mania infected us during the early years of Franklin D. Roosevelt's administration the excuse always has been that we have been facing an emergency of one kind or another requiring us to temporarily abandon good fiscal habits. During the depression it was argued that it was cruel and inhuman to worry about balanced budgets while people were actually suffering from want. This point of view won the support of a large majority of the American people, and properly so. Then came war, when the only goal was victory at whatever cost; again the American people rightfully threw overboard any thought of fiscal prudence in the face of the dictators' terrible threat.

After the war the spenders began to have trouble finding emergencies on which to peg their pleas for keeping the Federal Treasury's spigots open. The cold war in Korea, the recessions of 1949 and 1958, sputnik and the opening of the missile age offered them temporary alibis, but they obviously longed for the good old days of the great depression and the great war when they could shout down timid suggestions for economy in the name of humanity and patriotism.

As the year 1959 dawned, the spenders were up against it; they had no emergencies left. The Nation's economic system had shown itself disappointingly robust and was bouncing back from the 1958 recession with such speed that some economists began worrying about a runaway boom; the people's incomes were higher than ever and despite some pockets of unemployment (caused chiefly by geographic dislocation) more people had jobs at higher pay than ever before; a half-hearted attempt to exploit the missile gap was effectively answered by a soldier-President and his military advisers. Thus the spenders had to come out in the open and admit that they want spending anytime, every time and all the time; spending for its own sake, for the blessings it bestows on those who do the spending and, above all, for the votes it garners.

It is a frightening thing to behold men in high public office argue that we must vote a badly unbalanced budget at a time when we are more prosperous than ever before, when our military budget already is the greatest of any nation in history, when taxes are bringing in the greatest revenue ever received by any government in peacetime, when State and local budgets are straining to the breaking point because of the overwhelming pressure of Federal taxation on our citizens. Even the great Lord Keynes, the patron saint of the spenders, knew better than to advocate such measures; while he argued for heavy pump priming during hard times he argued just as hard for balancing it with budget austerity in good times.

The spenders' enthusiasm for their new credo has reached the point of arrogance, and on occasion of ridiculousness. When the President recently advocated an increase in the rate of interest on Government savings bonds which, of course, would put an upward pressure on all interest rates and thus discourage individuals and companies from borrowing, he was not only assaulted with the now familiar cries of "inhumanity" and "callousness," but Representative WRIGHT PATMAN, of Texas, shouted that this was an inflationary move. The only thing with which we can compare Representative PATMAN'S statement is George Orwell's "1984," in which "black is white, good is evil, slaves are free."

Yet obviously the spenders feel they can go this far with impunity and the reason, of course, is the victory they won last November. The people voted for spending, and spending they are going to get, with no more nonsense about emergencies or humanitarianism or patriotism, but just because spending is wonderful and come on, boys, get your share before someone else gets it.

First National Bank of Boston Celebrates 175th Anniversary

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. McCORMACK. Mr. Speaker, on July 5, 1959, the oldest chartered commercial bank in the United States, the First National Bank of Boston—originally chartered as "The Old Massachusetts National Bank"—celebrates its 175th aniversary of its establishment.

Throughout the decades and generations this banking institution has served in a progressive manner to become as it is now, a very important part of New England economy, us well as the economy of our Country.

While it is the oldest banking institution of its kind in our country, it has always kept young in spirit and service by the unusual ability and understanding leadership of a banking institution in the life of State and Nation.

Among its officers and depositors in its early days are many historic figures. Throughout its long history First National of Boston has always through its officers viewed their responsibilities with vision and forward-looking minds.

The present officers of First National of Boston, under the leadership of president Lloyd D. Brace, are carrying on in the highest traditions of the past, looking to the future with sound vision.

I congratulate First National of Boston on its 175th anniversary, confident that this outstanding bank will continue to serve for countless of decades to come in the advancement of the economy of Massachusetts, New England and our country.

In the Sunday Boston Globe of June 28, 1959, appeared an informative article on the 175th anniversary of First National Boston, written by Charles L. Whipple, which I am pleased to include in my insertion of remarks:

HUB BANK OLDER THAN UNCLE SAM—AMUSING, STARTLING, QUAINT STORIES MARK THE PATH OF FIRST NATIONAL OF BOSTON, AMONG WORLD'S BIGGEST

(By Charles L. Whipple)

The oldest chartered commercial bank in North America celebrates its 175th birthday July 5—and thereby hangs a tale of total resources of $1,885,424,084.89 that are still growing.

The bank, of course, is the First National Bank of Boston—until 1903, "The Old Massachusetts" National Bank.

One might expect such a bank to be stuffy. It's not—all the way up from Frank Jacobson of 98 Hemenway Street who answers questions down on "A floor" where thousands cash checks daily, to President Lloyd D. Brace.

What makes this oldest of old banks also the most active in developing new services?

The answer seems to lie in a tradition of such innovations, as well as in Brace's fostering of a pioneering atmosphere.

Consider these examples:

"The First" once shipped New Bedford's whale oil for the street lamps of Paris, changed the size of its currency notes to fit the billfold of its president, and was the first institution to put silk thread in banknotes to foil counterfeiters.

That was many years ago.

But today more than 40 percent of this bank's revenue from loans comes from types that did not exist only 25 years ago.

For example, its "First Check-Credit," the revolving personal plan plan of borrowing by writing a check, has been adopted, with permission, by more than 125 banks across the country since it started in 1956.

You don't have to be a Harvard man, or a sixth generation Bostonian, to go places with this bank, for the old Boston institution is basically run by non-New Englanders.

Brace himself comes from Lincoln, Nebr. Of five senior vice presidents, only two are original Bay Staters, while one comes from Russia, another from Canada, and one from Brooklyn.

"We're all aware that all bankers are considered stuffy," said Brace, a tall, youthful-looking executive, "but it's not true of our gang in here, nor of our broad-minded and courageous, forward-looking customers."

"We're not adventurers," he added. "We're not going off on a tangent without thought. But we do use independence of thinking by our people—a calculated plan and approach."

One of his 54 vice presidents, Ephron Catlin, Jr., put it another way:

"We make a point of doing the unusual. A great deal of leeway is allowed to the officers. Loan officers can make loans up to the legal limit. Mr. Brace encourages the maximum use of abilities without too much supervision. Other banks are much more strict."

Then he added with a chuckle: "The only thing you can't do here is to make a bad loan."

That's a far cry from the bank's early days, when one black ball in a box of white ones was enough to turn down a would-be borrower.

Five years older than the United States of America, the bank acquired its first home when it bought for $4,000 the Manufactory House, a brick structure on the northerly corner of what is now Hamilton Place, at Tremont Street.

When its charter was signed, the Governor put a no-fooling John Hancock on it, for that was his name.

There were 107 original stockholders, 10 of them women, including Abigail Quincy.

Paul Revere was an early customer.

James Bowdoin, scientist, philosopher, and twice Governor, was its first president.

Col. Thomas Dawes, cousin of Paul Revere's famed companion, adapted the brick structure from a school where use of the spinning wheel was taught to a banking house. For $55, 30 chairs or stools were bought—the kind one associates with Dickens.

Two iron chests were bought for $15 and $26.32 to keep the money in, and the bank still has one of them. Dawes rigged up an elaborate gadget to lower them into the basement every night for security.

The bank's light bill on opening was $1 for "candles."

The first international deal of "The First"—which today ranks among the world's leading international banks—was the import of an iron fence from Russia, for "at or under £120."

Boston had 17,000 people that year, and they had just voted not to make the town a city. The day's first deposits were $26,429.21. The Bank of North America in Philadelphia was the country's only other bank at the time, and gave help to the Massachusetts, as well as giving it its first cashier, Samuel Osgood, at $1,000 a year.

In those days Boston exported rum, salt pork, dried cod, and barrel staves, but shrewd Yankee merchants were already trading over the seven seas.

An early bank customer was Margaret Magee, wife of one of the first captains to go to the northwest coast.

Another, says the bank's official history, was "Thomas Brattle of Cambridge a gentleman who appears to have found the bank's insistence that loans be repaid on time not particularly to his liking."

Stephen Higginson was the merchant who exported whale oil for Parisian street lights, long before Standard Oil thought of the lamps of China.

Loan delinquents in those days found their names posted in a prominent place.

The interest rate was always 6 percent. Loans were from $100 to $3,000.

Until the Constitution was ratified in 1789, the unit of currency was the Mexican dollar.

The bank produced its own money from a hand rolling press. Its plates came from Robert Scott, who later became engraver to the U.S. Mint.

One early president had a favorite wallet, but to carry bills of the ordinary size he had to fold them. The answer was simple: He changed the size of an entire issue of banknotes.

The man who put silk threads into banknotes was John James Dixwell, president from 1847 to 1874. His brother in Calcutta sent him a lot of colored silk threads, and to beat the counterfeiters (the penalty for counterfeiting in 1787 had been cutting off one's right ear) he mixed them with the paper pulp for the banknote paper.

Dixwell was also the man who saw through a telescope from his Jamaica Plain home the Great Boston Fire of 1872, thought it would reach the bank which was then on Devonshire Street, and so ordered one of the Nation's earliest moves of big money.

Teams of oxen, at $50 a trip, lugged a heavily guarded $7 million in cold cash to a house in Pemberton Square. There it stayed under guard for 2 days and 2 nights. The fire never reached it there. But then the flames never reached the bank on Devonshire Street, either.

Through wars, panics, and other storms the bank went on growing. The 20th century began with John W. Weeks, later Senator and Secretary of War, installed as president.

Then in 1903 the Old Massachusetts purchased the First National Bank of Boston, and took its name. Later it took over 7 others, and today includes 60 banks, 59 of which it took over.

Today it is Boston's and New England's largest bank, holding a fifth of the total deposits of all New England banks, and more than half the total deposits of all Boston banks.

But let's not be parochial. It's also one of the leading banks in the world, capable of standing up and being counted along with what remains of the reputation of The Old Lady of Threadneedle Street.

But despite its age and its assets, it reminds one of a woman, always coming up with new ideas and proud that it remains young.

Such ideas, for example, as its installation last year of the largest electronic data processing machine of any bank in the world.

It processes in minutes all checks and statements that used to take days and lots of manpower—more than 100 employees, all of whom, by the way, now have other jobs in the ever-growing bank.

The data processing system has replaced at the 67 Milk Street headquarters, what was once the largest bookkeeping bank operation under one roof anywhere in the world.

"The new system makes errors once in a great while," said one bank official, "but it catches them itself a lot quicker than we used to."

And then, besides the bank's international branches started 40 years ago, particularly in Latin America, there are the 25 branches in Boston, downtown and uptown.

" 'The First' has done more new things in the last 20 years than any other bank," says Catlin, matter of factly.

"It's just the most progressive bank in the country."

He lists among the other chief innovations the first check-credit loan plan already mentioned, its being the only major bank that does a big factoring business, one of the five principal factors in the country, and its use of the registered check.

The bank officers responsible for the four chief innovations were born in Russia, Copenhagen, London—and Fitchburg, Mass.

"A great many of our vice presidents come from outside New England," says Catlin.

"A lot come to college here and stay. Mr. Brace cames from Lincoln, Nebr.

"There is something about the human mix here that gives us all ideas.

"Contrary to some people's opinion, our bank's main business is in the Boston area of New England," Catlin adds.

"Three-fourths of our business is local."

Its loans run around a billion dollars outstanding, nine-tenth of it in this country, where it has 4,000 employees with another 1,600 abroad.

Deposits run about $1.6 billion. There are 90,000 savings accounts in this area, 60,000 borrowers, and more than 100,000 checking accounts, a little less than 80,000 of them regular ones.

So the bank is big, and some people occasionally get wrong ideas about it. Some think, for example, that it owns or controls the Boston Herald-Traveler. It does not.

Does it mix in politics? Says Catlin:

"Our policy is to stay out of politics, but to offer the benefit of the bank's financial thinking to solve the problems of the Commonwealth for either political party."

Catlin cites as an example of swaying with the tide the setting up of a special department to handle so-called growth stocks and make loans to research companies.

Recently the bank took 54 presidents of these firms to a 3-day meeting in Sturbridge, recognizing their importance to the area's economy as well as to the bank.

A leading figure in this field is the bank's real estate expert, senior vice president William F. Keesler. Another senior vice president, Serge Semenenko, is a story all by himself, too.

But perhaps the real story of "The First" is told by the tellers and the bank guards down on A floor below the vaulted offices of the executives.

Down there, for example, 21 tellers cash as many as 8,000 checks within 2 hours on a busy day.

Guard Eddie Walsh, of 102 Center Street, North Easton, and executive assistant Richard Corcoran, of 29 Coyne Road, Waban, say sometimes the huge hall is choked with persons of all types, yet the ruffled temper is rare.

But perhaps the best story about "The First" is told by Matthew T. Hoevy, of 750 Saratoka Street, East Boston, chief guard at the main bank.

"It was just after I came here in 1931," he says, "when the bank holiday ended after Roosevelt's inaugural. A little old guy tried

to get in at 1 Federal Street, said he wanted to open a bank account.

"We asked him what kind and he said, 'Either savings or checking.' How much did he have? 'Something fabulous,' he said, '$7,000 in cash. I just drew it out from my bank.'

" 'What bank was that?' we asked him, and he said, 'Oh, the First National Bank over on Hanover Street.'

" 'But this is the same bank,' we told him.

" 'Oh, no,' he said. 'My money will have more security here in a bigger building.' "

Which only goes to show that you just can't blow out the candles on the First National Bank of Boston, 175 years old.

Letter to Time Magazine

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. DAVIS of Georgia. Mr. Speaker, several weeks ago, Mr. Ed Hiles, executive vice president of the Georgia Savings & Loan League, Inc., Atlanta, wrote a note to Time magazine in which he requested Time to discontinue his subscription. This note resulted in a reply from Miss Gwyneth Kahn of the Time magazine staff in which she promptly concluded that the reason for this discontinance was the editorial policy of Time on the question of integration. I commend to you Mr. Hile's reply to this letter from Time. Under unanimous consent to extend my remarks, I include the letter herewith:

MAY 6, 1959.

Miss GWYNETH KAHN,
Time Magazine,
Rockefeller Center,
New York, N.Y.

DEAR MISS KAHN: It was good of you to take the time to write as you did on April 10 in reply to the scribbled note in which I requested discontinuance of my Time subscription.

Your letter, however, only serves to emphasize the primary reason for my decision. I do not believe my note made any reference to the school integration problem in any manner whatsoever, yet in replying to it you have promptly concluded that that was the source of my discontent with your editorial policy.

I have been a Time subscriber ever since I graduated from college and entered the business world which has been since 1937.

I do not recall in all those years any instance which Time magazine has attempted to give its readers a fair and unbiased picture of the South and the many constructive things which have been done to erase the heritage of bitterness and prejudices which were bound to be a natural aftermath of that tragic conflict which pitted brother against brother in this country.

It may surprise you but I hope will interest you to know that I was born and reared in Cumberland County, N.J., on a dairy and produce farm. In the first and second grades at Haleyville, N.J., grammar school I shared one of the old-style double school benches and desks with a pigtailed girl whose skin was as black as coal. During my freshman and sophomore years at Port Norris, N.J., high school, the occupant of the desk next to mine was a young man from a Negro family who lived at the "Shellpile," a colored settlement near Bivalve, N.J., occupied almost exclusively by families who earned their livelihood shucking oysters.

I have no reason to believe that life since that time has been any more fruitful for them nor any less fruitful for me because of this early relationship.

The relationship existed, however, under longstanding established customs of social and human relations in the area.

These customs have never existed throughout the South and as long as human beings are what they are, I am of the rather firm belief that such customs cannot be legislated into existence.

I have resided in the South for the past 26 years and until the entrance upon the scene of the NAACP, the colored people of the South were enjoying a gradual but very sound advancement in both living standard and living conditions through a mutual understanding between the two races of the many and complex problems which had to be overcome.

The race-baiting activities of the NAACP coupled with the grossly unfair editorializing such as displayed by Time magazine and other northern publications have virtually put an end to a very commendable record of progress through cooperation and have restored hatred, bitterness and demagogism on both sides.

While it is the good citizens of the South, both black and white, who are being made the immediate pawns in a game of political hypocrisy, it is this great Nation of ours which is destined once again to be the ultimate victim.

Very truly yours,

ED W. HILES.

Resolution of Reserve Officers' Association on FBI

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. THURMOND. Mr. President, the Reserve Officers' Association of the United States, one of the most patriotic organizations in our country, has recognized that the Federal Bureau of Investigation is being subjected to a storm of unjust criticism from subversive and uninformed groups. The Reserve Officers Association on June 26 adopted a resolution expressing wholehearted support for the Federal Bureau of Investigation, its director, agents, policies, and operations. I ask unanimous consent that a copy of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Federal Bureau of Investigation of the U.S. Department of Justice is under unjust criticism from subversive and uninformed groups and individuals; and

Whereas the Federal Bureau of Investigation is the only authorized civilian agency of the Government of the United States to make investigations relative to the internal peacetime security of this Nation and to protect this Nation from enemy within; and

Whereas these subversive attacks have been made against the person of the Director of the Federal Bureau of Investigation, J. Edgar Hoover, as well as the membership of the FBI, with intent to smear and belittle this patriotic and high-charactered organization: Now, therefore, be it

Resolved, That the Reserve Officers Association of the United States, assembled in conference this 26th day of June 1959, at Denver, Colo., does hereby support wholeheartedly and without reservation, the leadership of Director J. Edgar Hoover, the agents, the policies, and the operations of the Federal Bureau of Investigation in its correlated activities in the defense of our country; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Vice President of the United States, the Speaker of the U.S. House, the Attorney General of the United States, the Director of the Federal Bureau of Investigation, and the members of the Appropriations and Armed Forces Committees of the U.S. Senate and the U.S. House of Representatives.

REAR ADM. LEON J. JACOBI, USNR,
National President, Reserve Officers Association of the United States.
COL. JOHN T. CARLTON, USAR,
Executive Director, Reserve Officers Association of the United States.

Top-Ranking Government and Military Leaders Join in Paying Tribute to Congressman Dan Flood

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include herein the articles which concern the testimonial dinner given in honor of our beloved colleague DAN FLOOD in his hometown—which I had the honor to attend, together with our most able Speaker, the Honorable SAM RAYBURN, and Senator PAUL DOUGLAS, of Illinois. The affair, which was sponsored by various citizen groups, was a most outstanding one and paid high tribute to their Representative in the Congress:

[From the Editor's Page on station WILK, Wilkes-Barre, Pa., June 4, 1959]

There will be a local event on Saturday evening, June 6, which has considerable bearing on the story of Israel. I mean the dinner which is being given to our Congressman, DANIEL J. FLOOD, in recognition of his special services to his community. The public gathering will take place this coming Saturday evening at 6 o'clock, at the Wilkes College Gymnasium on South Franklin Street. The sponsors represent the entire community, and this is exceptional.

It is not often that a political figure can raise his community above the partisan prejudices of political rivalries. When a man appears who can do that, who can inspire all factions to embrace him with respect, admiration, and pride, then truly that man deserves that his neighbors should seek an opportunity to do him honor. Such a man is DANIEL FLOOD. All kinds of people, groups, and organizations have come together to have a part in this public demonstration of their regard for their Congressman.

DANIEL FLOOD has been a hard-working Congressman. The term "public servant," at times carelessly used, is a faithful description of this man. He has devoted himself to the service of the people he represents. In him is reflected the literal preciseness of the meaning of the name "House of Representatives." In that House he is the ideal Representative.

Among the residents of Luzerne County, Congressman FLOOD does not know any "important" people. Neither is he acquainted with any "common" people. All the people belong to him, and he understands that he belongs to all. He works zealously and with spirit for any cause or proposition bearing on the interests of any of his people, the only price for his advocacy being that he must believe it to be in the right.

His interest in Palestine came early in his congressional career. As far back as 1945 he sponsored in the House, in collaboration with Senator Taft in the Senate, a concurrent resolution, expressing the sympathetic interest of the Congress of the United States in the hopes and aspirations of the Jewish people for Palestine. He has been a consistent, articulate, and intelligent supporter of Israel.

In both Houses of Congress there are now a great many who recognize that Israel is the only stable, dependable, democratic nation in an area of tyranny, instability, dictatorship, and feudalism. Congressman FLOOD is one of those who understand that only Israel and Turkey can be counted as friends of the West in that region. But, Congressman FLOOD was among the first to understand it. As long ago as 1946, DANIEL FLOOD's interest in Israel was recognized by the local Zionist organization, when arrangements were made to plant a forest of trees in the Holy Land, in his honor. The certificate bearing witness to this distinction occupies a place of prominence in the Congressman's office.

Now that the entire community joins together to rejoice in him, it is timely for these matters to be recalled. They are important in themselves, for the idealism and devotion of Congressman FLOOD and others who joined him in helping to create the new nation of Israel, but in this context they also are useful in demonstrating the human sympathies and the sense of justice which Congressman FLOOD possesses in such abundant measure.

May this community continue to have pride and profit in him for as long as we deserve him.

CONGRESSMAN'S DAY—FLOOD WILL RECEIVE COMMUNITY TRIBUTE

Today is being observed as "DAN FLOOD Day" in Wyoming Valley.

Congressman DANIEL J. FLOOD is being paid tribute by citizens of this community for the many contributions he has made to the well-being of Wyoming Valley as representative of this area.

Tonight, at 6:30 o'clock, at Wilkes College gymnasium, Congressman FLOOD will be honored at a dinner expected to be attended by more than 700 persons.

The dinner is being sponsored by a large group of local citizens and friends of the Congressman and will be a nonpolitical, nonprofit affair.

Representative SAM RAYBURN, Speaker of the House will be the main speaker.

Speaker RAYBURN will head a delegation of Government officials and military leaders who came from Washington.

Judge J. Harold Flannery will be toastmaster. He will be introduced by Reuben H. Levy, general dinner chairman.

Others on the program will include the following: Invocation, Rev. Jule Ayers, pastor, First Presbyterian Church, city; humorist, Attorney Joseph L. O'Donnell, and benediction, Rt. Rev. Msgr. Francis A. Costello, pastor of St. Mary's Church, city. Music will be provided by Donlin's Orchestra, and the Wilkes College Collegians, a mixed chorus.

Besides Levy, other principals connected with arrangements for the dinner include the following: Program, Charles Weissman, program chairman, and John A. Hourigan, Jr., cochairman; dinner committee, William O. Sword; tickets, Frank A. O'Neill; reception, Rulison Evans; secretary, Livingston Clewell, and treasurer, George M. Nicholson.

[From the Wilkes-Barre Times Leader]

MEMORABLE EVENING

This should be a memorable evening in the life of Representative DANIEL J. FLOOD and his attractive wife who will share in the tribute to her husband at a public testimonial dinner at Wilkes College gymnasium.

Members of Congress, unless they are retiring from public service, rarely are feted, so this makes the occasion unique. Representative FLOOD perhaps has attended more gatherings for others than any man in local history, but tonight the tables will be turned and he will be cast in the role of honor guest.

What adds to this affair will be makeup of the audience. Speaker SAMUEL RAYBURN of the House of Representatives will head a contingent of Washington notables to the scene, an indication of the standing of DAN FLOOD in the Nation's Capital. The guest list, limited to 900 locally because of facilities, will constitute a cross section of the community, with Republicans competing with Representative FLOOD's fellow Democrats to do him honor. Present will be men and women from all walks of life, representing many faiths and with roots deep in the soil of a score of countries throughout the world.

A champion of capital and labor and ever so many other elements, as well as worthy causes without end, DAN FLOOD occupies an unusual position in the Eleventh Congressional District of Pennsylvania. That explains his mounting victories at the polls where he has the added distinction of being high man of both major parties, no mean feat.

A lawyer by profession, he is a politician by choice. He frankly loves his job and works at it accordingly, applying himself with the refreshing zeal of the dedicated public servant. The results have added immeasurably to his stature and speak eloquently for themselves.

At a time when men in office so often are targets of outraged taxpayers and others, it is stimulating to note that we have here a public official the people honor personally as well as politically by paying him the compliment of a testimonial in addition to giving him their overwhelming support at the polls repeatedly.

[From the Wilkes-Barre Record, June 6, 1959]

FLOOD TESTIMONIAL

For Congressman DANIEL J. FLOOD to be guest of honor at a dinner will be no new experience for him, but the affair to be held tonight at Wilkes College gymnasium is to be no ordinary show of good will. Primarily it is his friends at home who will be acclaiming this sixth-term Congressman as a public official, a fellow citizen, and a friend. At the same time distinguished associates of Congresman FLOOD, including Representative SAM RAYBURN, Speaker of the House of Representatives, who will deliver the chief address, will be listed among the guests.

Congressman FLOOD has good reason to take pride in the home setting of tonight's tribute and in the approving response which has come from outside as well as within the region.

Historically and contemporaneously Congressman FLOOD has established a reputation for himself as an exceedingly active Member of the House. He has responded in generous measure to the exacting demands of his post. He has earned the plaudits which can be expected to be his tonight for long-sustained and dedicated service.

TOP-RANKING GOVERNMENT AND MILITARY LEADERS JOIN IN PAYING TRIBUTE TO CONGRESSMAN DAN FLOOD—NINE HUNDRED TURN OUT FOR SPLENDID TESTIMONIAL

(By Libby Brennan)

Top Government officials, military leaders, representatives of business, labor, and the community in general assembled last night at Wilkes College gymnasium to pay glowing tribute to Congressman DANIEL J. FLOOD.

It was the largest gathering ever held to pay tribute to a resident of Wyoming Valley. Approximately 900 people attended.

Included among the dignitaries present were Speaker of the U.S. House of Representatives Sam Rayburn, Democrat, Texas; Senator Paul Douglas, Democrat, Illinois; Representative Michael J. Kirwan, of Ohio, former Plains resident; Gideon Surgay, consul of the State of Israel to New York City; Maj. Gen. David W. Traub, Rear Adm. G. F. Beardsley, Brig. Gen. Herman Nickerson, Robert Freedman, Director of the Budget; Air Force Maj. John W. Persons; Joseph J. Lawler, Pennsylvania Turnpike Commissioner; William Davlin, Secretary of Commerce; Brig. Gen. Anthony J. Drexel Biddle Jr., adjutant general, Commonwealth of Pennsylvania.

Two former Governors of Pennsylvania, Arthur H. James and John S. Fine; representatives of the Luzerne County courts, the mayors of Hazleton, Nanticoke, Pittston, and Wilkes-Barre, Chief Judge John W. Murphy, U.S. district court, and hundreds of other community leaders stood in respect to the work done for his home county and the Nation by Congressman FLOOD.

The evening was a full one for the guest of honor and his "Lady," beginning with a cocktail party at the Weissman Recreation Center, followed by the dinner and an afterdinner party at the home of Mr. and Mrs. John S. Cresko, Kingston.

SCORES OF TELEGRAMS

Telegrams were received from well-wishers from all over the United States, including special tributes from Pennsylvania Senators JOSEPH CLARK and HUGH SCOTT.

As the gathering of dignitaries formed, the guests of honor were escorted to the speaker's table by representatives of the local Naval Reserve unit under the command of Comdr. John C. Bush.

Rev. Jule Ayers opened the program with the offering of prayer. Reuben H. Levy, general chairman, thanked the guests and his committees for their cooperation.

He introduced Judge J. Harold Flannery, toastmaster for the evening, who reminisced over the early days that he and the guest of honor spent working together in the Little Theatre.

Judge Flannery then introduced Speaker of the U.S. House of Representatives SAM RAYBURN, of Texas, principal speaker.

"I think Christian civilization is in more danger today than it has ever been since the time of the Holy Man," the 77-year-old Texan declared.

"There are forces that deny God and the home; there are those who deny every element of decency and good will; there are people in the world who only recognize the material things," he continued.

People who have gained freedom have had to be willing to pay a high price for it, he stated.

TRIBUTE TO FLOOD

"As long as this crisis in the world exists; as long as we are threatened by those who

wish to destroy every element of decency and goodwill I am going to vote to levy taxes to pay for the material that will make us strong. This is a high price, but it is the only way to protect our liberty," the man who has served since 1913 in Congress stressed.

"The price for freedom is staggering and almost inconceivable but it must be paid."

Turning to the honored guest Speaker RAYBURN said: "We need experts in Government, men of character, integrity, ability, and industry. DAN FLOOD has lived up to the highest standards. In the years since I first met him he has grown in stature, knowledge, and popularity.

"In doing our work in Washington, the burden is made easier by having someone of the type and ability and decency of Congressman FLOOD.

FLOOD IS GRATEFUL

Rising to the podium, Congressman FLOOD addressed the assembled body: "What can one say in response to all you have done for me tonight?

"As I stand here so much in your debt, I see with true clarity that I am largely what you, my friends, have made me. Your belief and your faith and your confidence have built my career.

"May I dedicate this evening to the cause of helping this area to the fulfillment of its historic destiny. We have suffered embittered years of torment; we have experienced happy years of joy. But to our stand have rallied men of all faiths and conditions.

"Tonight, I see in this meeting a bridge between many diversified views which, I am told, do not always meet in full agreement. It is possible that we have emphasized too much our divergencies. I prefer that we emphasize more our unities. I promise that we give less consideration to our tensions and pay more attention to the good things that bind us together.

"It is possible that we have squandered our natural resources. But I submit that there are areas with a lack of resources, but where there is a people which in themselves are inexhaustible resources. Such is our community.

"The Nation is not unaware of our problems. You have permitted me the opportunity to bring these to the Nation's attention. A bevy of Senators, Congressmen, writers, economists, and a legion of others have examined us. In our trouble, from Washington and Harrisburg have come commissions. In my judgment, the only commission we invite now from these capitals is a commission against any other such commission.

ONE OF OUR VIRTUES

"We cannot guarantee that we can restore our rich past, but dynamism will do it if it can be done, and that is one of our many virtues here in the Wyoming Valley—dynamism.

"From the very bottom of my heart, I say to you that if in my soul of souls there has ever been any wavering as to our future, it has been banished forever in the warm flow of your friendship and demonstrated confidence."

"THIS IS YOUR LIFE"

"This Is Your Life, DAN FLOOD, the Devoted Public Servant," was the feature of the evening.

Mrs. Thomas Herbert (Kay Flood, sister of the guest of honor) narrated the background of her brother. His high school days were discussed by Attorney and Mrs. Maurice Cantor, classmates.

Congressman FLOOD's days at Syracuse University were told in a testimonial letter from Roscoe Drummond, columnist of the New York Herald Tribune.

The next phase, his interest in theatrics, was told by Miss Annette Evans who appeared with him in "The Swan" in 1933 in a Little Theater presentation.

Louis Greco, member of the American Legion National Committee on Countersubversive Activities, described the Congressman's interest in Veterans' Affairs.

The Honorable MICHAEL J. KIRWAN, Member of Congress from Ohio and a native of Plains, described FLOOD's early experiences in Congress.

Gideon Saguy, the Israel Consul, New York City, told of the guest of honor's interest in the affairs of Israel.

HIS MARRIAGE RECALLED

The next stage in his life, his marriage to the former Catherine Swank, was depicted through the appearance of his wife and Rev. Raymond E. Larkin, pastor of St. John the Evangelist Church, who married the couple.

The Congressman's interest in the National Guard armories and the Central European help program was described by Maj. Gen. Anthony J. Drexel Biddle, Jr., adjutant general, Commonwealth of Pennsylvania.

State Senator Martin L. Murray presented citations from the Commonwealth of Pennsylvania.

To a standing ovation, Senator PAUL H. DOUGLAS, Democrat, of Illinois, cosponsor of the Flood-Douglas bill for depressed areas appeared to describe the work of the sponsors.

DAN FLOOD and the future was depicted by the following high school seniors, Hugh James Godwin, Tom Glenn, Patrick O'Connor, Joseph Meighan and Robert Namovicz. Godwin spoke in behalf of the students.

PRESENTED WITH GIFT

Reuben Levy, general chairman, presented the guest of honor with a hi-fi stereophonic sound phonograph. Mrs. Flood received flowers and gifts.

Seated at the speakers' tables were: Rt. Rev. Msgr. Francis Costello, Maj. Gen. David W. Traub, Rear Adm. G. F. Beardsley, Brig. Gen. Herman Nickerson, Speaker of the U.S. House of Representatives Sam Rayburn, Hon. Daniel J. Flood, Reuben Levy, Judge J. Harold Flannery, Attorney Joe O'Donnell, Brig. Gen. Robert Freedman, Director of the Budget, Air Force, Maj. Gen. John W. Persons, Rev. Jule Ayres, Rev. Raymond E. Larkins, Maj. Gen. Anthony J. Drexel Biddle, Jr., Congressman Michael J. Kirwan, Senator Paul H. Douglas, Hon. Gideon Saguy, Israel Consul, county commissioners Bowden Northrup and T. Newell Wood, Judge Bernard Brominski, Judge Michael J. Eagen, Scranton, Judge Thomas J. Lewis, Judge Frank Pinola, Judge John J. Aponick, Judge J. W. Murphy, Scranton, U.S. District Court; Hon. Joseph Lawler, turnpike commissioner; William Davlin, secretary of commerce, Luther Kniffen, mayor of Wilkes-Barre; Frank E. Kieler, mayor of Nanticoke; S. Thomas Capparell, mayor of Hazleton; James J. McNulty, city solicitor for Scranton, representing the mayor; State Senator Harold Flack, State Senator Martin L. Murray.

Mrs. Daniel J. Flood, Mrs. Thomas Herbert, Mrs. Charles Weissman, Mrs. Reuben Levy, Thomas Herbert, Mrs. Harold J. Flannery, Mrs. Martin Murray, Miss Helen M. Tomascik, Mrs. Joseph O'Donnell, Mrs. Thomas Lewis, Attorney J. George Tomascik, Comdr. Ed Boyd, Eugene D. Hegarty, J. Harold Flannery Jr.

MEMBERS OF COMMITTEE

Members of the committee who assisted Mr. Levy with the arrangements included Livingston Clewell, secretary; George M. Nicholson, treasurer and the following:

Dinner committee, William O. Sword, chairman; program committee, Charles Weissman, John A. Hourigan, Jr., Roy E. Morgan; ticket committee, Frank A. O'Neill, Peter A. Garriety, R. E. Neal, Attorney James Lenahan Brown, John S. Cresko; publicity committee, Joseph F. Collins, Larry Greenspon.

Reception committee, Rulison Evans, chairman, David M. Baltimore, Percy A. Brown, Frank Burnside, Guthrie Conyngham, Victor G. Deihm, Frank A. English, John R. Gallagher, Dr. Vincent Gallizzi, George W. Kanarr, Thomas Kennedy, Joseph H. MacVeigh, John Malinowski, Mrs. Min Lurye Matheson, Andrew J. Sordoni, Jr., and S. M. Wolfe, Jr.

Sponsoring committee, Robert J. Barrett, Michael Bonchonsky, Eugene Burke, Eugene J. Considine, Miss Grace B. Daniels, Miss Annette Evans, Eugene Goldstein, Thomas E. Hefferman, Attorney Andrew Hourigan, Jr., Dr. Bronis J. Kaslas, Joseph Lester, Mrs. Thomas J. Mack, Donald MacKenzie, Jr., Frank Mueller, R. N. Myers, Vincent O'Hara, James Price, Attorney George I. Puhak, Patrick W. Shovlin, Roy Stauffer, Attorney Enoch H. Thomas, Jr., Thomas C. Thomas, Miss Esther Tinsley, Col. Frank Townend, Frank Walser, and Aaron Weiss.

SPEAKER IN SPOTLIGHT

Saturday was DAN FLOOD Night at Wilkes College gymnasium, where a testimonial dinner was given in his honor, but with the hearty approval of Representative FLOOD and others present at this unique gathering SAM RAYBURN, Speaker of the House of Representatives, shared the spotlight.

This is understandable, as he is the third ranking officer in the Government at Washington and holds an office, comparable in some respects with the Presidency itself in influence and responsibility. His visit to Wilkes-Barre on this occasion was not only an impressive tribute to Mr. FLOOD, but to the community.

Of Speaker RAYBURN, it has been said that he has listened to more spoken words than any individual living. By the same token, he has heard more words of praise about himself than any other American, which is saying a great deal. As a result of his weekend visit to this city, important additions have been made to his impressive record.

SAM RAYBURN is an unusual public official in that he rose to high office on the basis of his record as an American. He always has concerned himself with the public interest. He has fought for free enterprise and for labor in turn, championing whichever cause he felt was deserving of support at the moment. There have been no strings attached to him. Nobody thinks of him other than as a good citizen and official, dedicated to the advancement of the American way of life and the cause of freedom throughout the world.

Speaker RAYBURN is a realist. For instance, he dislikes paying taxes as much as the next individual, but he is for higher taxes if they will provide the sinews that will keep America independent in these perilous times. His audience agreed with him on Saturday night, judging from the enthusiastic applause that greeted this phase of an outline of his philosophy of government.

Mr. RAYBURN is the author of many measures that have had a far-reaching effect on the Nation's economy and will for countless years to come. As in the case of the late Senator Robert Taft, Republicans and Democrats alike respect Mr. RAYBURN as Speaker and dean of the House both for his ability and integrity.

As a Member of Congress, he belongs to the Fourth Congressional District of Texas; as Speaker, he belongs to the country, including the Eleventh Congressional District of Pennsylvania, represented by DAN FLOOD.

The warmth of Wilkes-Barre's welcome to Speaker RAYBURN is evidence that he won immediate acceptance and a permanent place in the affections of the community. Obviously, his reputation as an outstanding American and a dedicated public servant had preceded him to our city and he fully justified the expression of confidence that was forthcoming.

A Message to College Graduates

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News of June 26, 1959:

A MESSAGE TO COLLEGE GRADUATES

(By Abraham Schlacht)

No light illuminating the intellectual horizon has cast a greater glory in contemporary history than that of education. It is the lifestream of our democracy.

Our college graduates are the luminaries in our educational firmaments. They are our mighty arsenals lifting our democratic ideas and ideals throughout the world. Our graduates are leaving college, but the knowledge they have acquired will never leave them. For she always exults in their success and sorrows in their failures.

There are times when circumstances inspire greatness of soul. Now more than ever we need stout hearts, trained minds, dedicated men and women to strengthen our ramparts and to repel the vicious elements here and abroad that seek to tear down the citadel of our institutions.

We cannot build for the future of our youth unless we build our youth for the future. We are now faced more than ever before with the march of youth rather than the march of time. Our graduates have studied in the company of great intellects in history as they pondered over their works. Our graduates have been instructed and trained in the ways of clear thinking.

The era in which we live is achieving things which make the eight wonders of the world a mere heirloom, so many are its vast accomplishments. Those who have followed in the path of education have been the benefactors of mankind. They have brought about the test tube, the electric ray, the surgeon's instrument, and the countless benefits that came from a greater knowledge of chemistry and physics. They have indeed played an extraordinary part in mankind's service.

Opinions may alter, names may change, creeds may rise and fall, but behind education, imperative as it is, is the moral law. It should be remembered that obedience to the moral law and the deep religious convictions of our people have built the greatness of America. It should ever be recalled that success is not measured merely by degrees of scholarship but rather by the moral victory attained. The applause of men, and the smile of fortune, will be like dust driven aimlessly by an idle wind, and direct it to the service of our fellow men. Nothing that is good comes easy, for life is made up of cheers and tears.

Let our college graduates bear in mind as they go about their tasks that progress has never been in direct line of ascent. There have been advances, peaks, and then descents into the valleys. There is progress and retrogression, but the next forward move somehow brings man to a higher and clearer view of things.

College graduates: You are our hope of today and our promise of tomorrow. You are the inheritors of a great tradition. With your knowledge, your vigor, your integrity, your faith—your future will be a bright one.

Harry B. Lee, Jr., of Chicago, Wins Coveted Goodwin Medal Award for Conspicuously Effective Teaching at Massachusetts Institute of Technology

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. BOGGS. Mr. Speaker, we in Congress, as well as all of the people of this great Nation, have had our attention focused on the importance of education to our Nation's welfare and our very existence in this modern world. Tremendous emphasis has been placed on education, particularly in the field of science and engineering.

Things are happening so fast in this so-called space age that education is foremost in the mind of all of our people. Naturally, we look to our grade schools, high schools, colleges, and universities for outstanding leadership in education.

In the field of higher education there is no more outstanding institution in the entire world than the Massachusetts Institute of Technology at Boston, Mass., which recently had installed as its 11th president Julius Adams Stratton. At this inaugural, President Lee A. DuBridge, of the California Institute of Technology, warmly called rival Massachusetts Institute of Technology "the leading college of science and engineering in the world."

This high praise from famed Caltech was no polite gesture. M.I.T. began in 1861 as a land-grant professional school for engineers. When Seattle-born "J" Stratton took his electrical engineering degree there in 1923, its aims were still basically the same. Last year, under Acting President Stratton—who stepped up from chancellor when President James R. Killian, Jr., became President Eisenhower's science adviser—M.I.T. spent an estimated $22 million for operating costs, another $56 million for sponsored research projects. It produces some of the country's ablest pure physicists; it has grown from the Nation's main wartime radar laboratory to the leading center of electronics and computer development. Out of its orbit have spun a dozen graduate-launched electronics companies—for example, Raytheon—in the golden brain center of surrounding Cambridge. It attracts more foreign professors—198 last year—and has a higher proportion of foreign students—12.4 percent—than any other U.S. institution. Above all, M.I.T. has led in broadening scientists by trying to ground them as thoroughly in the liberal arts as in the arts of technology.

For such achievements, Julius Stratton can claim major credit. No narrow specialist—he left Cambridge in 1923 to study French literature at the universities of Grenoble and Toulouse, still refreshes himself by reading French and German history in the original—Stratton is humanist as well as scientist. Under President (1930–48) Karl Compton, who first aimed M.I.T. toward real scientific eminence, Stratton taught electrical engineering and physics, won wide respect for his wartime radar research and later for his administrative abilities in organizing the institute's Research Laboratory of Electronics. Under President (now board chairman) Killian, who made him righthand man, Stratton engineered an important reform: Raising the departments of humanities and social sciences to equal rank with the institute's other professional schools. Today, M.I.T.'s curriculum spans the whole range of man's technology, from politics to psychology, from international relations to interstellar space. "M.I.T. must adapt itself to the needs of a changing epoch," Stratton said last week in his inaugural address. "It must assume new roles and accept new responsibilities." But not at the expense of education, he vowed, and laid out three guidelines for his administration.

At his impressive ceremony President Stratton said:

> We must strive to develop more effectively the creative, imaginative, constructive powers of the student. University research serves but half its purpose if it becomes remote and isolated from the students themselves.
>
> We must bring about a more productive integration of the humanities and social sciences with the physical sciences and engineering.
>
> We have an obligation to impart to our students an understanding of both the privileges and responsibilities inherent in the professional estate. The truly professional man must be imbued with a sense of responsibility to employer and client, a high code of personal ethics and a feeling of obligation to contribute to the public good. * * * By precept and example, we must convey to (students) a respect for moral values, a sense of the duties of citizenship, a feeling for taste and style, and the capacity to recognize and enjoy the first rate.

Not only was Massachusetts Institute of Technology being honored with the inaugural of a new president, but it also received a very distinguished honor in having one of its straight A students in its graduating school, who was graduated this year with a master's degree in electrical engineering, awarded the exceptional and coveted honor known as a "Goodwin Medal Award" given for "Conspicuously Effective Teaching." This most prized medal, with $500 was awarded to Harry B. Lee, Jr., of Chicago, Ill. The only time this is awarded, and the standards and requirements are exceptionally high, is only in the years when a graduate student qualifies under these exceptionally high standards. In some years it is not given at all because no graduate student makes the sufficient qualifications.

Here is a remarkable example of the great opportunities in the field of higher education in the United States for a student working on his master's degree, making straight A's, and at the same time was teaching classes in this great university with such outstanding effec-

tiveness that he was awarded this highly coveted honor at a school which, as has above been stated, is one of the outstanding engineering schools of the United States if not in the world.

Quite naturally, Harry B. Lee, Jr., is to be congratulated in his outstanding work. I believe his remarkable achievements are a splendid example of what we should hope that all our youth would work to acquire in the various schools, colleges, and universities throughout the United States. It is most obvious that without good teachers you certainly cannot expect to have outstanding students. Here is a unique example of a combination of both. Most sincere congratulations go to him.

I wish to add that Harry B. Lee, Jr. of Chicago, Ill., happens to be a nephew of my distinguished colleague and old friend, the Honorable JAMES H. MORRISON of Louisiana.

Support of Postmaster General in Prohibiting Obscene Matter From the Mail

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. MURRAY. Mr. Speaker, considerable misunderstanding has arisen lately regarding Postmaster General Summerfield's action of banning certain publications from the U.S. mail on grounds that such publications are obscene and filthy. I think it should be made clear that it is not the Postmaster General who says obscene material should not be sent through the mail—it is the law, and the courts have interpreted what is obscenity. The Postmaster General is merely carrying out his obligations under the law.

I believe that the Postmaster General should be commended, rather than condemned, for the action he has taken. I have received considerable correspondence from church and civic organizations strongly supporting the Postmaster General in the position he has taken on this matter.

As several examples, I would like to insert in the RECORD letters I have recently received from Dr. Carl F. Reuss, executive secretary, Board for Christian Social Action, American Lutheran Church; Dr. Caradine R. Hooten, chairman, Churchmen's Commission for Decent Publications; and Mr. Martin Work, executive director, the National Council of Catholic Men, which indicate that a vast segment of the citizens of this Nation want to have obscene matter barred from the mail and commend the Postmaster General for the action he has taken recently in banning literature that has been deemed obscene and filthy.

As chairman of the House Post Office and Civil Service Committee, I have been concerned for many years with this problem. I would like to say that no Postmaster General has shown more courage and taken greater direct action in this regard than Mr. Summerfield.

I wish to commend Postmaster General Summerfield for the worthwhile effort he is making to uphold the law which prohibits obscene matter from going through the mail.

BOARD FOR CHRISTIAN SOCIAL ACTION,
AMERICAN LUTHERAN CHURCH,
Columbus, Ohio, June 25, 1959.

The Honorable TOM MURRAY,
Chairman, House Post Office and Civil Service Committee, Room 215, Old House Office Building, Washington, D.C.

MY DEAR MR. MURRAY: It has been brought to my attention that the Postmaster General is being attacked for decisions prohibiting specific publications defined as obscene material from going through the mails.

As a Christian citizen I expect the laws passed by our representatives in the Congress to be enforced fairly and firmly by administrators in the executive branch. A public official should be commended, not condemned, for enforcing laws impartially, without fear or favor.

Of course many of us might differ as to whether a specific publication is, or is not, obscene. The administrator, however, must make his decision on the laws as he understands them. If abuses result, we have the courts to protect us.

As much as anyone, I abhor censorship. It is dangerous. It can be misused and can be destructive. On the other hand, I believe that obscenity is not entitled to the benefits and protection of the U.S. mails. If laws defining obscenity are not adequate, they should be amended to be realistic and workable.

Impartial enforcement of laws, without fear or favor, is expected of public servants. If such enforcements proves the need for changes, the people will support needed revisions. I firmly believe, however, that our members want and demand legal protections against obscene matter in the mails.

Sincerely yours,

CARL F. REUSS,
Executive Secretary.

THE GENERAL BOARD OF TEMPERANCE,
THE METHODIST CHURCH,
Washington, D.C., June 27, 1959.

Hon. TOM MURRAY,
Chairman, House Post Office Committee, Washington, D.C.

DEAR MR. MURRAY: As chairman of the Churchman's Commission for Decent Publications, and in my own behalf, I want to thank you for vigorous defense of the American people against unconscionable invasions that are made and threatened by purveyors of salacious materials, sometimes called literature.

While supporting your every effort to strengthen existing laws against the transmission of such filth, I want to express deep chagrin over unjust criticisms recently directed against the Postmaster General's Department for seeking to enforce the good protective laws we now have.

The Hon. Arthur E. Summerfield deserves the wholehearted commendation of all good citizens for his courageous performance of duty in checking this unlawful and unwanted flow of vulgarity through the U.S. mails. This is definite encouragement to work now being done by so many to encourage better and cleaner living among all groups of the American people.

With the feeling that your praiseworthy endeavors cannot be successfully confused with ideas of "censorship", and prayers for your success, I am

Sincerely yours,

C. R. HOOTON.

THE NATIONAL COUNCIL
OF CATHOLIC MEN,
Washington, D.C., June 26, 1959.

Hon. TOM MURRAY,
U.S. House of Representatives, Washington, D.C.

DEAR MR. MURRAY: The recent attacks upon Postmaster General Arthur E. Summerfield resulting from his action to ban from the mails the book "Lady Chatterley's Lover" prompts me to reiterate the position of this federation stated by our president, John Cornelius Hayes, in his testimony last month before the subcommittee investigating the mailing of obscene and pornographic material:

"* * * any governmental censorship necessarily impinges on the individual's freedom to communicate (which stems from his right to know), and—this freedom is absolutely essential, not only to the development of the individual, but also to the democratic state. But this freedom to communicate also has obvious social implications, which require that the freedom be exercised within the limitations imposed by the equal freedom of others in society and by the general welfare. To this end, public officials have a duty of watchfulness. * * *"

No amount of oratory about civil liberties or freedom of speech or the blight of governmental censorship will influence mothers and fathers who seem to be fighting a losing battle against juvenile delinquency, especially when even the power of government appears to have been enlisted against them through the use of the mails and through the subsidy of the second class mailing privilege. Nor can American parents be persuaded that obscenity is practically indefinable. They know it when they see it, because, as rational beings, social by nature, they have the inherent competence of making practical moral judgments in accord with a social conscience.

In banning "Lady Chatterley's Lover" from the mails, the Postmaster General was exercising the "watchfulness" expected of public officials, as expressed in Mr. Hayes' statement before your subcommittee. On behalf of our president, the executive committee and the 8 million American Catholic men who constitute the National Council of Catholic Men, I would like to commend Mr. Summerfield for his courageous and forthright action in this instance and to reassure you of the support of this federation in your efforts to secure the enactment of stronger measures to stem the increasing flow of mail-order obscenity.

Sincerely,

MARTIN H. WORK,
Executive Director.

They Would Destroy Anglo-Saxon Influence

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. DAVIS of Georgia. Mr. Speaker, on June 24, 1959, the Metropolitan Herald, one of the South's most distinctive community newspapers, printed in Atlanta, carried a most thought-provoking editorial entitled "They Would Destroy Anglo-Saxon Influence." In these days when we see so many assaults against our beloved Constitution, it is heartwarming to read such a concise and fac-

tual analysis of some of the factors which have made us a great Nation. Under consent to extend my remarks, I insert the editorial herewith:

THEY WOULD DESTROY ANGLO-SAXON INFLUENCE

Reading the liberal press and the so-called liberal columnists, these days, one gets the impression that those of Anglo-Saxon heritage have never contributed anything to the United States except prejudice, bigotry and a complete disregard for the law of the land.

The fact is in much of the public press, people with an Anglo-Saxon background are considered of little import. Their religion, love of personal liberty, their devotion to self-government and the written Constitution is considered stupid and intolerant.

All thoughtful Americans recognize that people of many nationalities contributed much to make the United States great.

However, every honest historian must admit that it was the Anglo-Saxon heritage of love for liberty which made this Nation possible. The great leaders of the Revolution were men in whose hearts and souls burned the flame of liberty, inbred in the Anglo-Saxon tradition.

Our Founding Fathers, determined that this new national government would never become as despotic as had the English king, had so much concern over the rights of the ordinary citizen they brought forth a written Constitution enumerating these rights and made it "the supreme law of the land."

Now we are told by so-called modern authorities that our written Constitution is outdated, that it is "a near plot" against the common man and that it has no place in the modern world.

Because those of the Anglo-Saxon heritage have been the foremost defenders of the Constitution, they have been slandered, smeared, scorned and accused of seeking to undermine the majesty and authority of "the law of the land."

We would remind these critics that from the day when King John was forced to sign the Magna Carta in 1215 down to the present day this Anglo-Saxon heritage has contributed more to the cause of freedom and self-government than all other sources combined.

History also records the fact that of all the major nations, only those of the English speaking nations, with their Anglo-Saxon traditions, have been able to escape the iron heel of political dictatorships.

No wonder, then, those alien philosophies and ideologies are repugnant to those of Anglo-Saxon background. No wonder, then, those who seek to destroy the United States, realize they must first destroy the Anglo-Saxon influence.

The cunning campaign now underway in the United States is part and parcel of a master plot. Destroy those who hold to the Anglo-Saxon traditions of self-government and it will be able to divide and conquer this Nation from within.

Federal Credit Union Act

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. FOLEY. Mr. Speaker, Friday, June 26, 1959, was celebrated on the floor of the House as Credit Union Day, the 25th anniversary of the passage of the Federal Credit Union Act of 1934. On that occasion, a number of distinguished Members of the House rose on the House floor to pay tribute to the effectiveness of the Federal Credit Union Act. The distinguished gentleman from Texas [Mr. PATMAN] gave us some of the history of the passage of the act, and others who were Members of the House when the act was passed referred to the historical development of this important legislation.

I felt I could add very little to the admirable statements of other distinguished Members with greater legislative experience in connection with Federal credit unions. But I want to go on record in support of the vitally needed new amendments to the Federal Credit Union Act incorporated in the Patman bill, H.R. 5777.

The Maryland Credit Union League, which is composed of 192 credit unions in the State of Maryland, consisting of 114,000 members, has prepared a statement of the "pros and cons of credit union" which I feel is a very valuable contribution to this whole discussion. Since I believe this document can be of value to my colleagues in considering legislation in this field, I ask that it be inserted in the Appendix of the RECORD following my remarks.

THE PROS AND CONS OF CREDIT UNIONS

(By the Maryland Credit Union League, Jan. 23, 1959)

ANTICREDIT UNION

Credit unions are foreign and un-American.

PROCREDIT UNION

Credit unions originated in Germany. However, they have become completely Americanized. They are the "Do-It-Yourself" movement of finance and just as American as any other do-it-yourself project. Our whole American heritage of culture and government has its roots and its origins in Europe, but all have become thoroughly Americanized, including credit unions. Do you think that the White House, the Senate, the House of Representatives and thousands of publicly owned, profitmaking corporations would have credit unions, if they were foreign and un-American? There's certainly nothing un-American about a group of people getting together to help each other. That's the American way.

ANTICREDIT UNION

Credit unions are socialistic.

PROCREDIT UNION

Credit unions are the opposite of socialism. They help their members become practicing capitalists. Each credit union is a corporation owned and operated by its shareholders, not by the Government as in socialism. The largest number of credit unions are in publicly owned, profitmaking industrial corporations. Credit unions teach their volunteer workers the principles of management and finance. They teach their members how to practice thrift, how to get out of debt, sound buying, and the pride and responsibilities of ownership. They personify the American ideal of self-government, ruled by the membership from within.

ANTICREDIT UNION

Credit unions are cooperatives which are dedicated to the elimination of the profit motive.

PROCREDIT UNION

Credit unions are cooperatives. Cooperatives have a long history in the United States and are provided for in both Federal and State laws. However, the credit union movement is not against the profit motive. Some extreme individuals and authors in the cooperative groups are against profits. These men do not speak for the credit union movement. We cannot be held responsible for what they say. Arguments of this type against credit unions are based on statements not made by credit union spokesmen. No CUNA statement ever has been made against the profit motive in this country. This is the old, old device of "guilt by association." All credit unions are co-ops, but all co-ops are not credit unions.

ANTICREDIT UNION

Credit unions are tax dodgers and pay no taxes.

PROCREDIT UNION

Credit unions do pay taxes. The question here is that credit unions do not pay income taxes. The reason is simple. Credit unions do not make a profit. They do not do business with the public. They do business only with their own shareholders * * * at no profit. The officers and committeemen of credit unions are all volunteer, nonpaid workers, except for the treasurer. Credit unions for the most part pay property and other taxes. Their members pay income taxes on their dividends. The tax exempt status of nonprofit organizations is well established in the United States. Many organizations are exempted by law from paying income taxes. Among them are religious and charitable organizations; business leagues, civic and employees associations; labor, agricultural, and horticultural organizations; social clubs, fraternal beneficiary societies; Federal employees associations; teachers retirement associations; local benevolent life insurance associations; mutual irrigation and telephone companies; cemetery companies; religious and apostolic associations; corporations organized to finance crop operations; and farmers cooperative associations.

ANTICREDIT UNION

Credit unions are unfair competition to banks and other financial institutions.

PROCREDIT UNION

Credit unions create business for banks. Most of the savings deposits and loans made by credit unions are too small to be profitable for banks. By law all credit union receipts must be deposited in a chartered bank, thus creating large, single commercial accounts for the banks. Credit unions do compete with financial institutions making small loans, but only within their own membership. The American system was built on competition. Credit unions always will be competitive. Incidentally, 32 banks, including that of the president of the American Bankers Association and all but one of the Federal Reserve banks, have their own credit unions.

ANTICREDIT UNION

Credit unions get free rent and management subsidizes them with quarters, heat, and light.

PROCREDIT UNION

Management finds that it pays to encourage and help credit unions because it takes the burden of the employees financial problems and garnishments out of its hands. Also the credit union helps make happier and safer employees who do not lose time or worry over financial problems. Many credit unions do pay rent and do pay for their utilities. In fact, many credit unions have their own modern building outside the plant and are not subsidized in any way. Managements with credit unions are not the ones complaining.

ANTICREDIT UNION

Credit unions are making too many big loans and getting away from their original purposes.

PROCREDIT UNION

How big is big? Size was never a real consideration in making credit union loans. The need and character of the member applying for the loan is the true consideration. Although many loans are made for automobiles and the like, the great majority of credit union loans are for provident and remedial purposes, not for luxuries. The average credit union loan made in Maryland is $380. Only 15 percent of the people can make bank loans. Banks and other financial institutions can make much larger loans for much longer periods than credit unions. The credit union philosophy of service and thrift and self-help has not and will not be changed.

ANTICREDIT UNION

Credit unions are planning a checking account system permiting members to write checks.

PROCREDIT UNION

This is not true. The basis of this charge is the misinterpretation of recommendations made in two bills in the last Congress. These would have permitted credit unions (1) to pass on actual bank charges for cashing checks, such as paychecks for members, and (2) to pass on actual bank charges for writing checks paying off creditors of members. In no instance did the credit union spokesmen advocate a checking account system.

ANTICREDIT UNION

Credit unions are advocating a central banking system of credit unions and the capital will be used to finance cooperative enterprises.

PROCREDIT UNION

Not true. First, the charge of advocating a central banking system of credit unions comes from misinterpretation of provisions in two bills before the last Congress allowing Federal credit unions to deposit funds in central credit unions. The primary purpose of central credit unions is to provide a source of credit for the credit union officer who, by law, does not enjoy full borrowing privileges from the credit union he serves. Central credit unions also make possible the flow of credit union funds within a limited area so that credit unions can help each other. Of the many State central credit unions which have long been in operation, not one has served as a source of capital for cooperative enterprises. Second, as for capital being used to finance cooperative enterprises, this was suggested by a man not connected with the credit union movement. Again, credit unions should not be held responsible for remarks, made by people outside the movement, or who do not represent the official policies of CUNA.

ANTICREDIT UNION

Credit unions are multiplying too rapidly and have large goals for the next 5 years.

PROCREDIT UNION

Misinterpretation of figures used in "Operation Impact" caused this charge. They were intended to demonstrate to the movement how little of the potential job now is being done, and how much remains to be done. This is considered sound practice in private business and marketing. Why can't credit unions use the same technique?

ANTICREDIT UNION

Credit unions are not serving the lower income groups as originally intended.

PROCREDIT UNION

On the one hand credit unions are charged with "multiplying too rapidly" and on the other hand are accused of not serving all of the lower income groups. The credit union movement is expanding to take care of as many of them as possible as quickly as possible. Hundreds of thousands of people are turning to either banks or credit unions for small loans. If the need for credit unions is there, we will attempt to fill it.

ANTICREDIT UNION

Credit unions get a free ride at the taxpayers' expense.

PROCREDIT UNION

Not true. The Bureau of Federal Credit Unions which charters and supervises credit unions operating under the Federal Credit Union Act draws no money from the tax rolls. It is supported entirely by the credit unions themselves through the supervisory and examination fees they pay. And State chartered credit unions also pay their own way with examination and filing fees to the State supervisory agency. In Maryland this is the State Banking Department.

ANTICREDIT UNION

Credit unions have amateur and incompetent management.

PROCREDIT UNION

Credit unions have good management and their record proves it. True, some credit union officers are not experienced, but the many training and field programs both by the league and by CUNA are excellent. In fact many company managements report that they watch for up and coming credit union officers because they find that these men receive such excellent training and experience that they are fine executive material. Credit union officials are much closer to the problems of their credit unions and members than the officers of other financial institutions can ever be. And the great majority are volunteers, motivated by the desire to help their fellows.

ANTICREDIT UNION

Credit unions are unsafe places to put your money because their funds are not protected.

PROCREDIT UNION

Credit unions do not have deposit insurance and for a very good reason. Any bank having deposit insurance is forced to close its doors for liquidation when poor management or defalcations cause it. Credit unions affiliated with the league and CUNA can carry maximum bond coverage up to $2 million to cover defalcations, and would not have to close in event of even large embezzlement. Also many leagues have stabilization funds to handle liquidation problems. Affiliated credit union liquidations usually result in no loss to its shareholders. Most credit unions give their depositors and borrowers insurance covering their deposits and loans at no extra cost.

ANTICREDIT UNION

Credit unions are getting too large.

PROCREDIT UNION

Who is to say if something is "too large?" How long is a piece of string? How high is up? It would seem that "too large" applies only to the other fellow, or to a competitor. Banks and companies are allowed to grow. The Government is growing. Credit unions are growing too. But they are small in comparison with other financial institutions. The largest credit union in the country is very small compared to a metropolitan bank of even average size. It is our hope that each credit union will grow large enough to fill the needs of its members, no larger, no smaller. We have not reached this point yet.

ANTICREDIT UNION

Credit unions give organized labor a foothold in a company.

PROCREDIT UNION

Credit unions are one thing that management and labor agree on. Both are in favor of them. Credit unions have nothing to do with organized labor, except that some members are naturally also members of labor unions. In fact there are labor unions with their own credit unions, just as there are banks and many thousands of private corporations with credit unions. Credit unions are not connected with organized labor. The word that scares some management people here is "union." They might as well be scared of the United States, because it too is a union.

Memorial for James Madison, an Honor Deserved

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. KASTENMEIER. Mr. Speaker, earlier this week I inserted into the Appendix of the RECORD an article by Irving Brant in which he urged that a suitable memorial be built for our fourth President, James Madison, for whom the capital city of the State of Wisconsin, which I have the privilege of representing, was named.

The Washington Post newspaper and I promptly second the suggestion, and today the Washington Post, in its issue of Wednesday, July 1, 1959, has printed an article by Francis de Sales Ryan, a retired Treasury Department official, author of Treasury Pageant and other volumes of local history, and a recognized student of Washington folklore which lends more support for this worthy project. The article follows:

AN HONOR DESERVED

President James Madison, fourth President of the United States, richly merits a public memorial here in the Capital City as urged by Irving Brant and endorsed by your June 28 editorial, "Neglected Father."

Indeed it would be most fitting and appropriate that the discarded columns of the Capitol's east front form a part of the proposed memorial, for it was Madison himself who first selected the site for the Capitol and fought against powerful forces to have his selection approved.

History records that when Congress enacted a bill called "An act establishing the temporary and permanent seat of Government of the United States," no reference was made to the exact location of the Capital City or the Capitol Building.

At President Washington's request James Madison and Thomas Jefferson studied the problem and Jefferson agreed with Madison on the choice of the site now occupied by the Capitol. Their agreement received the hearty approval of the President, but met with vigorous congressional opposition. Helen Nicolay, in "Our Capital on the Potomac," records the judgment of historians in stating that "James Madison's deft parliamentary skill * * * saved the Potomac project from defeat."

Moreover, Madison selected the very names for our District and our Capital City. When the purchase of the land had been effected, President Washington selected three Commissioners to take charge of the surveying and laying out of the District. The three Commissioners invited Madison and Jefferson to meet with them.

At their first meeting Madison suggested that the new district be called "The Territory of Columbia," in honor of Christopher

Columbus, the discoverer of America; and that the Capital City be known as "the city of Washington," in honor of the Father of our Country.

Both of these suggestions were adopted and for many years the official designation of our city was "the city of Washington in the Territory of Columbia."

Records of the Treasury Department show that when the British invaders were nearing Bladensburg during Madison's administration, he hurried to the office of the Secretary of the Treasury and borrowed two Army pistols which always hung behind the Secretary's desk. Then, mounting a horse, the President hurried out to the battlefield and fought beside General Widner until retreat was sounded. He loved his country with a great love and in a farewell letter to the American people, which he left among papers to be opened after his death, he wrote:

"The advice nearest my heart and deepest in my convictions is that the Union of the States be cherished and preserved. Let the open enemy to it be regarded as a Pandora with her box opened; the disguised one as the serpent creeping with his deadly wiles into Paradise."

Madison was a scholar and a Christian gentleman. While he was studying at Princeton University he wrote a manuscript, now at the Library of Congress, in which he copied 29 of the proverbs of Solomon from the Bible. One of them, heavily underscored, is a proverb that he often quoted in letters and addresses. It reads as follows:

"Get wisdom because it is better than gold, and purchase prudence for it is more precious than silver."

How appropriate it would be if these words were carved into the stone of a majestic memorial, formed of the 24 columns from the east front of the Capitol, as a grateful Nation's tribute to a brave soldier, a brilliant statesman, and an excellent President of the United States, James Madison.

FRANCIS DE SALES RYAN.

Proposing the Corn Tassel as National Floral Emblem—June 30, 1959

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. CARTER. Mr. Speaker, I rise today to join that growing group of Members of Congress who have supported the various resolutions to have the golden corn tassel made our national floral emblem.

In the beautiful corn tassel we have something that is truly indigenous to the Americas. Geologic artifacts indicate the presence of corn here long before the coming of the first settlers. The Indians knew it well and cherished it for its lifegiving abundance. Then when the first settlers came to America the Indians passed this along to them and it sustained our early Americans through those very trying early years and through their conquest of the continent just as it continues to sustain Americans today. It is a universal symbol of the productivity of our American soil and is grown in all the 50 States to some degree, not the least of which is in my own native State of Iowa.

Other proponents of the golden corn tassel as our national floral emblem have confined their efforts largely to tracing its historical usage and to disparaging for one reason or another the other flowers and floral symbols which have been proposed for adoption as our national floral emblem.

I would like to point up the fact here today that some of our most outstanding predecessors in this Congress and in American history were very conscious of the unique place of corn in American life and of its symbolism of beauty, productivity, and fertility. In fact, a monument to corn, an everlasting monument, exists in this very Capitol Building and was permanently incorporated into its architecture in the early 1800's. I speak, of course, of the six cornstalk columns and capitals which are located on the ground floor vestibule of the Law Library entrance of the U.S. Capitol Building. These were built into the Capitol during the term of B. H. Latrobe, who served as Architect of the Capitol from 1803 to 1811 and from 1815 to 1817—break in service due to suspension of work at the Capitol on account of war with Great Britain.

Latrobe, in a letter of August 28, 1809, to Thomas Jefferson, speaks as follows of these columns and capitals:

DEAR SIR: I have packed up and sent to Richmond to be forwarded to Monticello a box containing the model of the capital of the columns of the lower vestibule of the senatorial department of the north wing of the Capitol, which is composed of maize, on a short frustum running about 4 feet from the ground. It may serve for a dial stand, and should you appropriate it for that use, I will forward to you a horizontal dial in Pennsylvania marble of the proper size. These capitals during the summer session obtained me more applause from Members of Congress than all the works of magnitude or difficulty that surrounded them. They christened them the "corncob capitals," whether for the sake of alliteration I cannot tell, but certainly not very appropriately.

Then Thomas Jefferson, in a letter to Latrobe dated October 10, 1809, at Monticello, had the following to say:

I congratulate you on the successful completion of your great arch of the Senate Chamber as well as that of the Hall of Justice. I have no doubt you will finish those rooms so as to be worthy counterparts of that of the Representatives. It would give me pleasure to learn that Congress will consent to proceed on the middle building. I think that the work when finished will be a durable and honorable monument of our infant Republic, and will bear favorable comparison with the remains of the same kind of the ancient republics of Greece and Rome. I have no doubt that your cerealian Capitol will be handsome, and I shall be very happy to receive the model of it.

Of course, this latter reference by Jefferson is to the cornstalk columns.

Latrobe, in a letter of November 5, 1816, to Thomas Jefferson several years later again speaks of these columns and capitals after the burning of the Capitol by the British in 1814.

Dear Sir: Your letter of the 27th of August received. * * * You have done my capital much honor in making it the support of your dial. The columns and capitals as executed and standing in the north wing of the Capitol on the ground floor were not much injured by the British, so little, indeed, that I wish some part of the building to remain as they left it. I do not propose to repair them unless the President shall order it to be done.

And in more recent times, the author, Frary, in his book "They Built the Capitol" gives the following interesting description of the columns and capitals designed by Latrobe in this very building:

His fertility of imagination is well illustrated in the capitals and columns which he designed for the ground floor lobby and the small rotunda of the Senate or north wing of the Capitol. In the former he deserted the 2,000 year old tradition of loyalty to the acanthus leaf, and bestowed his artistic affections on the lowly cornstalk. His "cornstalk" or "corncob" capitals are among the most unique features of the great Capitol and are the delight of all who are fortunate enough to discover them and appreciate their individuality. In them Latrobe made a distinctly original contribution to decorative design and as might be expected from a man with his ability and discriminating taste, he did it well.

In place of the customary fluted columns, he represented bundles of cornstalks bound at the top with a rope, producing an effect not unlike that of the Egyptian papyrus column. On the capitals were carved ears of Indian corn, with the husks partially separated to show the kernels.

And so it goes, from the earliest geologic evidence of Indians on this Continent up to this very day, we see the bountiful plant corn with its beautiful golden tassel inextricably interwoven with the history of America and its people. I know of no other floral emblem which could bear the symbolism of all that is American in the genuine manner than could the golden corn tassel. I therefore urge all my colleagues to advance the corn tassel as the floral emblem of America.

Red Subversion in Our Back Yard

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. FLOOD. Mr. Speaker, in an address to the House on Tuesday, June 30, 1959, I dealt with the worsening situation in the Caribbean and made some specific suggestions aimed toward its amelioration.

The latest summary of the distressing conditions to the south of us is found in a thoughtful article in a recent issue of the Evening Star, Washington, D.C., by Constantine Brown, one of the Nation's ablest observers on foreign affairs.

As this article supplies in brief form important additional information relative to the background of my June 30 address, it is commended for study by all concerned with the formulation of U.S. policy toward Latin America.

The text follows:

[From the Washington Evening Star, June 30, 1959]

RED SUBVERSION IN OUR BACK YARD—WEALTHY LATIN REPUBLICS HAMSTRUNG ECONOMICALLY BY COMMUNIST INTRIGUE

(By Constantine Brown)

South America from the Caribbean to Tierra del Fuego is seething. Never before has America's backyard been in more serious danger than at present. Yet we do not appear to be able to take the initiative even in that area in which this country has so much at stake.

Latin American Republics have enormous wealth in raw materials. This should normally assure them at least limited prosperity. Yet they appear on the verge of collapse. If nature were to take its usual course, all these countries, with a measure of assistance and advice from the United States, would be able to weather the storm. But the chances of their being able to pull out are considerably reduced because of the activities of the Latin American Communists, strongly backed by Moscow.

As things stand now, there is a good chance, according to intelligence sources in Washington, that we may find ourselves ringed with Soviet submarine bases in the Caribbean. Despite Fidel Castro's protestations that he is only an ardent lover of democracy and freedom, the Communist element's influence in Cuba is much stronger than the alleged will of Castro to make that island republic neutralist.

Communist influence in the government of Venezuela is equally powerful and reports from Caracas indicate that in the event of a major international crisis the government will be taken over by active Communists under Moscow's discipline unless the present heads play along.

A realistic survey of most Latin American Republics indicates an alarming increase of Communist conspiracy. The agents, strongly backed financially by the Kremlin, are taking advantage of the economic distress—which they lay at the threshold of this country—to create chaotic internal conditions. Once these break out in revolutions against the dictatorial governments genuine dictators completely in the pocket of international communism are installed.

Washington is making some vague moves by offering limited financial support to the existing non-Communist administrations. But these are not effective because the ailment of our sister Republics south of the Rio Grande are more political than economic as appears on the surface.

We are dedicated to the elimination of dictators in Latin America. This was emphasized by Vice President NIXON when he visited that area some months ago and said: "We extend a cold hand to the dictators and a warm embrace to those opposed to them." It was realistically illustrated when Fidel Castro visited Washington unofficially. Despite the wholesale executions of sometimes innocent men and women, Castro received from our Government and enthusiasts in Washington and New York almost a hero's welcome.

There is not a single head of state in Central and South America who is not convinced that the hero of the Cuban revolution is under Communist discipline—by necessity if not by choice. But the hasty acquiescence of the U.S. Government and to some extent of the American people toward the Cuban dictator has created the impression thta the United States (the principal target of international communism) is leaning toward the Castro type of dictatorship rather than the strongly anti-Communist Trujillo type. This impression has, of course, given strength and unprecedented impetus to the Moscow agents who are doing their utmost to precipitate revolutions in as many Latin American Republics as feasible, and especially in those which could offer interesting bases within reach of our boundaries.

The abortive rebellions in Panama, Haiti, and the Dominican Republic are examples of international Communist strategy. They have failed temporarily. But there are strong indications that there will be a repeat before the end of the year.

The Kremlin has been planning for a decade for the day and has taken advantage of our lackadaisical policies whenever possible. Thus the Soviet intrigues in Latin America date back to the late 20's when agents infiltrated Central America selling the blessings of communism to the peons. Hearings of the Senate Internal Security Subcommittee and House Un-American Activities Committee showed this conclusively from the testimony of former agents who became fed up with communism after a while.

An American citizen, Joe Zack (his real name is Kornfelder), who was trained at the Lenin school of subversion and worked under direct orders of Stalin, spelled out the entire plan to the two congressional committees. But none of our officials seem to have taken the warnings seriously. Their accuracy was proven in the recent developments not only in the Caribbean but also in almost every one of the other Latin American countries.

While the attention of the administration, Congress and our people is focused on the great futility at Geneva and wherever the summit meeting is to take palce, the Muscovites are working overtime at our expense in our very backyard.

Mutual Security Appropriations

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. ADAIR. Mr. Speaker, recently the Honorable Spruille Braden made a presentation before the Subcommittee of the Committee on Appropriations which is considering the mutual security bill. Because it contains much valuable and important information, I include it herewith:

STATEMENT OF HON. SPRUILLE BRADEN, MEMBER OF THE CITIZENS FOREIGN AID COMMITTEE, BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON FOREIGN OPERATIONS, JUNE 24, 1959

Mr. Chairman and members of the committee, it is a privilege to be invited to appear as a witness before this distinguished Committee on Appropriations of the House, because this seems to be the one place in Washington where fiscal and economic sanity still prevail, especially in the area of foreign aid. I am unaware of any other congressional committee or representatives of the administration who have shown greater concern for the sorely afflicted American taxpayer than have you, gentlemen, under the courageous leadership of your chairman, Representative PASSMAN.

That I am competent to testify on foreign aid or mutual security, is indicated by the fact that most of my life has been spent in, or having to do with, the so-called underdeveloped areas of this hemisphere. Both in business and diplomacy, I have dedicated myself to the initiation, carrying out, and successful completion of many and varied developmental enterprises. I am proud of the fact that I am the only living U.S. citizen who has negotiated and signed a peace treaty (between Bolivia and Paraguay settling the bloody and ferociously fought Chaco war), which now has endured for 21 years.

I submit a brief curriculum vitae, which I request be made part and parcel of my testimony.

Although I appear as a member of the Citizens Foreign Aid Committee, I want it understood that my testimony here today in many places represents exclusively my own convictions. Also, I am especially experienced and informed about the Western Hemisphere.

I must confess to feelings of both frustration and alarm when once again I am requested to testify on the Mutual Security Act. Frustration, because none of the points which I have raised repeatedly through the years, beginning in 1949, in testimony before both House and Senate committees, as well as in many speeches I have given, seem to have made any worthwhile impression. Nor have any questions ever been answered competently by any individual or agency of our Government. Similarly, I am unimpressed by the answers made by several Government agencies to a first report by the Citizens Foreign Aid Committee.

I feel alarm, as I contemplate the callous way in which the International Cooperation Administration (ICA) is permitted to waste and misspend billions upon billions of our citizens' earnings. These feelings I expressed on May 10, 1959, by radio, over the Manion Forum:

"Innumerable and comprehensive reports have been and are being published by different congressional committees and by the Comptroller General of the United States describing the extravagance, waste, and corruption which permeates so many of the International Cooperation Administration's operations all over the world. So voluminous are they that few people could find the time to read all the shocking details.

"Dean Manion, I earnestly ask our listeners today to obtain and skim through just a few of these reports. (Reports of Comptroller General of the United States and General Accounting Office: June 30, 1955, on Iran; December 27, 1955, on Pakistan; June 30, 1955, on Egypt; June 30, 1955, on Lebanon; Comptroller General's Report on Pakistan for Fiscal Years 1955–57; House Committee on Government Operations, May 15, 1957, January 16, 1958, June 28, 1958, June 15, 1959.)

"If they will do so, they will be angered to learn how billions of hard-earned tax dollars are being thrown away on so-called mutual security or foreign aid. They will demand that the President and Congress forthwith put an end to the squandering, misuse and dishonesty involved in so many of these programs.

"The conditions disclosed in these official investigations are so appalling as to convince me that neither the President, the Cabinet, nor congressional leaders have ever read them. If they had, they long since would have taken positive measures to eradicate this disgraceful situation."

I respectfully request that this complete broadcast of May 10, 1959, be made a part and parcel of my testimony. Similarly, I request that two speeches, bearing on the subject of foreign aid, be incorporated in my testimony. These were made before (1) Associated Industries of Massachusetts on October 22, 1958; and (2) Rotary Club of New York on April 11, 1959, and Federation of Women's Clubs on April 12, 1959. I dare to hope that some of you gentlemen may find time to read these addresses, since they complete and supplement my testimony.

For more than 15 years I have reiterated at every opportunity, publicly and privately, that I felt the gravest danger to the survival of the United States and of civilization was the breakdown in morality everywhere, but particularly in government. Perhaps now I should add that this breakdown in morality is partially explained and unquestionably exacerbated by the failure of governments to exercise commonsense. Whom the gods destroy, they first make mad.

In our country, the rash extravagance, heedless waste, and immorality which increasingly characterize all Government activities nowadays are peculiarly apparent in the operations of the so-called Mutual Security Act.

Nikita Khrushchev recently in Albania proclaimed that capitalism is doomed, because "however strong a man may be, in time he becomes senile." If Khrushchev buries us, as he says he will, it will not be due to the blunders of senility, but because of our immaturity; because we refuse to learn from history, which teaches that foreign aid has been tried and has failed before. (See my aforementioned Rotary Club speech.) Truly, in this area of government, have the ICA "officialdom gone mad, officialdom erected into a new and merciless exploiting class." [1]

There may be a few places in the world, such as Korea or Taiwan, where for the security of the United States, some foreign aid temporarily may be necessary. But to have dissipated somewhere between $75 billion and $80 billion—in other words, between one-fourth and one-third of our national debt—at a time when the U.S. Federal Government is facing financial disaster, is not only senseless but unmoral. It is well nigh criminal to continue such folly in the face of a $12 billion or $13 billion deficit, when the U.S. dollar is depreciating all over the globe, excepting in those countries whose currencies—frequently due to our so-called aid—are depreciating even more rapidly, and when gold has been flowing out of this country at an unprecedented rate.

Especially is this true when none of the objectives claimed for foreign aid have been acomplished. Even Mr. Hollister, formerly Director of ICA, practically has admitted this already amply evident fact in a recent Reader's Digest article.

For years, we have been told that the principal reason for foreign aid was to do away with the menace of communism. Now, $70-odd-billion later, the President's Committee To Study the U.S. Military Assistance Program (the Draper committee), in its March 17, 1959, report, admits that: (1) the Communist military threat is greater than ever, (2) the Communist economic and political threat and capabilities are expanding, and concludes that we must throw out more hundreds of millions on a continuing basis.

That the Communist threat steadily has increased in the face of our foreign aid, was only to be expected, because as I have detailed repeatedly in the speeches to which I have referred today, we have been doing precisely what Lenin and Stalin urged as the best way to spread their wicked ideology and enslaving controls. And, instead of the Soviet paying for it, we have served their interests all for free.

My associates on the Citizens Foreign Aid Committee know that the only thing the U.S.S.R. and Communists respect is superior power. Therefore, we endorse all reasonable expenditures for the Strategic Air Command. Just as emphatically we oppose dribbling out billions of dollars all over the world, with relatively little, and often no benefit to the recipients and with grave harm to the United States of America.

[1] "Reflections on the Failure of Socialism," by Max Eastman.

As I have said, the operation of foreign aid has been characterized by extravagance and waste, corruption and fraud. This was true of the past and it is true today.

As for the extravagance, the Honorable Eugene R. Black, president of the International Bank for Reconstruction and Development, before the Pilgrims, London, England, on Tuesday, May 5, 1959, while maintaining the successful development of the underdeveloped world as a vitally important objective, makes the following statement:

"We may learn a striking lesson, I think, from some of those underdeveloped countries now undergoing the most severe shortages of foreign exchange and the worst distortions of their domestic economies. Among these countries are a number which, far from having had the least finance from abroad, have had the most.

"This finance was made available for both commercial and diplomatic motives. It was made available in quantities and at times that enabled these countries to persist in the folly of unwise economic policies, and made it possible for them to postpone the painful decisions and real sacrifices necessary to their economic progress. In these cases, neither the diplomat nor the exporter was able to take what sometimes may be the wisest decision of all—that is, not to proffer finance in circumstances that offer no prospect that it will be effectively employed for the good of the receiving country."

As a citizen, I cannot comprehend why the Congress and the administration will not abide by economic law as proven by the experience of all history and confirmed by Mr. Black.

Similarly, Mr. Edward Hunter, an expert on the Far East, testified before the Senate Internal Security Subcommittee on March 24, 1959, that when we attempt, with American aid, to counter Asian countries with their slave labor, "we depress our own labor standards, and try to fill a bottomless pit with our aid." He urges that we stick to private enterprise, observing that the government-to-government procedures often cannot be distinguished from socialism. Finally, he says the leaders in various countries (receiving our aid) have said to him, "What are you people trying to do? Do you want us to be Communists?"

As for the waste and corruption, I refer you to your own congressional reports, and those of the Comptroller General of the United States and the General Accounting Office, which I have already mentioned. I cannot understand how any legislator who has studied these reports could fail to demand, henceforth, the most meticulous estimating and subsequent accounting, together with the complete elimination of ICA's malpractices.

Gentlemen, at a fabulous cost to the American taxpayer, ICA has squandered countless billions, lowered the prestige of the United States, and dragged this Nation's reputation through the muck of corruption. And all to what end? To train other peoples to expect, demand, and depend on billions of dollars in grants and loans from us, and to abjure self-reliance, hard work, and sacrifice as the only sure means wherewith to develop their countries, and acquire spiritual and economic independence and dignity.

As for the fraud involved in foreign aid, the American public and the Congress, from the beginning repeatedly have been misled and misinformed. They were told at first, that these programs were to be temporary, and of short duration. Now the ICA bureaucrats, abetted by the Draper committee, insist they must be put on a continuing basis. Thus, all debate as to the need for foreign aid would be silenced permanently. They were told the expenditures would be relatively modest; now the ICA bureaucrats demand even more gargantuan appropriations than before. The giveaway programs allegedly were developed to defeat communism, whereas, in fact, we have handed over more than $1 billion to Yugoslavia, hundreds of millions to Poland, and supported Marxist regimes in Bolivia and, I am told, Indonesia. Private enterprise was to be upheld; actually, we have encouraged and financed collectivist and Socialist regimes all over the earth, thus making a Communist takeover far easier than it possibly could be otherwise. ICA officials declared that great progress was being made, thanks to our gifts in Bolivia. A few months later, events compelled these same officials to admit that their declarations had not been true.

So-called defense support is, I believe, much the biggest category of economic aid in the foreign aid bill. Purportedly, it was established in order to enable certain nations to carry on a large defense effort. Yet, according to the New York Times on May 31, Mr. Leonard J. Saccio, Acting Director of ICA, admitted to the Senate Foreign Relations Committee that this, too, was an untruth. When, as is exposed by Mr. Saccio's testimony, contradicting his previous declarations, we find the Congress and the American public have been misinformed deliberately and fraudulently, we indeed have come to an all-time low in the conduct of affairs by ICA officials and bureaucrats.

Through the years, foreign aid has been presented to the public under a variety of names and agencies: Coordinator of Inter-American Affairs, UNNRA, Marshall plan, point 4, technical aid, ECA, MSA, FOA, mutual security, and so forth. So many are the series of changing names, the proliferations of structures, and the overlapping organizations, as to leave the ordinary citizen in a maze of utter confusion. He neither can tell what has been done with his money, nor where it was spent, nor by whom. When his Representatives in Congress try to ascertain some of the facts, they are stopped, too often, by the information being classified, in totalitarian fashion.

Among the more alarming developments are:

1. Proposals in the administration and elsewhere to expand and make permanent the Development Loan Fund. Last year, before the Senate Appropriations Committee on July 18, I made the following statement on this economically unsound project:

"Under Secretary Dillon is reported to have told this committee on July 8 that the reduction of $325 million in the Development Loan Fund must be restored because: 'In all gravity I say to you that the future of our country and the future of freedom in the world will be decisively influenced by your decision on this particular appropriation'."

In reply to Mr. Dillon I say:

(a) "If all that stands between the future security of our country and the freedom of the world is the Development Loan Fund having $325 million more to disperse in soft loans, unacceptable to any other private or official banking organization, then, indeed, the United States of America and freedom have reached the end of the road. Mr. Dillon's alarm is false and should be stilled by you, gentlemen, rejecting his plea."

(b) "The whole idea of the Development Loan Fund is contrary to proven economic (Gresham's) law, that bad (soft or unsound) money and credits always drive out good (hard or sound) money and credits. To entrust this fund to ICA bureaucrats will do great harm wherever it is used and bring us enmity."

Fortunately, Mr. Dillon did not get his additional $325 million, but only a part of it. Nevertheless, the security of our country and the freedom of the world did not come

to an end. On the contrary, both the United States and our freedoms are more secure by reason of some saving having been made, thanks largely to you gentlemen on the House Appropriations Committee.

The proposition that the Development Loan Fund should be assured a minimum of $1 billion per year for 5 years is, I believe, not merely unconstitutional, but is so contrary to economic (Gresham's) law, which is just as much a law of nature as is the law of gravity, as to be sheer lunacy.

Anyone having a knowledge of economics can prophesy with assurance that Development Loan Fund credits, insofar as repayments are concerned, in large measure, will in due course be tantamount to grants. Certainly the U.S. taxpayers never again will benefit from their dollars. To the extent Development Loan Fund credits are repaid to ICA, more local currencies will be piled on top of those already acquired by the U.S. Government through the operations of Public Law 480. These huge accumulations of local currencies in many countries will create serious new problems, both for us and for the recipient nations. Of these, inflation will not be the least to plague both them and us.

2. It is proposed that an inspector with a staff, i.e., more bureaucracy, be created in the State Department for policing the administration of the foreign aid program. Of course, this in itself is an admission of the inefficiency and dishonesty with which it has been operated heretofore. The Department of State and ICA—without the supervision of an inspector—should handle this program competently and with integrity. The Congress and the people should be fully informed at all times in respect of all its operations, and above all, under the Constitution, the Congress should control the pursestrings, based on its own reports and those of the General Accounting Office, and see to it that it is properly and honestly run. This suggestion of appointing an inspector is like the system, with which we are all familiar, of appointing a coordinator when things did not go well; another coordinator when they continued badly; and eventually, a coordinator to coordinate the coordinators. This inspector suggestion is typical of the way in which bureaucracy has been piled upon bureaucracy in ICA. There is no sense to it.

3. The attempts through SUNFED (Special United Nations Fund for Economic Development), the special U.N. fund, headed by Paul Hoffman, and otherwise, to transfer foreign aid to some U.N. organization where we will be by far the largest contributors, and our dollars often will be spent by a hodgepodge of Communists and other Marxists, Socialists, and misguided idealists and unidentifiable theys, all of them basically disliking or hating the United States of America. Under any such U.N. setup, the people of the United States soon will learn that their money is being used more than ever to propagate collectivism and communism, and to destroy the United States of America and all the noble principles for which it stands. If these U.N. aid schemes prosper, the advanced nations will be impoverished, and the underdeveloped ones will be poorer and more helpless than ever. All hope for improving the world economic conditions will disappear.

Parenthetically, I would add that administration representatives are less than frank with us in these matters. In this connection, I submit for the record, as an integral part of my statement, copy of the National Economic Letter for February 15, 1957.

It would take volumes adequately to describe the vast and unending evils of foreign aid, as carried out by ICA (and still more, the U.N.). It is counter to our religion and our Constitution. (See my speech before American Coalition included with my testimony before Senate Appropriations Committee, July 18, 1958.) It encourages communism and foments collectivism and socialism all over the globe. It demoralizes both its recipients and our own citizens, who are connected with it. It contributes materially to our unbalanced budgets, national debt, and excessive taxation.

So intolerable and immoral is it, that I respectfully but strongly urge your acceptance of the recommendations of the Citizens Foreign Aid Committee, that the appriation for the next fiscal year be reduced by a total of $2 billion, and thereafter successively be reduced until finally taken off our already overloaded backs.

The Monroe Doctrine and Red Infiltration

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. DAGUE. Mr. Speaker, as we adjourn over this Fourth of July weekend we should take the opportunity to reaffirm the ideals set forth in our Declaration of Independence and at the same time evaluate the threat inherent in the continuing drive on the part of the minions of Moscow to sow the seeds of subversion and unrest among the republics of the Western Hemisphere.

In his able article appearing in yesterday's Washington Evening Star entitled "Red Subversion in Our Back Yard," Mr. Constantine Brown points out—

> South America from the Caribbean to Tierra del Fuego is seething. Never before has America's backyard been in more serious danger than at present. Yet we do not appear to be able to take the initiative even in that area in which this country has so much at stake.

Mr. Brown's indictment is unquestionably based on the simple fact that we are apparently standing idly by while the agents of communism are sowing their seeds of unrest and, as usual, are playing the tune that the economic problems confronting Latin America are due to the machinations, or at least to the indifference, of the United States—that old whipping boy—the colossus of the north.

When the Monroe Doctrine was originally laid down we firmly enunciated our determination to resist with every means at our command the infiltration of the Americas by any power or combination of powers from outside the area. That dictum was respected down through the years and while our southern neighbors had their internal problems it was not until the advent of international communism that the problem became hemispherewide.

At this writing the United States is meeting Moscow head on in what has been called the Berlin crisis, while at the very moment of our involvement in Europe the ground is being cut from under us, as Mr. Brown puts it, "in our own backyard."

What to do? Well as I see it, it is fairly simple. First, let us include to a larger degree our South American neighbors in a share of our foreign aid expenditures—our mutual security program. And then let us take our time-honored stance under Mr. Monroe's doctrine and reaffirm America for Americans, the implementation of which shall be a clear-cut warning that we will intervene militarily and economically in any case where the overthrow of constitutional government is being engineered by a Communist coup. We did it in the case of Guatemala and it worked—let us not hesitate to do it again.

Following that, let us serve notice on Fidel Castro, or any other revolutionary leader, that we will not tolerate the invasion of one nation by another until the grievances impelling the attack have been carefully reviewed by the Organization of American States. We have the means and the military might necessary to maintain peace in this section of the Western World and we should not shirk that responsibility.

H.R. 3 and REA

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. POFF. Mr. Speaker, during the course of debate on H.R. 3 on June 24, 1959, reference was made to the impact of the legislation on the REA program.

Shortly thereafter, the members of the Virginia congressional delegation received the following letter dated June 26 from Mr. Earl J. Shiflet, executive secretary, Virginia Association of Electric Cooperatives, Richmond, Va.:

> In view of a report carried in the Richmond Times-Dispatch June 25, 1959, reporting that members of the Rural Electric Cooperative Association were opposed to the Smith bill (H.R. 3) and for fear that the people of the State of Virginia will construe this to mean that the consumer members of the rural electric cooperatives in Virginia took action opposing the bill, I must dissassociate the more than 100,000 Virginia members of the Virginia Association of Electric Cooperatives from such implication.
>
> 1. At no time has the Virginia Association of Electric Cooperatives officially discussed the Smith bill.
>
> 2. At no time has any representative of the rural electric cooperatives of Virginia taken action concerning the bill as a representative of the electric cooperatives at national or regional meeting of the National Rural Electric Cooperative Association.
>
> 3. No such action has been taken because we had not interpreted the bill to have any effect on the rural electric cooperatives.

However, today I received a telegram from Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, author of the letter referred to above, in which he stated the statement carried in the Richmond Times-Dispatch that "CELLER cited a letter from Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association who claimed its 4 million members opposed the measure. Several rural members disputed this," was untrue. What he did say, quoting Ellis' telegram, "I did write five Members of the House in the

hope of getting an amendment to exclude matters affecting the rural electrification program from H.R. 3 and such an amendment was offered on the floor. I did not say that our member systems or the members of NRECA opposed H.R. But rather that NRECA, the service organization of the rural electric systems of the United States which represents some 4 million member consumers, has a vital and direct interest in this legislation."

In reply to Mr. Shiflet's letter, I wrote the following letter dated July 1, 1959:

After dictating my letter of June 29, in reply to your letter of June 26, I decided to explore further the excerpt from the telegram sent to you by Mr. Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association. As quoted in your letter, that excerpt read as follows:

"I did write five Members of the House in the hope of getting an amendment to exclude matters affecting the rural electrification program from H.R. 3 and such an amendment was offered on the floor."

Clearly that language was phrased in a manner calculated to convey the implication that the amendment was offered at the instance of Mr. Ellis. This amendment was offered by Hon. JAMES G. FULTON, of Pennsylvania. I have just talked with Congressman FULTON and he advises me that he did not receive a letter from Mr. Ellis; that he himself, with the assistance of legal counsel and members of his staff, conceived and drafted the amendment; and that he did so without the request or even the suggestion of Mr. Ellis.

The letter which Mr. Ellis wrote to a few Members of Congress appears on page 10724 of the CONGRESSIONAL RECORD for June 24, 1959. Contrary to the inference in Mr. Ellis' telegram, nowhere in that letter did Mr. Ellis suggest an amendment to exclude matters affecting the rural electrification program from H.R. 3. Rather, the letter registered unequivocal opposition to H.R. 3 and clearly was designed to leave the impression that H.R. 3 was opposed by the some 4 million member consumers in the REA system.

As I stated to you in my letter of June 29, H.R. 3 does not in any way adversely affect REA, the views or comments of Mr. Clyde T. Ellis to the contrary notwithstanding, and I think it is extremely unfortunate that Mr. Ellis should undertake to convey the erroneous impression that he was speaking the views of 4 million farmers in opposition to a bill which is designed to preserve the principle of States' rights. I am sure that the overwhelming majority of REA members and consumers in the congressional district I am privileged to represent do not share Mr. Ellis' views.

Sincerely,

RICHARD H. POFF.

Foreign Affairs—Untying the Hand Behind Our Back

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. DOOLEY. Mr. Speaker, in the light of the cold war which now rages between the United States and the Soviet Republic, the following article by C. L. Sulzberger carries a particularly trenchant message.

For more than a decade we have been at grim odds with te U.S.S.R. and in that period of time our annual expenditures have risen at a pace which saw our budgetary deficit rise to a total of almost $13 billion in 1959.

Mr. Sulzberger's remarks follow:

FOREIGN AFFAIRS—UNTYING THE HAND BEHIND OUR BACK

(By C. L. Sulzberger)

Peace, a word easy to interpret and to understand, has virtually disappeared from the lexicon of our times. Instead we find turgid and unsatisfactory phrases: cold war, peaceful coexistence or competitive coexistence.

Formerly nations considered themselves at peace when they were not actively at war. War itself was seen, to use the words of Clausewitz, as "a continuation of state policy by other means." Now Soviet leaders have inverted this. For them state policy becomes a continuation of war by other means. True peace doesn't exist.

In its absence competition rages between disparate and rival political systems. This competition, involving all aspects of international life, is unabashedly recognized by communism. But much as we ourselves talk of competitive coexistence, we do little about adjusting to its implications.

The cold war has lasted almost 14 years, during which period our adversaries often warned that they intend to destroy us, albeit by nonmilitary means. Responding to the threat, we have spent billions of dollars on our own and our friends' defense. We have distributed largesse around the earth to dam menacing Soviet tides.

Nevertheless, costly as this response has been, we avoid the essential, central issue. This is that war is a contest for actual existence, whether that war be hot or cold. We have refrained from adjusting our social or political systems to the totality of the challenge.

While dealing with incalculable sums, we continue to budget their allocation on a restrictive annual basis, knowing all the while that our opponents plan 5 or 7 years ahead. The Russians, reaching around the globe, use the entirety of their immense and highly trained population where and as the state demands. But our reply is diffident.

In Morocco, where vital U.S. airbases are located, the Soviet Embassy is generously staffed with fluent, expert Arabists. Only one American in our mission speaks that language; and he doesn't know the local dialect. This typifies the way we are meeting the menace to our survival. We play the game as if it were an amateur tournament. The stake is winner-take-all. Yet we tie one hand behind our back.

OLYMPIC COMPETITION

Soviet teams, including numerous stars whom we would call professionals, score increasing point totals each time they meet us at the Olympics. We protest that their athletes violate the defined amateur status laid down for Olympic contests. A Russian soccer forward or pugilist may be paid by state factory or collective to do nothing but kick or punch. But surely we cannot ask Moscow to revamp its social system merely to suit our own old-fashioned, gentlemanly terms.

There is no simon-pure amateur in the U.S.S.R. Consequently, in sports as in other realms, we should compete by sending our best representatives, regardless of who pays them. This is above all true of the grimmer game whose prize is existence itself.

How can we provide the necessary skilled experts for our worldwide obligations as long as private industry continues to drain off talent by offers of pay exceeding the best our Government can afford? There is need for a law permitting the state authority to draft civilians for national assignments.

If a young man is expected to serve many months learning military techniques he may never be required to use, surely an older man might be expected to serve a lesser period to fight his country's cold war battles. Why should Washington not be entitled to demand, for limited terms, the abilities of specialists familiar with specific areas or problems but now working for oil companies, newspapers, banks or commercial firms?

Numerous complications are posed by this idea. Many sincere people would find abhorrent such intrusion into individual privacy. Nevertheless, need a rationed and carefully controlled authority, watched over by suspicious legislators, be either revolutionary or dangerous? Once the mere thought of Federal income tax was considered a violation of personal freedom. But democracy survived.

The paramount task for democracy today is to survive. However, we will win no coexistence competition with a hand remaining fettered to our back. The time has come to reconsider how better to use the talent that abounds in the United States—and remains unavailable for its defense.

A Duty to Foreign Orphans

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. MOORE. Mr. Speaker, in the field of adoption of foreign-born orphans by American couples—in many instances, on a sight-unseen basis—there are many weak points in existing law which my bill, H.R. 7239, would eliminate and the present statute relating to such matters would be greatly strengthened.

This proposed legislation would still make it possible for American couples to adopt children born abroad. It would still make it possible for such children to be issued visas outside the normal immigration quotas for the country of origin.

The situation is best explained in the following remarks by Secretary Arthur S. Flemming of the Department of Health, Education, and Welfare on this subject and in regard to this legislation:

The present law exempting such children from the immigration quotas expires on June 30.

The proposed bill has two major objectives:

1. It would establish authority for issuance of nonquota visas for these children on a permanent basis.

2. It would require assurances that any child adopted abroad or brought to this country for adoption here will be properly cared for.

The effect of the bill is to extend to children adopted abroad, whether by the adoptive parents in person or by proxy, safeguards similar to those which now exist in the law for children adopted after they have been brought to the United States.

This would mean that an American couple wishing to secure a nonquota visa for a child adopted abroad would have to give assurances satisfactory to the Department of Health, Education and Welfare that the child

will be well and properly cared for in a suitable home.

Legislation enacted in 1957 permits the entry into this country under special nonquota provisions of any orphan who has been lawfully adopted abroad by a U.S. citizen and spouse.

This legislation also provides that nonquota visas may not be issued to admit children to this country for adoption unless assurances have been given that they will be properly cared for and preadoption requirements, if any, of the State in which the child is to live have been met.

The existing law vests in the Department of Justice the responsibility for determining that such assurances are satisfactory. The proposed law vests in the Department of Health, Education, and Welfare the determination of satisfactory assurances not only for children brought to this country for adoption but also for children adopted abroad.

Almost 1,200 children adopted abroad were issued visas under Public Law 85-316 between September 11, 1957, and June 30, 1958. It is estimated that more than half of these children were adopted by proxy. Cases have been reported in which there have been tragic consequences for children thus adopted.

While it would still be possible under the proposed bill for American couples to adopt children from abroad by proxy, a visa could not be granted until the prospective American parents gave assurances satisfactory to the Department of Health, Education, and Welfare that the child would have a suitable home.

It is our belief that the working partnership which already exists between this Department and a network of recognized public and voluntary social agencies active in adoption placements at the local, State and international level can be extended to play a key role in achieving the objectives of the bill.

The proposed measure would be a further expression by our Government of its concern for the welfare of all children. These new citizens of ours from other lands are entitled to the same safeguards that we traditionally extend to our native-born children in need of homes. The cooperative efforts of this Department and other Federal agencies can make a substantial contribution to that end.

A New New House Office Building

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, in answer to the widespread, insistent demands from the people for less Federal spending, a lowering of the high cost of living, and relief from burdensome taxation, I replied that one cause of all three was the ever-continuing pressure on the Congress from the people for new benefit payments of one kind or another from the Federal Government.

That laid the primary cause for our financial ills squarely upon the shoulders of the taxpayers. That is where most, but not all, of it rests. But quickly I received replies that Members of the Congress themselves were not free from guilt, and my attention was called to the waste connected with the construction of the new Senate Office Building—and there was plenty of it—to the construction of another new House Office Building, neither of which any taxpayer even suggested building.

The situation was again called to mind by a June 13 editorial in the News-Palladium, published at Benton Harbor, Mich., which was captioned "Congressional Spenders." It started out:

A hundred-million-dollar bill to foot the cost of Congress next year breezed through the House this month with scarcely a ripple.

It called attention to many items, regular expenses of running the House, which ran into $150 million for next year. Another was the $82 million new House Office Building for Representatives.

No taxpayer other than Congressmen was responsible for that.

Permits me to show, by quotes from the CONGRESSIONAL RECORD of March 18, 1955, why my effort to prevent that expenditure failed.

Mr. CANNON was in charge of an appropriation bill which was before the Committee of the Whole House on the State of the Union. Mr. RAYBURN, Speaker of the House, from the floor offered an amendment authorizing construction of a new House Office Building. Mr. CANNON, likewise a Democrat, and chairman of the Appropriations Committee, said, at page 3205:

Mr. CANNON. Mr. Chairman, in view of the emergency involved, and the urgent need of the facility for which the appropriation is proposed, the committee accepts this amendment and approves the expenditure.

Of course, there was no emergency.

Mr. HOFFMAN of Michigan. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HOFFMAN of Michigan. I make the point of order against the amendment that it is legislation on an appropriation bill.

Mr. CANNON. Mr. Chairman, the point of order comes too late.

The CHAIRMAN. The point of order does come too late.

Mr. HOFFMAN of Michigan. How does it come too late when I was on my feet seeking recognition before the gentleman was recognized.

The CHAIRMAN. The gentleman, as chairman of the committee was recognized first.

Mr. HOFFMAN of Michigan. That is to say the rule that requires recognition of the chairman of a committee would deprive another Member from making a point of order?

The CHAIRMAN. No. Did the gentleman address the Chair?

Mr. HOFFMAN of Michigan. I did address the Chair before the Clerk finished reading.

The CHAIRMAN. That was not the proper time.

Mr. HOFFMAN of Michigan. I was on my feet and addressed the Chair before the Clerk finished and as soon as he finished. Now, if I have to shout louder, I can do that.

The CHAIRMAN. The Chair could not recognize the gentleman until the Clerk had finished reading.

I was on my feet with a valid point of order before and when the Clerk finished reading, but was overruled, and that is how the building of the New House Office Building was authorized.

The ruling was wrong and that is known to every student of parliamentary law. I objected both before the Clerk had finished reading and as soon as he finished reading, and was entitled to recognition. Moreover, as every student of parliamentary law knows, a point of order is always in order.

But the Speaker of the House offered the amendment which called for the new building, the chairman of the Appropriations Committee accepted it, and the chairman of the Committee of the Whole House—all Democrats—overruled an obvious, valid point of order, and the authorization went through.

That is the way the Democrats in control of the House worked their will with the taxpayers' dollars on that particular occasion.

An appropriation of some $80 million authorizing the building will probably, if present trends and practices continue, involve a final total cost of more than $100 million—all for the convenience of the Congressmen—an expenditure which the voters did not request or approve.

It is obvious that, while the taxpayers are primarily to blame for many expenditures, they are by no means responsible for all. Some of the big ones the Congressmen think up all by themselves.

Exit Lewis L. Strauss

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. BECKER. Mr. Speaker, I have asked permission to insert in the Appendix of the RECORD an article written by Mr. George E. Sokolsky and published on June 26, 1959, entitled "Exit Lewis L. Strauss." Mr. Sokolsky is an exceptional writer, and he has dealt with the treatment given to Lewis Strauss very effectively and factually. My reason for placing this in the RECORD is so that everyone throughout the country may have an opportunity to read this article.

The article follows:

EXIT LEWIS L. STRAUSS
(By George E. Sokolsky)

The Strauss controversy is not dead and will not cease to be a political issue until after the 1960 election. It is easy talking for Senator LYNDON JOHNSON and Senator EVERETT DIRKSEN to say that they will bury that hatchet. But they have buried it in the neck of a human being. It may even lead to a constitutional amendment giving the President the authority to choose his own Cabinet without "the advice and consent of the Senate."

By a parliamentary trick, Lewis L. Strauss was rejected as Secretary of Commerce of the United States. It was a soul-searing experience and while the vote was 49-46 and the proceedings were strictly partisan, nevertheless a human being who has served his country well, has been rejected and humiliated.

For any man, this is a tough deal. It will hurt forever.

The question is: Does Lewis L. Strauss deserve such treatment? Is he a thief? Has he accepted bribes? Has he ever harmed his country? Is he a wicked man?

No one, except possible Senator WAYNE MORSE, has ever questioned Lewis Strauss' integrity, and to be insulted by Senator WAYNE MORSE is not altogether an unhappy occurrence. It may even help a man in his political relationships.

What then is Lewis L. Strauss' crime? Let me list some of the accusations against him:

1. He is haughty in manner.

2. He has withheld information concerning atomic energy from committees of Congress.

3. He has followed President Eisenhower's program in the Dixon-Yates matter, seeking to save the United States from socialistic power programs.

4. He has refused to consent to Senator CLINTON ANDERSON'S program to enter upon a wasteful and costly atomic public power program for which there is no necessity in this country.

5. He has been a banker.

6. He brought about the dismissal of Robert Oppenheimer from the Atomic Energy Commission after Oppenheimer gave testimony to establish that he had lied and that he had paid dues to the Communist Party.

7. He has prevented the shipment of American goods to Soviet Russia.

For these felonies and misdemeanors, the Democratic Party in the U.S. Senate opposed his confirmation as Secretary of Commerce. For these reasons, he was humiliated and rejected.

It is not astonishing that Senator WAYNE MORSE and Senator CLINTON ANDERSON opposed Strauss. It is astonishing that Senator LYNDON JOHNSON, a man of foresight and political know-how, resorted to a political stratagem to force a vote on the Strauss matter when several Republicans who would have voted for Strauss, were away from Washington. Some of them rushed back, just in time to vote. All he needed was two more votes for a narrow confirmation. On such small margins are great issues decided. Had he been confirmed in this manner, he would undoubtedly have declined to serve as Clare Luce had.

I have known Strauss well for about a quarter of a century. I first met him in the company of Herbert Hoover. He had been Hoover's secretary and friend since 1917. He had been associated with Hoover in all his relief enterprises. He had thus had a vast experience in administration and in humanitarian endeavor.

When President Truman appointed Lewis Strauss to the Atomic Energy Commission, it was because of this experience and because Strauss had made himself a master of atomic science and had had close relations with the Princeton group, including Albert Einstein.

Strauss may go back to banking or may devote himself to public service but this is certain: He will not be sore. He is not that kind of a man. He will accept it that when one enters politics, one must be prepared for anything.

On the other hand, when the game is played in this manner, how is it possible to mobilize the brains and character of this Nation for public service? Who needs to go through the ordeal of Clare Luce or of Lewis Strauss? There are other things to do. There are places to work where one's services are appreciated and where one is not humiliated by politicians who cater to pressure groups.

Operation Brainpower

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. BROYHILL. Mr. Speaker, I am very much impressed by a statement made by Mr. Thomas Meloy, president of Melpar, Inc. Under unanimous consent, I insert in the RECORD a report on this talk which appeared in the Northern Virginia Sun on June 25. Mr. Meloy expresses an idea which I believe merits the attention of all who are concerned with the future of our country's educational and technological development in the coming space age.

THOMAS MELOY, MELPAR'S PRESIDENT PROPOSES OPERATION BRAINPOWER TO BUILD UP U.S. SCIENTIFIC EDUCATION

WASHINGTON, D.C.—Thomas Meloy, president of Melpar, Inc., a subsidiary of Westinghouse Air Brake Co., talking before the National Rocket Club here, proposed a plan, Operation Brainpower which industry should sponsor to meet the need of our space age manpower challenge.

Speaking from his own company's experience and training program, Mr. Meloy suggested that industry, especially those engaged in military and Government projects, and employing high-level scientists, engineers and skilled technicians, could utilize them for teaching in-plant courses and also to teach in their areas schools and colleges, which are not equipped with scientific and engineering courses and technical facilities.

Mr. Meloy in amplifying his talk stated: "This plan which I am proposing, Operation Brainpower would utilize a national reservoir of scientific brainpower on a scale that has never been achieved to date.

Operation Brainpower would enable every industry employing scientists, engineers and highly skilled technicians, who are faced with the common problem of increasing the future supply of scientists, to effect a solution.

The following steps were suggested to overcome future scientific manpower needs:

1. Preparation by industrial plants of roster of engineers and scientists in their employ, who could be offered as instructors to schools and colleges in their areas not having complete engineering courses.

2. Work out program of in-plant training courses with local colleges, universities and trade schools which would enable company to upgrade promising, young men and develop them into future scientists and engineers for the space age.

He further stated that "Industries engaged in research and development work should actively encourage and support scientific education at the community, State and national levels." This means establishing fellowships at leading universities, awarding scholarships to colleges and inspiring high school students to study for careers in science and engineering.

Mr. Meloy stated that he felt the urgency for a plan such as Operation Brainpower, because of the predicted shortage of approximately 20,000 engineers within 5 years. He also indicated that some economy in the cost of recruiting could be achieved by developing the proper number of engineers and scientists to meet the need of the U.S. space age.

The American Secretary of State

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mrs. BOLTON. Mr. Speaker, confronted as we are by a powerful and revolutionary force dedicated to our destruction the activities of the Department of State and the Foreign Service have come to occupy a central place in the life of the Nation. With each new assumption of global responsibility the importance of these activities is expanded and multiplied.

As the activities of the Department have grown, the position of the Secretary of State has become increasingly complex and compounded. Policies must be formulated, negotiations conducted, and decisions articulated on a broad range of foreign policy subjects.

Writing in the June 4 edition of the Listener, Prof. H. G. Nicholas has sketched a peculiarly informative portrait of the transformation in the office of Secretary of State. In the belief that his sketch will provide a valuable insight into the position of the Secretary, I ask that it be included with my remarks.

[From the Listener, June 4, 1959]

THE AMERICAN SECRETARY OF STATE

(By H. G. Nicholas)

The world has become used to the United States rotating like some vast planet every 4 years. In November of each leap year a President is elected; for 4 years he holds sway uninterrupted until in November of the next leap year his mandate expires or is renewed. The resignation of the late Mr. Dulles, however, halfway through one of these quadrennial periods, was a reminder not only that the rhythm is not necessarily so fixed but also that the planet is not alone. Rather, the President now appears (like Saturn) as only the center of a series of concentric rings of which by far the nearest and most important is the Secretary of State. The world, perhaps as never before, is now conscious of the potency and dimensions of the office, and views a change in its incumbent as only one degree less significant than a change in the tenancy of the White House itself. How has this come about? Are we right to see the Secretary of State in these impressive terms?

The historian will not find the present situation entirely novel. He will remind us that before there was a President there was a Secretary of State—or, to be precise, a Secretary of Foreign Affairs. In the infancy of the Republic, during the years of Confederation, when Congress served as both executive and legislature, it found it impossible to get along without a Department

of Foreign Affairs, and to the post of Secretary it appointed in succession two of the ablest figures of the period, Robert Livingston and John Jay. They laid a foundation so solid and sensible that when the new Constitution came into operation in 1789 the existing system was continued, though with the difference that the Secretary no longer served under the immediate authority of Congress but under that of the newly created supreme Executive, the President of the United States.

Unfortunately in the rush to get everything packed and the system of government underway, one or two things were left out. It was discovered that there was an assortment of duties which had to be performed but which none of the executive departments was exactly adjusted to discharge. No arrangements had been made for publishing the acts of Congress, no one had been designated to keep the Great Seal and the accounts and records of the United States; worst of all, now that the United States was a federation, no part of the Federal Government had been made responsible for conducting correspondence with the several States. There was nothing much in common between these tasks and none of them had much to do with the conduct of foreign relations, but they had to be handled somewhere, and it seemed to Congress as if the Department of Foreign Affairs was not too overburdened to take them on. However, if it was to have its functions thus irrelevantly augmented, it hardly made sense to go on calling it by the old name. So in September 1789 the Department of State was born and its principal officer was designated henceforth the Secretary of State.

Neither then nor since have these odds and ends taken up much of the Secretary's time or thought. But in the lighthearted way in which Congress dumped these forgotten items in the Secretary's lap one may see an indication of the contradictory attitude which Congress displays towards him at intervals throughout American history. Oh the one hand foreign affairs are judged so important that the Secretary of State is the senior member of the President's Cabinet and was indeed, between 1836 and 1947, second in succession to the Presidency. On the other hand there is recurrent hope that foreign affairs will give so little trouble that the Secretary of State will be free to go fishing and that the most important U.S. embassies can be staffed with party spoilsmen.

The act of 1789 which set up the Department makes it clear that the Secretary is, in law, the direct subordinate of the President. He is to perform such duties as the President may assign him and is to conduct the business of the Department "in such manner as the President * * * shall from time to time order or instruct". In this respect the Secretary is no different from any other member of the President's Cabinet; they are all servants of the President, alter egos who do for him, in relation to the work of their separate departments, what, owing to human limitations of space and time, he cannot do for himself. He appoints and dismisses them, consults or ignores them, instructs or leaves them to their own devices. What their relationship with the President is to be is entirely for him to determine. It is not a team he leads, like the British Prime Minister; it is an administration he directs. The people have put the President where he is; he alone has put them. The power they exercise is all delegated by him. But this has never meant that a President could safely surround himself by nonentities. Indeed the ideal has always been what George Washington proclaimed it to be when he chose his first Cabinet, to appoint men "already of marked eminence before the country; not only as the more likely to be serviceable, but because the public will more readily trust them".

Especially is this true of the Secretary of State. From the earliest days the country has always wanted to have someone as the head of the State Department that they could trust. If you look over the long roll of Presidential Cabinets you will find that the Secretaryship of State has generally been held by the weightiest and ablest member of the group. In the first formative years of the Republic in particular, when the fundamentals of American foreign policy were being laid down for a century, a series of brilliant statesmen followed each other in the Department of State—Jefferson, Randolph, Marshall, Madison, Monroe, John Quincy Adams, Henry Clay. In this period the office, more often than not, was a stepping some to the Presidency itself. In the first 40 years half of the Secretaries of State go on to become Presidents. Then comes a change. After 1831 only one Secretary of State, James Buchanan, is elected to the Presidency, and only one, James G. Blaine, is even nominated subsequently as a candidate. Nowadays, it is probably true to say, no serious aspirant to the Presidency would regard the road to the White House as lying through the State Department. How should we account for this change?

In part it is due to a transformation in the character of the Presidency. The early Presidents were all, in varying degrees, patrician statesmen chosen from a limited circle for their proven fitness and experience; for an office so conceived the Department of State was an obvious proving ground. But as America's westward expansion turned her gaze further and further from Europe and from foreign relations in any shape or form, and as popular suffrage spread and national parties developed, a change occurred. The President was now nominated by a national party and directly elected by the people; thus the emphasis fell, as with Andrew Jackson, not on proven competence in the arts of Government but on broad popular appeal, and appeal of this kind could not easily be acquired by performance in the State Department.

At about the same time, though for different reasons, the Secretary of State's job changed its character too. Or perhaps not its character so much as its scope. With the extrusion of European imperialism from the Western Hemisphere and the enunciation of the Monroe Doctrine, the great formative periods of foreign policymaking for the young Republic were over. It was as if the ship of state had now been set on her course and could be left to plough ahead on calm seas with only an occasional touch from the steersman. For three-quarters of a century this was broadly true, so that although there were some able men at the State Department there was no great outlet there for their talents; indeed, if it happened that a superannuated dud like Senator John Sherman was appointed, few people thought that the Republic would come to any great harm in consequence. (The low esteem into which the office had fallen in the eyes of politicians was well indicated by Sherman himself who grumbled, "They deprived me of the high office of Senator by the temporary appointment of Secretary of State.")

Then came, at the turn of the century, that first American awakening to the perils and possibilities of world responsibility which is associated with the name of Theodore Roosevelt. Thenceforward to our own day, with only momentary intervals, foreign affairs are a major concern of American government and an increasing preoccupation of American public opinion. This brings back to the State Department a sequence of eminent and able Secretaries—John Hay, Elihu Root, Robert Lansing, Henry Stimson, Cordell Hull. But it does not make the Department once again a stepping stone to the White House. In all the tributes that the resignation of Mr. Dulles evoked there was not one suggestion that if time and health had been permitted to him the highest office might have been within his grasp. Nor has Mr. Herter's elevation made him a serious contestant for the Republican nomination in 1960. Why is this?

We can see something of the answer, I think, if we look at the relations between President and Secretary of State in two administrations notable for their concern with problems of foreign policy. Both Woodrow Wilson and Franklin Roosevelt began with Secretaries of State whom they appointed primarily because they were considerable political figures in their own right. Bryan, three times Democratic candidate for the Presidency, had been largely instrumental in securing the nomination for Wilson in 1912. Hull, much less of a national figure, was none the less highly influential in the Senate and throughout the Democratic South which provided half of Roosevelt's popular following. But Wilson found the divergencies between his policy and Bryan's pacifism were too great to be bridged and in 1915 Bryan the politician was replaced by Lansing the Counsellor of the Department, the lawyer who was the technician of policy, the expert official.

"F.D.R." under strain of war reacted similarly; his disagreements with Hull were never great enough to warrant dismissal, but whenever he was at odds with his Secretary of State he simply by-passed him and used Sumner Welles, the Under Secretary. In 1943 the jealousy to which this gave rise obliged Roosevelt to dismiss Welles, but the by-passing did not cease; Harry Hopkins, the President's personal assistant and White House lodger, was repeatedly employed on diplomatic errands.

Historians have sometimes tried to explain these relationships in terms of the personality of the President involved—Wilson's autocratic moralism, Roosevelt's reliance on personal charm and devious indirection. But there is more to it than this. In proportion as foreign affairs have become a growing preoccupation of American public opinion, so the Secretary of State has come under the shadow of the Jacksonian concept of the Presidency. Too important now to be left to mere technicians, the conduct of American foreign relations requires at the State Department a man of stature who can deal with foreign ministers abroad and with Congress at home as an equal, if not a superior. But just because the decisions in foreign affairs involve issues of life and death for the Nation these decisions cannot ultimately be taken by a mere appointee, however able and however dedicated. They can only be taken by the one man who represents the American people because he has been elected by them, the President. Truman understood this perfectly; although he had, first in Marshall and then in Dean Acheson, Secretaries of State to whom he gave his complete confidence, from the outset the big decisions were all his.

One is tempted sometimes to think that there may be more to it even than this. Respected though he may be, the Secretary of State can seldom hope to be a very popular man. Like the British Chancellor of the Exchequer, one of his main jobs is to tell the public what they do not wish to hear. This has been especially so during these last decades when the cherished dream of American omnipotence has come into such painful clash with the realities of world politics. In such a case, and when things go awry, it

seems as if it is not necessarily the President who mainly suffers; he is, after all, the electorate themselves in another guise. Instead the Secretary of State becomes the whipping-boy.

It is the Secretary of State who has to spend long hours before the committees of Congress, to defend a policy which may often be of his master's making. It is he who has to answer a barrage of questions from Senators and Congressmen. When these assume, as they often do, a humiliating or embarrassing form, he can neither, like the President, take shelter behind the prestige of his office, nor, like a British parliamentarian, give as good as he gets in the sure knowledge that his back-benchers will cheer him. The Senate, in particular, believes that truculence should be a one-way street. A Secretary of State who would win their support must combine the patience of Job with the heroism of St. Sebastian; he is not even permitted to imply that the arrows are wide of the mark and do not really hurt—that was what lost Mr. Acheson votes when he was tied to the Senatorial stake. The President can, upon occasion, read Congress a lecture; the Secretary of State never. So it comes about that for the "loss of China" and the stalmate in Korea, Truman admittedly was criticized, but it was Marshall and Acheson who were scourged. And has not something of the same happened upon occasion where Eisenhower and Dulles were involved?

So the picture emerges of the Secretary of State as a figure strangely compounded and curiously placed. In the increasingly complex world of international politics he must be an expert diplomat; yet he must also have a political standing at home. For all that, he can never press his own judgment against the President's; the people's choice is the boss. If things go well he may get some credit, but even when he has brought the dragon to its knees it is probably a St. George from the White House who will administer the coup de grace and take the plaudits. If things go badly he will get most of the boos and may even be thrown to the lions. And when his time is done he can hope for no further preferment, except what comes from writing his memoirs or returning to his law practice. Happy the country which offering so little can yet attract to its employment so many illustrious public servants, from Robert Livingston to Christian Herter.

Commodity Credit Loans

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. GATHINGS. Mr. Speaker, on yesterday, June 30, the gentleman from Illinois [Mr. MICHEL] placed in the CONGRESSIONAL RECORD tables he had been furnished by the Department of Agriculture having to do with Commodity Credit loans made to producers which were in excess of $50,000.

On pages 11201 and 11202 were listed loans made to soybean growers, and on that list were six loans made to growers in Mississippi County, Ark. The record should be clear, and I wish to make clear the fact that these were loans—not outright grants such as are made to commercial airlines; loans—not subsidies such as are used to pay a great part of postal charges for slick-paper magazines. Many other such subsidies could be cited. The CCC loan program does not cost the taxpayer unless the commodities were not withdrawn by the farmer and subsequently sold by the Government for less than the amount of the loan by Commodity Credit. To illustrate this fact, I wish to place in the RECORD at this point a telegram which I have received from a Mississippi County farmer, who is also general manager of the Mississippi County Production Credit Association:

Hon. E. C. GATHINGS,
House of Representatives,
Washington, D.C.:

Mississippi County ASC office made $4,386,000 soybean loans in 1958; 75 percent has been paid. Most of balance will be before deadline. Collected enough fees from farmers to pay clerical and field help 5 years. Farmers averaged $2 for beans. Where storage not available $1.50. Without storage and loan farmers would have had minimum of $3 million less income this county. Program has not cost Government. Saved farmers big and little from heavy losses. Despite insidious propaganda program is good for agriculture and business. Limitation will upset orderly marketing. Will not save money for Government. Will cost economy of Nation.

LLOYD GODLEY.

Attorney Joseph J. Savitz, of Wilkes-Barre, Elected Commander of Pennsylvania Jewish War Veterans

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Times Leader of June 29, 1959.

[From the Wilkes-Barre Times Leader, June 29, 1959]

ATTORNEY JOSEPH J. SAVITZ, OF WILKES-BARRE, ELECTED COMMANDER OF PENNSYLVANIA JEWISH WAR VETERANS

Attorney Joseph J. Savitz, of 278 East Northampton Street, city, was unanimously elected commander of the Department of Pennsylvania, Jewish War Veterans of the United States of America, at the concluding session of the 26th annual convention yesterday. The 3-day conclave was held in Atlantic City, N.J., and was attended by some 500 delegates.

One of the several resolutions adopted at the convention was that future department conventions be held within Pennsylvania and not outside the State.

A member of the law firm of Rosenn, Jenkins and Greenwald, Attorney Savitz is a past commander of Post 212, past department of Pennsylvania judge advocate, past national liaison officer and is vice chairman of the National Foreign Affairs Committee.

He served 3 years with the Army during World War II, in this country and overseas. He received the bachelor of arts degree from Wilkes College and was graduated by the University of Pennsylvania Law School. Attorney Savitz is a trustee of Wilkes College and has served as president of its alumni association since 1957.

Attorney Savitz serves as a director of the Legal Aid Society, Wyoming Valley United Nations Association, Jewish Community Center, Wyoming Valley Jewish Committee, B'nai Jacob Synagogue, Wilkes-Barre Hebrew Institute and Luzerne County Civil Defense.

Delegates of Post 212 who attended the session were William Cherkes, post commander; Harry Fierverker, newly elected central district commander; Attorney Sol Lubin, Dr. Joseph Lubin, Theodore H. Yudkovitz, past department commander; Leonard Brader and B. J. Levin.

Members of the post auxiliary in attendance were Gloria Fierverker, newly elected president, and Dorothy Yudkovitz, past president.

Are Employment Security Offices Functioning Properly?

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the RECORD I ask unanimous consent to include an article by Herb Levitt relating to the frustration experienced by a young mother who wished to hire a woman to care for her infant son while she and her husband worked; but she had no success.

We read daily of how many people are out of work; however, here we read about a job for which nobody had applied. I would say that the Michigan Employment Security Commission has been negligent in carrying out its obligations as far as administrative duties are concerned. It is time that we took a new look at the operations of all such employment security commissions in an endeavor to determine whether a complete overhauling is needed, or at least a reorganization so we won't have the very apparent mismanagement of operational functions as in this instance.

WOMAN WHO OFFERS JOB SENT AROUND IN CIRCLES

(By Herb Levitt)

A week-long battle against city, county and State bureaucracy by a Garden City mother has ended in a draw.

Considering the odds, however, Mrs. Janet Rasor thinks she must be credited with at least a moral victory.

Mrs. Rasor didn't want to battle the Detroit Welfare Department.

She had nothing against the County Department of Social Welfare. The State Bureau of Social Aid, with its Aid to Dependent Children and Old Age Assistance bureaus had never troubled her.

She wasn't even sure what the initials of the Michigan Employment Security Commission stood for until last week.

All she wanted was to hire a full-time housekeeper.

WOMAN WANTED

She is the office manager of an investment company. Her husband, William, is an engineer. They needed a woman to keep things tidy and care for their 7-month-old son, Bart, while they were at work.

"I thought I would contact a welfare office because I had read that many women were on relief because they couldn't find jobs," she said.

Mrs. Rasor tried the Detroit Welfare Department. Someone there, she said, told her that they didn't approve of their welfare cases getting work outside the Detroit area.

The County Department of Social Welfare was next on Mrs. Rasor's list. No help there.

Next on the list was Aid to Dependent Children—ditto.

WORKS IN CIRCLE

"A lady there told me to call the Dearborn Welfare Office, because it was closest to my home," Mrs. Rason said. "I did, and the woman there gave me the same phone number I had just called at ADC.

"By this time I was angry. I wasn't getting all of my work done around the office either."

ADC instructed Mrs. Rasor to call Old Age Assistance.

There she was told that while some of the older women in that program occasionally seek domestic work, there is no list of available prospects.

"Some of the people I talked to seemed put out because I wanted to put someone to work," Mrs. Rasor said. "I got the feeling I was rocking the boat.

MORE CALLS

"After awhile I was determined to get to the bottom. I didn't have any malice when I started—but when I finished—whew."

She also tried several other suggestions, before she finally hit on the answer—she thought.

"They told me that the Michigan Employment Security Commission ran a domestic placement service," she said. "So I called the Inkster office."

That call also proved fruitless.

"Somebody there told me that few domestics are eligible for unemployment relief—so they don't come around.

Welfare and employment office officials expressed amazement and disbelief when informed of Mrs. Rasor's woes.

NAMES SENT IN

"We've sent hundreds of names of capable domestic help to the Michigan Employment Security Commission domestic placement service," said R. Bernard Houston, director of the Wayne County Bureau of Social Aid. "We have one woman whose job is to route such calls to the proper place.

"You can be sure my workers will be further instructed."

Daniel J. Ryan, city welfare superintendent, could not believe one of his workers did not know about the Michigan Employment Security Commission services.

"We have a Michigan Employment Security Commission branch office right in our own central intake office," he said. "We welcome callers like Mrs. Rasor, and in the past we've placed many welfare recipients in such jobs."

Perhaps most surprised was John Watt, a Michigan Employment Security Commission spokesman.

"We have an agreement with county, Detroit and similar welfare agencies by which they screen domestic clients and refer them to us for placement.

"I'm going to send memos to every welfare agency to remind them."

"I hope this does some good," Mrs. Rasor said.

"I really saw red when one welfare worker told me to advertise for the help I wanted in the newspaper.

"I called the newspaper, all right, but it wasn't to advertise."

Meanwhile, neighbors are caring for her infant.

No Recognition

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert a letter to the editor of the Rapid City (S. Dak.) Daily Journal from Matthew Cvetic on the subject of recognition of Red China.

Mr. Cvetic is a former Communist for the FBI whose recent lecture tour in South Dakota was very well received. His comments deserve careful consideration.

LETTERS TO THE EDITOR

NO RECOGNITION

I would like to comment on an article by George W. Cornell, Associated Press religion writer, in the June 9 issue of the Rapid City Daily Journal. The article deals with the question of whether we should or should not recognize Red China.

When I posed as a Communist for the FBI, I knew, as a matter of fact, that the Chinese Communists were part and parcel of the international Red conspiracy directed by the Kremlin. Why some of our diplomats of the late forties dealt with the Chinese Reds as agrarian reformers, despite the fact that they knew better, is something that stands the scrutiny of every American.

Why some American diplomats permitted the Chinese people to fall into the hands of Communist bandits is something only they, the diplomats who caused it, can explain.

From knowledge acquired inside the Soviet conspiracy from Communist agents, one thing stands out crystal clear—If we are to remain a free Nation and if we are to avoid a disastrous world war III, we can never recognize Red China. And why not? Simple mathematics reflect that recognizing Red Russia lost almost half of the world to communism. Recognizing Red China most assuredly can have only one final and appalling result—loss of the other half of the world to communism—and we are in that other half. To those who want to know the Kremlin's position on Red China, here it is:

The Kremlin's plan for Red China was handed down to Communists all over the world by the late leader of the Red conspiracy, Stalin, in 1949. Since, during that year, I was still posing as a Communist, I also received this Red directive. Quoting Comrade Stalin, it stated as follows:

"Comrades, we have now taken over China—our next task in China is fourfold: First, in 1950, we must liquidate (Communist for murder) 20 million in China to solidify our control. Second, we must gain recognition for our new Communist government in China. Third, we must secure admission for her to the United Nations. Fourth, finally, and the most important task, comrades, is as follows: We must get all the help in the way of machinery, material, equipment, and supplies from the enemy (we always called the United States the enemy in secret Communist Party meetings) for our new Communist government in China. This help from the enemy, comrades, will hasten the day of the Communist revolution in the United States."

So you can see that according to the Kremlin's plan, by recognizing Red China, by admitting her to the United Nations or trading with her, we would be literally sowing the seeds of our own destruction.

To those who want to recognize the Red tyrants in China, because they think it is the Christian thing—or the American thing to do—let me, as a fellow American and Christian, pose a couple of questions.

"Did Moses compromise with Pharaoh in Egypt to win freedom for the Hebrew slaves?"

"Did Christ compromise with the moneychangers, hypocrites, or the devil?" Of course not. And neither can we appease or compromise with the Red tyrants. Appeasement or compromise, not only will never win freedom for the enslaved behind the Iron or Bamboo Curtain, but can have the disastrous result of loss of our own freedom as calculatingly plotted by the Reds.

True Christians, good Americans, can never acquiesce in the enslavement of men by recognizing and giving respectability to the ruthless tyrants who enslave them.

MATTHEW CVETIC.

Water and Property Rights of the Individual and the Several States

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. LIBONATI. Mr. Speaker, I have received a communication through the office of the distinguished secretary of state of the State of Illinois, the Honorable Charles F. Carpentier, from the members of the Illinois General Assembly, enclosing a copy of House Joint Resolution 46, relative to the water and property rights of the individual and of the several States, and to prevent Federal ursurpation of these rights, as accomplished through the recent decisions of the Federal courts and the recent opinions and assertions of the U.S. Department of Justice.

I am, by request, presenting this resolution, which follows herewith:

HOUSE JOINT RESOLUTION 46

(Offered by Messrs. Stremlau, Morris, Hunter, McConnell, Mills, McCully, Haag, Loughran and Whalen.)

Whereas recent decisions of the Federal courts and recent opinions and assertions from the U.S. Department of Justice have deprived States and persons of rights which said States and persons previously enjoyed, to regulate and control the use of water in those respective States and areas; and

Whereas said decisions and opinions are a part of a general pattern gradually developing into Federal supremacy over and usurpation of water which, if continued, will destroy individual and States rights and substitute in lieu thereof an all powerful centralized government control over water: Therefore, be it

Resolved, by the House of Representatives of the 71st General Assembly of the State of Illinois, the senate concurring herein, That the President and Congress of the United States and the Representatives of the State of Illinois in the Congress of the United States, be and they hereby are urged and requested to take all necessary action (1) to preserve the water rights of the individual

and of the several States and to prevent Federal usurpation of those rights; (2) to initiate and support legislation which will reestablish and secure to individuals and to the States the rights taken from them by the Federal courts and the Department of Justice, and (3) in every way possible to reaffirm, renew, further, and defend the concept that water rights are property rights and that these established rights to the use of water by State or an individual should not be taken away without due process of law and adequate compensation.

Further resolved, That certified copies of this resolution be transmitted by the secretary of state to the President and Vice President of the United States, to the Speaker of the House of Representatives of the Congress, to the chairmen of the U.S. Senate and House Committees of Interior and Insular Affairs, and to each of the Senators and Representatives from the State of Illinois.

Adopted by the house, May 6, 1959.

PAUL POWELL,
Speaker, House of Representatives.

CLARENCE BOYLE,
Clerk, House of Representatives.

Concurred in by the Senate, June 10, 1959.

JOHN WM. CHAPMAN,
President of the Senate.

EDWARD E. FERNANDES,
Secretary of the Senate.

An Oklahoma Salute to DAV

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. EDMONDSON. Mr. Speaker, during the past 7 years in Congress I have had many occasions to appreciate the fine work being done for the veterans of Oklahoma by the national veterans organizations which are active in my State. The service which they give to many veterans and the families of our veterans, is almost beyond measure.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Oklahoma, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV ORGANIZATION

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained an able and hard-working staff of full-time trained national service officers. The 138 full-time service officers, located in 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its Central Office in Washington, D.C., are on constant call to serve our disabled American veterans and their families.

They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

SERVICES IN OKLAHOMA

The DAV maintains a full-time national service officer in the VA regional office at 2d and Court Streets, Muskogee. Joe Adair is a good personal friend of mine and he also serves as DAV department adjutant, in addition to his community service as president of the Muskogee School Board. There are two VA hospitals in Oklahoma at which the DAV has VAVS representatives as follows: Mr. Guy T. Kavanaugh, 918 Boston Avenue, Muskogee, and Mrs. Floyd Edens, 1133 NW. 82d Street, Oklahoma City. Both of these VAVS representatives are a credit to the DAV in its mission of service, and my friend Guy Kavanaugh is the newly elected department commander.

During the last fiscal year, the VA paid out $82,201,000 for its veteran program in Oklahoma, including $23,117,548 disability compensation to its 27,862 service-disabled veterans. These Federal expenditures in Oklahoma furnish substantial purchasing power in all communities.

The following figures supply impressive additional evidence of the outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Oklahoma veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted, est	45,814.00
Claims folders reviewed	38,178.00
Appearances before rating boards	8,680.00
Compensation increases obtained	3,034.00
Service connections obtained	599.00
Nonservice pensions	1,029.00
Death benefits obtained	248.00
Total monetary benefits obtained	$1,933,309.66

The above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Oklahoma veterans, their dependents and their survivors.

ADDITIONAL DAV AIDS

These figures do not tell the full story of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—Civil Service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

For the service officer, every claim presents different problems. Too few Americans fully realize that governmental benefits are often not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendent, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting it to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings.

The VA has denied more claims than it has allowed—and one major reason is that many claims are not properly prepared. The DAV is justly proud of its success in the preparation and presentation of claims—many successes having been scored in cases which had been turned down previously because of inadequate preparation by the veteran

acting alone and without skilled assistance.

LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1⅓ percent of such discontinuances and reductions have probably occurred as to disabled veterans in Oklahoma with a consequent loss of about $364,000 per year.

A great number of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. Every disabled veteran in Oklahoma should carefully consider the advisability of enlisting the skilled assistance of the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, as a protective measure in the safeguarding of his rights.

HOW SERVICES ARE MAINTAINED

Many claimants are not aware of the fact that the DAV receives no Government subsidy. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Indento-Tag—minature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in its own right. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Indento-Tag department, many of whom, during the last 8 years, were Oklahoma residents.

Every eligible veteran, by becoming a DAV member and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. Much more could undoubtedly be accomplished for distressed disabled veterans if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members, and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Oklahoma by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington 4, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal-year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. For America's disabled defenders, who are receiving disability compensation, the DAV has been a forceful, eloquent, and effective voice in our Nation's Capital, and a strong right arm in cities and towns all over the country.

I welcome this opportunity to salute the DAV—a great veterans' organization doing a great job.

Dr. Samuel Slavin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of June 29, 1959.

[From the Wilkes-Barre Times Leader of June 29, 1959]

DR. SAMUEL SLAVIN

Like so many individuals, who arrived here before the turn of the century, Dr. Samuel Slavin, a native of Russia, found America truly a land of opportunity. He was only 14 when he first sighted his adopted country. Twelve years later, he was a doctor of dentistry. For more than a half century, he practiced his profession, living to see his son and associate, Dr. Mortimer Slavin, who paid him the compliment of following in his footsteps, elected president of the Luzerne County Dental Society.

Greater Wilkes-Barre has a large number of individuals who found success and contentment under circumstances, similar to the experience of Dr. Slavin. Not all, to be sure, were professional men, but they and their offsprings today are numbered among our leading citizens. America and this community owe them a considerable debt of gratitude for the contribution they made to its development through their courage and initiative. Dr. Slavin is a notable example.

Latin American Police Force

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond as it appeared in the New York Herald Tribune of June 21, 1959.

As you know, one of Senator SMATHERS' amendments to which Mr. Drummond refers, to provide for an Inter-American Court of Justice, was not adopted by the committee. The other amendment, however, to provide for a Western Hemisphere Police Force, was modified and adopted in substance, by providing that $35 million be set aside for use by the Organization of American States to encourage the appointment of a police force. Of course if the $35 million is not used by the OAS for that purpose, it reverts to use for economic assistance to Latin America.

Recent events in Latin America point up the need for such a police force.

Mr. Drummond's article follows:

LATIN AMERICAN POLICE FORCE

(By Roscoe Drummond)

WASHINGTON.—Senator GEORGE A. SMATHERS, Democrat of Florida, who has always shown an alert interest in Latin America, is making significant headway advancing a significant proposal.

What Senator SMATHERS is urging—and he is winning increasing support—is that the organization of the 21 American States be strengthened at two vital points so that it will have the means of securing the peace in the Western Hemisphere the way the United Nations was intended to secure the peace of the world but has never been allowed to.

Mr. SMATHERS proposes two concrete steps.

He would create a "volunteer police force" to deter or counter any use of force against any Latin American country and would put this police force at the disposal of the Organization of American States for such emergency.

He would establish an Inter-American Court of Justice as the legal arm of the Organization of American States to which the members would agree to refer justifiable disputes.

Senator SMATHERS' purpose is not just to show how well the United Nations could do its job if it were free to do it. That is just a byproduct, though a useful one.

The reason for creating the Organization of American States police force and an inter-American court is that relations between numerous of the Latin American nations are seriously deteriorating. There have been either threats or overt aggression against Haiti, the Dominican Republic, Cuba, and Panama in recent months. Without forces which it could instantly deploy, there is a dangerous prospect that the Organization of American States would be unable to help.

The United States would be benefited by helping to create a Western Hemisphere police force.

1. If the Organization of American States decides it must use force to counter an aggression against one of its members, the only adequate force which could be called upon would be U.S. defense forces. This could easily be made to appear like U.S. interference in the internal affairs of another coun-

try. How much better for both the Organization of American States and the United States to have an international police force for this purpose—a police force which could be used only by the Organization of American States and for the Organization of American States.

2. It would be more economical and would save us the myriad headaches of military aid to individual Latin American countries. This aid is not designed to prop up any government, but our military aid has been so used—much to our political discredit. For the next fiscal year the administration is proposing to allot $96,500,000 for military assistance to Latin America. I think there can be no doubt that we could achieve more mutual security throughout Latin America by spending part of this sum on a Latin American police force. We'd be better off politically. The Latin American countries would be better off defensively.

2. It is clear that the Communists in Latin America, taking their orders from Moscow, are organizing for the opportunity to get hold of other Latin American countries, as they did temporarily in Guatemala, where they will be as embarrassing and menacing to the United States as possible. Commenting on the recent attempted invasion of Panama, President Ernesto de La Guardia said: "This was not just a group of adventurers from our won country or even from Cuba. These people were mostly Cubans, but directed by and led by militant Communists. Their ambition is the long-stated one of taking over the Panama Canal." An Organization of American States police force would be good protection there.

The U.N.'s World Court lies limp from lack of use.

The U.N.'s international police force was still-born because the Soviet Union vetoed it.

The Western Hemisphere could use its own police force and its own court of justice.

Senator SMATHERS has already won important backing in the Senate Foreign Relations Committee. He needs—and deserves—further allies.

Edgewood Arsenal in World War I

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I want to offer for the RECORD a speech of Mr. Michael J. Dwyer, candidate for national commander of the Veterans of World War I, endorsed by the Florida department:

One of our buddies revealed to me some first-hand observations of the chemical warfare operation during 1917–18. Edgewood Arsenal was a poison gas factory. It was located near Baltimore on the Chesapeak Bay. This was a top-secret operation and this buddy was assigned there as a private soon after induction into the Army.

There were no promotions, transfers or leaves granted to any one after they were assigned to this gas factory. The privates worked there many hours a day and slept, ate, and worked with gas masks around their necks. There were a 100-percent casualties per month in the mustard gas plant. That is every man was in the hospital by the end of a month with burns from this gas and every veteran that was in a combat unit over there should know what that means.

There were 7,000 enlisted men in this factory who lost their voice or could just whisper, all of them had scabs under the arms, between the legs, or wherever body moisture absorbed the mustard gas which was always present in the air.

The phosgene gas affected eyes, voice, lungs and appetites adversely. Many of the buddies could not read, talk or walk without considerable discomfort. They were too sick to go to the mess hall more than once a day but they had to continue to work regardless of illness.

For this they received $30 per month, minus $9 for their own insurance. Now this factory and camp was built by an American patriot who worked for $1 per year, his name was Honest Andy Mellon. A Major Walker from Ohio State University and undergraduates and other chemists were working there as privates. This Mr. Mellon built the factory and camp on a 10 percent cost plus basis. The barracks were beautiful steel and concrete permanent buildings, about 30 of them all erected for future expansion. The Du Pont firm acquired them after the war was over and there was no more gas needed for warfare.

The civilian employees received $30 per day and many of them were paid much more as it was a cost plus contract. It should be interesting to know how many of those 7,000 buddies are alive today after breathing all the gas fumes that affected their health in later years.

We Veterans of World War I deserve our traditional pension for the faithful service rendered during the Nation's time of need.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I have the privilege to include a resolution adopted by the council of the city of Philadelphia at a meeting held June 25, 1959:

RESOLUTION 357

Resolution memorializing the 86th Congress of the United States to enact the Kennedy-Morse-Roosevelt bill (S. 1046 and H.R. 4488), a bill which would increase the minimum wage and extend protection to nearly 8 million additional workers

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and we are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the people of Philadelphia. Unless a national minimum wage standard is established by Federal law, Philadelphia industries which pay a decent wage scale will suffer unfair economic competition from those in other communities which pay their employees low, substandard wages and are thus able to undersell our industries; and

Whereas there is now before Congress the Kennedy-Morse-Roosevelt bill (S. 1046 and H.R. 4488) which would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and include nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore, be it

Resolved, by the Council of the City of Philadelphia, That we hereby memorialize the Members of the 86th Congress of the United States to enact S. 1046 and H.R. 4488, a bill which would increase the minimum wage and extend protection to nearly 8 million additional workers.

Resolved, That certified copies of this resolution be forwarded to the Speaker of the House of Representatives, the President pro tempore of the Senate, the Members of Congress representing Philadelphia and the U.S. Senators representing Pennsylvania.

"A Flaming Torch to All America"—Remarks by the Honorable Bernard F. Dickmann, Chairman, at Ground-Breaking Ceremonies for Jefferson National Expansion Memorial

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mrs. SULLIVAN. Mr. Speaker, one of the most thrilling experiences of my first term in the Congress of the United States was to be permitted authorship of Public Law 361 of the 83d Congress authorizing the Jefferson National Expansion Memorial at St. Louis as a joint Federal-local project under the National Park Service. Work on this great project had been underway for 20 years or more before my bill became law, but the law was necessary to regularize appropriations already made and to be made in carrying out Federal responsibilities for the memorial.

The one man most directly responsible for the successful achievement of our dream in St. Louis of a great memorial project symbolizing the opening by Thomas Jefferson of the vast western areas of this continent to American settlement and development was and is the Honorable Bernard F. Dickmann, director of welfare of St. Louis since his recent retirement as postmaster, and, prior to a long and distinguished career as postmaster, one of the finest mayors St. Louis has ever been fortunate enough to have.

My husband, prior to his election to Congress in 1940, was secretary to Mayor Dickmann. No man is a hero to his secretary unless he is of truly great stature. I can attest to the fact that Mayor Dickmann was very much of a hero—and was a great inspiration—to John B. Sullivan, as he has been to everyone I know who has worked with him or for him over the years.

It was most fitting that when the long-delayed groundbreaking occurred on June 23 for the relocation of the railroad tracks which will clear the last obstacle to erection of the great riverfront project in St. Louis under the National Park Service, that "Barney" Dickmann was chosen as chairman of the impressive ceremonies.

I am very sorry that the heavy schedule of important legislation before the Congress early last week made it impossible for those of us in Congress who have worked many years for the achievement of the Jefferson National Expansion Memorial to be present in St. Louis for the groundbreaking. Unfortunately, the arrangements were made without taking into consideration the difficulty of Members of Congress in attending affairs far from the Capitol during midweek.

However, I was pleased to receive a copy of Mr. Dickmann's excellent talk in officiating at the groundbreaking, and I am sure they will be of interest to all Members, particularly those from areas of the country which were part of the Louisiana Purchase.

Mr. Dickmann quoted the late William Allen White, of Emporia, Kans., about the desirability of establishing this memorial to Jefferson in St. Louis as a national park, as follows:

> The Louisiana Purchase * * * was Jefferson's major contribution to American life. The Louisiana Purchase, which Jefferson promoted and finally secured, made the United States a continental empire. The Louisiana Purchase, more than any other one political act, recast our Nation.

It was the view of Editor White that in making the great Purchase from Napoleon, "he did more to preserve democracy than he did when he formulated the ideals of democracy in the Declaration of Independence."

Chairman Dickmann not only dramatized the meaning and significance of the Jefferson National Expansion Memorial in officiating at the groundbreaking last week but put into perspective the great work done by many outstanding citizens of St. Louis since the late Mr. Luther Ely Smith first broached the idea to a brandnew mayor of St. Louis in 1933.

The remarks referred to, Mr. Speaker, by the Honorable Bernard F. Dickmann, at groundbreaking ceremonies for the Jefferson National Expansion Memorial at St. Louis, June 23, 1957, were as follows:

ADDRESS OF HON. BERNARD F. DICKMANN, DIRECTOR OF WELFARE, CITY OF ST. LOUIS, AT GROUND-BREAKING CEREMONY, JEFFERSON NATIONAL EXPANSION MEMORIAL JUNE 23, 1959

Members of the Jefferson National Expansoin Memorial Committee, distinguished guests, ladies, and gentlemen, this is a most auspicious occasion and I am deeply honored and privileged to act as chairman for these dedicatory ceremonies, here on the site of a dream come true. How I wish the late Luther Ely Smith were here to join with us, because it was he who conceived the idea of a memorial on the riverfront in St. Louis, and it was he who first approached me when I was newly elected mayor of St. Louis, back in 1933, to ask me to consider plans for a memorial on the site of Old St. Louis on the riverfront.

Twenty-six years ago, on December 15, 1933, a small group of citizens of this great city convened at the first meeting, held in the Adolphus room of the Jefferson Hotel, to plan a great memorial to the territorial expansion for which St. Louis is the gateway—the gateway to the west, as a memorial to the man who was responsible for that territorial expansion—the greatest peacetime acquisition in these United States, conceived and achieved by Thomas Jefferson. That, and the next meeting, was attended by men you know, men you knew, some with us here today, some called from us, to our deep regret. I think it is more than fitting that I call the roll of these men and women:

Mr. Luther Ely Smith, who fought the battle for this memorial from the beginning, and with whom it was my privilege to be associated in all the planning, the battles and the victories. Mr. John G. Lonsdale, Mr. Carl F. G. Meyer, Judge Jesse McDonald, Mr. Baxter Brown, Mr. Morton May, Sidney Maestre, who has been in the front all through the years. Tom Gilmartin, Isaac H. Orr, Claude B. Ricketts, McCune Gill, whose research gave us the valuable historic background on which to build our memorial. Walter B. Weisburger, Bill D'Arcy, William J. Gibbons, Gale F. Johnston, Max O'Rell Truitt, Frank C. Rand, Louis LaBeaume, Albert T. Perkins, J. Lionberger Davis, Judge George Hitchcock, Mayor Rolla Wells, Hon. Charles Nagel, Mrs. W. M. Grossman, Mrs. Edna Gellhorn, Miss Temple Burrus, and myself. From these two meetings came the Jefferson National Expansion Memorial Association, incorporated June 11, 1934.

There have been many meetings, many conferences, many heart-breaking obstacles, but all happily overcome. How prophetic were the words of the late Newton D. Baker, a member of the U.S. Commission, who said: "This memorial will be like a cathedral; built slowly, but surely." Slowly it has been indeed, but how surely. Today marks the realization of this gigantic dream, a worthy prize in a long and well-fought battle.

I will not bore you too much with statistical data over these 26 years: the city of St. Louis took the first step by passing the necessary ordinances permitting our citizens to vote for a bond issue to contribute up to $7,500,000 for this memorial. That was in June and July of 1935; in August 1935, Congress passed a Historic Sites and Building Act, and in September of 1935, the citizens of St. Louis, at a special election, passed the $7,500,000 bond issue by more than a two-thirds majority. In November of 1935, the Missouri Supreme Court, in a test case, sustained the validity of the city's bond issue. In December 1935, by Executive order, the President of the United States, the late Franklin Delano Roosevelt, designated the National Park Service as the executive agency to acquire and develop the Jefferson National Expansion Memorial, with an allocation of $6,750,000 of Federal funds, to be matched by $2,250,000 contributed by St. Louis. In January 1936, injunction suits in State courts were filed to restrain city officials from proceeding with the memorial, but the suits were dismissed.

In May 1936, the city of St. Louis deposited in the Treasury of the United States, $2,250,000 realized from the sale of the city bonds, making a total of $9 million available for the acquisition and development. This left $5,250,000 of city bonds unissued, available to match further funds from the Federal Government in the ratio of $1 of St. Louis funds to $3 of Federal funds. In July 1937, the city of St. Louis offered the old courthouse to the Federal Government for inclusion within the area of the memorial. In 1940 demolition of the buildings in these 37 city blocks was completed, and the only buildings left were the old courthouse, the old cathedral, the first church west of the Mississippi River, and the old rock house, all three of which are now part of our great memorial.

As we know, there was a national architectural contest for a design for our memorial, which was won by Mr. Eero Saarinen.

Then came one of the biggest obstacles to the building of our memorial, the removal of the tracks of the Terminal Railroad. This obstacle seemed unsurmountable, but with grim determination, our present mayor, the Honorable Raymond R. Tucker, resolved to overcome this obstacle, once and for all, and he appointed a committee of our leading railroad officials, requesting them to study the matter unselfishly, and from a civic standpoint, and through the combined efforts of our friends and leading citizens, Mayor Raymond R. Tucker, Hon. Russell L. Dearmont, new president of the Missouri Pacific Railroad, Hon. Arthur K. Atkinson, president of the Wabash Railroad, and the late Armstrong Chinn, president of the Terminal Railroad Association, the difficulty was resolved, and today marks the beginning of the relocation of the troublesome tracks.

Our forefathers built a sturdy democracy, they formed a more perfect union, and they established justice, insured domestic tranquillity, and provided for the common defense; they promoted the general welfare, and secured the blessings of liberty to themselves and their posterity. The Louisiana Purchase provided a growing people the greatest peaceful territorial expansion in history. With the purchase of Florida, the annexation of Texas, the cessions of the Oregon and Mexican territories, together with the Gadsden Purchase, our dominion was extended from coast to coast, and the foundations were laid for an enduring Nation. Can you visualize what our country would be like today if it had not been for the foresight of Thomas Jefferson? We would be a small country indeed, with much fewer opportunities for our people. That is what we are memorializing, fellow citizens, opportunities provided us by our forefathers, the right to expand, to develop, to grow, and go ever farther and farther westward. And it all started right here, in what was known as Old St. Louis. You all read about, and some of you participated in the reenactment of the day St. Louis was under three flags. What a moment in history. And it all took place right here, where we stand today.

May I quote some excerpts from an editorial written by the world-famous Emporia, Kans., newspaperman, who was a member of the U.S. Commission, the late William Allen White. He said, "The memorial in St. Louis will be the only adequate memorial to Thomas Jefferson, on the continent. It will be erected at the gateway to the Louisiana Purchase, which was Jefferson's major contribution to American life. The Louisiana Purchase, which Jefferson promoted and finally secured, made the United States a continental empire. The Louisiana Purchase, more than any other one political act, recast our Nation. Jefferson gave us our inspiration toward democracy and when he bought from Napoleon, the vast territory stretching from the Mississippi far into the western mountains, toward the Pacific, for $13 million, he did more to preserve democracy than he did when he formulated the ideals of democracy in the Declaration of Independence. Therefore, it is fitting at this time to erect this dignified monument on the waterfront in St. Louis to the great visionary whose ideals were realized and whose dream came true. This Jeffersonian Monument, here in the center of our land, will light a flaming torch to all America. It will point the way that Jefferson would lead us, to an enlightened country, peopled by free citizens with equal opportunity for all."

Luther Ely Smith was the first president of our local memorial association; he was

succeeded by Mr. William W. Crowdus, who has served in that capacity, very ably, for the past 10 years. And this past week, we acquired a new president, Mr. Morton D. May. Buster May has succeeded Mr. Crowdus and we welcome him, and look to him to carry on our work to the final completion of this memorial.

There are other speakers here today who will tell you more about our great memorial, its plans, and what it means to the Nation. So I shall stop here and introduce the first of our distinguished guests. As you all know, the Jesuits were the first to bring educational opportunities to St. Louis—today they are one of the strongholds of our community, one of the most inspirational and respected leaders in our spiritual welfare. It is fitting indeed, that the first church west of the Mississippi River should be a part of this memorial, and as the representative of the great faith that brought to us our earliest spiritual leaders, it is my distinct privilege to introduce to you, Rt. Rev. Msgr. James E. Hoflich, pastor of the Old Cathedral, who will give the invocation for the ceremonies to follow—Monsignor Hoflich.

One Step Forward, Two Steps Back

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the June 25 Journal of Commerce, which characterizes the wheat bill passed by the House and Senate as "one step forward, two steps back":

ONE STEP FORWARD, TWO STEPS BACK

Once again Congress has proved beyond any reasonable doubt that it is either unwilling or simply incapable of facing up to the realities of the crop support program.

The wheat bill it sent to the White House on Monday—even though labeled a "stopgap" measure and limited to 1960 and 1961 crops—is patently unacceptable. It is an open invitation to a White House veto, and perhaps a good many of the Senators and Representatives who voted for it intended that it should be precisely that.

They have certainly had fair warning that the President would balk at it. They had the opportunity to produce compromise legislation the President might accept, even though with reluctance. The course they chose, however, was the seemingly easy way of showing the farmers they favored high supports while shifting over to the White House the onus of saying, "No; the Nation cannot afford this kind of nonsense any longer."

Outwardly, the purpose of the wheat bill is that of cutting planting allotments 25 percent under the present national minimum allotment of 55 million acres. And since this in turn offers some hope of cutting the rate at which the Government's massive wheat surplus continues to pile up year after year, it is certainly commendable.

But at what price would this be accomplished? At the price of fixing price supports at 90 percent of parity. Not at 75 percent, as at present, not at 80 percent—or even at 85 percent, as suggested in various moves to compromise the House and Senate bills—but at the full 90 percent demanded by the House.

This is the equivalent of taking one step forward with a flourish of trumpets in broad daylight, then quietly retreating as darkness falls with the vague hope that perhaps no one will notice what is really happening.

The President and his Secretary of Agriculture, Ezra Taft Benson, have fought a hard and thankless battle these 6½ years past to cut away some of the roots of the system that drives farmers one year after another to produce more of certain crops than they would have any hope of selling if the Government didn't step in and pick up the tab.

They have not sought to eliminate the system altogether, but merely to modify it by replacing high rigid supports with a more flexible system under which production would tend to drop as incentives were cut back by establishing at least a slight relationship between parity payments and market prices.

Experience has shown that it is not always sufficient to reduce acreage allotments, for farmers naturally withdraw their more marginal lands and concentrate all the harder on their most productive soil. And if this has been so in the past, what can we expect if the parity payments are suddenly jumped up to 90 percent?

For one thing, a good deal of the painful progress made during the past half-dozen years will be wiped out. So far as wheat is concerned, the withdrawal from 90 percent of parity will have to start all over again 2 years from now.

This is perhaps the most depressing aspect of the whole affair, for what the present Congress has done is wash its hands of a difficult issue and pass it over to another Congress in a state considerably worse than it was at the beginning of the present session.

For another thing, whatever reduction this measure may seem to make in the accumulation of 1960–61 wheat surpluses will be largely illusory. The physical surplus may be smaller in those years, but the Government will pay a good deal more for what is actually produced. Mr. Benson has warned in fact, that far from cutting the overall cost of the program by $264 million a year, the measure would raise it by $100 million to a total of $800 million.

The odd thing about the wheat bill is that its worst feature—the 90 percent parity requirement—was affixed not in the Senate, where agricultural interests exert the greatest strength, but in the House.

Another curious twist is the unofficial explanation that the Senate approved the original House version as the lesser of two evils—the other having been the necessity of working out still another version which would be acceptable to both Houses—something that would naturally require both time and effort.

This is about as lame an excuse for bad legislation as we have heard in some time. Of course, it would have required more time and effort. But it is not, after all, the business of legislators to legislate? And if the President vetoes this measure—as we expect and hope he will—will not both House and Senate have to get to work on another measure anyway?

They will unless they can override his veto. And judging by the narrow margin (44 to 40) with which this bill passed the Senate, we rather doubt they can muster the votes to do so.

The World Refugee Year

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. MULTER. Mr. Speaker, last December the United States joined with other free countries in the United Nations in sponsoring a proposal for a World Refugee Year.

It was the hope of our Government that the proclamation of such a year would have the effect of arousing interest in refugees among countries and segments of the public who had not previously seemed aware of their plight, and would at the same time revive public concern and lead to greater assistance from those countries which had traditionally shown compassion for, and generosity toward these, our unhappy fellow human beings. Only the Soviet bloc opposed the proposal for the obvious reason that many of the refugees are fugitives from communism. Currently more than 30 countries have indicated that they will participate in the year, which begins today, by doing what lies within their power to help.

It is hard to estimate the extent of the refugee problem. Secretary General Dag Hammarskjold of the United Nations has said that over 40 million people have become refugees since the end of World War II and that there are still 15 million without permanent homes. Of this number the United Nations helps only the 2 or 3 million who require international aid in special ways. The two largest groups are the nearly 1 million Palestine Arab refugees in the Middle East, almost half under 15, and the 1 million refugees from Communist China living in desperation and poverty in Hong Kong. The Algerian-French war has resulted in the flight of 210,000 refugees from Algeria into Tunisia and Morocco, the large majority of whom are women, children and oldsters. Escapees from communism in Europe number 100,000, many of whom are still in camps after nearly 20 years. There are 9,000 European refugees in Communist China. The recent aggression of Communist China against Tibet has driven 10,000 Tibetan refugees into India. Refugees from Nasser's Egypt number about 5,000 and other scattered groups increase the total by some 15,000.

Some countries have welcomed large numbers of so-called refugees as nationals and accord them all the rights of citizenship. West Germany, for example, has opened its doors to 12 million East Germans and 2,000 a week are still filtering across the border to escape the Communist dictatorship. South Korea and South Vietnam have offered the same kind of haven to their nationals from the Communist north.

During the World Refugee Year the United States plans a five-point program of assistance for the refugees aided through the United Nations.

First. Continued support for existing refugee programs at a cost of about $40 million a year.

Second. An additional $4 million to be assigned to the most pressing refugee problems.

Third. A special immigration program to bring to the United States part of the refugees requiring resettlement.

Fourth. An increase of $10 to $20 million for food distribution from the surplus agricultural commodity program.

Fifth. Full support for programs undertaken by the U.S. Committee for Refugees, which is coordinating the efforts of private refugee relief groups.

Those of us who are interested in helping in this program can do so through the many private agencies cooperating through the U.S. Committee for Refugees. Here is one instance in which individual efforts can help in the solution of an international problem of great importance. We should not miss the opportunity the World Refugee Year affords.

Public Highway Route U.S. 51

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. LIBONATI. Mr. Speaker, I have received a communication from the office of the distinguished secretary of state of the State of Illinois, the Honorable Chas. F. Carpentier, from the members of the Illinois General Assembly, enclosing a copy of House Joint Resolution No. 15, relative to the inclusion in the system of public highways now provided for by Federal law, and known as the National System of Interstate and Defense Highways, of U.S. 51, starting near the shipping port of Duluth on the shore of Lake Superior, and extending in an approximately straight line to the great shipping port of New Orleans.

This highway is of the highest importance to the national defense. I am presenting this resolution, which follows herewith:

HOUSE JOINT RESOLUTION 15

(Offered by Mrs. F. C. Pierce, Messrs. Choate, Eberspacher, Scott, Hunter, McConnell, Mrs. M. E. Green, Messrs. Harbeck, Haag, Stremlau, William Pierce, Hollerich, Alsup, McCarthy, Clyde Lee, Billhartz, Holloway, Manning, Baker, Mills, Rhodes, McCully, Willett, Davidson, and Soderstrom.)

Whereas the existing public highway route marked as U.S. 51, commencing near the important shipping port of Duluth on the shore of Lake Superior and extending in an approximately straight line to the great shipping port of New Orleans, transverses the heart of the industrial, agricultural, and mining areas of the State of Illinois and is hereby one of the most important avenues of this Nation in the transport of personnel, goods, wares, merchandise, and foodstuffs essential to the health, welfare, and defense of this Nation; and

Whereas it is the sense of the General Assembly of the State of Illinois that such highway route in this State is a more heavily traveled and a more important pathway of communication than some of the routes that have been designated as part of the National System of Interstate and Defense Highways and should therefore be included as part of such National System of Interstate and Defense Highways provided for by the Congress: Therefore, be it

Resolved, by the House of Representatives of the 71st General Assembly of the State of Illinois, the Senate concurring herein, That the Congress of the United States is urged to take appropriate action to provide for the inclusion of the route of the existing public highway marked as U.S. 51 in the State of Illinois in the system of highways now provided for by Federal law and known as the National System of Interstate and Defense Highways; and that an appropriate copy of this resolution and its preamble be forwarded by the secretary of state to each Member of Congress from this State.

Adopted by the House, February 16, 1959.
PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.
Concurred in by the Senate, June 8, 1959.
JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Poison in Your Water—No. 136

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the RECORD an editorial from the Maine Outdoorsman and Conservationist for July 1959, entitled "Stinks in Portland, Too":

STINKS IN PORTLAND, TOO

When Portland residents began to get a whiff of what foul air smells like, and also an example of how contaminated air can change the color of the paint on a house, they rose in righteous indignation and demanded that something be done to remove this unpleasant situation. They're asking about Federal funds to alleviate such a nuisance.

Well, the good folks who live along the Androscoggin River, as well as numerous other highly polluted waters in our State of Maine, can certainly sympathize with their Portland neighbors. No; it isn't a pleasant odor. Incidentally, been up Rumford way lately?

Sooner or later, the people are going to become sufficiently nauseated with the whole stinking mess they'll start demanding that the legislators, who so far are much too complacent about the growing pollution problem, stop listening to the industrial lobbyists and start listening to the people who cast the votes to elect them to office.

Some day, perhaps, some of these elected public servants will start listening to the many, instead of the few.

Ezekiel Connected Them

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. BONNER. Mr. Speaker, under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I include a most interesting address delivered by Dr. Edmund J. Gleazer, executive director, American Association of Junior Colleges, Washington, D.C., at the commencement exercises of Chowan College, Murfreesboro, N.C., on June 1.

The address follows:

EZEKIEL CONNECTED THEM

(Commencement address by Edmund J. Gleazer, Jr.)

I was talking with a sophomore junior college student not so long ago who was astounded to hear the dean of the general college of the University of Minnesota remind a faculty group that students could be looking at a teacher with rapt attention and still have their minds a thousand miles away. She said she didn't know that teachers knew that.

This happens, too, sometimes to people in church. With the best of intentions let me tell you a story. I sat in church a few weeks ago. As the service proceeded an impression began to trouble me. I though how matter-of-fact we seem to behave. How lifeless the words spoken. All at once I could hardly stand it. Like a torrent breaking through a dam, great resounding phrases began to come to mind:

"God created man in his own image."

"Know ye that the Lord He is God; it is He that hath made us."

"Go ye therefore and teach all nations."

"I am come that ye might have life and have it more abundantly."

"Glory to God in the highest and on earth peace."

How could we sit there, impassive, casual, proceeding mechanically? Where was the note of wonder and awe as we spoke His name? Where was the motivation of urgency? How could our faces be other than radiant with His glory as we spoke and thought of Him? How had we reduced the work of God to such a commonplace? And there came to mind the vision of the prophet, Ezekiel, as he saw the valley filled with dry bones and asked: "Son of man, can these bones live?" And I thought further, of my own vocation, what of our work in higher education—the learning process which ought to be such a thrilling quest—a glorious adventure into the problematical and the unknown—has it, too, had the life suffocated out of it? Are we too occupied with dry bones? Chemical equations, names and dates, rules and formulas, semester hours and passing grades, 64 credit hours and an A.A. degree. How can these bones live?

Ezekiel was a prophet to a people in bondage. And there is a kind of bondage that theratens us today. Goethe, the German philosopher spoke of it. He said it is the commonplace that enslaves us all. "Commonplaceness, the surrender to the average, that good which is not bad but still the enemy of the best—that is our besetting danger." And Henry Drummond, the great preacher, said we need to "move the vast inertia of the soul, and place and keep it

where the spiritual forces will act upon it."

To those who were in bondage Ezekiel, speaking in the name of Jehovah, promised: "A new heart also will I give you, and a new spirit will I put within you * * * and ye shall be my people, and I will be your God."

Sometimes the greatest lessons are spoken in the simplest ways. I have heard choral groups sing the spiritual about the prophet Ezekiel. And the text of this talk might very well be put in a most rhythmic way: "Ezekiel connected them—dry bones—hear the word of the Lord." And the word of the Lord was: "I shall put my spirit within you and ye shall live."

Yes, shall live. There are certain characteristics of a living, vital individual. He is sensitive to his environment. He is tuned in to what is going on. He is not like the bull in a china shop. He is using all of his senses. He is not oblivious to his surroundings. He knows when it is raining and knows enough to come in out of it. He sees with perception—his hearing is acute. He has broad peripheral vision. The individual with vitality is sensitive.

In addition to registering the sounds, sights, and happenings in his environment he has a predisposition toward action. He is alert. Alertness means a readiness to respond. This is much like the description that William James gives of faith—a predisposition toward action. Action is anticipated. The individual is expectant, close to excitement. He is ready to move. What a thrill it is to have some people like that in the classroom.

And the live creature responds to his environment. In fact, continuance of life requires a response. If you poke an animal and it doesn't move, you suspect that it is dead. The environment will work toward the elimination of a creature that does not respond. If we are alive we answer to the situation—we reply to it. We do something about it. A man throws a brick at you. You respond to the situaion by ducking or you get hit. You have a class assignment. You turn it in or you get an "F".

But do you notice that we have said something else? You could respond to the brick-throwing situation by not ducking. You might simply shout at the man or make a face at him. This bring us to our next characteristic of vitality. The response will be an appropriate one. It will be suitable and proper and timely. This seems to be the essence of intelligence, that a person know how to respond to a situation in an appropriate way. He is sensitive enough to define the situation in accurate terms. He sees the picture. He responds in a way to further the objectives and values of his group. This is appropriateness.

The man doesn't want to get hit by the brick so he ducks. His objective is to save his face, to go on living—fight another day—this is considered desirable. The student prepares his assignment because he wants to remain a member in good standing of the college community. One great contribution of a college education ought to be the growing ability to size up a situation and to be able to respond to that situation with a knowledge of what is appropriate, that is suitable and timely.

There is one other characteristic of this vital individual. Not only does he respond appropriately, he responds with competence. This means that the appropriate way of behaving has been mastered so that when the occasion arises the individual is ready to respond, he has the ability. Appropriate behavior might call for the man to duck when the brick is thrown but what if the man is not agile? Appropriate behavior is to respond to the teacher's question with a comment, an answer, but what answer?

Let us look at it another way. We are going to sing a song—all of us. We need a songleader. You look around. Nobody volunteers. You are aware of the need. Sensitive to it. Tensions mounts. Finally you say you will do it. You have responded to a need, and appropriately too. The situation requires a songleader. You didn't leave the room in answer to the problem. You said you would do it. You know you need to do. But do you know how to do it? This is competence.

Now, to borrow a phrase from Ezekiel, How do we connect these qualities to areas of our lives so that we may live?

We live in a world of people—two and one-half billion of them. People of various colors, languages, religions. People with needs and wants. People with problems. People with dreams. There will be no life in us unless we make secure our connection with this world of humanity. I am part of all of this. The problems and issues of these people are my problems. This college is not an island off from the world. All that we have done here will lack sincerity, honesty, meaning unless the course in Geography means living, breathing people with hopes and aims and passions and burdens; unless Chemistry and Physics mean metals and soils and materials and energy and power for people; unless Religion becomes values, and striving, and believing and searching of people. Here then we find motivation. Here is the answer to that perennial question, "Why learn this stuff?" Here is the connection that gives the spark to what could so easily be the dusty verbalisms of the classroom.

There is a real possibility that you could interpret these two years here as an interlude between the life that was at home and your life when you leave here. Two years taken out with little connection between what has gone before and what will come. However life is not like that—not a sequence of pools. We do not jump from one to another with the water chemistry different in each pool. Rather life is like a river and the elements up stream are flowing into the portion right before us and that part of the river now visible is going down stream to join with that which is out of sight at the moment. Experiences before flow into the experiences of now and the now becomes our future character.

In this light we see our present work connected with reality—no busy work about this—no idle abstractions—no lifeless forms. Here and now there can be the essence of vigorous and meaningful and pulsating life as we connect ourselves with the factors in this present time and space at Chowan College. And with sensitivity and alertness we respond in suitable and timely ways with developing competence to the continuing stimulation of this college community.

There is another connection to be made if we shall live. Just as our biological make-up is the result of transmission of life from one generation to another just so there is a heritage of wisdom for those who would seek it. We have lifelines that extend back through the centuries to other people who lived and breathed and wondered and sought. They give us a head start if we can understand what they are trying to say to us. Unfortunately there is a possibility that life is squeezed out of the words that form the major record of these people who have gone before us. At Harvard, students have used the original laboratory notebooks of scientists who were searching for truths that we now accept. By retracing the scientists' steps, by sharing in their mistakes and disappointments, by joining in their hypotheses and thrilling to discovery with them, the student senses a fellowship with those who have contributed to our reservoir of knowledge and appreciates more fully the disipline and rigor of research. Surely "all experience is an arch wherethu' gleams that untraveled world whose margin fades forever and forever when I move. How dull it is to pause, to make an end * * *."

A cut flower soon withers away and dies. We need to be grounded in the vast store of wisdom which is available if we shall work for it.

We acknowledge our connection with humanity. We recognize the vitality which can be ours as we connect ourselves with present opportunities in the college community. We are aware of our relationship to our academic forefathers. There is one additional connection—another dimension needed.

We need to look up—to dedicate ourselves to life's highest values—to understand the ways of sacrifice. We must find a cause, a reason for being—something worthwhile to which we can give ourselves completely. Sometimes we refer to dedication as sacrifice. There is a misconception here we ought to clear up. Sacrifice is not unpleasant—not a way of action forced upon a person of sanctimonious intentions. Sacrifice is simply service that is disciplined—that costs something—that insists that a person examine his scale of values. It is not like putting a dollar on the offering plate, an action that requires little examination or evaluation—it is like our putting $1,000 on the plate. It means forgoing something desirable for the sake of some greater good.

And it does not mean that this shall be done reluctantly or unhappily or grudgingly but freely and fully and happily. Sacrifice is service given a vertical dimension. It is singlemindedness. We make service sacred by relating it to that which is of the most importance. It means assuming the obligations of discipleship—the disciplined life. The option remains with us to choose our goals, our objective, but sacrifice means to yield ourselves to the way of life defined by those objectives—the way of life we are bound to as the result of our choices of goal. Sacrifice means to freely respond to restraint for the sake of achievement. It means recognizing that if there are some things we want to do then there are some things we must do. In this elemental principle and its application lies the hope of perpetuating a society of freemen.

Ezekiel talked of the resurrection day of a nation, when God would gather together the nation's dry, dead bones and breathe life and spirit into them again. The world in which you hold membership and in which you move now with increasing responsibilities has almost desperate need of a people who can add to their learning and skills a new heart and a new spirit. Man's greatest achievements are still before him. Be glad that you were born for such a day. Accept this blessing. Immerse yourselves in the exciting, challenging, demanding environment in which your life will have its setting; be guided by the experiences of those who have led you to this day and upon whose work you build and reach for life's highest goals with boldness and humility—that man may live.

Two Thousand Independent Merchants in V-Stores Family

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. ANDERSEN of Minnesota. Mr. Speaker, the independent community merchant is one of the finest traditions

in our national economy. Within the lifetimes of most of us we have seen the development of great mail order houses, chain stores, and giant retail businesses to supply American households with goods. Somehow, our local independent retail stores have continued in business despite the keenest price competition imaginable.

In the United States we recognize the merits of bigness, but we strive also to protect the little fellow. Searching for a reason for the growth of our Nation we might well come to the conclusion that it is this precarious balance between big and little business that has kept our economy going.

The Congress has struggled for many years with legislattion designed to protect independent business. We have enacted antitrust legislation and we have armed the executive branch with powers to curb and destroy monopolies. As our economy grows and changes, we find that the problem is constantly before us and the solution becomes increasingly difficult. Even now, the Congress is in a crossfire of opinion regarding the relative merits of so-called "Fair Trade" legislation which would have as its avowed purpose the protection of independent merchants all over the land.

But there is a practical limit to the lengths we can go in enacting laws to protect small business. Some means must be found for independent merchants to compete fairly and legitimately with their big neighbors, and one effective system to serve that purpose has been developed out in my district in Minnesota.

One of the most unusual businesses in America has its headquarters in Clara City, Minn. Probably not more than half-a-dozen of our colleagues ever heard of that little city, but more than 2,000 merchants all over the United States look to Clara City as the home of the Variety Supply Co. with which they are associated.

The V-Stores organization exists for the sole purpose of making high quality merchandise available at the lowest possible prices through the independent member stores. While retaining and strengthening the fiber of independence, it brings to its membership the advantages of bigness. More than 2,000 little neighborhood stores buying as one through the V-Stores organization have patterned a new and proven means of existing in the sharply competitive retail economy we have today.

The character, efficiency, and integrity of this system reflects the qualities of its founder, Mr. Gordon Yock, of Clara City. If any man in his lifetime erected a national monument to free enterprise, such a monument has been built by Gordon Yock in his establishment of the V-Stores organization. With unusual foresight he has translated an urgent need into a brilliant opportunity for community merchants to live and grow in sharp competition with their big economic rivals.

I have followed year-by-year the phenomenal growth of this merchandising system and I have marveled at its success. Under the unanimous consent given me, I am including in the Appendix a statement released today detailing the story of this family of merchants. It is a typically-American success story and one which should strengthen the faith of every one of us in our great system of free enterprise.

The release follows:

TWO THOUSAND INDEPENDENT MERCHANTS IN V-STORES FAMILY

The west-central Minnesota farmlands surrounding Clara City are best known for their rich crops of corn and soybeans. But right within the community, population only 1,106, has grown one of the most remarkable success stories in modern merchantile history.

It's the story of the Variety Supply Co., headquarters of the V-Stores organization, which today is one of the largest—and certainly the fastest-growing—groups of independently owned dry goods and variety stores in all the Nation.

Fast growing? Twenty years ago there were only seven V-Stores, all in Minnesota. Two years ago there were 529 in 11 States and Hawaii. Today there are more than 2,000 in every part of the United States.

So reports Gordon Yock, the easy-smiling, crew-cut president of Variety Supply Co., who has been the guiding force behind what he frankly calls a miracle.

By far the biggest single expansion in the V-Store saga occurred 2 years ago when Variety Supply Co. made available on a franchise basis its V-Store program to 6 wholesalers in other parts of the Nation. Adding the already existing 529 V-Stores to the stores serviced by the 6 new affiliates brought to more than 2,000 the number of hometown merchants teamed under the big V emblem.

The five wholesalers who are affiliated with the V-Stores program include C. B. Meyers Co., Grand Rapids, Mich.; Berkow Sales Co., Baltimore, Md.; Kling Co., Inc., Louisville, Ky.; Gail Enterprises, Inc., Boston, Mass.; Singer & Co., Columbus, Ga.; and Progressive Wholesalers, Los Angeles, Calif.

Primarily, they are teamed up with Variety Supply Co. to form a massive buying group for its member stores, all of which are locally owned and operated stores. For this purpose the group maintains its own buying office on Fifth Avenue in New York City with a 3-man staff and 800 square feet of showroom space.

"But," explains Mr. Yock, "we are not just a buying organization. We perform all services from store planning to a complete sales program for the entire year, including advertising and promotional events."

Definite plans for further expansion of the V-Stores program are now in the mill. Besides its Clara City headquarters, Variety Supply Co. also has a branch of its own in Coeur d'Alene, Idaho; New Hampton, Iowa; and Omaha, Nebr., to serve its distant members.

It's with understandable pride that Mr. Yock recalls the beginning of the V-Stores story in 1939:

"I had a general merchandise store here in Clara City and visited with six good friends who had good stores in nearby towns. I showed them it would be to our advantage to do our buying together and suggested we get together for this purpose.

"We decided that if we used my Clara City store's basement plus its phones and office equipment we could perhaps make it worthwhile for ourselves. We agreed to give it a whirl on the basis if it didn't work we could always divide up the merchandise and quit. We set a 6-month period as a trial.

"Then a southwestern Minnesota group of merchants was told what we were doing. These stores were all individually owned but they were sort of a voluntary group because of relationship, mostly brothers. They acted on our auditor's suggestion and did join with us. That made a total of 18 stores.

"From there on our program has grown to today's level."

Growth was something less than spectacular during the early years, however. Sales the first year were only $66,000, Mr. Yock relates. And it took another 8 years to reach the million-dollar milestone.

In 1958, Mr. Yock estimates, some 500 V-Stores did about $75 million in retail sales. With 2,000 stores now in the organization—and many more due to join—even last year's figure will appear puny compared with what is in sight for the immediate future.

Despite its amazing growth, the V-Store organization has always remained a picture of utter simplicity. Member stores pay nothing to join nor anything in the way of annual dues. There are no contracts to sign or promises to make.

"The only requirements," explains Mr. Yock, "are that a prospective member be a well-rated merchant, a nice fellow to do business with, and that his city is open. Then he's in and free to try out our program for 1 month, 6 months, 1 year, or 2 years, but quit if he ever wishes. However, nobody ever does."

Most unusual part about the whole V-Store story, says Mr. Yock, is that none of it was planned. It all just developed and quite by accident one cog after another seemed to fall right into place.

Disgraced Dollar

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 12, 1959

Mr. SILER. Mr. Speaker, last weekend I journeyed to Canada—at my own expense—and I was amazed to find that our dollars are now disgraced and humiliated up there in that great and busy land of the north. Every time I gave some of the Canadians a dollar bill I would get back only 95 cents in Canadian money. They said the discount was 5 percent. Now it used to be the other way around, for if you gave the Canadians a dollar bill in the good old days you would get back a dollar and five cents in Canadian money. But how times have changed. So, now it costs you exactly $1 to get a $20 bill changed when you visit "sound money Canada" for a vacation.

This disgraced dollar of our land has already smacked the daylights out of the real income of millions of Americans from Martha's Vineyard to San Diego. Its value went below 50 cents compared to 1940 some time ago. And this means we have robbed the widows, orphans, coal miners, pensioners, social security beneficiaries, old-age assistance people, and untold millions of others out of their patrimony or income or standard of living.

This disgrace upon the dollar has now settled like a shameful dunce cap even upon the head of the once respected Government bond so that today it is selling at less than 85 percent of its face

value or par value. People apparently no longer have full faith in the Government bonds of our country.

While anyone may entertain his own opinion about the cause of all this disgrace and humiliation, yet I feel that it basically lies in the deficit Government financing we have been practicing in almost every year during the past generation of our recent history. What is deficit financing? Well, it is simply putting out more than you take in. Uncle Bill Provins ran a country store a few miles from my hometown. Some drummer asked him about his markup and his net income. He said, "I don't know nothing about them things but I do know when I buy a hat for $3 and sell it for $5, I ain't lost nothing." Well, I myself am an economist or financier, but I do know when we put out more than we take in we are doing deficit financing and disgracing the dollar and robbing the widows and workers of our country and all the income receivers, both big and small, throughout the whole land.

One of the easiest and best ways to stop deficits and deficit financing is to stop most of this foreign aid right now. Some high Government officials recently stated that we would have to continue foreign aid indefinitely and maybe for the next 50 years or so. It is the only way, they claim, to stop Russia and prevent the spread of communism. I do not agree at all. But if we are planning to keep on with this foreign aid over an indefinite period, then we should change the motto on all our coins and make that motto "In foreign aid we trust" instead of our present motto, "In God we trust." Where did we ever obtain the insipid notion that America could be sustained or helped or defended by foreign aid? This overall program has already cost the American taxpayers about $70 billion over the past 14 years. It has done nothing for our country but cause disgrace to the dollar, flight from our Government bond, inflation of our grocery bills, robbery of our common people, embezzlement from our pensioners and workers, and continuation of high taxes upon every American that makes his bread in the sweat of his face. While Great Britain and Japan both were reducing taxes in recent times for their own people, we had to continue all of our tax burdens, transportation tax, telephone tax, income tax, gasoline tax, and all the rest, so we could help Great Britain and Japan reduce their own taxes upon their own people. A total of $3 billion of foreign aid money has actually gone to foreign powers so that they could reduce their national debts and balance their budgets, and yet to extend this kind of aid we ourselves had to borrow the money that was needed. We have also given more than $2 billion to foreign governments that were and are unfriendly to the United States, including the Soviet Union, Yugoslavia, and Poland.

Mr. Speaker, paraphrasing the remark of Patrick Henry, I know not what course others may take but as for me, give me something for Albany—Kentucky—ahead of Afghanistan, something for Harlan ahead of Hindustan, and something for London, Ky., ahead of London, England. And, in conclusion, it is now almost the Fourth of July and I wish to say that I do not apologize for being an American instead of an internationalist or for favoring the motto, "In God we trust," over the current song of many, "In foreign aid we trust."

Let us return to sanity and let us lift our pitiable dollar out of disgrace up to a returned respectability. Let us shake off our old sackcloth and ashes and say, "Hurray for America—I am proud to be an American and to stand for Americans as long as the world stands."

Yellow Journalism: A Case History

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. WILLIAMS. Mr. Speaker, one who confines his reading exclusively to the New York Times would be likely to believe that interracial crimes are commited only in the Southern States, and are virtually unknown in their own area of New York City.

When a crime is committed against a Negro by a white southerner, the Times takes great pains to see that it is prominently mentioned, and covered as an "interracial" incident. On the other hand, when a white person is the victim of crime at the hands of Negroes in their own circulation area, the fact that such crime is interracial in character is carefully, deliberately, and meticulously suppressed in their news reports.

The Times put great emphasis on the interracial character of the recent Tallahassee assault of a Negro girl by white men, but as may be seen from the following copy of their report of a similar assault in their own city by Negroes against a white girl, racial identities were excluded. Under leave to extend my remarks, and in order to illustrate the above charges, I include herewith the New York Times report of this incident, and, also, the report of the same crime by the Newark Evening News:

[From the New York Times, June 20, 1959]

SIX SEIZED IN RAPE HERE—QUEENS YOUTHS HELD IN ATTACK ON GIRL, 14, NEAR SCHOOL

Six Queens youths were seized yesterday in the rape of a 14-year-old Queens girl on Thursday.

The attack took place near Public School 16 in Corona following an evening recreation program.

The police said the girl, who is in fair condition, knew all of her attackers. With her description, officers picked up a 14-year-old boy, who they said had acted as a lookout. He named the others, according to the police. He was charged with juvenile delinquency and paroled in his parents' custody after a hearing in Jamaica Children's Court.

[From the Newark Evening News, June 20, 1959]

SIX YOUTHS ARRESTED IN RAPE OF GIRL, 14

NEW YORK.—Six Negro youths, aged 14 to 17, have been arrested for the Corona, Queens, schoolyard rape of a 14-year-old white girl. She was attacked three times.

The victim, a pretty blonde eighth grader in the junior high school, was assaulted Thursday night after attending a recreation program at the school. Her name was withheld.

Police said two of the youths admitted assaulting the girl, but that a third denied it. They said a 16-year-old admitted holding the girl down while the others attacked her. Of the four, one is employed as a messenger boy and the others were students at the Brooklyn Automotive School.

ARRAIGNMENT TODAY

The four youths will be arraigned today in Ridgewood Felony Court on rape charges. Arraigned yesterday and charged with juvenile delinquency were a 14-year-old and 15-year old boy. The 14-year-old, accused of being the lookout, was a student in a school for problem children. The 15-year-old was a student at Flushing High School, Queens.

Police said the youth who first grabbed the girl, hit her with his fist, and raped her the first time. The victim's girl companions, who fled when she was struck and dragged away, ran into the school and sought the aid of Mrs. Louis Clifford, director of the recreation program. She rushed into the schoolyard and the youths fled.

The Corona section's population is about equally divided between whites and Negroes. An unidentified detective told newsmen: "There was nothing racial about the attack. It was just a punk kid trying to prove himself in front of his friends."

Police were on the alert, however, since the brutality of the assault might lead to revenge action by whites against Negroes. The neighborhood remained quiet.

Still a Master

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. BONNER. Mr. Speaker, under leave heretofore granted to extend my remarks in the Appendix of the RECORD, I enclose an editorial entitled "Still a Master," taken from the editorial page of the News and Observer, Raleigh, N.C. The Honorable Lindsay C. Warren will be remembered as one of the great leaders of this distinguished body.

The editorial follows:

Still a Master

When Lindsay C. Warren announced last year his intention to return to the State senate after an absence of exactly 40 years from that body, there was considerable speculation in political circles. Observers differed as to whether he would again be one of the dominant figures he was in the State senate in 1917 and 1919 and in the house in 1923.

The 1959 session has ended and Mr. Warren's role in it is now a matter of record. There is room for a considerable difference of opinion as to the wisdom of some of the

things he tried to do. In fact, this newspaper differed with some of his positions.

But there is no doubt that Lindsay Warren is still a master of the art of legislation—as he had shown himself to be early in his career and in the U.S. Congress from 1925 to 1940—when he became Comptroller General.

Lindsay Warren always knows what he wants to do and is uncommonly successful in getting much of it done.

Tribute to Interns and Residents of Freedmen's Hospital

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an address which I delivered at the annual banquet of the Association of Former Internes and Residents of Freedmen's Hospital, Washington, D.C., June 3, 1959.

The address follows:

I am happy to be with you today, as I always am when in the company of physicians and other medical scientists. Usually, the medical people are talking to me, telling of the accomplishments of research in health and medicine and of their hopes and plans for future progress.

Today, the shoe is on the other foot, and I have the privilege of talking to physicians and medical scientists. While I shall not presume to talk to this audience about specific details of medical research, I do want to tell you how proud I am of the accomplishments of such research. I am proud, too, that I have been able, through my many years of service in the Congress of the United States, to secure support for research and other programs leading to advancement in health and medicine through appropriations to the Public Health Service in the Department of Health, Education, and Welfare.

I want to tell you, also, of some of my hopes for future progress in health and medicine.

I know that some of the national progress in medical research has been made right here at Freedmen's Hospital and Howard University. Some of you in this audience—your program chairman, Dr. Spellman, among many others—have made notable contributions. I daresay many of you who are now in general practice assisted, during your student days, in the research then underway here. And I am sure that all of you, inspired by the example of your teachers here, have continued your interest in research, although I know the demands of the general practice of medicine make it difficult to devote much time to scientific investigations per se. Even if you cannot actively engage in research, I know that you keep abreast of research findings and their application to medical practice through the postgraduate seminars your association conducts, and doubtless through other means, too.

Because of my interest in medical and health research, and in my role as chairman of the House subcommittee that hears testimony of health and medical scientists in connection with appropriations for the Department of Health, Education, and Welfare, I do a little homework myself, reading over the testimony and the reports that sketch for me the progress of research and its probable application to practice in the control and prevention of disease and the alleviation of human suffering.

From this homework, I gather that our medical researchers now think that we can look forward perhaps—and I know that they stress the "perhaps"—to such advances as the following:

1. Solution to the present question of whether some or many human cancers are caused by viruses, with all that implies for possible prevention or treatment.

2. Better, or perhaps complete, understanding of that artery disease you medical people call atherosclerosis. From such understanding would come methods physicians could advise for prevention of this major cause of death.

3. Better drugs or other means for treating high-blood pressure, resulting from an understanding of its cause, and with this understanding, even development of a rational method for its prevention.

4. More and better vaccines for control or prevention of infectious diseases, including tuberculosis and the common cold.

5. New knowledge in the field of mental and emotional disease and the environmental factors leading to deviant behavior of both children and adults.

Perhaps from advances in this last area will come the most striking changes in your practice of medicine. I have been told that physicians in the future—and I hope it will not be a too distant future—will be applying the new knowledge in the field of mental health to both individual patients and to community groups. Through such an approach we—you as physicians and I as legislator—may be able to contrive a more intelligent social environment, so that each of our younger and our older citizens can better make his total contribution to his community and his nation. I know that you here today look forward especially to such future advances, as I do, and I can assure you that as our scientists show us, through their research, the way to improve the health of individuals and of communities, I, as a legislator, stand ready to work with you physicians to implement the improvements.

Now let me talk a few minutes about some of my hopes in a broader area—the area of international medical research. I believe these hopes of mine may be of especial interest to you because this institution of which you are alumni serves not only our Nation but has for many years served in international areas also. In fact, some of you here today may have returned for this occasion from your homes and practices outside the United States. And I am sure all of you, while students, internes and residents, established friendships with men and women who, students or internes then, are now your colleagues in medicine in other lands.

I have just returned from Geneva where I had the pleasure of joining other workers for health—dedicated health workers from all over the world—at the World Health Assembly. A major concern of the Assembly this year was the advancement of medical research. In my opinion, no subject could be more important, or more timely, for deliberation by the Assembly.

It seemed significant to me, too, that this World Health Assembly was meeting at the same time and in the same place as another group of world leaders were assembled. This other group met for the purpose of discussing ways to ease international tensions and to make a beginning, at least, toward a solid and lasting world peace. Yet it may be that the seeds of such a peace lie in the hands of delegates to the World Health Assembly and the medical scientists of the nations they represent.

After all, the fruits to be reaped, as medical research advances around the world, are vastly better health for vaster numbers of the world's population. They are improved nutrition and housing. They are happier and friendlier people. And they are the unities of a healthier and stronger peace.

On my way to and from Geneva I visited with medical and health workers in London, Dublin, Rome, Madrid. Everywhere I went, I found these men and women of medical and health science in agreement with me on the importance of expanding medical research. They feel, as I do, that expanding research and disease control around the world is one—perhaps the one—truly global effort in which all nations can and will join as real partners.

As I visited various health workers, and talked with others at Geneva, I gained fresh, firsthand knowledge of some of the health problems of the world, some of the potentials, some of the programs and their cost. These matters may be familiar to you. Yet, perhaps, busy with your patients and your local community health problems, you have not been aware of worldwide needs, as well as of your own—needs for research, for more trained medical manpower, for health facilities and better education and information dissemination.

Overall, the world health situation shows that man has progressed far in his fight for health; the world is healthier than it has ever been before. There have been sizable declines in the death rates from disease all over the globe, not just in highly developed areas. The world's population has, therefore, been increasing. Yet the increase has not, as some may believe, come about because of great increases in the birth rates. Primarily, the population increase is a result of decreasing death rates in many countries.

This means that medical research advances have been great and have been applied in enough force to effect declines in deaths from disease in many areas. In the last half-century, it has been said, the progress of science has been more rapid than in the previous 2,000 years. The lowering of mortality from disease proves the statement.

Moreover, directly against disease itself we see progress on many fronts. There have been real advances against cholera, a tremendous world problem. Perhaps the most notable victory, although it is like the winning of a battle and not a whole war, has been against malaria. Then there have been gains against typhus, a deadly disease enemy in many parts of the world.

Again from the overall viewpoint, the life span of man on earth has been extended and there has been some decline in the death rate of infants. Progress has been made against venereal disease around the world, and some advance, though little and far from what could or should be accomplished, against tuberculosis.

All of this is to the credit side of the ledger. The other side shows that, while we have come far, we have farther still to go. The familiar illustration of the iceberg is apt. What has been achieved is but the top part, which we see, of the iceberg. Nine-tenths of it is underneath. Just so, the greatest part of the world's health problems is still unsolved.

I found, too, that in countries abroad where the communicable diseases have been reduced, as they have here in our country, chronic illnesses have emerged as today's great cripplers and killers.

I was impressed again by the fact that in the past medical contributions to knowledge have come from all quarters of the globe and that today, as in the past, participation in medical research is widespread around the world. You know, even better than I, that the roots of any great medical discovery lie in scientific findings made over the years by many researchers. I have been told, and I am sure you know this, too, that careful observations at the bedside and in the clinic—observations such as you men

and women in general practice may make—have often pointed the way to important advances in control of disease.

The history of institutions, too, shows that they are erected upon and stem from methods and organizational structures developed in no one country. But in many, I have been told that Freedmen's Hospital offers an excellent training in hospital administration. I am sure that those of you who have taken this training, and followed careers in hospital administration, know full well how much any of our modern hospitals and research and teaching institutions have drawn from others around the world for methods and organizational details.

Coming back closer to home and close, I know, to all your hearts, is the matter of the relation of Freedmen's Hospital to Howard University and the possibility of transfer of its jurisdiction to the university. I know that many major changes in physical structure, expansion of bed capacity of the hospital, and changes in program, are being deferred until this matter is settled. I share your hopes and those of the hospital's administrators that the matter may be settled soon, and in a way that will be to the best advantage of all concerned.

As you know, I have, during every one of my many years of service in the Congress, devoted myself to the advancement of health and of medical research. I think you know that I can be counted on to espouse any measures which, in my considered judgment, will contribute best to such advancement.

This hospital has a proud record of achievement in service to the sick and suffering, in teaching, and in research. I am sure that each of you, and all who are following in your footsteps, will add to the brilliance of that proud record and that Freedmen's Hospital will continue to be known as a national and international center for training, for service, and for the advancement of the world's store of health and medical knowledge.

May I say that I include that in my hopes for the future? It is one in which I am sure you share. And because you are physicians—"standing above the common herd" as "the flower of our civilization," as Robert Louis Stevenson so beautifully and truly wrote—I am sure you share also my larger hopes that in our lifetime we may have:

Means to conquer such dreadful diseases as cancer, heart and blood-vessel disorders, mental and emotional sickness.

Such extension and expansion of medical and health research and practice that health, happiness, and peace shall spread throughout the world.

Red Subversion in Our Backyard

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. BRIDGES. Mr. President, it is increasingly apparent that the political situation in some South American countries is grave and foreboding. The Communist elements in these countries not only threaten the well-being of our southern neighbors, but that of the entire American hemisphere. The learned news analyst, Constatine Brown, graphically points out the danger of this Communist infiltration in an article which appeared in the Washington (D.C.) Evening Star of June 30, 1959.

I ask unanimous consent that his comments be printed in the Appendix of the RECORD and I commend its reading to my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED SUBVERSION IN OUR BACKYARD—WEALTHY LATIN REPUBLICS HAMSTRUNG ECONOMICALLY BY COMMUNIST INTRIGUE

(By Constantine Brown)

South America from the Caribbean to Tierra del Fuego is seething. Never before has America's backyard been in more serious danger than at present. Yet we do not appear to be able to take the initiative even in that area in which this country has so much at stake.

Latin American Republics have enormous wealth in raw materials. This should normally assure them at least limited prosperity. Yet they appear on the verge of collapse. If nature were to take its usual course, all these countries, with a measure of assistance and advice from the United States, would be able to weather the storm. But the chances of their being able to pull out are considerably reduced because of the activities of the Latin American Communists, strongly backed by Moscow.

As things stand now, there is a good chance, according to intelligence sources in Washington, that we may find ourselves ringed with Soviet submarine bases in the Caribbean. Despite Fidel Castro's protestations that he is only an ardent lover of democracy and freedom, the Communist element's influence in Cuba is much stronger than the alleged will of Castro to make that island republic neutralist.

Communist influence in the Government of Venezuela is equally powerful and reports from Caracas indicate that in the event of a major international crisis the Government will be taken over by active Communists under Moscow's discipline unless the present heads play along.

A realistic survey of most Latin American Republics indicates an alarming increase of Communist conspiracy. The agents, strongly backed financially by the Kremlin, are taking advantage of the economic distress—which they lay at the threshold of this country—to create chaotic internal conditions. Once these break out in revolutions against the "dictatorial" governments genuine dictators completely in the pocket of international communism are installed.

Washington is making some vague moves by offering limited financial support to the existing non-Communist administrations. But these are not effective because the ailment of our sister Republics south of the Rio Grande are more political than economic as appears on the surface.

We are dedicated to the elimination of dictators in Latin America. This was emphasized by Vice President NIXON when he visited that area some months ago and said: "We extend a cold hand to the dictators and a warm embrace to those opposed to them." It was realistically illustrated when Fidel Castro visited Washington unofficially. Despite the wholesale executions of sometimes innocent men and women, Castro received from our Government and enthusiasts in Washington and New York almost a hero's welcome.

There is not a single head of state in Central and South America who is not convinced that the hero of the Cuban revolution is under Communist discipline—by necessity if not by choice. But the hasty acquiescence of the U.S. Government and to some extent of the American people toward the Cuban dictator has created the impression that the United States (the principal target of international communism) is leaning toward the "Castro type" of dictatorship rather than the strongly anti-Communist "Trujillo type." This impression has, of course, given strength and unprecedented impetus to the Moscow agents who are doing their utmost to precipitate revolutions in as many Latin-American Republics as feasible, and especially in those which could offer "interesting" bases within reach of our boundaries.

The abortive rebellions in Panama, Haiti, and the Dominican Republic are examples of international Communist strategy. They have failed temporarily. But there are strong indications that there will be a repeat before the end of the year.

The Kremlin has been planning for a decade for the "day" and has taken advantage of our lackadaisical policies whenever possible. Thus the Soviet intrigues in Latin America date back to the late twenties when agents infiltrated Central America selling the blessings of communism to the peons. Hearings of the Senate Internal Security Subcommittee and House Un-American Activities Committee showed this conclusively from the testimony of former agents who became fed up with communism after a while.

An American citizen, Joe Zack (his real name is Kornfelder), who was trained at the Lenin school of subversion and worked under direct orders of Stalin, spelled out the entire plan to the two congressional committees. But none of our officials seem to have taken the warnings seriously. Their accuracy was proven in the recent developments not only in the Caribbean but also in almost every one of the other Latin-American countries.

While the attention of the administration, Congress and our people is focused on the great futility at Geneva and wherever the summit meeting is to take place, the Muscovites are working overtime at our expense in our very backyard.

Research and Aluminum

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, my remarks relating to research and aluminum.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

RESEARCH AND ALUMINUM

(Remarks by Hon. THOMAS E. MARTIN of Iowa, July 1, 1959)

Mr. President, in this critical period, one of our greatest resources is the skill and knowledge of our trained scientists and engineers who are able to probe nature's secrets.

The Aluminum Co. of America has one of its most important operations at Davenport in my State. Throughout the years its efforts have represented American research at its best. Recently two advertisements on their approach to science and technology which were placed in national magazines were brought to my attention.

In view of my long concern with research as well as my interest arising from my membership on the Committee on Aeronautical and Space Sciences, I wish to share these views with my colleagues and include portions of these two advertisements in the Appendix of the RECORD:

"DR. VAN HORN GETS THE 'GREEN LIGHT'

"You could staff a college of engineering from the Alcoa research laboratories, for 37 of 762 technical experts hold a Ph. D. degree and 275 more are masters of science. Alcoa built this talent pool with the same philosophy that raised research and development expenditures to $18 million in a recession year when other aluminum firms chopped already slim budgets 20 to 50 percent.

"This year, Director Kent Van Horn has the 'green light' for a new $30 million science center. Yet this news is no surprise to men who know that Alcoa investments in research created 95 percent of all aluminum alloys, invented the alclad process to thwart corrosion, developed anodic treatments to give aluminum color and abrasion resistance, pioneered the fabricating techniques that turned aluminum from a curio into a metal with over 4,000 product applications.

"For 70 years, Alcoa research has helped to put more than just 16 ounces of metal into every pound of Alcoa aluminum."

"NO ONE TOLD GUS HOGLUND YOU COULDN'T WELD ALUMINUM

"Twenty years ago, Gus Hoglund gathered a dozen skeptics around a jar of flux, a torch and some bits of aluminum. He was breaking trail for the man who now brazes 350 percolator spouts an hour, and for the company that will crack a new market with welded aluminum cans, churned out at 500 a minute.

"Even when doubting Thomases granted you could weld aluminum, they had to be taught how to do it. Gus Hoglund and his process development crew gave lessons by the thousands. And their work between classes with alloys and techniques has led to the development of welded aluminum structures three times as strong as the best of the past.

"Aluminum is second to no other metal in variety of commercial joining methods. With the industry's largest staff of engineering specialists to solve your joining problems, you get extra value in every pound of Alcoa aluminum you buy."

AMA Positive Health Program for Older Citizens

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. McNAMARA. Mr. President, recently, the Senate Subcommittee on Problems of the Aged and Aging had the privilege of listening to a number of the Nation's leading authorities on the problems of our older citizens.

Among these was Dr. Frederick Swartz, of Lansing, Mich., who is chairman of the Committee on Aging of the American Medical Association. Dr. Swartz presented the subcommittee with the AMA's positive health program for older citizens.

I ask unanimous consent that excerpts from Dr. Swartz's statement be printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

PRESENTATION BY FREDERICK C. SWARTZ, M.D., LANSING, MICH., AS REQUESTED BY SENATOR PATRICK V. MCNAMARA, CHAIRMAN, U.S. SENATE SUBCOMMITTEE ON THE PROBLEMS OF THE AGED AND AGING, IN CONNECTION WITH SUBCOMMITTEE MEETING IN WASHINGTON, D.C., ON JUNE 16, 1959

If it is not inappropriate, I should like first to compliment the chairman and committee members on the way in which they are beginning their study of the problems of the aged and aging. The deliberative, thoughtful approach which the committee apparently intends to follow should help provide the Senate with a clear picture of the basic needs of older persons.

The work of the American Medical Association in the field of aging has shown that the needs of persons over 65 are complex and that providing opportunity for these citizens to meet their needs requires full recognition of the widely varied circumstances under which they live. The calm, dispassionate approach by the committee, therefore, augurs well for its study results.

If the experience of the AMA committee on aging is any indication, the members of this committee may even find their own concepts of aging undergoing material changes as the study progresses.

When our committee was first formed, it was charged with the responsibility of studying the problems of geriatrics, that is, the diseases of the aged, and was so named. It became apparent early in our deliberations that there are practically no diseases specifically and exclusively attached to the aging process and that while there are diseases among the aged, there are no diseases of the aged.

In the light of this, the committee recognized that its real purpose is the health of the nation's aging population, sick or well.

The committee's goal is optimum health for each individual. This embraces the areas of (1) adequate medical care at the lowest practical cost for those who are ill; (2) promotion of better understanding and wider use of restorative services on behalf of those who are disabled; (3) encouragement of activities, both group and individual, for the prevention of illness among all older persons; and (4) the promotion of long-range positive health programs which will increase the overall capacities of persons to live active, meaningful lives in their later years.

From the earliest, study of these areas showed that the health of the senior citizen is not solely a medical or health habits matter. It became increasingly plain that the health of persons over 65 depends in a large measure on socioeconomic and psychological factors which prevent many persons from exercising their potential for responsible participation in society. As long as these patterns exist, unnecessary illness will occur despite medical care and otherwise sound health programs. Likewise, the duration of illnesses may be unnecessarily prolonged, the degree of disabilities increased.

It was in this frame of reference and after protracted study, that the AMA Committee on Aging developed its positive health program for older citizens. It did so only after numerous conferences with physicians throughout the Nation and other informed persons and groups capable of providing data on aging. The program calls for:

1. Stimulation of a realistic attitude toward aging by all people.

The present general attitude of perspective of the public toward this ever-increasing segment of itself is well known but somewhat puzzling to understand. After a fourth of a lifetime spent in preparing to be a producer and after a half a lifetime spent in gaining experience and contributing to the public welfare, the oldster finds himself with a commodity which is still in demand but not from him.

* * * * *

He is robbed of his ego and individualism. He is now just "Grandpop" or "Gramp" or "Grandpa." He is cashiered out of the human army.

He now stands naked without rank, weapons, medals, or identification.

To change this perspective will take much good, hard work. We, as a Nation, can ill afford this tremendous loss of human resources. Retirement at the present retirement age for all of the ever-increasing older group is economically unsound and will prove ruinous in time. As physicians, we know it often interferes with optimum health for the individual.

The argument that there are not now and will not be enough jobs in the future to go around is just as fallacious as it was when it was offered to keep women from working. Now, 9 million women are working without having impaired the earning power of the male. Automation may dislocate labor on occasion but industrial advances have always been associated with increased employment opportunities. It may well be that industry of the future will hire him for his entire working life and by inservice training keep him as a member of the production team in the face of automation, changing products, and changing times.

The medical profession is not opposed to retirement of those who want to retire. As physicians, however, we know that retirement to inactivity, for health reasons if no other, can for many people be an impediment to their health. Inflexible retirement based solely on age is unsound and unfair to many thousands of men and women who deserve better.

Is it too much to ask that the aging, who are no less human because of their age, be reincorporated into the human family? Is there no still healthful and happy motivation that is worthwhile to the total group?

This may sound like an impossible undertaking, but it will be made easier when we produce a new generation of oldsters. A real senior citizen group which will recognize aging for what it is—growing—and present themselves in the older years with advanced accomplishments, dignity, and rank.

* * * * *

2. Promotion of health maintenance programs and wider use of restorative and rehabilitative services.

Dr. Henry A. Holle, of the Public Health Service, and former health commissioner of Texas, says: "The interest of the apparently well senior citizen in his own health has been grossly underestimated. Our work is thereby made easier.

"For many years we have ignored the so-called degenerative or chronic diseases in the elderly. We accepted them as matters of course in the treatment of more acute symptoms. Now our researchers are studying tissue cells to find out why their rate of replacement slows down with increasing age. Who can say that these mysteries will not be solved? Who can say that atherosclerosis may not some day be reversible, or at least preventable?

"Because of these things, we see a beginning realization on the part of the physician in practice and in health agencies that the development and application of regimens of health maintenance in our oldsters can be tremendously productive. If we can take this positive approach to the stitch-in-time philosophy, we may avoid being faced with the necessity of doing a complete sewing job later on when it can do little good.

"Too much emphasis cannot be placed upon the need for a medical adviser in the middle and senior years. We need here the individual physician-patient relationship. It pays its greatest dividend during the years when body reserves are dwindling and when advantage should be taken by the physician of intimate knowledge of the individual patient gained through years of experience as his medical adviser."

* * * * *

3. Extension of effective methods of financing health care for persons over 65.

With the continuing expanding enrollment in prepayment plans and the health insurance industry, the problem of inadequate numbers of aged having protection is a temporary one and is constantly decreasing. At the present time there are more than 6 million persons over the age of 65 who are covered by voluntary health insurance—over 43 percent of the aged population. Most of the growth in plans and coverage for persons over 65 has been achieved in the past 5 or 6 years. It can be assumed that an ever increasing number of persons will be able to carry their protection into retirement years and that the percent covered will soon be maximal.

This is substantiated by national Blue Shield experience since 1952. It has been the general policy of Blue Shield plans to permit continuation of coverage after retirement. In the past 6 years total enrollment has increased 85 percent but the number of subscribers over 65 has grown 170 percent during the same period, showing not only the results of this continuation policy but also of new enrollment of those over 65.

A number of commercial insurance companies have also made protection available for persons over 65 and a great number have modified their regulations to permit continuation of benefits upon retirement.

* * * * *

A significant step toward the accomplishment of this objective was taken by the American Medical Association last December when the house of delegates adopted a resolution urging the development of voluntary health insurance and prepayment programs designed for the low income aged with modest resources.

Constituent and component societies, and their Blue Shield plans, throughout the country have responded enthusiastically to the proposal and are moving rapidly and forcefully to fully implement its intent.

* * * * *

The whole area of financing health care has been confused by conflicting claims about the abilities of persons over 65 to pay for medical expenses or health insurance. On the other hand, we are frequently told of the obvious fact that most persons in this age group have reduced incomes. On the other hand, we are told that the older person's need for income is not as great as it was in earlier years; that his accumulation of assets often more than offsets reduced income, that other members of the family are willing and able to help, that reported income is sometimes at variance with the facts, and that in rural areas "income in kind" is sometimes a major factor.

It is also true that by most data the older patient takes up more time in the hospital per illness than does the younger.

This may well be changed somewhat when the physician and patient commence to realize the potentialities for corrective and curative treatment, along with rehabilitation, may be as productive in the oldster as in the youngster and can be accomplished in relatively short time.

4. Expansion of skilled personnel training programs and improvements of medical and related facilities for older people.

Since a larger part of modern medicine will be occupied with the treatment of the chronically ill and rehabilitation problems, a whole new generation of health personnel will have to be trained to fill these positions. Because of the impact of geriatrics and rehabilitation, the form and function of the traditional acute hospital is being changed rapidly. The newer concept of the general hospital is growing in popularity. It has intensive care units and recovery rooms and chronic wings. It is set up so that the patient can be rapidly moved from the higher priced acute facility to the chronic wing. This will serve as a distinct advantage to the geriatric and rehabilitation patient.

From the chronic wing of the hospital the next step will be to the rehabilitation center to the convalescent home and then to the patient's own home and occupation. This better utilization of hospital and other medical facilities should lead to a downgrading in medical expense totally.

5. Amplification of medical and socio-economic research in the problems of the aging.

Investigation up to a present time has revealed the following:

(a) The acid base equilibrium of the blood is maintained within normal limits in the old person.

(b) The arterial fasting blood sugar does not change significantly with age.

(c) The hematological values of the blood are well maintained in the aged.

(d) Total lung capacity corrected for surface area does not change.

(e) Measurement in vitamins A and C do not vary significantly between the youthful and the aged.

(f) Tests of endocrine gland function at rest show no significant statistical variation between the young and the old.

(g) In fact, after the subject has reached adult life there is no satisfactory test or battery of tests that will actually indicate the individual's place on the chronologic time scale.

Dr. Falzone and Dr. Shock conclude in their paper, "The Physiologic Limitation of Age," that examination of experimental studies on physiologic changes in age indicate that, under resting conditions, the aged human is usually able to maintain uniformity of the internal environment. However, when increased demands are placed on a number of organs and systems, impairment of function can often be detected.

* * * * *

The application of what we already have learned and what we are about to learn may bring about results as startling in the field of chronic disease as the discovery of the antibiotics in the field of infectious diseases.

6. Cooperation in community programs for senior citizens.

The problems of the older citizens have placed an increased demand on the physician. The change in the type of practice for the family physician now, more than ever before, means he is challenged to leave his traditional occupation of diagnosis and treatment and enter actively into the field of prevention. He is challenged more than ever before to take an active part in the total health problems of his community. More than ever before he will be called upon to provide leadership in these health fields and to cooperate fully with other disciplines trying to accomplish the same end.

* * * * *

As every scientist realizes, the thing he knows constitutes probably the greatest hurdle he must get over in his efforts to arrive at the truth. If it is possible to set aside such thoughts as outlined in the previous definitions and to examine the material at hand with the tools of logic and experience, we will have had some measure of success in explaining the reasons for this paper.

* * * * *

Sometime, somewhere in the dim unrecorded past something happened. What it was and how it will be described will depend upon the discipline making the investigation. The scientist may say it was the first effort of a new creature to find the eternal truth. Religious disciplines will point to the birth of religious principles, especially the concept of the brotherhood of man. In any case, man by his own acts began to interfere with the balance of power and natural selection as maintained by the law of the jungle. The moment he did this certain individuals who were given a longer life span were unprepared for it. The pace may not have been slowed any, but a helping hand was offered to those who faltered. Those who were unable to carry on in the usual style of the tribe caused a change in the philosophy of living and as their numbers grew became the first gerontologic problem. The great number of individuals involved seems to have interested most of the investigators. Does it not seem, however, that the real problem is the lack of preparation of these individuals for their increased life span rather than the increased number of individuals or the increased number of years? Today's rush to counsel and advise the aging and retiring emphasizes the validity of this concept, but the counseling overlooks the important factors.

This presented a new frontier. It called for a new race of pioneers to map the pathways for the millions who were to come after. As yet there have been very few who have had the vision to meet the challenge. Like the flotsam and jetsam of the deep washed upon the shore or floating the calmer inlets, most of the present oldsters are being pushed out of the stream of life. Instead of making an effort to extend this age frontier into a land of new experience, enjoyment, and compensation they are constantly looking backward as if all life had been left behind them. * * *

Aging, as presently maintained by the gerontologists, constitutes a rather vague condition or state representing a balance between evolution or growth and involution or atrophy. They go hand in hand, growth being in ascendency in the young and atrophy being in ascendency in the old. This is further elaborated on to include the involution or atrophy that occurs when certain structures like the thymus or ovary cease to function. They get old. Thus, we become more mixed up trying to understand and account for varying degrees or rates of evolution or involution of certain parts of a whole that is itself of one age.

Would it not be simpler to use those proved tenets of physiology and anatomy which have taught that structure depends on function? Thus, the varying degree of evolution or involution in organs would represent a varying degree of need and function and would not be related to time or age. This, at least, gets us out of the dilemma of having one part of the whole older or younger than the remainder.

In earlier times, the number who reached the advanced years was not large. The society was largely based on agriculture, and it was comparatively easy for the oldsters' efforts, diminishing in amount as they were, to be utilized and appreciated in the total farming effort. In the main, the general philosophy of these times was for the family to take care of its own. * * *

As the refugees from infant mortality and the infectious diseases crowded the confines of the aged and aging, many things happened.

1. Great numbers of younger people forgot their responsibility for the care of the aging members of their family. How much of this phenomenon was born of recessions and depression thinking cannot be estimated. There can be no doubt, however, that this attitude has an infectious quality and leads to a diminution of those qualities of altruistic love which binds families and groups together for the benefit of all.

2. Society has changed from agricultural to industrial. As pointed out above, agriculture has a built-in method of taking care of most of its aging workers. Youthful industry, interested as it was in production and competition, saw no obligation at first to assume a social responsibility for its older workers. This change produced an increase in the size and intensity of the problems of aging.

3. Retirement methods, as they are practiced today, add to the size and complexity of the problem. This is true in spite of the efforts made to insure some degree of economic security for the older worker.

4. The so-called miracle drugs worked their charms among the older as well as the younger groups and continued the status of many as refugees from the infectious diseases.

As a result of the above and many unenumerated factors, we now have a segment of our society that includes an excess of 15 million people whose one mark of similarity is that they are 65 years or older. Reports from the U.S. Census statistics, social security agencies, health agencies, medical clinics, and hospital and medical research, all indicate that the aged are not a homogenous group whose status can be simply described in a few words.

Doctors have agreed that there really were no diseases characteristic of the older age group. Poliomyelitis and other diseases usually thought of as appearing only in childhood were occurring in those past middle life. Also, the so-called degenerative diseases of men, such as arteriosclerosis, hypertension, and nephritis, originally thought of as being part and parcel of the aging process, are being recognized in the younger age groups. Hardening of the arteries and coronary diseases are supposed to be characteristically a malady of middle or old age, but in 1954 arteriosclerotic heart disease, including coronary, killed 98 children under 5, and is found in every age bracket thereafter.

It was therefore decided that the AMA Committee on Aging's interest and activity as a physicians' committee should be:

1. The sick oldster;

2. The frail or fragile oldster who, without good attention, would become sick; and

3. The well oldster, who, if guided by a positive health program, should be able to solve most of his own problems.

We approach the total national problem in the same way a doctor tackles a single situation in his own office. The solution of many of the individual illnesses requires some knowledge and ability to deal with all the problems of the patient's environment, such as family, work, religion, and community adjustment. When need be, help is called for from the proper disciplines and agencies so that the patient may better be served. Using this type of procedure as a guide, organized medicine is being urged to and is studying the needs of the oldster in the fields of work, home, retirement, housing, recreation, etc.

The doctor realizes from his experience that the stigmata and diseases usually associated with aging are due to the impact of stress and environment. This, like infectious diseases and infant mortality, can be attacked and defeated.

And finally the doctor realizes that aging is a growing process and he expects the senior citizen to present certain admirable accomplishments, dignity and rank. He is expected to keep pace in dress, manner and thinking. In turn, for his past contributions and his present status his community should recognize anew that the right of citizenship be not abridged because of age.

San Luis Irrigation Legislation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. ENGLE. Mr. President, on June 28, 1959, the Washington Post and Times Herald published an editorial entitled "Irrigation Question." The editorial, which was printed in the June 29 RECORD—page A5613—concerns itself with the San Luis project bill and raises two questions in its criticism of the proposed legislation. I have written the editor of the Washington Post answering the editorial and I ask unanimous consent to have my reply printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 30, 1959.

Mr. ROBERT H. ESTABROOK,
Editorial Page Editor, Washington Post and Times Herald, Washington, D.C.

DEAR BOB: I read with special interest your editorial of June 28, 1959, entitled "Irrigating Question."

The editorial raises two questions: One relating to the 160-acre limitation, and the other regarding the intelligence of building new irrigation projects while the Government is spending millions of dollars to subsidize surplus farm production.

With reference to the first question: The San Luis bill as reported by the Senate Interior Committee applied the 160-acre limitation to the Federal water service area. The fight made by Senators DOUGLAS and MORSE was for the purpose of striking language in the bill, section 6(a), which stated that the 160-acre limitation would not apply to the water service area under the State project. The bill, as you perhaps know, provides for the joint use of the San Luis Reservoir by the State and the Federal governments, with each paying the full amount for its respective benefits. I do not believe that the Federal Government ought to tell the State government what kind of a limitation, 160-acres or otherwise, it should have on the areas irrigated under the State project. I attach a copy of colloquy on the Senate floor (p. 7168 of May 12 RECORD) between Senator MORSE and myself which I think makes it perfectly clear what the issue was. You will note from my remarks that Governor Brown and I agree that the 160-acre limitation should apply to the Federal water service area, as the bill provides, but that the State government should determine the nature and the extent of the acreage limitation on the State-serviced area.

The second question raised in the editorial is far more fundamental—that is, the intelligence of building more irrigation projects while we presently have farm surpluses running out of our ears. The answer is that we do not have too much farm production in general but that we do have too much farm production of certain types. The San Luis bill specifically provides that the amount of subsidized production of agricultural products cannot be increased in the areas irrigated under this project. We do not believe that those crops would increase anyway but, just to be sure, we put in a special amendment in the bill prohibiting it. This amendment, while stated in general terms, was offered by Senator RUSSELL, of Georgia, for the specific purpose of being sure that cotton production was not increased. The area involved under the bill is running out of water and if this project is not built, we believe the land will revert to wheat and grains, presently the worst surplus crop we have. Under irrigation this land will go into row crops and the various types of nonsubsidized farm production necessary to serve the needs of the expanding population in the metropolitan areas of our State adjacent to this land.

I call attention to the fact that the State legislature this year authorized a $1½ billion State project because of the growing water shortages in California for irrigation, municipal and industrial use. We Californians believe that the shortage of water is the most serious single local problem we have. The San Luis project which passed the Senate will help in a small way to solve that problem; otherwise, a vast area of the great Central Valley project will return to sagebrush and sand. We think, too, that in formulating this legislation we have adequately answered both of the questions raised in your editorial—regarding the 160-acre limitation and the problem of adding to our current farm surpluses.

Sincerely yours,

CLAIR ENGLE,
U.S. Senator.

Wanted: A Sound Fiscal Policy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. BRIDGES. Mr. President, as we enter a new fiscal year, the seriousness of the record peacetime deficit of last year is staggering to contemplate. The President in recognition of the graveness of this situation appointed several months ago a committee of the Cabinet to analyze the problem and make recommendations in an effort to solve this unhealthy situation. David Lawrence, writing in the Evening Star on June 30, 1959, analyzes this report which was recently made to the President, and I ask unanimous consent that his comments be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

WANTED: A SOUND FISCAL POLICY—CABINET REPORT POINTS OUT DANGERS IN MAKING BONDS EQUIVALENT TO MONEY

(By David Lawrence)

Tomorrow—July 1—is New Year's Day so far as Government finances are concerned. One fiscal year ends, and another begins. The deficit is more than $12 billion, largely due to the economic recession. It's a record for so-called peacetime. The coming year, however, is expected to see a balanced budget.

With armament expenditures taking a bigger and bigger proportion of the national budget, due to the cold war in a nuclear age, it is not surprising that a setback on the economic front runs into such big figures. For the Government's chief worry is the con-

tinuation of rising prices. It has to pay each year more and more for the same articles of warfare that it bought in previous years at lower prices.

This is why inflation is being so widely discussed as a danger to the American economy. President Eisenhower appointed a committee of the Cabinet to analyze the problem. After several months of study, it has just issued its report.

Unfortunately, because of the prominence of some of the Cabinet members in the political arena, the report is being regarded by Democratic opponents as political. It would have received more attention perhaps if it had been signed only by such nonpolitical figures as Robert Anderson, Secretary of the Treasury, and Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers. Here, for instance, is an extract from the Cabinet committee report which reads like the language of Messrs. Anderson and Saulnier:

"Without firm control of the quantity of money and credit, all other measures to check inflation will be futile. Sound monetary policy requires that the Federal Government avoid making its bonds, other than those of comparatively small denomination designed for family savings, the equivalent of money. Government bonds are the equivalent of money if they can always be changed into actual money at virtually face value, not only when they are due and payable but any time before.

"This is the case if the Treasury is forced to issue only very short-term bonds, or if the Federal Reserve System stands ready to buy at a pegged price all Government bonds offered to it in advance of the date when they are due to be paid by the Treasury. There is only an imperceptible difference between the Government's issuing bonds that are equivalent to money, and the Government's just cranking up the printing presses and rolling out greenbacks. The Government will be forced to continue issuing large additional amounts of short-term bonds that are the near-equivalent of money until the Congress allows the Treasury sufficient flexibility to achieve a balance in our debt structure by inducing people of their own free will to invest their savings in long-term Government bonds. Thus, to avoid inflation it is essential that the present limitation on the interest rate on long-term Government bonds be removed, as the administration has already recommended.

"The issue is whether we want price stability or whether we want, in a concealed way, to do the equivalent of printing money—something the American public would not stand for if done openly."

This is the most outspoken appraisal yet of what deficit spending can mean. It comes at a time when the President is asking Congress to permit interest rates to find a natural level and not to be restricted by Government action. Many Democrats are fighting for the maintenance of artificially low rates.

Inflation is to no small extent a matter of public confidence. If interest rates are held low for Government securities, while in the money markets interest rates generally are rising, the danger is that investors will turn from Government securities to other forms of investment.

The inflationary spiral is related, of course, to many other factors besides Government spending and Treasury deficits. The Cabinet Committee report says, for instance:

"Wage settlements have been made recently which raised wages substantially; wage agreements negotiated in earlier years provide for increases in rates this year; and wage agreements to be negotiated this summer or autumn in many industries (steel, aluminum, other metals, construction, rubber, lumber, railroads, paper, longshoring, meatpacking, and metal containers are among them) could result in wage increases of such magnitude as to lead to price increases. * * *

"We face a serious risk of price increases which not only would be directly harmful to American families but would seriously endanger the healthy prosperity now developing."

The Cabinet Committee doesn't propose any concrete solutions but does point out that excessive concentration of power in the hands of labor or business results in practices which are contrary to the public interest and that such practices reduce efficiency and productivity, and they create inflationary pressures.

But what to do about them? The Cabinet Committee says it soon will examine and later report on the extent to which such concentrations of power in labor and business "contribute to inflation or impede economic progress."

Padre Island, Tex., National Seashore Area

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 1, 1959

Mr. YARBOROUGH. Mr. President, the Associated Press recently issued a story on Padre Island in Texas, concerning the move to make it a national seashore area.

This story is self-explanatory, as it tells of the area advantages of the island for such a purpose. Wildlife refuges and marine laboratories are already in the area, making the preservation of Padre Island even more desirable. I request unanimous consent to have printed in the Appendix of the RECORD the article as it appeared in the Dallas (Tex.) Times Herald for Friday, June 26, 1959, under the heading "Texas' Long, Thin Padre—Gulf Island May Become National Seashore Park."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS' LONG, THIN PADRE—GULF ISLAND MAY BECOME NATIONAL SEASHORE PARK

ARANSAS PASS, TEX.—Padre Island is a vast and beautiful area of large and irregular dunes along the beach, sculptured anew by each passing breeze.

Chances are that more and more persons from over the Nation will learn its beauties if it becomes a new national seashore park.

A resolution in the legislature calls the island a magnificent, history-rich, romantic expanse of dune and beach that is a priceless Texas heritage.

The resolution is to authorize Congress to establish a seashore park between the Port Mansfield Channel and Yarborough Pass.

It further says, "Padre Island is the longest unspoiled natural beach still in existence in the United States. The major part of the island is still unspoiled and might yet be preserved for public use and enjoyment if steps are taken without delay."

Not all persons are in favor of the seaside park plan. Private owners of some of the land claim that the park plan will infringe on private property rights.

The island is a very thin, very long strip stretching from the tip of Texas far north and slightly east to the vicinity of Corpus Christi.

When held in place by sparse vegetation such as sea oats, morning-glories, and sea grapevines, the dunes are often imposing, towering 40 feet or more.

Elsewhere, the sand lies in small rippling mounds, or is nonexistent, as on the southern part of the island where flats stretch across it from sea to the Laguna Madre.

Because of the encroachments of civilization on both Atlantic and Pacific seaboards, Padre presents one of the last opportunities to preserve such a length of beach in its natural state. It could provide an outstanding area for biological and geological study.

The National Park Service has recommended that the middle and upper portions of the island be preserved, from about opposite Port Mansfield to a spot just below the Nueces County Park at the northern end.

The central portion of this would be roadless, to preserve the island's primitive character and in other sections a road system behind the barrier dunes would provide access to the beach.

Other developments would include camping and picnic areas and information centers at the north and south entrances.

Between Tivoli and Brownsville there are almost unmatched attractions for nature lovers.

There is the Aransas Wildlife Refuge near Austwell, the last wintering ground for the whooping cranes.

At Rockport, where the great migration routes from Central and South America are constricted by the coastal bend, there are concentrations of birds at certain seasons of the year.

At Rockport, too, is the marine laboratory of the Texas Game and Fish Commission, and there is another such institution at Port Aransas, under sponsorship of the University of Texas.

WELDER REFUGE

At Sinton the Welder Wildlife Refuge is the largest privately endowed foundation for study of wildlife in the world, and under leadership of Dr. Clarence Cottam, it is becoming internationally famous and a mecca for naturelovers and scientists.

At the lower end of Padre there is the Laguna Atascosa Wildlife Refuge in Cameron County, which harbors enormous concentrations of waterfowl during the migratory seasons. In Aransas and Mesquite Bays and the Laguna Madre there are great nesting grounds for wading birds, pelicans, gulls, terns, herons, and all the myriad waterbirds that live on the Texas coast around the year.

At the Santa Ana Refuge, not far from the lower end of Padre, there are unique opportunities to see birds and animals normally found only in Mexico and Central America.

Los Angeles Elks Lodge 99 Observes Annual Flag Day Ritual

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. LIPSCOMB. Mr. Speaker, on June 10 the Los Angeles Elks Lodge No. 99 conducted its annual Flag Day ritual under the chairmanship of Mr. Charles R. Tyson, Americanism chairman of the lodge.

During the inspiring and beautiful program, presented basically in the form of a question-and-response service, there was presented a comprehensive history of the evolution of the American flag from colonial days until the present, a prayer, a presentation of the new 49-star flag to the lodge, and a discussion of our struggles over the years for freedom under the Stars and Stripes as our symbol of the American way of life. Another highlight of the ritual was the uncovering of a floral bell of liberty, made up of red, white, and blue flowers, representing not only the colors of the flag but the ideals we live by.

Mr. Speaker, I believe it would be very worthwhile if greater stress were placed nationwide on celebrating Flag Day, for it is an inspiring way of focusing attention to our beautiful flag and its meaning as a symbol of America.

Military Influence on Defense Contracts

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. SANTANGELO. Mr. Speaker, on June 3 my amendment to bar defense funds to defense contractors who employ retired military officers was dramatically defeated by one vote upon the assurance of the leaders that an investigation would promptly be pursued. Such an investigation is scheduled to commence on July 7.

I have heard many comments favorable and unfavorable regarding my amendment. Some declare that the need exists, but that the remedy is too broad and the restrictions should be narrowed. One of the most critical written comments that has come to my attention regarding the so-called Santangelo amendment came to me by a learned professor of law of Harvard University, W. Barton Leach.

Professor Leach is a former brigadier general, USAFR, and the founder of the Harvard defense studies program, which has studied the problem of recruiting and retaining in the Military Establishment the best brains and leadership ability of the country. His comments are critical of my amendment, have a great deal of pertinency and merit, and, I believe, casts light upon the weaknesses and the merits of my bill. I submit the comments by Professor Leach in the knowledge that it will give the readers a better understanding of the problem:

COMMENTS ON SANTANGELO AMENDMENT (RETIRED GENERALS AND ADMIRALS IN DEFENSE INDUSTRY), NEW YORK HERALD-TRIBUNE, JUNE 12, 1959, PAGE 1

As reported, this amendment to a defense appropriation bill would bar defense contracts to any company employing any officer above the rank of colonel in the last 5 years.

1. Our military personnel policies properly force retirement of officers at successive rank levels, since each rank has a number of T/O spaces much smaller than that of the next lower rank; i.e. the officer structure is a steep pyramid. If these men are good—and it is a major national objective that they should be of the best—they will seek and obtain employment throughout the civilian economy. But where? Obviously where their training and experience is relevant—and it is in the national interest that this training and experience should be drawn upon after, as well as before, they get out of uniform. There are some, like Lt. Gen. James M. Gavin Jr. and Maj. Gen. James McCormack Jr., whose technical qualifications enable them to go outside the direct defense field; but the proposal of Representative SANTANGELO would almost certainly require Arthur D. Little, Inc., and Massachusets Institute of Technology to dismiss these two officers from their respective posts as vice president. Some few might qualify for government administration, like Maj. Gen. Roger J. Browne now deputy administrator of the city of New York (after first serving with American Brake Shoe); but this would create, and indeed has created, another furor about the Government being taken over by "men on horseback." A few might get into education, like Gen. Mark W. Clark (The Citadel) or our present professor of military science and tactics at Harvard, Col. De Vere Armstrong (who is going to the McCaillie School, Chattanooga); but if this took place on a large scale you would soon hear criticism of impregnating youth with the military mind—and of course the number of these openings is trifling.

2. If retired general and flag officers are forbidden to engage in the types of business where they have the greatest knowledge and experience, one can predict the effect on the officer of colonel-equivalent grade. If he is industry-employable, he will quit with his 20 or 30 years of service and refuse promotion to a grade which disqualifies him from earning a living after he gets out. The result will be that selection of general and flag officers will be by survival of the unfit, with the exception of a few who have married rich women. The impact upon the morale of the officer corps from the lowest to the highest is incalculable.

3. What of the civilians—Frank Pace and Earl Johnson of General Dynamics, John Sullivan with a brisk Washington law practice, Trevor Gardner who is up to his ears in defense work? Are we going to throw up additional barriers to getting good civilians in the Pentagon by assuring them that, in addition to being inadequately paid while they are serving, they will be unemployable when they get out? Or are we to say that what is wrong for the officers is right for the civilians? And, how about Senators and Congressmen—especially those who have served on the Appropriations and Armed Services Committees? After they are defeated or withdraw are they to have freedom denied to retired officers? And how about the undersigned, who is a Reserve general; and, as a personal consultant of all Secretaries and Chiefs of Staff since the Air Force was established, probably has contacts in the Air Force which are as close as those of most Regular generals. Does he get the boot, too? And if he does, where are you going to get any Reserve generals, or consultants either?

The proposal is patently absurd; but somebody has got to stand up and say so and run the risk of being labeled an admiral lover or a cat's paw for the generals.

Now, just a word about competition between weapons manufacturers. As long as the competition relates to the merits of the weapon, that is a good and necessary thing. (I deplore the Boeing advertisement which plugged Bomarc by showing how many subcontractors it supported; they ought to fire their public relations man.) Very few weapons are the subject of interservice competition; so, if you are going to get competition at all, it must be between manufacturers where each does his best to produce the best weapon or piece of equipment and to convince the using service that it is the best. A striking and well-documented example of how this works in the public interest appears in the testimony of Maj. Gen. Frederick H. Smith, Jr., in the first phase of the B–36 investigation (House Armed Services Committee, 1949) where he shows the three companies which developed the B–54, B–49, and B–36 competing for the intercontinental bomber production contract—all, I submit, to the benefit of national defense. Now, who do we want managing these companies, supervising development and production, and presenting the case for their weapons—men who have no knowledge of the realities of combat or men who have spent their lives as users of the things they are now developing and producing? The question answers itself.

Are there potential abuses in the present system? Probably—in this or any system where salesmanship is a factor. I don't know what percentage of the working force of the country is engaged in selling, but it is large; and the job of selling is to get buyers for your product through (a) its intrinsic merit and (b) establishment of favorable personal relationships which create a receptive attitude toward the product. Unless you are going to try to eliminate factor (b) by forbidding all personal contact between defense suppliers and procurement officers, it is futile and self-defeating to blacklist one particular class of men who can be very helpful indeed.

I have been in close contact with the Air Force since the end of World War II. Mistakes have been made in procurement of weapons and equipment, but I know of no case where the mistake was related to the personal influence of any employee of a supplier, whether or not a retired officer. Indeed I will go further; I don't think the influence of any retired officer has the slightest effect on procurement decisions except as the retired officer is able to put himself in the position of the procurement authority and thus present more effectively the merits of the weapon—and any supplier who employs a retired officer in the hope of cashing in on personal influence is wasting his money.

W. BARTON LEACH,
Consultant to the Chief of Staff, USAF,
Brigadier General, USAFR.

David P. Haxton, of Miami, Fla.

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. FASCELL. Mr. Speaker, Floridians are honored to have the International Headquarters for the Junior Chamber of Commerce located in Miami Beach, Fla. Junior Chamber International is a marvelous and deserving organization which is interested in community understanding and peaceful relationships among the peoples of the world.

For 4 years, Mr. David P. Haxton, 1200 5th Street, Miami Beach, Fla., was the secretary-general of the junior chamber of commerce. Recently Mr. Haxton was placed in a position of great honor and

responsibility as nongovernmental liaison officer for the United Nations Childrens Fund at the United Nations in New York. It is a high honor to be appointed to this office. Mr. Haxton's appointment was no doubt due to his experience in junior chamber matters, his knowledge of world affairs, his ability to express himself freely and openly, and his sincere devotion to democratic principles and desire to help his fellow man. David Haxton has been an enthusiastic leader, and has constnatnly demonstrated those qualities of leadership which have contributed to the promotion of good will between the younger generation of the free nations of the world.

I would like to express my personal appreciation to Mr. Haxton for the contributions he has made to the young men of the United States and to those who make up the J.C.I. membership in 89 countries of the world.

I am certain all Jaycees join with me in extending David Haxton our deep appreciation and gratitude for the excellent job he has done in the past and wish him continued success in his challenging new position.

Gen. Maxwell D. Taylor: Scholarly Soldier

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 15, 1959

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent article from the Wall Street Journal of June 30, 1959.

The writer, William Henry Chamberlin, is a highly recognized student of government. He consistently contributes columns of special significance on the problems of the Nation. In the inserted article, he details the military philosophy of Gen. Maxwell D. Taylor and the general's great concern with the failure to effectively modernize the Army for the conventional wars of the future.

General Taylor's retirement from the military service is a loss to the Nation. There is no question of the debt our country owes to him for the great service he has rendered. His activities and his views will long be remembered and we hope that, even in retirement, his opinions and advice will be sought by the Department of Defense.

The article is as follows:

SCHOLARLY SOLDIER—IN GENERAL TAYLOR'S RETIREMENT, PENTAGON LOSES OFFICER WHOSE POLICY WAS READINESS FOR LITTLE WARS, TOO

(By William Henry Chamberlin)

Gen. Maxwell D. Taylor, who said the other day that his retirement from the Army came about because his views over modernization of the service were unacceptable to the administration, is one of America's most articulate and outspoken military leaders.

The Army Chief of Staff—he ends his career today—possesses an uncommonly broad and varied experience as a scholar, linguist and educator, quite apart from his splendid record as a fighting general in command of a paratrooper unit in Europe during World War II.

A West Point graduate, Taylor served for a time as instructor in French at the Point and was later sent, with the rank of captain, to Tokyo as a language officer, with the double assignment of mastering the difficult Japanese language and attending Japanese army maneuvers and field exercises. After a war experience that included a daring dash into Rome while the city was still under Nazi occupation, Taylor was at various times Superintendent of West Point (where he showed a keen interest in modernizing teaching methods), American military commandant of Berlin and commander of the U.N. forces in Korea until the armistice was signed. He then served two terms as Army Chief of Staff.

Three points on which General Taylor has been insistent in congressional testimony and public speeches during his last months in office are these:

America must be prepared to fight little limited wars as well as all-out thermonuclear conflicts.

Special emphasis, in plans for defense against hostile attack, should be laid on development of an antimissile missile.

Just for this reason, and because suspension of nuclear tests would involve serious handicaps in developing efficient and economical tactical nuclear weapons, there should be the utmost care about concluding far-reaching agreements with an opponent not noted for good faith on this subject.

BALANCE OF TERROR

This question of American willingness and ability to wage limited wars, in which the more awesome weapons of mass destruction would not be used, is especially important at a time when something like a balance of terror has been established between the United States and the Soviet Union, with each side theoretically capable of inflicting crippling damage on the other. It may well be that Nikita Khrushchev's ultimate decision about resorting to some dangerous provocation to the Western forces in West Berlin depends on his own judgment as to American capability to react with limited warfare to a challenge too serious to be ignored, yet not serious enough to warrant the unloosing of the more terrible weapons.

As General Taylor pointed out in a speech before the Institute of World Affairs in Pasadena, there have been 17 limited war situations since 1945. In this speech he sounded the following warning of more difficult times that may lie ahead:

"The Soviet leaders have always shown a willingness to take chances, even when they had no counterpart to our preponderant atomic strength. With the rise in their capability in the atomic and missile fields it appears possible that we may expect increasing intransigence on their part. We may well be required to respond to increased levels of provocation in an atmosphere of heightened international tension. * * * In exploiting the fear imposed by mutual atomic capabilities it would appear quite likely that they will henceforth undertake to kick us higher and harder on the shins than they have done during the period of our atomic monopoly."

How should America improve its preparedness for limited war? General Taylor spells out five conditions for achieving this end. Weapons and equipment should be modernized; there should be more light atomic weapons, new types of air and ground vehicles, improved signal equipment based on radio. Speed and mobility should be assured, partly by forward stocking of supplies in critical areas. A certain amount of air and sea lift facilities should be earmarked for emergency situations like the landing in Lebanon.

His fourth, more general point, is that "we be as effective in meeting the complex requirements of limited war as the Strategic Air Command is in meeting the requirements of general atomic war." Fifth and last, General Taylor would like to see more demonstrative testing of our capabilities for "little wars."

"We must," he says, "overcome any impression that we are a country which can respond with a big bomb and little else."

BALLISTIC BOASTING

General Taylor considers the Nike-Zeus antimissile missile one of the Army's most important development efforts, since it is the only weapon under development that can meet effectively the threat of long-range ballistic missiles, the new weapon of which Khrushchev likes to boast.

As regards the cessation of nuclear tests, the subject of long negotiation at Geneva, General Taylor offered this statement of sober warning in testifying before the Senate subcommittee on disarmament:

"It is certain that our program for the development of nuclear weapons will suffer from the banning of tests. Test bans or suspensions would slow down and ultimately halt the development of essential empirical knowledge needed to develop improved nuclear weapons and methods of atomic warfare.

"A ban on the use of nuclear weapons would not of itself signify a worldwide rejection of force as an instrument of policy in international relationships. Forces equipped with nonatomic arms would still provide an aggressor nation with a capability for imposing its will upon others, particularly those possessing fewer conventional resources. Additionally, there is always the possibility that other parties to the ban might cheat."

GOING SLOW

Such a "go slow" signal, coming from a man of General Taylor's judgment, experience and intimate knowledge of the international military picture might well be heeded, both by our negotiators at Geneva and by the Senate, which will presumably have to ratify any agreement that may be reached there.

Meantime, Congress doubtless will give more consideration to the military doctrines that, because he considers them unacceptable to his superiors, led to Taylor's retirement.

"Urban Renewal Is Good Business": Letter From John Hirten, Stockton, Calif.

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD today a very timely letter from John E. Hirten, Jr., executive director of the Redevelopment Agency of the city of Stockton, Calif.

The Congress in the past few days has completed action on a good housing bill and sent it to the President for his signature. I hope that it will be signed into law. Included in the bill are authorizations for continued urban renewal, public housing, FHA mortgage in-

surance, and many, many more programs that are good for individual communities and good for the prosperity of our country.

The bill we sent to the President was cut back considerably from the versions which both the House and the Senate had adopted earlier as being required to meet the needs of our expanding economy.

Mr. Hirten's letter is particularly pertinent at this time since he points out very clearly how the voices of national organizations that have been raised so strongly against this good housing bill, do not in many instances accurately represent the actual feelings of their individual members.

The city of Stockton, which is in the District I represent, has done a particularly fine job in the areas of urban renewal and public housing and I sincerely hope that the new housing bill will become law so that these worthwhile programs can continue.

Following is the text of Mr. Hirten's letter:

The Honorable JOHN J. MCFALL,
Member of Congress,
Old House Office Building,
Washington, D.C.

DEAR JOHN: Enclosed is a copy of a letter sent to our members transmitting a resolution concerning the discontinuation of our West End project. The lack of any housing legislation means that this project must be terminated.

I realize that the Senate and House have passed legislation covering the omnibus housing problems and now it is up to the President. However, since I am sending this letter, I did want to add a comment to the effect that I feel a general misunderstanding exists in certain areas of Washington with respect to the importance of urban renewal and urban renewal legislation to the local communities. I would like to refer you to an article in the June issue of Architectural Forum, page 147, entitled "Urban Renewal and the Ambivalent Businessman," by Stephen G. Thompson. He points out, and I think rather accurately, that such national organizations as the chamber of commerce and the National Association of Realty Boards are taking one position with respect to urban renewal and housing programs, while their local counterparts are in disagreement with their national policy. The U.S. Chamber, for example, has been against urban renewal, while the local chambers in many cities (and in Stockton particularly) have strongly supported the urban renewal progam. The National Association of Realty Boards has been against the proposed housing legislation, while their local counterparts, (including, again, Stockton) have been strongly in back of the urban renewal program.

These are just some of the many other examples. Urban renewal is good business; and from a local point of view, very good business. Urban renewal, also, represents (in my opinion) the only real possibility for saving our urban communities. With large areas of slums and blight in this city and in almost every other city throughout the country, how can the city operate as a balanced economic entity? How can revenues meet necessary disbursements when the sick areas of our city are being subsidized by the healthy ones. Mr. Mason, the present Administrator of the Housing and Home Finance Agency, states that this legislation and proposed bill is not a bill that is good for the people. If this bill, which pours money right back into the local community and into the pockets of the citizens, owners, renters, businessmen and community economics—while correcting the physical and social ills brought on by slums and blight—is not good for the people, then what bill in Congress is?

I don't know what will be the next step if the President vetoes the bill; but I surely hope if that occurs every step will be made by Congress to override such a veto. The tremendous progress being made in Stockton and in many cities throughout the country is directly related to their programs of renewal and redevelopment. Without urban renewal, the sick and deteriorated parts of our city will continue to demand heavy abnormal expenditures, while private investment (in avoiding these blighted sections) will scramble for new land on the outskirts of our community and further complicate matters by demanding the extension of city services well beyond the economical logic of such extensions.

I don't wish to burden you with comments such as these, for I am aware of your feeling for our program and toward progressive legislation in general. However, I did feel the urge to express some of my comments concerning this, and take the liberty of doing so in this letter to you.

Thank you for all the help you have given us in the past. I assure you that we will put forth our fullest energies to carry out an effective and worthwhile program.

Most sincerely,

REDEVELOPMENT AGENCY OF
THE CITY OF STOCKTON,
JOHN E. HIRTEN, Jr.,
Executive Director.

Statement of Edwin Christianson, President, Minnesota Farmers Union, Before the House Agriculture Committee

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on June 30, Edwin Christianson, president of the Minnesota Farmers Union, testified at the general farm hearings being conducted by the House Agriculture Committee. Under leave to extend my remarks, I would like to include Mr. Christianson's testimony in the RECORD:

STATEMENT OF EDWIN CHRISTIANSON, PRESIDENT, MINNESOTA FARMERS UNION, BEFORE THE HOUSE AGRICULTURE COMMITTEE

I am happy to have this opportunity to present our views before this committee and to say that we regard these hearings as very significant because there are several actions which need to be taken on farm matters by this session of Congress.

I want to associate myself with the comments and recommendations of Mr. Patton, our national president.

We appreciate the difficult position which the committee is in, due to the attitude of the administration on farm policy. The recent wheat example, certainly, is not encouraging, since once again it has put the Congress in the position of being severely criticized for not acting, and then equally as severely criticized for acting.

Nevertheless, the fact that there is no leadership from the administrative branch does not mean that the Congress should cease to try to exert leadership as far as is possible.

There are some conditions in agriculture which should not be left unremedied—there are some conditions which will become increasingly more serious by a year from now—and there are some conditions which will cause severe damage to the national economy if not corrected before next year.

Since this is true, it becomes the responsibility of the Congress to constructively put together the kind of legislation which it believes will be of some assistance to the Nation.

Three conditions are becoming intolerable and need to be acted upon as soon as possible:

1. The low level of farm prices and income.
2. The collapse of market levels on perishable farm products, now on eggs and soon to come on hogs and other products unless action is taken.
3. The tremendous surpluses and excessive cost of the ineffective Benson program.

As we told the agricultural subcommittee of the House committee on appropriations early in April, unless Congress forces a reversal of the present policy, the Nation may some day see a Benson budget of $10 billion a year and total national net farm income less than that figure.

We expressed to the appropriations subcommittee our view that a full parity farm program can be operated through direct payments and allotments at less than half the cost of the Benson program and that we could avoid both the economic deficit which has resulted from low farm income and the accumulation of further surpluses of farm commodities.

We feel that the basic things which we must have in any farm legislation are the following:

1. Bring farm income to parity levels.
2. Cease the new accumulation of large stocks of farm commodities.
3. Bring the farm program cost to a reasonable figure.

In our statement, we wish to use an illustration of how a combination of allotments and direct payments can achieve these three program goals on one farm commodity—dairy products—and how a similar program could be tailored to fit many other commodities.

We believe that a dairy program along the line of the program spelled out last year in title 6 of the omnibus House farm bill could bring dairy prices to 90 percent of parity, yet could be operated at an annual cost to the taxpayers of $50 to $100 million a year compared with the outlay of $200 to $400 million a year in recent years to achieve a price average of about 75 percent of parity.

As you know, title 6 has been reintroduced, with some revisions, in this session by Congressman LESTER JOHNSON in the bill H.R. 6750. The Johnson bill would authorize the use of deficiency payments, compliance deposits and market allotments to achieve stabilization of dairy prices and production at reasonable levels.

An important consideration about the Johnson dairy bill is that it would permit dairy farmers for the first time in history, to vote on the type of program they would prefer to have in operation.

The Johnson dairy bill would place much of the administration of the new dairy plan in the hands of a farmer-elected national dairy board. Decisions on establishment of marketing allotments and levying of compliance deposits would be made by the dairy board, rather than the Secretary of Agriculture. The dairy board would also estimate the probable free marekt price of manufacturing milk in the absence of a support

program. If it appeared that the average market price would be less than 90 percent of parity, the dairy board would be authorized to establish marketing bases and allotments for each dairy farm and would also be authorized to require the deduction of compliance deposits of 25 to 50 cents per hundredweight from the price paid to producers for milk.

If allotments are required, the marketing base for each producer would be the average production for a 3-year period. The marketing allotment would be reduced below the base by 1 percent for each 5 percent which the market price was likely to be below 90 percent of parity.

Farmers who stayed within their marketing allotment would be eligible to receive a refund of the compliance deposits in full and also to receive a deficiency payment to represent the difference between the market average price and the support level. The compliance deposits of farmers who exceeded their allotment would be defaulted and would be appropriated to CCC to be used in helping finance the support program payments.

From this brief outline, it can be seen that the Johnson dairy plan would be self-regulating, because any weakness in price would result in the incentive being offered for a reduction in volume.

The program would be self-financing in large part because the defaulted compliance deposits would be available if some producers failed to comply with their allotment.

The program outlined in the Johnson dairy bill would be a voluntary one. A producer could produce and market as much milk as he desired if he was willing to forego receiving a deficiency payment and did not intend to claim a refund of his compliance deposits. Yet, for the average producer, the combined total of the deficiency payment and the compliance deposit would represent too large a sum for him to wish to exceed his marketing allotment.

Furthermore, the allotment and compliance deposits would be in effect only when prices threatened to fall below 90 percent of parity. They would act as a preventive measure, encouraging a reduction in production volume as quickly as any price weakness appeared likely. Thus, we would avoid surpluses rather than waiting for them to develop and then trying, with costly and largely ineffective measures, to reduce or dispose of them.

The formula contained in the dairy bill, we believe, could be tailored to fit any or all of the major farm commodities, with the same desirable results of maintaining fair farm income, avoiding the accumulation of further surpluses, and bringing the cost of farm programs to a reasonable figure.

Because such programs would be self-regulating in nature, we would head off surplus and price trouble before it happened. Therefore, we are confident that such programs for the major commodities could be operated at an annual cost of less than $1 billion a year to the taxpayer.

A program of market allotments, together with compliance deposits at 10 percent of the parity price for each commodity, would take care of most of the stabilization problem for most commodities, leaving only a nominal amount of the support funds to be supplied by the public treasury.

Such a program would not only be very effective on the perishable items, but would be practical as well on the crops on which we are seeking to broaden our export volume.

Farm leaders in the Congress, many of them on this very committee, have time after time made legislative proposals which would have improved the farm programs.

While the opposition of the administration forces us to delay the adoption of a program based on market allotments and deficiency payments, Canada is moving ahead to try to solve its farm price difficulties by use of the production payment principles on milk, eggs, and perhaps hogs as well.

A program of incentive payments to attract hogs and cattle to market at lighter, more desirable weights, would help considerably to reduce market volume to demand.

For example, by offering incentive payments of $1 to $3 per hundredweight for hogs, marketed at 200 pounds or less, a sizable cutback in market volume could be achieved.

We need to consider that the 1959 pig crop will be about 9 million head greater, and the feed supply will be about 30 percent greater per animal unit than in 1955, the year we suffered the great collapse on hog prices.

By bringing these hogs to market at 200 pounds or less instead of 240 to 250 pounds, we could achieve a reduction in pork volume of as much as 20 percent.

We could thus avoid the oversupply and the price break which are otherwise sure to come late this year and next.

To those who would propose that we should let the hog situation iron itself out, let us point out that if the addition to the feed carryover of some 11 million tons of feed in just this past year (from 59 to 70 million tons) were to be fed up—it would mean an additional 22 million hogs on the market. Hog incentive payments would be a method of preventing surpluses, rather than curing them after it is too late.

If an overall program of market allotments were to be established in order to tailor the market volume to national needs, it would be advisable and necessary to make available a program temporarily, at least, to divert some resources out of agricultural production.

Our farm productivity at least for the present is likely to outrun visible demand. We do not believe that there is any point in using valuable resources in the production of commodities surpluses for which there is no ready market. This is not to say that we should have a program of planned scarcity, but that we should cut back on production to the extent that it outruns all possible demand domestically, for export and for needed reserves.

The soil bank has not proved to be an effective measure for reducing the resources going into agricultural production. Whether or not the soil bank was sound in theory, at least it has been administered into ineffectiveness. The soil-bank acreage reserve has been terminated and the conservation reserve will expire after the 1960 sign-up.

In the consideration of any land-diversion program, we ought to avoid the mistakes and shortcomings of the soil bank.

We believe the House Appropriations Committee made a very good suggestion when it proposed that a diverted acres program could be carried out much more effectively within the framework of the agricultural conservation program.

We would feel that a land-retirement program, if it was operated in conjunction with the type of a price support program as proposed herein, could be successfully run on an effective scale yet at much less than the cost of the soil bank.

Farmers would be able to take land out of production at a nominal rental if they were assured of a satisfactory return on the remainder of their production.

We believe that it will take many years to use up the surpluses accumulated under the Benson program. To use them up within a 2- or 3-year period, in our opinion would require that 80 to 100 million acres would have to be taken out of production. The economy of our agricultural areas could not withstand a third of the cropland being taken out of production at one time.

We would propose instead that the goal be to work off the surpluses over a longer period of time with perhaps 10 to 20 percent of the cropland being taken temporarily out of production.

We feel that the diverted acres program must be such that it will fit into the normal rotation and cropping programs of typical farmers.

We also feel that there must be a limit to the acreage which any farmer can place into the program so that we avoid the undesirable effects of whole farms being taken out of production. The program should be operated in a way that will keep the farm production unit intact.

We believe a workable program could be developed along the following lines:

1. Each farmer, who wishes to be eligible for any support loans or Government support payments, would be required to keep 10 percent of his cropland base out of production and in the agricultural conservation program as a regular matter, with no payment except cost-sharing on the agricultural conservation program practices.

2. A program of rental payments to encourage placing additional acreage, ranging between 1 percent and 10 percent of cropland base, into agricultural conservation program practices under a 2-year program under which no cropping or grazing would be permitted.

3. The rental payments would be based on the prevailing average rent on land in the respective township or county.

4. A program of additional incentive payments ranging from $1 to $10 per acre, with a rate of $1 in incentive payments for each 1 percent of the cropland base being placed in the 2-year agricultural conservation program. Thus, a farmer could qualify for payments under this program, totaling the rental value plus a maximum of $10 an acre in incentive payments if he had the full 10 percent of his cropland in the regular agriculture conservation program and another full 10 percent in the agricultural conservation program 2-year program.

We estimate that under such a program, we would annually have about 50 to 60 million acres taken out of production, half of it under the agricultural conservation program 2-year program and the other half of it voluntarily under the regular agricultural conservation program without any compensation except for cost-sharing on the practices.

We believe that a land-diversion program of this sort is a necessary part of a broad farm program, because it is important to the future of the Nation to preserve and build up the soil resources. An agricultural conservation program land diversion program, or land-use adjustment program as it used to be called in the earlier years of the AAA program, would provide a way in which soil nutrients could be maintained and built up while the land was placed temporarily on a standby basis.

We believe that the essentials which we have outlined, including market allotments, compliance deposits, and direct payments are the framework of a workable program for most farm commodities. Further, we believe that a farm price support program needs to be supplemented by a land-retirement program over a period of years and that this can be done most effectively and most economically within the framework of the agricultural conservation program. We recommend these actions to the consideration of the committee.

Steel Negotiations

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. HOLLAND. Mr. Speaker, the officers of the United Steelworkers of America have sent to their membership a true history of the negotiations with the steel corporations which I thought every Member of Congress should read.

It tells the story in full of the employer's stand, and his unwillingness to accept collective bargaining and to keep peace and good relationship in the steel industry.

Management has insisted on changing many of the benefits now enjoyed by the steelworker. If these changes are to be accepted by the union, many of the gains won on the picket line will be sacrificed.

I ask that the Members of Congress make a fair appraisal of the justice of the union's demands.

UNITED STEELWORKERS OF AMERICA,
Pittsburgh, Pa., June 20, 1959.

To the Members and Families of the United Steelworkers of America:

We, as international officers of your union, are writing you this personal letter out of a strong sense of duty and responsibility which we feel toward you and your family. Since this union has always tried its best to protect and extend the best interests of you and your loved ones, we feel a direct obligation to inform you of any development which may threaten your status as a wage earner and family breadwinner.

There is afoot at this writing a most serious effort to undermine your job security, your earnings, your fringe benefits, and your union's ability to safeguard these for you. Although for the time being this effort is directed at those who work in the basic steel companies, it is a cancer which could take hold and spread throughout every company and industry in the United States and Canada with which we bargain. So this matter about which we write you is one that directly or indirectly involves every member of the union.

For almost 2 months now, your union has been hard at work trying to negotiate new wage agreements to replace those which expire at midnight, June 30, 1959. In these negotiations we have been talking to the 12 largest steel corporations or their spokesmen, but in reality we have been dealing with a united industry which has marshaled the wealth and power of business and industrial America to fight the Steelworkers' Union and its membership.

Several months before contract negotiations with our union got underway, the rich steel corporations began a carefully contrived campaign to condition the public and our members to the idea that steelworkers should not share in their great profits. In newspaper advertisements, television and radio messages, in booklets and letters, they beat the drums of inflation and foreign competition.

Both the inflation monster and the foreign competition hoax which industry conjured up have had a telling effect on the public, even though most of our members knew these issues were meant to frighten them into accepting inferior wages and watered-down benefits at a time when steel companies are piling up profits at a record-breaking pace.

While your attention and the eyes of the public have been fixed on the alleged effect of inflation and foreign competition the steel corporations mapped their plan to atomize and completely undermine your job rights now guaranteed under various union contract provisions—won through bitter struggles over the years—which protect you as an individual employee.

Less than 3 weeks before current basic steel agreements were due to expire, the company representatives let the cat out of the bag. They laid before your union negotiators eight blockbusters which would demolish or jeopardize almost every important right you now enjoy as a union worker.

This coldblooded plan of the steel industry is set forth in a document which is now a matter of public record. In it, the corporations took eight separate and distinct steps toward the destruction of your individual job rights. They demanded that you take a giant step backward toward the dark days of company unionism.

In the following paragraphs, each of these eight demands from industry is spelled out. With each one you will find a brief explanation of how the companies would use such contract changes to their advantage against you.

Please study all eight of the industry's proposals and the full meaning behind each of them:

1. The industry proposes to modify contractual language to allow management to make any changes which would produce greater efficiency and economy.

This means the companies want the right to eliminate any contract protection which stands in the way of speeding up operations or wringing from you and your fellow employees something more than the last possible ounce of productive effort. This includes the elimination of jobs, abolishment of established work practices, and the surrender of other hard-won benefits which you count on to protect you on the job.

2. Management wants to reinforce present contract restrictions against wildcat strikes, slowdowns, and other interferences with production.

This is demanded by the companies despite the fact that union contracts already contain ironclad guarantees which are far tougher than those in other industries and which have been rigorously enforced by the international union. More language in this section can only mean that the companies want the right to punish you for any sort of work interference whether or not you may be involved or responsible. They could deprive you and your family or your income or fringe benefits if some kind of shutdown occurred over which you personally had no control and which might be deliberately provoked by management.

3. Management wants the union to recognize "the functions of management to develop incentives and establish sound standards."

Present union contracts already provide for such recognition. All the union requires is that incentives set by management must be fair, just, and provide equitable compensation, without jeopardizing the earnings of employees involved. Why do the companies want to change the present arrangement? They either want to install incentives without being fair, just, and equitable, or they want to cut your earnings under existing incentive plans. Or they may want to impose incentive work standards on you without any incentive pay whatever and set the standards by industrial engineers and foremen without your participation.

4. Management proposes to clarify the right of companies to change work schedules.

Each company now has broad rights to change work schedules, subject only to giving proper notice to affected employees so that each person can adjust his private life to the needs of management. Management evidently wants to ignore entirely the interests of the employees with respect to work schedules. The company would like the right to make you come and go without advance notice, or stand by on 24-hour call, as it may suit management.

5. The companies propose (a) to add additional requirements for the receipt of vacations and (b) to enlarge the period for scheduling vacations.

The first part of this industry proposal would make it doubly hard for you to qualify for a vacation, requiring you to work a specified amount of time both in the year before you take your vacation and in the year in which the vacation occurs. Even the companies themselves in 1956 recognized the injustice of such a qualification and upon their suggestion it was eliminated.

The second part of industry's proposal shows how you would be forced to let management do as it pleases about your vacation. As you know, the companies already have the right to schedule your vacation without your consent during 6 months of the year in the case of United States Steel and even longer periods in the case of other companies. Management also has the further right to schedule vacations at any time—if the individual employee agrees. Somehow, the companies feel they still do not have enough authority over your vacation plans.

6. The steel companies propose to eliminate what they call "an overlapping or duplication of benefits" under provisions relating to severance allowance, supplemental unemployment benefits (SUB) and pensions.

This is a very mystifying proposal since all programs mentioned by the companies already contain provision against duplication. Management apparently wants to take away your rights to continue your insurance after you are retired and on pension. Or the steel companies are, perhaps, thinking of depriving you of already inadequate 30-day life insurance coverage if you should be laid off and collect supplemental unemployment benefits.

7. Management wants to "simplify" the procedure for establishing seniority units.

Under present contracts, existing seniority units are preserved and new units are established by mutual agreement at the local plant level. In event there is disagreement over new jobs, management has the right to place the job in question in an appropriate unit, subject to your union's grievance procedure. But what the companies evidently now want is the right to determine and revise seniority units, which affect your job status, without any challenge whatever from the union. You know how much job security you would have without seniority rights. Without such protection, you would have to depend on the whims of management to hold your job.

8. The steel industry proposes, finally, to simplify and clarify contract language.

The union agrees that contract language could be written more clearly so that everyone could better understand its provisions. But in light of management's other proposals to simplify and clarify, this last proposal can only mean a virtual end to the union contract. This would make it simpler for management. There is no simpler contract than one which gives you no rights.

If you have read these proposals of the companies carefully as we have you can come to only one conclusion.

This is one of the most sweeping and brazen attempts to destroy the individual rights of workers that any management has ever seriously proposed in the history of collective bargaining.

As you have probably already noticed, not one of these industry proposals has anything to do with the argument that better wages and conditions for you will bring about

"inflation" or extend the threat of "foreign competition." This proves that such diversionary issues and tactics were used by the companies merely to hide the real, sinister goal of the industry until negotiations were underway.

Stripped of their high-sounding language, these industry proposals tear down the protective fence the union has built up around your job over the past 18 to 23 years. They would give the company unlimited power and authority over you, and your union could do little but stand by helplessly.

If this letter sounds alarming there is good reason to get excited. Unless the United Steelworkers can prevent the steel corporations from destroying these fundamental job rights, you and your family face a great loss. Your job security, your job rights, your earnings and your fringe benefits will hang by the thinnest thread of management mercy.

We must not permit a backward step. We must stand united against this assault on your rights. Talk to your fellow-employees on the job about this matter. Explain to your friends and neighbors what the rich and powerful steel industry is trying to put over on you. Now that these corporations have openly revealed how they hope to wreck your job rights—while operating behind a phony crusade against inflation and foreign competition—it is time to speak out.

We, the officers of the United Steelworkers of America pledge to you that there will be no backward step. We will fight a positive, constructive battle for decent honorable agreements. We will tell the industry that you need more protection and a better standard of living—not destruction and a return to the dark ages of company unionism.

Our cause is just. With your personal support, we will win.

DAVID J. MCDONALD
International President.

Congressman Commended for Change in Milk Check Regulations

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. LAIRD. Mr. Speaker, I rise to commend our distinguished friend and colleague, the gentleman from Idaho [Mr. BUDGE], upon the splendid service he has rendered to the American dairy farmer. My congressional district produces more milk and cheese than any other district in the country and we appreciate the fine efforts on behalf of the dairy farmer rendered by the gentleman from Idaho [Mr. BUDGE].

This week a letter addressed to the gentleman from Idaho from the National Milk Producers Federation was called to my attention. I wish to include this letter in the CONGRESSIONAL RECORD. The letter is as follows:

NATIONAL MILK PRODUCERS FEDERATION,
Washington, D. C., June 18, 1959.

Hon. HAMER BUDGE,
House Office Building,
Washington, D.C.

DEAR MR. BUDGE: Recently we had occasion to make reference to the compilation of the statutes restricting the transportation of letters and the interpretations of such statutes.

We noted an insert relating to milk checks and in view of the fact that this problem had confronted many of our member associations, we made inquiry in the Post Office Department with respect to the amendment.

We were informed that you did considerable work on this issue and on pursuing the matter further we found that most of the credit for the amendment is due to your efforts.

On behalf of our dairy farmer members, we express our deep appreciation for your interest and success in securing the much-needed change in the regulations.

Sincerely,

E. M. NORTON,
Secretary,
National Milk Producers Federation.

The Great Epic of the Opening of the West Translated Into Jefferson National Expansion Memorial—Speech by Hon. Conrad L. Wirth, Director, National Park Service

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mrs. SULLIVAN. Mr. Speaker, the long, hard road over the years to obtain necessary Federal appropriations for the Jefferson National Expansion Memorial at St. Louis reached a high point last week with ground-breaking ceremonies for the relocation of the railroad tracks as the first major phase of the extensive project.

Many times in the past, other Members of Congress have asked me why the Federal Government should be helping to build what is often thought to be a purely local project for the improvement and beautification of downtown St. Louis and the riverfront. Of course it is not a local project for local enjoyment only, and one of the best statements of why it is not a purely St. Louis project—why it is of national importance—was made in St. Louis last week by Director Conrad L. Wirth of the National Park Service, under whose agency the memorial is being constructed.

Under unanimous consent, Mr. Speaker, I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD this excellent address on the Jefferson National Expansion Memorial made by Mr. Wirth at a luncheon last week given by the Advertising Club of St. Louis in conjunction with ground-breaking ceremonies earlier in the day. The address by Mr. Wirth is as follows:

ADDRESS BY CONRAD L. WIRTH, DIRECTOR OF NATIONAL PARK SERVICE, BEFORE THE ADVERTISING CLUB OF ST. LOUIS ON JUNE 23, 1959

I am highly honored that you have asked me here today to join you good people in St. Louis in breaking ground for the first major step in a great memorial development which will honor the spirit that conceived and made possible the territorial integrity and national greatness of this country. I want to thank the advertising club for inviting me and for its interest and enthusiasm in our plan to develop Jefferson National Expansion Memorial.

To reuse the words made famous by Lindbergh 32 years ago, we see here today another great expression of the indomitable "Spirit of St. Louis."

Secretary of the Interior Fred A. Seaton is vitally interested in the rewarding progress the National Park Service, with the encouragement and support of the American people and the Congress, is making in its Mission 66 program. He has asked me to extend his greetings to all of you and to convey his sincere regrets that he cannot be present with you on this memorable occasion.

I am especially gratified to hear of the extensive new development, modernization, and rehabilitation programs planned and being undertaken throughout Greater St. Louis. I think it is most significant that many of these activities will assure the economic rebirth of downtown St. Louis. The Jefferson National Expansion Memorial will play a vital and unique role in the economic life of the community, and the harmonious redevelopment of the environs of the memorial will be a tremendous achievement in which the city of St. Louis, the people of all America, and this Service and the Department of the Interior can take just pride.

Certainly, there are tangible economic benefits from the construction program of some $22 million for the overall development of Jefferson National Expansion Memorial which is being financed jointly by the city of St. Louis, the Federal Government, and the Terminal Railroad Association. This is teamwork of Federal and local interests at its best. When development is completed (our target date is 1963), your city will be the locale of one of America's greatest intangible assets—an asset whose dividends will flow perpetually in the form of inspiration, patriotism, and pride of country in the countless millions of Americans who will make new contact with their past and with American history on these memorial grounds. This is the primary dividend we seek in giving our energies, our devotion, and our means to this project.

But there will be substantial continuing material dividends from the investment of dollars being spent here. In our Mission 66 planning, we have estimated that 3 million visitors annually will visit this memorial by 1966. Applying well-established formulas of measuring the value of tourist activity, it is evident that this inpouring of memorial visitors may contribute as much as $20 million annually to the local economy.

It is doubly significant that the groundbreaking today is in an area which played a role of paramount importance in this country's westward expansion. It is doubtful if the history of America west of the Appalachians affords the example of another city which approaches the stature of St. Louis as the hub of vast territorial exploration, the nerve center of a farflung trade, and the exclusive mart for so vast an extent of country as that which was tributary to St. Louis from the time of the Louisiana Purchase to the present day.

Almost every route of trade or adventure to the remote regions of the West, whether by water or over arduous trails through plains, mountains, and deserts, centered in this city. Following the lines of trade, almost all significant travel to the Far West, be it for gain, for pleasure, or for scientific research, be it exploring expeditions, military movements, trade with the Indians, or the enterprise of missionaries, made St. Louis a starting point and base of operations.

A great epic will be translated and presented for all to know and enjoy perpetually in the Jefferson National Expansion Me-

morial. The expansion of the United States westward from the Mississippi River to the Pacific Ocean during the 19th century is a salient chapter of American history and perhaps the world's greatest example of a nation's peaceful growth. The first effective move in trans-Mississippi expansion was that of the farsighted Thomas Jefferson, who set out to open the Mississippi for the trans-Allegheny westerners by peaceful means, and gained, in addition, the vast new territory of Louisiana.

It has been said that a nation's capacity for survival depends upon the strength of its guiding traditions—the elements which created the national character. Such traditions are kept alive, not only by custom and literature, but also by the preservation of places where great historic events occurred. This we have set about to do here.

Long before President Franklin D. Roosevelt set aside the St. Louis waterfront area as a national historic site in 1935, many people, and you in St. Louis of all people, were aware of its significance as one of our Nation's great historic spots and recognized the importance of bringing it under protection provided by the organic laws under which the National Park Service guards the Nation's treasures of nature and man's record upon our land.

I think it is appropriate at this point that we pay tribute to the many far-sighted civic leaders and organizations of St. Louis who have been instrumental in acquiring and obtaining national recognition for this original gateway to the West. We are indeed fortunate to have some of those people with us here today—Mr. William Crowdus, president of the Jefferson National Expansion Memorial Association; Mr. Dickmann, who is a former mayor of St. Louis; your present mayor, Raymond R. Tucker; and Mr. Russell Dearmont, of the Missouri Pacific Railroad. We should pay special tribute to the late Luther Ely Smith, the first president of the Jefferson National Expansion Memorial Association, who exercised such unflagging faith and devoted so much time and effort in the initial establishment of this area. We are proud that his son, Luther Ely Smith, who is following in his father's footsteps in supporting the memorial program, is with is here today. We must, of course, never forget the guidance and the many fine contributions to this project through the U.S. Territorial Expansion Commission.

That you, the citizens of St. Louis, have great pride in and appreciation for the accomplishments of our Nation and of the noteworthy individuals and events that make up the fabric of American history is emphasized in your joining with us to finance this great project. The groundbreaking for relocation of the railroad tracks which we took part in this morning at the riverfront marks the first step in carrying out the Saarinen plan for the development of the memorial. I shall not bring coals to Newcastle by detailing for you all that will be accomplished under that plan, but certain elements deserve our attention on this occasion.

The dominant physical structure will be the graceful, breathtaking, parabolic arch. Although the arch will be unique in architectural history, its true significance far transcends that of merely a structure of outstanding design. St. Louis was the gateway to westward expansion, and an arch placed on the very ground from whence the westward movement flowed has a special symbolism as a visualization of the gateway concept. The imagination can also see in it a giant projection of the sturdy wagon bow so closely a part of the popular image of the great surge westward. So this structure of modern material and design also is a looking backward to the historic past in a recognizable symbol of high patriotic and sentimental value.

But the arch, like all symbols, will have many meanings for people of a nation so wondrously heterogeneous as ours. It may be to the space-age thinker a frozen trajectory of a missile seeking to escape earth's gravity. To those who think in abstract, it may be an inspired representation of unfettered human spirit, the human heart eternally searching for the achievement of transcendent goals. It embodies the spirit of enterprise, the same courageous advance into the unknown, and the same faith in man's destiny that characterized our ancestors on America's geographical frontier. In this sense, it will glorify those qualities which are still needed by us to cope with the enormous problems of modern technological and sociological frontiers. Thus, the arch, as we said earlier, will be symbolic not only of a gateway to the West but also of the new age of atomic poser, rockets, and exploration of space. It will remind us not only of our westward territorial expansion, but also of our continued progress toward goals our ancestors rarely dreamed of. In its morning shadow will lie your great city with its material witness to the benefits of the heritage focused here in the memorial.

Another major center of interest in the memorial will be a fine new visitor center. As a part of the development phase of Mission 66, visitor centers are being erected in many of our parks, but, like the arch, this one will be unique. Located beneath the memorial arch, it will be the only underground visitor center in the national park system. Here, by means of exhibits of original objects and of maps, texts, and murals, and by use of dioramas, the visitor can project himself into the events and onto the scenes of the panorama of western history. Here will be told the story of the inspiring and daring deeds of the statesmen, frontiersmen, and pioneers who brought about the final filling of the Continent to the waters of the Pacific. Here will be information to tie the thrilling events of the past to the responsibilities of our Nation today in its approach to future frontiers which involve technology, ideology, and the conquering of space.

In the future months, as you watch these structures gradually taking shape, I am sure you can see for yourselves the great good that is being accomplished under the 10-year Mission 66 program of the National Park Service. The contribution of the Federal Government to the developments which will be made at Jefferson National Expansion Memorial is a part of this program. In my enthusiasm, I sometimes forget that everyone is not fully aware of what Mission 66 means, and how it came about.

Mission 66 is so named because it is a 10-year program, launched in the summer of 1958 and scheduled to meet the goals by 1966, the golden anniversary year of the establishment of the national park system in 1916. Its goals are to so develop and staff our national park areas as to permit their widest and wisest possible use; provide maximum understanding and enjoyment for those who use them; and to preserve and give rigorous protection to the priceless scenic, historic, scientific, and wilderness resources of the national park system, existing and proposed, which comprise our people's greatest heritage.

Mission 66 was created to meet a near-disastrous situation which developed from the necessary economies our Nation was forced to meet during World War II and the critical defense period during the Korean emergency. When the war started, much of the national park system was placed on an emergency standby operation. We patched up our facilities and put patches upon patches. Roads deteriorated, guardrails rotted and fell, and trails became overgrown. Everywhere you looked you could find symptoms of neglect.

When peace was finally restored, if we can call our world situation today that of peace, Americans began to go back to the parks in tremendous numbers. The Park Service struggled desperately to catch up with the work that had been postponed, but with the limited means at hand, and accumulated arrears in planning, we could not hope to keep abreast of the demands made on us.

And so Mission 66 was created to arrest the deficiencies of the past, to meet the critical needs of the present, and to look ahead to certain future demands upon a very limited resource. The President, the Department of the Interior, and the Congress of the United States, have stanchly supported this program from the very beginning.

The National Park Service is guardian of approximately 340 historic structures of many kinds. Parallel with our work in preserving and protecting wilderness and natural features in the scenic and scientific areas of the national park system, one of our goals under Mission 66 is to preserve those buildings with high historic associations or symbolic value in bridging past and future frontiers in the mind of the visitor. You have just such a building in the memorial area—the restored rock house, built in 1818 and used originally as a riverfront warehouse for the upper Missouri fur trade, and now a precious relic of the past. Unfortunately, the only feasible relocation of the railroad will require the use of part of the present site of the rock house. We plan to move, faithfully reconstruct, and furnish this building as an historic fur trade museum, making it one of the memorial feature in the vicinity of the arch, where it will be readily accessible to visitors.

I should like to take this opportunity to recognize the unqualified support for this program on the part of the members of the Missouri congressional delegation.

Mission 66 is well underway now but we must beware of complacency. We are determined that this program for the people must not falter, here at Jefferson National Expansion Memorial or elsewhere in the far-flung park system. The American people have indicated their clear realization of the great heritage they have in their park system by the ever-increasing volume of visits—almost 60 million in 1957 and 1958 and we have every indication that this year will break all previous records.

Fifty years ago the population of the United States was less than 90 million. Ten years from now, we are expected to reach 200 million, and those added millions will have more leisure time to use for good or evil or indifferently. Visits to the great historic and scenic areas of our Nation already are becoming great factors in turning our leisure pursuits to constructive ends.

It has been said that the future of our Nation may very well depend upon the wisdom with which we make use of our added leisure time. To assure that we shall always have sources of spiritual refreshment, mental and physical realization, and patriotic inspiration in our national shrines like Jefferson National Expansion Memorial is a task worthy of our highest measure of dedication, and a dollar investment dwarfed by the immensity of the returns to our people.

It is in this spirit that we start this day the construction program at Jefferson National Expansion Memorial for the benefit and enjoyment of all the people. When this memorial is fully developed, visits to it will help Americans regenerate and dignify the values connected with their Western heritage and will reawaken in them a sense of the great responsibilities of citizenship in a democracy.

I know we will have your continued support in seeing this great undertaking to its full realization. I hope that it may be my privilege within a few years to join you good friends of St. Louis in dedicating the completed memorial which we have worked together for so many years to bring into being.

Anniversary of the Federal Credit Union Act

SPEECH
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. COHELAN. Mr. Speaker, on the 25th anniversary of the passage of the Federal Credit Union Act, I am pleased to join other Members of Congress in paying tribute to our colleagues whose work resulted in that legislation and to the credit-union movement itself.

In this we call attention to the fact that the uncomplicated democratic institution which is a credit union has lived up to its original promise, has thrived, and in doing so has clearly demonstrated that it will play a more and more important role in years ahead.

In the State of California, as elsewhere, credit unions are a healthy and widely accepted institution, which simply means that more and more thousands of citizens have joined with fellow workers and friends to pool their savings and make loans at low interest rates. In California in the past 5 years the number of individual credit unions has increased by 54 percent. I am advised by the California Credit Union League that today members of credit unions in our State have accumulated total savings of $499 million and total assets of $510 million and have loans outstanding in the amount of $420 million.

Having shared in the organizing of one such credit union in California and having served on its board, I know the credit union also as a down-to-earth workshop in the principles of democracy, as well as an entirely workable self-help agency for thrift and saving.

In the years ahead we will see continuing growth of the credit-union movement, and we can be confident that this is healthy growth.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

History of the Connally Act

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. JOHNSON of Texas. Mr. President, Ernest O. Thompson, a distinguished citizen and soldier, is chairman of the Texas Railroad Commission and an internationally recognized authority in the field of oil and gas conservation.

At a recent meeting of the Interstate Oil Compact Commission in New Orleans, La., General Thompson discussed the Connally Act and lauded it as a fine example of Federal cooperation with the oil States.

He expressed thanks to the Congress for this cooperation in the effort to build up adequate oil and gas reserves for our national security. Because of the wide interest in this vital national question, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from his speech.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

HISTORY OF THE CONNALLY ACT

(By Ernest O. Thompson, chairman, Texas Railroad Commission, before Interstate Oil Compact Commission meeting in New Orleans, La., June 15, 1959)

In all my experience and study of administrative law and its practical application, there has come to my attention no such helpful and constructive cooperation between State and Federal agencies as has been furnished by the provisions and the administration of the Connally Act.

The Connally Act covers only movements of oil in interstate commerce where the oil is not produced in accord with the statutes, rules, and regulations of the oil producing origin State.

The act applies only to the strictly Federal field of constitutional authority and leaves entirely to the States the complete control of their oil and gas conservation laws, rules, and regulations.

Such was the aim and intent of the Congress when the act was passed in 1935 on February 22.

Some background may be of interest. The Texas Legislature passed the market demand statute and the Texas Railroad Commission in east Texas set up a tender system by which each well was given its daily allowable credit and movements of oil by pipeline, truck, and tankcar by rail were permitted only when the oil shipment had been cleared as legally produced and a tender issued to accompany the oil, attached to the bill of lading or shipping ticket on the oil concerned. We in Texas even checked the throughout efficiency of every refinery in order to see to it that no more gasoline tenders were issued the particular refinery than his throughout rate would yield out of the specific number of barrels of crude oil tender covered.

This action proceeded very well until we were met by the opposition of the railroad companies and shipment of oil by tankcars. It was pointed out by the railroad attorneys that the Railroad Commission of Texas was acting beyond its scope of authority in placing a burden on interstate commerce by requiring these tenders, and the railroads contended that if they did not obey our orders they would be subject to action by the Railroad Commission of Texas; and, at the same time, if they refused to take the oil that was tendered to them by interstate shippers they themselves—the railroads—would be subject to a penalty of $1,000 a day at the hands of the Interstate Commerce Commission for not taking the shipments. They were afraid of that course, a course which would subject them to possible risks, and, of course, the railroads naturally were not anxious to lose some 700 cars of freight movement a day when they were hard pressed for revenue. And I do not suppose that it took a very strong urge for the railroad lawyers to raise the constitutional ground and thereby be compelled to take this business. Anyway, a part of the problem was to stop the movement of this excess produced oil from interstate commerce.

I suggested to the railroad lawyers and to the other members of our commission that we send a telegram to the President asking him to issue an Executive order which would relieve the railroads of this penalty pending the passage of an act. Here follows the telegram which I sent to the President on July 8, 1933:

"In order that full cooperative effect can be given to oil-control measure, may we suggest that our enforcement of oil proration orders could be made more effective if you could at this time prohibit the shipment of illegally produced oil in interstate and foreign commerce. We have called a hearing for July 31 at Austin to ascertain the amount of oil that will be permitted to be stored in Texas and will issue orders prohibiting storage in excess of that amount. Prevention of shipment of illegal oil and elimination of excess storage of crude will go far toward a solution of the oil problem. Your order at this time prohibiting interstate and foreign shipment of oil illegally produced or withdrawn from storage will greatly assist in bringing all elements of the industry in accord. The situation in Texas is steadily improving. The Railroad Commission of Texas is now getting the unqualified support of the greater part of the industry.

"ERNEST O. THOMPSON,
"Member, Railroad Commission of Texas."

On July 11, 1933, the President issued the requested Executive order prohibiting the transportation in interstate and foreign commerce of petroleum and products thereof unlawfully produced or withdrawn from storage. The order follows:

"By virtue of the authority vested in me by the act of Congress entitled 'An act to encourage national industrial receovery, to foster fair competition, and to provide for the construction of certain useful public works, and for other purposes,' approved June 16, 1933 (Public Law No. 67, 73d Cong.), the transportation in interstate and foreign commerce of petroleum and the products thereof produced or withdrawn from storage in excess of the amount permitted to be produced or withdrawn from storage by any State law or valid regulation or order prescribed thereunder, by any board, commission, officer, or other duly authorized agency of a State, is hereby prohibited.

"FRANKLIN D. ROOSEVELT."

After such action was taken by the President, all three members of our commission sent the President the following telegram:

"The PRESIDENT,
"Washington, D.C.:

"The railroad commission notes with much gratification your order of today prohibiting interstate transportation of oil produced or withdrawn from storage in excess of allowable amounts. This will, to a large extent, solve a vexatious problem in the oil industry and will help this commission in maintaining orderly production and fairness to operators so that all may benefit. The order means that the State and National authorities are cooperating for the good of the whole, and we congratulate you on the promptness and sympathetic interest you have given. With such forces at work and with harmony prevailing, the oil problem will be satisfactorily adjusted for the common welfare.

"TEXAS RAILROAD COMMISSION,
"LON A. SMITH, *Chairman,*
"C. V. TERRELL,
"ERNEST O. THOMPSON,
"Commissioners."

This cleared the atmosphere until the Supreme Court knocked out the Industrial Recovery Act, after which time Senator Connally promptly, on February 22, 1935, passed the Connally Act through the Congress which prohibits the shipment in commerce of petroleum and its products produced in violation of State law.

* * * * *

Our commission and staff have worked in wholehearted cooperation with the staff of the Federal Tender Board and we commend the administration of this act and all of those who have helped enforce this law. It is one of our main supports to conservation of oil.

I wish especially to thank publicly our distinguished former Senator, the Honorable Tom Connally, for his work in passing this fine piece of cooperative legislation which bears his name.

Also, I wish to highly commend the Honorable Nelson Puett, the present Chairman of the Federal Tender Board, or Federal Petroleum Board as it is now called, for his 19 years of work on this Board, the last 4 of which he has and is now serving as its able Chairman. Nelson Puett has served his State and Nation ably and aggressively. I know he is a good man. It was my pleasure to room with him in Texas University Law School days when he played quarterback for Texas University just as aggressively as he has worked in the enforcement of the Connally law.

The Board has an annual appropriation of $209,000 which gives employment to a total of 25 persons in four offices located at Lafayette, La., and Kilgore, Midland, and Victoria, Tex.

Fines have been collected in the sum of $1,092,000 in 22 years—1936–58.

All said and done, only praise and commendation can be given, and must be given, to this fine example of State and Federal cooperation, each division—State and Federal—operating strictly within its own sphere of unquestioned jurisdiction, thus showing that the sovereign States and the Federal Government can operate together each on its own ground.

Oklahoma's Future Waterborne

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Oklahoma's Future Waterborne," which I delivered before the Oklahoma Press Association convention of June 12, 1959, at Tulsa, Okla.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OKLAHOMA'S FUTURE WATERBORNE

(Address by Senator KERR, before the Oklahoma Press Association Convention on June 12, 1959, at Tulsa, Okla.)

Well, I'll say this, that you haven't been introduced until you've been introduced by Ed Livermore.

I'll say that I'm grateful. I'll say it sincerely, but I realize, Ed, that all I say is entirely inadequate.

I'm glad that we saw the film of the Corps of Engineers, one of the great agencies of the executive branch of our Government.

A group of highly technical, professional men.

The film they presented to you had to do with the project already authorized. They know how serious the purpose of the Congress is with reference to the building of the project we call the Greater Arkansas Development program.

Because in the Congress this year there will be something like $60 million appropriated to be spent mostly by the Corps of Engineers in Oklahoma in the next 12 months in the development of water projects principally in the Arkansas River development program.

They know that next year something like $80 million will be required and that the following year and each year thereafter until the program is completed a hundred million dollars or more will be required.

As I talk to you about Oklahoma's future, waterborne, I do so with the concept of the addition of the central Oklahoma project to the Arkansas River development plan now under construction.

I do that because of its significance to the State as a whole and because of the fact that in reality the Arkansas program will receive a very great impetus from the extension of this project into central Oklahoma and because Oklahoma's future is tied equally to both. Now those who have felt that it was unduly optimistic to contemplate the completion of the two simultaneously, I remind you that the great dams now under construction on the Arkansas—I do not include Colagah because it is so far along in the course of construction, I refer to Keystone, Eufaula, and Dardanelle—will require some 3 to 5 years under good circumstances to be built and closed and put into operation. Until that time the actual work of the building of the channel will be only in the preliminary stages. It is our hope and purpose during that same period of time to bring about the completion of the preliminary survey now in course of progress, to be followed by the project survey which we hope to see authorized next year, its completion which should be within 2 years and then it would be our hope to secure the authorization of the extension, either in 1963 or 1964 which would be about the time of the closing of these great key reservoirs for the Arkansas River part of the program. And if the authorization for the central Oklahoma project can be obtained by that time the work that will be required for the central Oklahoma project beyond that date would be of no greater dimensions or proportions than that which will remain to be done in the development of the Arkansas River project itself.

As we try to determine the sepcifications of Oklahoma's future, waterborne, we have much information to guide us.

The Arkansas River will not be the first inland waterway developed in our country—it will be the last of the great tributaries of the Mississippi to be made navigable.

Actually we have 30,000 miles of navigable inland waterways. The accurate story of how they stimulate and sustain industrial growth and development is so fabulous that you must see it to believe it. Then you must experience it, to realize the magnitude of it. Actually the stories of other areas, astounding as they are, do not give an accurate picture of what ours will be.

The Arkansas navigation channel, plus the proposed central Oklahoma extension, will produce the most dynamic industrial growth and economic expansion of any inland waterway in the history of the country. It will trigger an economic explosion unparalleled by any other similar project in our history.

When the Ohio River navigation project was started in 1879, the Nation's population was 50 million, the total inland waterway mileage was 17,745 miles, the gross national annual income was $6⅔ billion, and the gross national annual product was $8.9 billion.

When the Illinois Waterway was started in 1852, the figures were as follows: National population, 23 million; inland waterway mileage, 5,100; gross national annual income, $2⅓ billion.

When the Tennessee Valley Authority began development of the navigation channel on the Tennessee River in 1933, the figures were as follow: National population, 122,700,000; inland waterway mileage, 27,000; gross national annual income, $40.2 billion; gross national annual production, $56 billion.

Today as we move into the serious construction phase of our project, we are confronted by these astounding figures: National population, 177 million; inland waterway mileage, 30,000; gross national annual income, $375 billion; gross national annual production, $470 billion.

When the TVA started, there were 4,900,000 people in the affected area. Our comparable population today in Oklahoma and Arkansas is 4,150,000. Their per capita income then was $262. Ours now is $2,027.

Each preceding navigation project, or extension of our inland waterways, received the impetus and was the beneficiary of every project theretofore built. The effect was and is cumulative. The most astounding and far-reaching project yet built has just been completed. It will be dedicated later this month. It provides a new navigable channel of greater length than our entire Atlantic seaboard. It extends from the Atlantic to every harbor on the Great Lakes and through outlets from them to the entire inland waterway system of our country. I refer to the fabulous St. Lawrence waterway.

Amazing as it may seem, every mile of our inland waterways, plus the St. Lawrence, and the entire gulf coast and the Atlantic coastline, will contribute to the traffic and tonnage that will move in the barges on the Arkansas channel and the central Oklahoma extension.

While industrial growth and expansion along the Tennessee, the lower Mississippi, the Illinois Waterway, and the Ohio, have been phenomenal and literally unbelievable, ours will be actually, or proprtionately, greater.

Growth of industrial capacity along the Tennessee is presently at a rate in excess of $100 million per year; along the lower Mississippi, in excess of $200 million per year; along the Illinois Waterway, it is estimated at $75 million per year; while along the Ohio, the growth now exceeds $1 billion of capacity per year.

In 1908 the Corps of Engineers estimated that the annual traffic on the Ohio would be 8 million tons. Their estimate in 1927 was 22,300,000 tons. The actual traffic in 1957 was 81,600,000 tons. The estimated annual traffic at present is in excess of 100 million tons.

The story of the Illinois, on a proportionate basis, is comparable. The Tennessee River navigation channel is 9 feet deep and extends 650 miles from Knoxville, Tenn., to Paducah, Ky. The difference in elevation between the two points is 511 feet.

In 1933, the river carried 33 million ton-miles of traffic. In 1957, it carried 12,742,223 tons of traffic for a total of 2,112,793,000 ton-miles.

In 1954, the Corps of Engineers estimated the Arkansas River project alone, without the central Oklahoma extension, would, if then in operation, carry 13,200,000 tons of traffic at an annual saving of $73 million, or nearly 4 percent more than actually moved on the Tennessee in 1957.

Our area not only has the benefit of all projects heretofore built, plus the impact of present greatly increased population, much larger gross National annual income and production; Oklahoma's future, waterborne, will be profoundly affected by these additional amazing facts:

1. The national population will increase by 50 million, or more, by 1972, the target date for completion of our project.

2. Before the year 2000, or 41 years from now, the national population will be more than double what it is now.

3. The Nation by that time will require 16 times as much electric energy as was used last year, and it was 16 times as much last year as in 1920.

4. Oklahoma has a more abundant supply of more natural resources with which industry can grow and expand than any other similar area in the Nation, and the sum total of them can be produced at lower cost than anywhere else in the Nation. In addition to our natural physical resources, we have 2,300,000 of the most alert, progressive and finest people on the earth.

Our most valued natural resource is soil. Then our next most valued natural resource and one we have in such a great abundance is water. Water for domestic and municipal use, water for irrigation, water for unlimited industrial growth, water for power, for recreation, water for the magic word of economic expansion, "navigation."

Good useable industrial water is not now obtainable in much of the Nation for industrial expansion at any price. In most industrial areas today, water of the quality available costs industry 15 cents per 1,000 gallons, or more.

When our presently authorized and proposed program is completed, high quality industrial water will be available from Oklahoma City, north, northeast, east, south, and southeast, at 5 cents per 1,000 gallons, or less.

Make no mistake about it, these are priceless elements of insurance for Oklahoma's future, waterborne.

The Department of Commerce tells us that the cities and towns in America must invest $80 billion in the next 20 to 25 years to keep abreast of the requirements for domestic and industrial water. In 1956, the Army Chief of Engineers reported that some areas even at that time were "constantly going through the ceiling of available average water supply."

Nowhere can so much good quality water be conserved and made available at such low cost as in the eastern 60 percent of Oklahoma.

Even with our present national population, a U.S. Geological Survey hydrologist finds that most water that is immediately available and inexpensive to use at each individual point, is in use already.

If we carry out our presently authorized and contemplated programs and let it be known, the industrial run into Oklahoma will make the run for land into the Cherokee Strip and other of our areas opened for settlement look like minor incidents and puny efforts.

Our next most valued and important natural resource is energy fuel—vast quantities of coal, oil, and gas available at low cost.

In October of 1956, at Western Hills Lodge, General Itschner, Chief of Engineers, was talking of Oklahoma's future, waterborne. He described the fantastic growth, past and present, in the Ohio Valley. He told us that coal and water had made it possible—coal for fuel, water for industry and navigation. He then told us that here in the Arkansas Valley, we have a much greater quantity of good, low-cost coal, plus vast supplies of oil and gas. He recognized our unlimited supply of good, fresh water for domestic and industrial growth and for navigation. He talked about our other mineral resources and our forests. He then told us that we have far more resources with which to build an industrial empire, and that with navigation, we could and would have a greater development here in the future than the Ohio Valley has seen in the past.

I am frank to tell you that he told us nothing which I had not already long believed and had been predicting. But, there were a host of fine and able men in his audience who, for the first time, began to really believe. One told me he had come to scorn, but remained to pray.

Oklahoma's future, waterborne, will see the great transition from a high plateau of discriminatory freight costs to a position as favorable for transportation as any area in the Nation.

Our land-locked Oklahoma, through water conservation and navigation, will see the growth of industry beyond anything we can now imagine. Our industrial production, ever growing, will move competitively, waterborne, to the teaming markets of the Nation.

Truly there is a bright, expansive waterborne future for Oklahoma for the products of its farms, its forests, and its vast mineral resources—also for the everincreasing production of its present and future mills and factories. Among the many things in this waterborne future will be:

1. More and more employment and jobs for the people of Oklahoma.

2. The planning and building of bigger cities; a rapidly increasing population, with higher and higher per capita income; an increasing demand here at home for the products of our farms, ranches, and forests.

3. Expanded trade and commerce for existing industries, and a rapidly growing influx of new basic industries requiring the further development and use of our vast resources of coal, oil, gas, and other minerals.

4. Expansion of existing and development of new basic chemical industries using great quantities of energy fuel and salt brine.

5. Industrial production of huge amounts of products basic to further industrialization, including chlorine, caustic soda, and the myriad petrochemicals.

6. Industries are for the production of plastics, synthetic fibers, and fertilizers.

7. Expanded utilization of our sand, gravel, granite, limestone, and rock asphalt deposits.

8. The development of an electric power complex of such huge proportions as to rival that of the famed Tennessee Valley—and I say that completely aware that the TVA now uses 20 million tons of coal annually in its steamplants generating electricity to firm up and augment her vast hydrocapacity.

9. A rapidly expanding construction industry.

10. An ever-increasing forest products industry.

Oklahoma's future, waterborne, within the lifetime of some in the sound of my voice today, will see industrial payrolls and production, each being measured in terms of billions of dollars per year.

And then, in that future, another picture and another vast industry will be seen. You and I can remember, just a few years ago, when the area of permanent water surface in Oklahoma was very small indeed. Now, there are scores of thousands of farm ponds, water-retardation structures, floodways, and dams. They have created vast areas of reservoirs and lakes on our high prairies and in our valleys.

They provide water areas of hundreds of square miles and hundreds of miles of shorelines. These changes have been publicized as being in the nature of a miracle. Indeed, as we think of what has already been done, we know that a miraculous change has already been brought about upon the face of our fair Oklahoma in our day.

This has been brought about under God's will by a great host of God's children. I wish I had time to pay adequate tribute to that great host of Oklahomans whose vision, faith, courage, and perseverence have wrought this miracle. It is the work of a mighty team, composed of our people, and their Congressional delegation working together. And, I pay an especial tribute to each Member of your congressional delegation. They have all done heroic work in this regard.

But, as I think of the water projects already built, I think also of the future. We are working on a great and noble plan. We call it the Arkansas, White, and Red River Basins development plan. It is the first of its kind, and the finest and most complete ever developed for any river basin in America

As it moves to completion through the next 20 to 30 years, Oklahoma will have more than 400,000 surface acres of impounded water, more manmade lakes and canal surface than any other State between the Rocky Mountains and the Atlantic Ocean. This, together with our fine climate, our location on the Nation's highways, will give Oklahoma a recreation industry beyond anything of which any of us has ever dreamed.

And, then, with all of these, Oklahoma—in this great waterborne and industrial future—will have something of which few States can boast. We will still proudly and gratefully possess hundreds of thousands of acres which will be preserved in its original natural condition. We will have vast areas, publicly and privately owned, of mountains and valleys, and prairies, where countless millions of people, yearning for the great out of doors as God made it—may rest, and dream, and play to their heart's content.

Yes, we will always have the pine-clad forests and the clear water mountain streams of our eastern and southeastern mountain areas; the rugged beauty and native fish and wildlife haunts of the Wichita preserve; the natural caverns of the northwest; and the high plateau and rugged uplifts of the Panhandle.

Other areas would consider themselves richly blessed, if, in their future, they could match either, the production of our farms and ranches; or, the truly fabulous production that will come in ever increasing quantities from our waterborne industrial empire; or, the breathtaking beauty of our original natural areas; or, the amazing recreational developments made possible by our streams, waterways, and lakes.

I know of no other area which can, in the foreseeable future, hope to match all of the rich blessings which are ahead of Oklahoma in her matchless waterborne future.

I salute Oklahoma's future, waterborne.

Housing Lag, Rather Than Japanese Imports, Lay at Root of Slump in Pacific Northwest Lumber Market

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 2, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful editorial from the Greater Oregon of June 26, 1959, entitled "Political Pap Versus Economic Facts."

This editorial effectively demolishes the false claim that imports of Japanese plywood had depressed the Oregon lumber market during 1957 and 1958. To begin with, Japanese plywood is hardwood which does not compete with the softwood product of the forests of the Pacific Northwest. Further, the editorial in Greater Oregon emphasizes that the lumber market in the Pacific Northwest sagged because higher interest rates and tight money had depressed the private housing market right here in the United States.

I ask unanimous consent, Mr. President, that the June 26 editorial from Greater Oregon, which is edited by J. Francyl Howard, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL PAP VERSUS ECONOMIC FACTS

The above title is taken from Senator RICHARD NEUBERGER's Washington Calling report, just received, and deals with the frantic alarms raised this past fall and winter about how cheap imported Japanese plywood was causing unemployment in Oregon.

As we pointed out previously, and as Senator NEUBERGER states, the Japanese plywood is of the hardwood variety and thus not competitive with our Oregon plywood and the market for our product. These alarms were just designed to damage the

members of the Oregon delegation in Congress who had been active in supporting the reciprocal trade program, and were spread by certain political sources. Many people, naturally, did not realize this and believed in all earnestness that the Japanese plywood was a threat to our plywood workers.

Now, with the housing market being restored, Senator NEUBERGER points out that plywood shipments from the States of Oregon and Washington during the past 3 months have set an all-time record for volume and value. This represents an 18.3 percent increase over 1958 shipments for the same period.

Thus is exposed and punctured the 1958 false alarm, manufactured solely for political purposes, that the reciprocal trade program was weakening Oregon's plywood production and payrolls.

We certainly agree with this report, and we would go one step further than Senator NEUBERGER. The economic facts show clearly that it was not letting Japanese plywood enter this country that caused unemployment in Oregon. We did have and still do have unemployment. But this is due entirely to the failure of the administration to support an adequate housing program.

Now with the housing market being restored, as was mentioned above, movement of plywood and other building materials again is booming and jobs are opening up in the lumber industry and building trade.

Had President Eisenhower let the housing program continue, instead of opposing adequate funds and creating "tight money" trouble through higher interest rates, we never would have had a slump. We have the folks at home—not those abroad—to blame for our unemployment.

Public Service and the Liberal Arts

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 2, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address by the Honorable William Benton entitled "Public Service and the Liberal Arts," delivered at the commencement exercises at Hunter College on June 16 be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PUBLIC SERVICE AND THE LIBERAL ARTS

(Address by the Honorable William Benton at Hunter College commencement, New York City, June 16, 1959)

We are gathered to celebrate one of the classic rites of spring. This is a feast day at Hunter College for more than a thousand families whose sons and daughters are today admitted to adult society. It is an ancient and honorable rite. You young people who are receiving degrees are the symbol of a tradition which grew from the higher arts reserved for liberales, the free citizens of ancient Rome. Since Roman days, men have acknowledged that the liberal academic disciplines can free them from ignorance, superstition and prejudice.

So I congratulate you, each of you; I congratulate you on the hours you have stolen from TV and the movies to devote to your education. You are today making the downpayment on the price of admission to the company of educated men and women. Because I respect this ancient ritual, I now come to remind you again that learning is a lifelong work, and that the wise among you will continue to pay the installments as long as you live—and to do so happily and usefully—even if you are so ill-advised that you do not devote yourselves to Britannica's new 54-volume set, the great books of the Western World. (This is my commercial.)

Last week the Associated Press began a news story with these two sentences: "Self-discipline, duty, tolerance, morality, faith. Those words echoed across college campuses yesterday at upstate New York commencement exercises." Two weeks ago the New Yorker magazine ran a cover of an outline of a young man's head in cap and gown; but there was no face, no indication of eyes or nose or mouth, merely a perfect blank under that cap and above that gown. The etching of your future life, of which every day is the commencement—the etching upon your faces of the decades of self-discipline, morality, faith, or of the reverse, today this is still to be drawn by artists and by trials and tribulations yet unknown. Let me express the hope that the artists will be tall, dark, and handsome.

For my own theme today I shall pick a man who is the right kind of artist, even if his hair no longer curls. Indeed, he is the living symbol of my text. I point to him, and I say to you, "Go thou and do likewise." He is why I am here as your speaker. My devotion to his character and his career is the reason I came here to stress to you the relation between the public service and the liberal arts. He is Dr. George N. Shuster and this is his last commencement. He retires today after 20 energetic years as Hunter's president. As your fathers will agree, these years have required more than energy; they have called for an understanding of women. For Dr. Shuster they have been 20 years of women.

You young women—and men—represent our Nations' seasonal crop of brainpower. The productive decades of your lives now stretch out invitingly before you. Unless you are radically different from the vintage generations our Nation has raised up before you—and you don't look like a beat generation to me—at least very few of you have beards—you will be divinely discontented with the world into which you graduate. That is as it should be and as it's often been. What makes your generation different from all others is the degree of promise and peril it faces. No young people in human history have faced these opposite twins in the measure you now do. And the nature of the promise and peril is such that the promise can best be realized, and the peril best averted, not merely by technical achievement but by the qualities of mind and character developed through the liberal arts.

In modern times these arts have come to be identified with general education—with the humanities and the social and natural sciences, as distinct from the applied arts. In our educational system we strive through the liberal arts to accomplish two great ends—first, to introduce young people to the accumulated wisdom and experience of the human race, and second, to help them learn how to think clearly and independently. The ideal liberal arts curriculum is that which most successfully induces its students to apply their brains vigorously—and rigorously—to the main substance of human learning, problems, and opportunities. There has never been greater need for such students than now.

In the dizzy world I foresee, freedom will be in constant jeopardy and wisdom must be a constant counterweight. Originality and resourcefulness, combined with understanding of and respect for enduring values, will be much more important than knowledge of techniques. The techniques of one decade may become the museum exhibits of the next. Every new breakthrough out into the cosmos, or down into the living cell and the atom, can make a whole syllabus of techniques obsolete. But wisdom won't become obsolete.

Last month, at the meeting of the Committee for Economic Development in Boston, I was astonished and disturbed to discover that 16 percent of all bachelor of arts degrees being given in the United States are for majors in business education. I remembered the wasted hours and weeks and months and years I spent at Yale enrolled in courses in banking, accounting, and other business subjects. Nobody in New Haven told me that the same hours spent studying literature, history, or even astronomy would have made me a better businessman. This I learned later in life.

There have been two recent attempts to guess how much time it takes for the sum total of man's information to double. One estimate gives 15 years as the period required, at our present pace, to multiply by two our entire stock of information. Another study says that information in all the natural sciences multiplies by two in 15 years but that two or three times as long is required to double the amount of information in the social sciences and the humanities.

Manifestly a man cannot educate himself by collecting more and more information. As an encyclopedia publisher, I ought to know. I don't have anyone working for me who has even attempted to read all of Britannica's 40 million words. (This is not a commercial.)

In Communist lands future scientists and administrators are being graduated this month too, getting their certificates and their "kandidat" diplomas. They owe allegiance to closed societies and they propose to make these societies universal. Their rulers spend less of their national income on comforts. They invest a far higher proportion on their future—for example, on education and research. They export needed skills to underdeveloped countries, with political doctrines thrown in at no extra charge. In political warfare, thus far they have been more original and more resourceful than we have.

One of the central differences between ourselves and our Communist adversaries is that our traditions commit us to belief in the utility, indeed the sanctity, of dissent—and theirs do not. They are ruled by an elite of ruthless and able men; let the rest of mankind follow and obey. Ours is a democracy with faith in the freedom and the dignity of all men—and faith that out of dissent and diversity will come progress. This is our faith as free adults.

Liberal education teaches us this faith. It is anything but a hothouse for dilettantes. It's no bed of roses for after dinner intellectuals. Neither is it designed to lay on a finishing school gloss.

Can a single one of the 86 Americans in our Hall of Fame be fairly described as a conformist? If there was one trait they held in common, it was independence of mind. They differed. They fought. They thought for themselves. They were the makers and builders of America.

Thus I have confidence that many among you will learn successfully to compete against the Soviet gospel according to Pavlov—however seductively and hypnotically it is enmeshed in the cabalistic writ of Marxism-Leninism. You will win if you have learned the lesson the liberal arts can teach you. If you have learned your lesson, other men and women throughout the world will learn it from you.

Many among you will proceed to advanced studies for teaching, research and the

learned professions. The large numbers who will do so help prove that the Western World is moving ahead in its respect for learning. In my time at Yale, the man with an A.B. diploma who went into graduate work was looked on—in the words of George Edgar Vincent, then president of the Rockefeller Foundation—as a fellow who didn't know enough to go home when the party was over.

I hope, too, that many of the most gifted among you will prepare yourselves to go into public service and into government. Our political life has never had the dynamic, mature development of personnel that has occurred in technology and the healing arts. It urgently needs more talent, more vision and courage. This is the world of politics, that area of our life which must necessarily be pragmatic, empiric and always imperfect.

Einstein once said, "Politics is more difficult than physics." The world, he said, is more apt to die of bad politics than of bad physics.

Political leadership is surely one of the most difficult arts ever practiced by men—if you will permit me to call it an art. And for better or worse, in our democratic western societies we can only depend for our safety on our politicians—those specialists in the art of the possible, those compromisers, those choosers of the lesser evil, those followers and leaders of public ignorance and public insight.

Thus my prayer to you today, to you as young men and women—and yes, even to you parents—my message today is: Cultivate politics and cultivate the politicians; make forthright demands upon them for what you know is right—and instruct them as you can. I urge upon each of you some active role in the public life of your community and your country. The Olympian questions of your world's future will be political.

You who are to become scholars, prepare for a life of partnership with the politicians. You who are to be politicians, prepare for partnership with the scholars. I plead with all of you: go into politics, at whatever level you can, beginning at the community level and aiming ever higher, even at the national.

I have five small bits of advice. Perhaps the first woman U.S. Senator from New York State is a new alumna here today to heed them.

1. Join a party and then get on a party committee—either party—in your community. Do it now. You'll be welcomed, if you're a worker. Sooner than you think, you'll find your political influence multiplied tenfold or a hundredfold.

2. Know what you want, in terms of your community's future, and go after it through your party. If you want better schools—or better city colleges—push for them. Don't make a speech at your first or your tenth meeting about the Founding Fathers or about efficiency in Government. Be specific and concrete about candidates and about issues—and state what you're after and why and how.

3. Be persistent about your political objectives. I know of no field where the old maxim, "Keep everlastingly at it," pays off more surely than in politics. But be good-natured too as the other fellow sometimes turns out to be right.

4. Run for office as soon as it is practicable to do so. President Truman once told me "No man can ever really understand American politics until he's run for office." Don't be afraid to make promises, but only make those you can keep. A man's word in politics counts for more than in academic life or in business.

5. Expect, and ignore, unwarranted abuse. This is one of the penalties of public service. But it is far outweighed by its rewards.

In public service, whether it be limited to community activities, or extended into a full career service, or whether it is an aspiration to the high elective offices of the State and Nation, you will find deep satisfaction that can be achieved in no other way. I discovered in the U.S. Senate that no experience I had ever had was without some value applied to some problem I had to meet. The intellectual and moral challenge in the public service gives a man or woman the chance to call forth his greatest capacities and capabilities, and through them to work toward that goal of man on which most western philosophers have agreed: That activity which develops your highest powers.

My personal hall of fame in the field of public service includes the man whose imprint has made Hunter College an infinitely richer place. His name is George Nauman Shuster. He is a great liberal artist, and because he is a great liberal artist he is the perfect public servant in any assignment he undertakes.

I have known George Shuster best through our joint efforts to organize and develop American participation in UNESCO, the United Nations Educational, Scientific and Cultural Organization. I am greatly pleased that he has now agreed to serve as the U.S. representative on the Executive Council of UNESCO.

I have worked with George Shuster also as a member of the Commission on the Freedom of the Press, as a director of Encyclopaedia Britannica films, of which I have the honor of being chairman, and now as a member of the board of editors of the Encyclopaedia Britannica itself.

But these are merely a few among his galaxy of public services. He was High Commissioner for Bavaria after World War II when Mrs. Benton and I visited him and Mrs. Shuster in Munich. Later he served as chairman of the committee on discrimination in Washington.

George Shuster has given his associates and readers new insights into longstanding, even eternal, problems of man and society. His wit has given old truths new bite by using words with wings.

Few of us can hope to be George Shusters. But we can seek to emulate him by living up to the highest roles our neighbors and our country entrust to us. Even though the United States may be storm tossed and wracked by trials ahead, your America will still be grounded upon moral imperatives of which President Shuster is a shining symbol.

Hunter College suggests today, in conferring its degrees upon you, that there can be little doubt about the promise of your abilities. I pray that these potential abilities will be goaded by the example of President Shuster as well as by the great problems pressing in upon us. Let us hope, all of us parents here today, that the qualities kindled by the liberal artist who retires today as president of Hunter—will glow within you as long as you live.

Marinette's New Horizon

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. WILEY. Mr. President, the progress in America is a story of successive efforts by individuals and communities, as well as those by the State and Nation, to provide a climate in which to achieve our aspirations and goals.

I am, therefore, always particularly encouraged when I witness a community guided by constructive leaders who are attempting to design constructive programs to make their community a better place for their citizens in which to live.

Although our free-enterprise system has provided more good things of life for more people than any other system in history, we all recognize that there are multitudes of problems to be resolved.

To meet these challenges, the American people characteristically demonstrate a spirit of optimism, confidence, and dedication. These are the qualities which have built America and made it the leading power in the world which it is today; these are the virtues of the pioneer spirit which has ventured forth to create a great nation from a wilderness. Those who possessed this pioneer spirit did not look far off for the answers to the many problems which they encountered; they looked within themselves and found the strength to build America.

Recently I was pleased to receive a copy of an address delivered by Mr. Henry S. Godshall before the Marinette (Wis.) Chamber of Commerce on the occasion of its 20th anniversary meeting, in which is outlined the constructive way in which that community and its leaders are attempting to meet and resolve the problems with which they are confronted. As an illustration of the kind of realistic effort that is essential by local communities in order to promote progress, I ask unanimous consent to have the address on "Marinette's New Horizon" printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MARINETTE'S NEW HORIZON

It was quite flattering to have been chosen for the challenging assignment of bringing to you something worthy of your consideration. This is somewhat difficult in view of the fact I probably have not yet qualified as a native and have scarcely been in this community long enough even to have gotten citizenship papers. On the other hand, there may be some virtue to this if it can be considered that my comments may represent the thoughts of someone who has been able to stand off and see Marinette from a broader vantage point.

This is a memorable year in the life of the Marinette Chamber of Commerce since it marks the completion of 20 years' service to this community. As Bernie Schreiner has just outlined to you, these have been good years and fruitful ones. The community is a better place in which to live because of the work that has been done by those who have served in the chamber throughout that period. Many of you in the audience tonight have played your part throughout these 2 decades. To you all should go Marinette's heartfelt thanks.

We can glory in the past—particularly when it has been good to us—but there is no longer anything we can do about it, other than to profit from the experience gained. The future now lies within our control and it is to that future we shall direct our thoughts tonight.

It is my opinion that Marinette today stands at the crossroads and for the sake of

its future must decide now the direction in which it is going to go.

This country is moving into a bold era.

We are in the midst of a dynamic national economy which is bursting at the seams all around us. There is a rapidly expanding population, entirely new industries are coming into being based on the jet age and on the space age, there are countless thrilling developments underway which are pointing toward an exciting future.

Marinette should now decide if it wants to be a part of this challenging period, or whether it wants to stand on the sidelines and watch the passing parade.

I'll quickly venture to suggest such decision by expressing the sincere belief that this community wants to be a very vital part of this new era and wants to fit into its rightful place in this State and in this country. It is hungry to determine the course which will enable it to capitalize on its as yet untapped potential.

You may have noted that this little talk is keyed to new horizons. As are most things in life, horizon is a matter of relativity. Standing at the base of a mountain there is little of the horizon which is visible. Yet, as one laboriously works up toward a mountain's top, the horizon begins to widen out. When finally at the crest, the horizon is unlimited, infinite in every direction. Once there, what an inspiration this breadth of horizon can be.

What we see in such a horizon is also relative. This past week I heard a thought expressed which deeply impressed me. The speaker presenting this idea was a conservationist and referred to an occasion when he was standing looking out over a beautiful, fertile valley with mountains rising majestically on each side, and with a sparkling river winding its course down through this valley. He commented to a friend that this was nature in its greatest glory and should be preserved for all to see. The friend replied, "Yes, perhaps, but others have seen this same scene from a different vantage point. To a farmer it is an ideal spot for a prosperous farm; to the engineer, a perfect location for a reservoir to conserve water and provide power; to the actor, a natural amphitheater in which could be presented the great plays of mankind. The surroundings are the same, yet to different eyes a completely different meaning." So it is with Marinette. We must select our own horizons and through our own eyes, must determine how we can best use our many advantages and blessings.

I can see this city's future. I can see it here before me tonight. It is the people in this room—it is you. By your very presence here you have affirmed your belief that this is a good place to be and are willing to work toward its betterment. The future rests in the hands of those willing and anxious to do something about it, to control it, to guide it. Our natural resources, our surroundings are valueless except as put to use by human hands. We cannot wait or hope that something will happen. We must see to it ourselves. Those who are coming along behind us are looking to us to lead the way. We don't want to let them down.

These are the things dreams are made of, and it is from such dreams we get our inspiration to work for a better future. But from such dreams we must ultimately awaken and begin to work in the realities of the world around us. That is how we make our dreams come true.

To move now into the world of realism, what can we reasonably expect to happen to Marinette? It would seem to me that our growth would be gradual rather than spectacular. Our geographical position would point to this conclusion. Probably this is a good way to grow. Steady growth is sound growth, and provides a strong foundation. This might mean attracting light industry, small businesses, or development as a marketing or transportation center. But keep in mind, this growth will not take place unless we do something to help it. There is intense competition by many communities for this type of development. We must have something better or something more to offer if we are to attract the new faces we are seeking.

It is encouraging to note that we've already started along this path. Many things are taking place in our community. Separately we may tend to overlook them, but added together they become quite impressive. There are definite signs of a reawakening.

Running down the list; there is now a new post office underway, and the new Farmers & Merchants Bank is a tremendous asset. We can't overlook the fourth estate either. The Eagle-Star's new publishing plant is a significant addition to our well being.

The hopes for a deeper harbor and a new Menekaunee Bridge are nearing realization. The new historical museum will soon be a reality, the city waterworks is now bigger and better than ever. Many building owners or shopkeepers are improving their store fronts, and the chamber of commerce's new office is a great stimulant for this group. There is now underway some interesting and attractive motel improvement in the neighborhood. There have been several new small businesses started up or have come to town recently. That's quite an impressive list, isn't it.

Perhaps of greatest significance is the recent establishment of an industrial park area, spearheaded by the chamber of commerce, but made possible by the complete cooperation of both the city council and county board. For years there has been pious hope that more industry would gravitate to this city—but there was little to encourage anyone to do so. Now, at last, we have something to work with. We have something to sell. The results will not be evident overnight, and it will mean lots of hard work and patience. But we are on the way.

If we do want to see some new smokestacks, or to encourage new people and businesses to make this their home, what else do we really have to offer them? If you were to consider this town as a likely place to settle your family or to set up in business, what impression would you get? What would you look for? You know, and I know, there are many good things, and let's admit, a few less pleasant ones, too. Let's see what these amount to.

First off, this community has a wonderful lot of people—as citizens, as friends, as workers. As to the latter, I would say as steady and productive a force as can be found anywhere. Yet, with it all, I detect one ingredient lacking somewhat generally, and this is certainly one of the most important ingredients to success. There seems to be a lack of pride in the virtues of this community. We tend to sell down rather than up. Why is this? Why can't we speak of our virtues? Exploit them? Correct those flaws which may make us a little ashamed from time to time? If we can't be proud of what we have, and what we do, why should someone else believe in us?

One of the things that embarrasses us most is the appearance of our town. The unpainted homes, the unkept yards, empty stores, shabby buildings, bleak, blank spots where buildings once were, standing out like a missing tooth. Somehow we must begin to instill some pride in our surroundings so these conditions can be corrected. Some steps in this direction have been taken, but they have not yet been enough. Why can't each of us make certain the surroundings of our own homes or business are in good order, then talk it up in our own neighborhoods, in the hope others will begin to feel a certain swelling of pride and a desire to do the same thing? Holding back for fear of an increased assessment represents a narrow view. Our city administration is on record that they want to encourage such improvement without prejudice. Let's express our confidence in them—spread this word. If necessary, provide some incentive to get this housekeeping job done. For one, I pledge that our plant properties will live up to good standards.

Our streets are a scandal to the jaybirds, yet we know the city has embarked on a program calling for steady improvement in this situation. Each of us should support and encourage the city to carry out this program—and to do it promptly.

Our city hall is a relic and makes it look as though we are living in the past age. How long can we continue just talking of that day when it must be replaced? Is there not some way for us to get up our collective courage to do something about this, to do what is necessary to get the job done?

This is no more than just plain salesmanship. Putting a better package around the same old product.

If you saw a girl walking down the street in dirty dungarees, an old shirt, flat scuffs, hair looking like it was combed with an egg beater, the odds are you wouldn't give her a tumble. Take the same girl in a stylish dress, high heeled shoes, sheer stockings, and other tools of the trade used by women—what would be your reaction? Even a homely member of the species can do a lot with these kind of tricks. I do hope the ladies will forgive this particular example, but we men have to discuss the problem in terms we understand.

In making any references to our city administration, I must add that I sincerely believe we have a good government. They are dedicated, honest, hard working public servants. They are doing all within their power and within their limited means to make this a good city. We should stand behind them 100 percent. Our homes and our children are safe and comfortable, thanks to the job they are doing. This is one of the things of which we can rightly be most proud.

Incidently, let's also take some pride and interest in our government. City, State, and Federal. Become active or at least interested in your political parties' activities. Know what your legislators are doing—let them know what you think—and at least get out and vote.

One of the greatest assets we have at hand is the natural resources surrounding us which are admirably suited for recreation. They can, and should, be the heart of a whole new industry—the tourist industry. That can represent some mighty valuable business dollars. Are we really exploiting it to the fullest? We talk of public beaches, yet to find Red Arrow Beach is a formidable task, a challenge to the most durable of automobiles, and a shoddy affair at best when finally found.

The boating industry is a tremendous one today. Yet, where can a roving boatman tie up in our town? The yacht dock? How many of you have seen it recently? There is little or no space available. The visitor cannot get convenient service even to the extent of being able to gas up his boat easily. We seem to be missing another good bet here.

If a tourist wanted to go fishing in the bay or on the river, or just go boating, where could he even rent a boat? It takes more than just wanting tourists. We have to compete against other towns to give the tourist some reason to stop in Marinette or to gravitate to Marinette. It would appear there is still much to do in this field.

This should be a marketing center for a large area. Another pretty good sources of business dollars. How, then, do our shops stand up? Are they really interested in the customer, or do they merely indulge him? Are our stores well stocked with a good variety of merchandise of good quality? Do we get all the commercial business we should get right here—or does it go elsewhere all too often?

Our children are our most precious commodity. Proper schooling for them is of the first importance. Our school officials are a dedicated lot, making every effort to meet the needs of our time. Excellent progress has been made in keeping up the quality of the school facilities, particularly in the grade school buildings. Here, again, we should look more closely. Are our schools truly giving our students a broad outlook on life, an awareness of the opportunities around them and encouraging them or training them to go on to greater heights? Not only the handful at the top, but all those who have promise for the future. And I might add, we parents have a responsibility in this—to encourage our children to make best use of their talents.

Many people express the belief we seem to be training our young people for someone else. If that be the case why not make available more opportunities here at home for them? Why is it that my company, for example, doesn't seek out local men for responsible positions, and why is it local college graduates rarely apply to us for such positions? With a stronger, growing community can come increased opportunities and in turn the desire to do something better closer at home.

What if we are training them for someone else? After all, there are those like myself who have come here and were trained elsewhere. This is an age of a migratory population. Right or wrong, it is with us. Perhaps this blending of populations can be invigorating to the community. Those persons interested in coming to this town will certainly judge it in part by the educational advantages which can be provided for their children.

If our children are to go forth elsewhere in the world, let them go with the pride of good training. Let them spread Marinette's gospel widely and let us realize that in the final analysis that, too, will serve this town's best interests.

This is by no means a complete baring of our soul. There are lots of other things we could talk about far into the night. If we are looking for more things of which we can be justifiably proud, there are many. Fine churches, a splendid library, a beautiful county building, good golf courses, a vocational school, extension school, and teacher's college, a diversity of business, and many fine recreational areas. These are really selling points.

Then there are some others we'd like to sweep under the rug. Parking limitations, traffic flow, a dubious but well merited reputation for the greatest concentration of bars per capita found anywhere, limited new housing or presentable rental housing, and last but not least, the cave in Dunlap Square's Golden Triangle.

Even as I recount these various items, someone may feel offended. Please understand that my only purpose in bringing them to light is not an effort to disillusion or discredit anyone, but instead to fire your imagination, to show you that the problems we have are really little ones; ones that can be corrected or improved upon with reasonable effort.

In stating these beliefs—I am reminded of a comment Birdie Tebbetts made here in Marinette a short while ago. Someone asked him to name an all-opponent team—which he did. When finished, he said he wanted no arguments since this was just his opinion. Those who agreed with him thought he was smart; those who didn't then were sure they knew why Cincinnati had fired him. So with me—if you agree with me, you'll say that's why Marinette Paper is a good outfit—if you don't, you'll say that guy is a menace. There must be some smart guys somewhere else that are running the paper company. So it goes.

Up to this point we have dwelled on some of the day to day problems that surround us. Let's now return again to the concept of our horizons and our future.

Somewhere in the distance is our destiny. But how are we to get there? What should be our course, how can we create and carry out that overall plan which will put us in our rightful position? I think there is a way to do this.

You all know that the entire Midwest is extremely enthusiastic about the tremendous possibilities attendant to the opening of the St. Lawrence Seaway. Marinette should be in a position to capitalize on this great new inland industrial empire. If there ever was one, this can be a rallying point around which all of us can muster our tremendous latent power.

We can no longer take time to merely talk about future development. Other cities are alert and are taking action. For us to stand still would be to go backwards. I submit to you here tonight a definite proposal that Marinette get on the move. To do this without delay, I propose this city call in a selected firm of urban planning consultants to evaluate Marinette's potential and that such firm be empowered to prepare a plan of long-range development for this city. This to include population projection, transportation potential, industrial prospects, traffic control and the many other related subjects. We should find out just where and how we can fit into this new economy. Is it in harbor development, as a distribution or storage point, or in providing a decentralized manufacturing location to provide for the needs of the growing population of the Midwest? To make such a determination is a greater task than any of us or all of us locally are capable of handling. With such a plan, we would know how far we can go—and how to get there, step by step.

For those of you who may wince at the consideration of the cost of such a project, I would like to add two comments. First, if it is worth doing, it is worth doing well and the means can be found to do it. Second, as much as I personally object to Federal handouts, I believe there are ways to get the Federal Government to share equally in the cost of any such survey.

I further pledge you that if this is done, the chamber of commerce will lend its strength and support in every possible way.

The time is now, ladies and gentlemen. You are the ones who must decide the breadth of Marinette's horizon. There is much of which to be proud in this community. You can be the leaders in creating that pride. The road ahead may be long, but the results can be most gratifying. Progress has never come easily, but is not beyond our ability to achieve it.

You have been a good audience. I am grateful to you for having listened so well.

Thank you.

Senior Citizens in Quincy, Mass.

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 2, 1959

Mr. KENNEDY. Mr. President, the Quincy (Mass.) Patriot Ledger has published a series of three articles by Dr. Glenn A. McLain, professor of social studies at Quincy (Mass.) Junior College and research director of the Quincy Council for the Aging. These articles describe what two communities in Massachusetts are doing to meet the problems of our older citizens.

In view of the increasing importance of adequate recreational facilities, adequate health services, adequate employment opportunities and adequate social patterns for this segment of our population, I commend these articles to the attention of the Senate. Soon 10 percent of the people of the United States will be 65 or over. It is already long past the time when we should have planned for their needs and their happiness.

I ask unanimous consent that the three articles, which appeared in the Quincy Patriot Ledger on May 28, 1959, by Dr. McLain, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SENIOR CITIZENS IN QUINCY—ARTICLE I

(By Dr. Glenn A. McLain, Quincy Council for the Aging)

There are over 10,000 people in Quincy over 65 years of age. This statement might startle some in this city, but most informed Americans are well aware that amazing progress in medical and social services designed to prevent the diseases of childhood and youth has made our population an older one in recent years. Quincy has long been noted for the excellence of its programs for the youth of our city, but little civic attention has been paid to the problems of the aged or senior citizens. In fact, many people in Quincy and elsewhere in the United States don't believe that there is any such problem at all. A look at the facts in Quincy and throughout the Nation might modify the ideas of those who have been unable to see the necessity of sponsoring comprehensive and regular programs on a steady basis for retired people.

With about 8 percent of the manpower resources in the United States over 65 and approximately 10 percent in Quincy a new dimension has been added to our thinking about the status of the retired; his recreational facilities, health problems, employment opportunities, and his opportunity to belong in a society which is rushing toward automation in industry, but not in personality. The elderly must be given the opportunity to participate in community life, to continue to contribute to the social, economic, and political patterns of his society and most of all to make his golden years peaceful but stimulating if he cares to be stimulated. To further these objectives many local civic, religious, and private organizations have been working quietly for the past several years. One such organization, officially sponsored by the mayor in 1953 and continued by each succeeding mayor since then has been the Quincy Council for the Aging. The new program of the council is one which should be known and fully evaluated by every citizen in Quincy. The original program of the council in 1953 was led by representatives of both private and public agencies. A great deal of initial enthusiasm was developed in the city for a full program but many civic leaders felt that eventually the State of Massachusetts would provide funds for such activities. Among the accomplishments of the Council for the Aging since 1953 have been sponsored activities finally resulting in the building of special units for the elderly at Snug Harbor in Germantown, benches for resting at vari-

ous places throughout the city, and general community studies on geriatric problems. The recreation department has frequently sponsored sporting events and movies for the elderly with a great deal of success. However, the various members of the committee since 1953 have all felt that the mere surface of the problem was just being scratched.

As Anthony Venna, commissioner of welfare and chairman of the council for most of this period has expressed the issue "this is only a beginning. As long as the council continues to operate with only volunteer help, we will never be able to handle all the many problems on a coordinated basis. We need a paid, professionally trained worker to act as a resource person and to provide leadership for the development of new programs and recreational activities."

The experience of many other towns and cities throughout the Nation in trying to build a comprehensive program without the superior organization which naturally develops under a capable, well-trained person in this field would seem to bear out the advice of the chairman of the council.

Problems in the fields of health, housing, and recreation were attacked by the leaders of the group, but many of the plans foundered on the hard rock of lost expectations—that the State would eventually pay for the hiring of a full-time professional worker to coordinate the program.

Through legislation sponsored by Quincy political leaders funds were appropriated to provide for minimum expenses of $500 for the Council for the Aging to start a program. It is probable that this amount will be increased in the future, but the members of the council do not feel that money from State sources is the answer to this problem.

In 1957 the council was fortunate in securing the volunteer services of a vigorously aggressive retired person, Mr. Frederick Cornell. The 76-year-old Mr. Cornell revitalized the program of the council pushing an agenda which included support for the elderly in five fields: Housing, recreation, employment, transportation, and representation. During the 1 year in which Mr. Cornell spearheaded this program, much was learned by the Council for the Aging. Two results of this activity were that the group discovered the necessity for a full time worker to mobilize constant program activity and for a drop-in center to use as a base for the program activity. In order to explore the possibilities in these objectives, the council has surveyed many other projects of this type in Massachusetts and throughout the country. One of the most challenging and successful in the Springfield Hobby Club in Springfield, Mass.

THE YOUNG IN HEART IN SPRINGFIELD—ARTICLE 2

(By Dr. Glenn A. McLain Quincy Council for the Aging)

Will you be young in heart at 65? Did you ever meet an expert on the aged who lives her job 24 hours a day? Go to Springfield, Mass., and your questions will be answered as this writer's were recently when I visited the Springfield Hobby Club.

Located in the YMCA building, the Hobby Club was founded by Dr. Theodore Swartz for the lonely and frustrated senior citizens of Springfield. This was truly a pioneer effort as in 1946 little attention was being directed to the problems of the elderly. The goal of Dr. Swartz was through the development of hobby and recreational programs to help those over 65 become the "Young in Heart." Miss Leone Avery, a former schoolteacher and past master in humanitarian skills sparked his program leadership with ideas and imaginative plans. Starting in a small store with 55 men and women members to provide useful recreation for all those over 65, the club has, since 1946 moved into larger quarters four times and expanded its membership to over 1700 in 1959. Each members pays 15 cents monthly dues and the entire budget of this worthwhile project is raised by a combination of parties, dances, bake sales, etc. and United Fund support. There is every indication that a well planned Quincy project could also be mostly self-sustaining after initial support is received from the United Fund.

As the club prospered, it was obvious to the city of Springfield that the problems of the aged were many and complex. The countless health, recreational, welfare, financial, housing, and other special problems moved the entire community into action. One of the first Massachusetts Councils for the Aging was formed; and a Golden Age Club, separate from the Hobby Club, surged into activity. All of these groups led by the Hobby Club developed into models of creativity for the rest of Massachusetts and the entire Nation to copy with profit. The reasons for the outstanding success of the Hobby Club and other Springfield community groups in the field of the aging deserve evaluation by the citizens of Quincy and Americans everywhere.

Most Americans in 1959 are aware of some of the reasons for the so-called "problem of the aged." The rise in life expectancy at birth of men, from 48 to 68 years since 1901, and for women from 51 to 73 has highlighted other issues. Chronic disabling illnesses, lack of proper housing and poor retirement income for those over 65 have forced the establishment of State Councils for the Aging in many States. Many of these problems have been attacked throughout the Nation by social minded legislators who firmly believe that the "Young in Heart" are not just those in the age of romance, but also are those in the age of retirement.

Over the years from 1946 until the present time, the Hobby Club has concerned itself not with legislative problems, but only with those which would provide good recreation for elderly citizens. Miss Avery and her wise Board of Directors at the Hobby Club have found that all the increased social security checks in the world are not enough if the senior citizen does not have a purpose in life. The very air of the Springfield Hobby Club breathes purpose, self identification through constructive hobbies or games and human dignity for all once again.

The Hobby Club had the usual growing pains of any other worthwhile community project until it was accepted as a Red Feather and United Fund Agency in 1956. Quincy and other cities and towns in the United States should carefully analyze the experience of Springfield in this respect. Since this official recognition, the club has been able to offer a fully operative library; recreational features including TV, radio, woodworking shops, crafts classes, dancing, pool, shuffleboard, etc., all in daily operation.

The future of the club is bright. It's well-directed and spirited membership has sponsored a housing program in a local hotel which has drawn applicants from all over the Nation. It's present program and future plans have attracted national attention by oldsters and by young scholars who are writing doctor of philosophy dissertations on the successful operations. Members of the club agree that any city or town in the United States which has similar problems as Springfield can be equally successful if three things are done.

There must be a real need in order for a program of this sort to be developed. Rural areas do not need to develop complicated programs to organize the elderly. The "young in heart" must themselves be deeply involved in the planning and operation of any such "drop-in center" or sponsored recreational program. It is essential that dedicated people, with strong educational backgrounds if possible, but mostly those with heart, understanding, humility, and a sincere understanding of our young oldsters must be found to lead the aged programs.

Every city cannot be as fortunate in finding the leadership that has been tapped in Springfield. But every city can seek out the "young in heart" and help them fulfill their destiny as American citizens at the zenith of their lives. The Quincy Council for the Aging has begun to develop a program to help solve this problem and to build constructively for the future.

PRESENT AND FUTURE PLANS OF THE QUINCY COUNCIL FOR THE AGING—ARTICLE 3

(By Dr. Glenn A. McLain, Quincy Council for the Aging)

After several years of experimentation and general research in surveying the problems of the aged in Quincy the council has in 1959 developed three major objectives for the future: to fully analyze the activities, programs, and efforts of all groups in Quincy now working in this field; to work toward the establishment of a "drop-in center" here; and to hire a full-time professional worker to coordinate present programs and to organize future ones for all retired people.

The first step taken by most other councils throughout the country has been to take a survey of all agencies, clubs, and private organizations and religious programs. Only by exploring all available community resources can a fully matured program be developed for the future. The Quincy Council for the Aged has such a survey in the hands of 139 individuals and agencies in the city. When the questionnaires are returned and the results analyzed important resource materials will be available to help all Quincy citizens who may be interested in advancing the project.

As an example of the importance of the survey to the Quincy project the early returns of the mailing indicates that only 15 percent of organized group and privately sponsored city activities have any program underway at present for the aged. If these temporary figures are borne out in the final tabulation more stress will be placed upon the present plans of the council to gain community support for citywide efforts in this direction.

Another important aspect of the survey is to build up a permanent resource file for the use of all community organizations. If the League of Women Voters of Quincy which mostly confines its activities to governmental and political questions should decide to develop a project for the aged it can be guided to develop such a program within the scope of their special interests.

A major objective of the Quincy Council for the Aging is to eventually establish a drop-in center where a permanent and expanding recreational program can be maintianed. This important type of activity has been successfully organized and promoted by several cities in Massachusetts and hundreds throughout the Nation. There are many possibilities in Quincy of securing a house or home where card parties, television, radio, games, dances, and most of all just plain leisure-time activity may be sponsored.

Most civic sponsored projects for the aged in the United States have started with small quarters and expanded as the needs developed.

Many churches and private groups in Quincy already have such centers in operation but none of them are on a full-time basis. A Quincy council prop-in center would be fully operational 7 days a week under the direction of a full-time worker who would seek out the volunteer coopera-

tion of many civic groups. It is not expected that a council sponsored center would supplant other groups working in this direction, but rather to help them supplement their existing resources and to provide a source of new ideas for further expansion of their programs.

A mere review of the facts and statistics behind the record of drop-in centers in other parts of the country will not bring out the real secret behind any successful program. The real answer to this problem can only be found by talking to retired people in Springfield or members of successful projects in the pioneer States in this field in California, Michigan, or New York. There are four objectives behind any functional center: recreation, entertainment, personal involvement on the part of the members, and continuous progress. Add them all up and one word, "spirit" is the answer.

The spirit in Springfield, where 81-year-old youngsters ride 6 miles daily to attend the activity program of the hobby club and in other cities all over America where a longer and more interesting life are the rewards for these activities is the spark needed to activate a Quincy center. All of these things can be done in Quincy as they are done elsewhere if a drop-in center is developed.

The careful planning of a drop-in center is actually one of the two keys to a workable program for the aged in this city. Perhaps another hobby club of the Springfield type might be developed. There are many other possibilities according to the wishes of the senior citizens themselves. It is essential to keep this in mind as programs planned for but not with those involved are destined to fail. Many senior citizens' groups charge dues and engage in various types of fund raising activities which can best be sponsored from a drop-in center of a permanent nature.

The last, but perhaps the most important of the current objectives of the Quincy Council for the Aging, is to hire a full-time professional worker to coordinate the programs throughout the city. This is not the type of position for a part-time worker who is only able to borrow time from a regular job for the activities of the aged. The many private agencies in Quincy engaged in programs for our youth are mostly staffed with full-time workers. Any program for the aged involving over 10,000 citizens in our city deserves similar consideration. It is expected by the members of the council that the United Fund will favorably consider its request for funds to pay the salary of a full-time executive director to run this program.

In summary, it is important to understand that mere numbers of retired people in Quincy or anyplace else do not in themselves create a problem for the aged or for the city. The members of the Quincy Council for the Aging strongly feel that with over 1,200 of our citizens under the old-age assistance program and another 4,000 on the social security rolls there are sufficient reasons to further explore the need for organized activities for the retired in Quincy. After the survey taken by the council is interpreted the real nature of the situation can be fully understood in this city.

Only through the good advice of those groups already in the field and through the understanding of the citizens of Quincy can the objectives of the council be furthered in developing a program for the aged. A program for the future will be built only according to the needs of this community and the senior citizens who will be the inspiration behind the activities.

Federal Aid to Education—Oregon Educators Support Murray-Metcalf Bill

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. NEUBERGER. Mr. President, one of the most important pieces of legislation now pending before Congress is the Murray-Metcalf bill, which would make available to the States Federal funds to assist in the construction of elementary and secondary school classrooms and to help raise teachers' salaries.

In the House of Representatives this proposal is identified as H.R. 22. H.R. 22 was reported by the House Committee on Education and Labor on June 8. It is now awaiting consideration by the House Rules Committee.

In the Senate, the plan is contained in S. 2, of which I am happy to be a cosponsor. This bill is currently under study in the Subcommittee on Education of the Senate Committee on Labor and Public Welfare. Hearings on the measure have been held and testimony published.

I am hopeful that Congress will take action on the Murray-Metcalf proposal in the current session. I think it is good legislation. I believe it is needed legislation. Inadequate classroom facilities and meager teachers' salaries represent a danger to American strength as surely as do second-rate weapons systems and an undermanned U.S. Army.

I wish to indicate my very strong belief that it would be an error for Congress to strike from the Murray-Metcalf bill that provision which allows utilization of Federal funds for increasing of teachers' salaries, as some have suggested. The American schoolteacher is the true heart and soul of our educational system. To promote the supply of qualified elementary and secondary teachers is to improve all education.

Mr. President, the representative assembly of the National Education Association is now meeting in St. Louis. Many able educators from Oregon are attending this important meeting and a number of them have wired me indicating their strong support for the Murray-Metcalf proposal. I ask unanimous consent that these telegrams be printed in the Appendix of the RECORD, together with the text of a message sent to me by Dr. J. L. McCaskill, executive secretary of the NEA legislative commission, transmitting the text of the resolution approved by the assembly endorsing the Murray-Metcalf bill.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

ST. LOUIS, MO., *July 1, 1959.*
Hon. RICHARD L. NEUBERGER,
U.S. Senate, Washington, D.C.:

Following is a resolution adopted by the 38th representative assembly of the National Education Association in session in St. Louis, Mo. When the resolution was offered on the floor by Miss Morma Mowrey, of West Virgina, it was enthusiastically seconded by 46 States and passed by an overwhelming vote of approximately 5,000 delegates. We hope that all members of the Senate Labor and Public Welfare Committee will learn of NEA's endorsement of the bill which you have sponsored:

"I move that we of the National Education Association and its affiliated State and local associations pledge our total organizational strength and effort to obtain prompt passage of permanent broad purpose Federal financial support of education which assures State and local control of public schools. It is our firm conviction that the Murray-Metcalf bill as introduced in the 86th Congress embodies these basic principles which are of utmost importance to the future of our Nation. As delegates to this the 38th representative assembly we pledge our total organizational strength and personal efforts to obtain early passage of such legislation.

"I further move that we here and now make it crystal clear that we firmly reject as being unsound and unwise national policy all proposals to compromise the basic principles embodied in the Murray-Metcalf bill by eliminating either teachers' salaries or school construction.

"I further move that we make it known to the American people and to all Members of Congress that on these principles, and in this action, we stand firm and united."

J. L. MCCASKILL,
Executive Secretary, NEA Legislative Commission.

ST. LOUIS, MO., *July 1, 1959.*
Senator NEUBERGER,
Senate Office Building,
Washington, D.C.:

We urge you to exert your influence on behalf of S. 2, Murray-Metcalf bill. Urgent in interest of quality teaching and children of America.

K. J. SPEEDIE,
President, Roseburg Education Association.

ST. LOUIS, MO., *July 1, 1959.*
The Honorable RICHARD NEUBERGER,
Senate Building,
Washington, D.C.:

Please support Senate bill 2 in its present form. Oregon children are entitled to quality teaching. Without Federal aid for both the building program and salaries this will be impossible.

RUBY F. RAHN.

ST. LOUIS, MO., *July 1, 1959.*
Senator RICHARD NEUBERGER,
Senate Office Building,
Washington, D.C.:

As a delegate to the NEA convention representing Jackson County, Oreg., teachers, we urgently ask your support of the Murray-Metcalf bill.

Mrs. GERARD C. CLUTE.

ST. LOUIS, MO., *July 1, 1959.*
Hon. RICHARD NEUBERGER,
U.S. Senator From Oregon,
Washington, D.C.:

Ernestly urge you to do all in your power to secure enactment of Murray-Metcalf pub-

lic school support bill into law. No legislation could give as great insurance in permanent defense of our American free society nor as strong assistance to a permanently prosperous economy. It should be passed at this session of Congress.

FREDERICK M. HUNTER.

ST. LOUIS, MO., *June 30, 1959.*

The Honorable RICHARD NEUBERGER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NEUBERGER: We understand some consideration is being given to amending the Murray-Metcalf proposal so that teachers' salaries will be deleted. The Oregon delegation at the NEA convention in St. Louis is unanimously opposed to any such move. Any support or help you can give for action on the present proposal will certainly be appreciated. Perhaps you may know some members of the Senate Committee on Education with whom you can discuss this matter. We certainly appreciate your continuing support for Federal support for education.

Sincerely yours,

C. W. POSEY,
Executive Secretary,
Oregon Education Association.

A Sweeping Court Decision

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. BRIDGES. Mr. President, from time to time I have made many statements about the decisions rendered by the U.S. Supreme Court. I have praised the opinions of this country's highest tribunal whenever I thought its decisions were worthy of praise. I have also taken strong issue with some Supreme Court decisions, particularly those dealing with communism and investigations for sedition, whenever I thought the decrees were not in the best interests of this country.

The Supreme Court has now said in effect, that the teaching of adultery and the breaking of marriage vows is lawful under the general cloak of free speech.

This decision is the topic for a straightforward and penetrating article written by David Lawrence which appeared in the Washington (D.C.) Evening Star, and I ask unanimous consent that the article entitled, "A Sweeping Court Decision," be printed in the Appendix of the RECORD. I commend it to the attention of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SWEEPING COURT DECISION—JUSTICES RULE TEACHING ADULTERY IS LAWFUL BECAUSE IT'S AN IDEA"

(By David Lawrence)

The same Supreme Court of the United States which recently ruled that it's all right to teach or advocate the overthrow of our Government—because this is just an idea—now says, in effect, that it is lawful to teach adultery and the breaking of the marriage vows. The Court says this also is just an idea which the majority of the people of America may not like, but that it all comes under the head of "free speech" and is protected by the 1st and 14th amendments to the Constitution.

This latest decision will come as a shock to church-going folks everywhere who do not believe that it is lawful to advocate sin, any more than it is right to advocate crime of any kind, especially in motion pictures that reach the young as well as adults.

The Supreme Court's own words are startling. The opinion of the Court, delivered by Justice Stewart, reversed a decision of the highest court of the State of New York, which upheld the law of that State forbidding the exhibition of motion pictures "which are immoral in that they portray 'acts of sexual immorality * * * as desirable, acceptable, or proper patterns of behavior.'" The New York court had interpreted that language of the statute to require denial of a license to a motion picture where "its subject matter is adultery presented as being right and desirable for certain people under certain circumstances."

The Supreme Court's opinion accepted the contention "that the motion picture here in question can be so characterized," but went on to hold that New York State has no right to pass such a law, because it is unconstitutional on its face. Justice Stewart says:

"What New York has done, therefore, is to prevent the exhibition of a motion picture because that picture advocates an idea—that adultery under certain circumstances may be proper behavior. Yet the first amendment's basic guarantee is of freedom to advocate ideas. The State, quite simply, has thus struck at the very heart of constitutionally protected liberty."

This is a sweeping interpretation of the first amendment. Time was when the Supreme Court of the United States considered the interests of the citizens as a whole superseded those of any individual citizens, and held that to cry fire in a crowded theater might be regarded as coming under free speech but didn't protect the people who would be killed in the ensuing panic.

In the instant case, the Court quibbles that incitement has not been proved. It similarly has previously argued, in effect, that, until acts are undertaken to overthrow the Government, there is no incitement to revolution on the part of speakers who teach the forceful overthrow of Government.

Justice Harlan, in behalf of himself and Justices Frankfurter and Whittaker, wrote an opinion concurring in the result in the Motion Picture case, but said the Court had moved too swiftly in striking down the New York State law. He said that, while the motion picture in question shouldn't be banned, the right of the State to retain such a law should not be forfeited.

Justice Frankfurter, in a separate opinion, concurred in the decision as to the picture involved, but stated his belief that the Court should have limited itself to deciding whether a particular picture is entitled to the protection of expression under the 14th amendment. Holding that there is an evil against which a State may constitutionally protect itself, whatever we may think about the questions of policy involved, he added:

"The real problem is the formulation of constitutionally allowable safeguards which society may take against evil without impinging upon the necessary dependence of a free society upon the fullest scope of free expression."

Justice Douglas, in behalf of himself and Justice Black, wrote a separate opinion concurring in the result but insisting that no State can constitutionally enact any law requiring censorship in advance. He holds that the exhibition of a controversial motion picture—as in the case of publication of a libelous article—should not be subjected to previous restraint, but should suffer legal consequences if any law is involved. Justice Douglas says: "If a particular movie violates a valid law, the exhibitor can be prosecuted in the usual way."

So, all in all, six Justices voted to take away the right of the States to decide for themselves what motion pictures involving sexual immorality are objectionable, while three others said they would rather see the Supreme Court, acting presumably as a supreme board of censors, decide each case on its merits.

Justice Black objected to that role, declaring that then "every member of the Court must exercise his own judgment as to how bad a picture is, a judgment which is ultimately based at least in large part on his own standard of what is immoral. * * * Such an individualized determination cannot be guided by reasonably fixed and certain standards."

But the impression left by the Justices is that the Supreme Court of the United States today is not disturbed by the teaching of the idea of sexual immorality or adultery. This is proclaimed now as protected by free speech, and evidently the scope of the first amendment cannot be limited in that respect to let the States of the Union regulate morals as they see fit.

The new doctrine seems to be that it is necessary to prove that each picture may incite its observers to subsequent acts of immorality. In other words, sin can be taught, and the States must silently accept such teachings as within the protection of the Constitution.

Kidding the Troops

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Washington Daily News on Thursday, July 2, 1959, entitled "Kidding the Troops."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KIDDING THE TROOPS

Just like you may have figured, the wealthy corporation farmer won the battle of the $50,000 price support limitation.

The bill just passed by Congress includes the limitation, but with so many exceptions it is about 99.4 percent fraud.

As originally proposed—and passed by the Senate—$50,000 was the limit any one farmer, or farm corporation, would collect from the Government in any one year. Even $50,000 was far too high and far beyond the hopes of the average family farmer which the program is supposed to serve.

But under the compromise reached in conference committee and approved by both Houses the limitation is $50,000 for each crop rather than for each farmer. Even this lid may be removed under a variety of exceptions which appear to make the sky the limit.

This is a prime example of what the enlisted man used to call "kidding the troops." It saves no money, corrects no injustice yet is paraded as "reform," in obvious scorn of both the public purse and public intelligence.

American Art in Moscow Exhibition

EXTENSION OF REMARKS
OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, July 2, 1959

Mr. HART. Mr. President, the current interest in the political views of some of the artists whose works will be on display in our Moscow exhibition is reflected in the material which I ask to have printed in the Appendix of the RECORD. As I said on this floor on June 4, 1959, this can be an occasion for the United States to prove it is dramatically different from the Soviet approach on freedom of expression; an occasion to demonstrate our cultural maturity.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 2, 1959]

PURGE IN PAINT

If Representative FRANCIS E. WALTER paused for a moment's thought, he might find a cutting ironic edge in his current investigation of art works selected for the American Exhibition in Moscow. Mr. WALTER, the chairman of the House Un-American Activities Committee, began hearings yesterday on possible political heresies of the painters involved. But isn't this official mingling of art and politics precisely what caused the uproar over Boris Pasternak not so long ago? Surely Mr. WALTER ought to ask himself how Americans can honestly protest the official censorship of Pasternak's novel if the same kind of political blacklisting should be applied to—of all things—an exhibit designed to show the Russian people the felicities of liberty.

It seems to us that President Eisenhower missed a chance in his news conference comments yesterday to make clear the vital principle at stake. To be sure, Mr. Eisenhower stressed that he was not going to censor "the art that has already gone there." But he undercut the force of his sentiments by adding that all the editorial comment he had seen "is defending the committee very strenuously, and so I don't know what's right."

The 70 paintings and sculptures by 67 artists were picked for exhibition by a distinguished four-man jury solely on the basis of artistic merit. Critics are fallible, and perhaps some inferior works were included. But Mr. WALTER is guided by no lofty esthetic impulses in raising his objections. Instead, he asserts that 34 of the 67 artists whose works have been selected "have records of affiliation with Communist fronts and causes." Change that language to read "have records of affiliation with decadent bourgeois fronts and causes" and you have a phrase that could have come from the pen of Pravda's art critic.

Indeed, there is special irony in Mr. WALTER'S ill-advised attempt to impose a political varnish on these works of art. Few aspects of Communist conformity have aroused as much ridicule as the deadening official insistence on what is called "Socialist realism" in art. Abstractions and any other experimental forms have been proscribed with a vigor that has been endlessly embarrassing to such fellow-traveling painters elsewhere as Picasso. One result is that within the Soviet Union there is an extraordinary interest in seeing the kind of art that is considered illicit and "decadent" by the Kremlin's official connoisseurs. It would be a pity if this unique opportunity to bring a little esthetic ferment into Russia were clouded over by a quixotic crusade aimed at preventing Soviet citizens from seeing any pink in a painting.

[From the New York Times, July 2, 1959]

PRESIDENT FAVORS ART THE UNITED STATES LIKES—GIVES VIEW ON WORKS SENT TO MOSCOW EXHIBITION—CALLS ONE LAMPOON

(By C. P. Trussell)

WASHINGTON, July 1.—President Eisenhower said today that U.S. art selected to be shown abroad should include "what America likes."

His comment came at his news conference when asked about the controversy over the works to be displayed at the U.S. exhibition opening in Moscow, July 25. [Question 5, p. 10.]

The choices have been under attack by Representative FRANCIS E. WALTER, Democrat, of Pennsylvania, and chairman of the House Committee on Un-American Activities, and by Wheeler Williams, sculptor and president of the American Artists Professional League.

Mr. WALTER contends that many of the artists "have records of affiliation with Communist fronts and causes."

Mr. Williams, whose works and tastes are conservative, termed the paintings and sculptures selected for the exhibition "childish doodles" and said most of them were a "discredit" to the United States.

Mr. Williams is the sculptor of the statue of the late Sentaor Robert A. Taft at the Taft Memorial here. He testified before the House committee today.

A MINOR SECTOR

The President pointed out that "the art is really a relatively minor sector" of the Moscow exhibition, "two fairly small rooms and the exhibit is all over two floors."

As for the actual selections, he said, "no one in the Government had a single thing to do with it" except George V. Allen, Director of the United States Information Agency, which is staging the exhibition.

Twenty-one cultural advisers to the State Department and the Information Agency picked a four-man jury of art experts to select the works. Seventy paintings and sculptures of 67 artists were chosen.

The jury was headed by Franklin C. Watkins, instructor of painting at the Pennsylvania Academy of Fine Art. The other members were Lloyd Goodrich, director of the Whitney Museum of Art in New York; Henry Radford Hope, chairman of the Fine Arts Department of Indiana University, and Theodore Roszak, a sculptor and faculty member at Sarah Lawrence College.

The President also pointed out the exhibit was limited to art of the last 50 years and said that "no piece of art or painting" had been sent to Moscow except those produced since 1918, since the First World War."

SEES ONE AS LAMPOON

While the President insisted that he was not a critic, one of the paintings sent to the Moscow fair appeared to him, he said, more like "a lampoon" than art. Painted in 1946 by Jack Levine of New York, it depicts a general with his mouth full of food at a victory dinner. It is entitled "Welcome Home."

"But I'm not going, I assure you," the President said, "I am not going to be the censor myself for the art that has already gone there. Now I think I might have something to say if we have another exhibition anywhere, to the responsible officials of the methods they produce, or get the juries, and possibly there ought to be one or two people that, like most of us here, say, we are not too certain exactly what art is but we know what we like, and what America likes—whatever America likes is after all some of the things that ought to be shown.

REITERATE CHARGES

Mr. WALTER, who first made his Communist-front charges to the House on June 3, reiterated them as he opened the hearings today.

He said that of the 67 artists whose works had been accepted for the exhibit, 34 had records of affiliation in various degrees with Communist causes.

Some were passing in nature, Mr. WALTER said, but 22 had "a minimum of a total of 465 connections with Communist fronts and causes."

He said he could not believe that Vice President RICHARD M. NIXON, who is to go to Moscow to open the exhibit, would "knowingly condone" the art.

Mr. Williams attacked most of the art works and assailed modern art generally.

[From the New York Times, June 14, 1959]

U.S. ART FOR MOSCOW

(By Aline B. Saarinen)

It was predictable that if the jury which selected the contemporary art for the American National Exhibition chose paintings and sculptures that truly illuminated the vitality and variety of American art, some disgruntled Congressman, probably encouraged by disgruntled left-out academic artists, would criticize the show in one way or another.

The predictable happened. One Member of the House of Representatives made the accusation that more than half of the 67 artists represented in the exhibition had "records of affiliations with Communist fronts and causes." If this tired old red herring were the only thing that happened, there would be no point in remarking it.

What is worth remarking is that the diatribe of the loquacious gentleman from Pennsylvania encouraged other actions which are pleasing evidences of America's growing cultural maturity and which are all, explicit or implicit, endorsements of the show now on its way to Russia.

1. The U.S. Information Agency reiterated the fact that it had placed "the selection of the art for the Amercian National Exhibition in the hands of a four-man jury of distinguished art experts outside Government without any attempt at censorship. The jury felt that the judging of works of creative art should be solely on the merit of the paintings and sculptures rather than the political views of the artists. The Government authorities concerned concurred in this view."

2. At its annual meeting, held this year in the Carnegie Institute at Pittsburg, the American Association of Museums, representing the leading American museums of science, history and art, unanimously passed a resolution commending the USIA for using a professional jury to select art to be sent abroad and for allowing it freedom to act without political or artistic censorship.

3. Senator PHILIP HART, Democrat of Michigan, rose on the floor of the Senate and made the following remarks in answer to the criticism directed at the show:

WISE WORDS IN CONGRESS

"I had hoped that we had grown beyond the point where a political litmus test would be applied to our judgment of art. All that this hullabaloo would do would be to take the Russians off the hook of world opinion on which they find themselves in connection with the Pasternak case and put us on it.

"I believe that it is the Soviet Union which has lost face by attempting political censorship of its artists. We do not want to get ourselves into that situation. There

are a great many people in the world who think one can judge a civilization and the soul of a people more clearly by looking at its painting and sculpture than by counting its plumbing and automobiles. The sooner we understand that fact the better it will be for us."

It is perhaps important to underline his words about judging a civilization and the soul of a people by looking at its art. The ingenious "Seven Simultaneous Screens," with movie projections of actual photographs, in the great dome of the American National Exhibition at Moscow will give the portrait of Americans and the American way of life. That is not the job of painting and sculpture. Art is not supposed to be reportage: art is the distilled vision of a creative man. But the art will make other revelations—significant revelations—about freedom of expression.

That Russian painters and sculptors, intellectuals and students will recognize and applaud and envy these evidences of freedom is fairly certain.

CRACKS IN THE CURTAIN

Even those who have ostensibly and obediently followed the dictates of social realism have not been blind. A genial reader, Daniel Bell, reports a story about Russian art that was current in Poland at a time when there was less freedom there: a commissar with but one eye, one arm and one leg wanted his portrait painted. A Soviet painter painted him with one eye, one arm and one leg—and was shot for bourgeois naturalism. A second Soviet painter painted the commissar with two eyes, two arms and two legs—and was shot for reactionary idealism. A third Soviet artist posed the commissar in profile, showing the good eye, the good arm and the good leg and was given a medal for "socialist realism."

There may also be some significance in a current, well-founded rumor that the Soviet Union is planning for next year a large exhibition of works by Wassily Kandinsky. It may well be that their intention in showing the art of this Russian-born creative abstractionist is to prove their priority in the field of abstract and nonobjective art. But the fact remains that unless there were insistent and surging curiosity and interest within the ranks of Soviet artists, about such free forms of expression, the Government would never have stirred itself in such a direction.

Although the heterogeneity of our art exhibition—with only one example of each of the 67 artists—may be confusing, the very fact that American art is shown with all its many valid ways of seeing and ways of saying, achieved by artists of every different kinds, complexions and beliefs, makes a strong, inescapable point.

Tribute to Dr. Ralph Steen, President of Stephen F. Austin State College

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 2, 1959

Mr. YARBOROUGH. Mr. President, Dr. Ralph W. Steen, head of the History Department of Texas Agricultural and Mechanical College was selected as president of Stephen F. Austin State College at Nacogdoches last November.

Dr. Steen is a noted educator with an outstanding background in many phases of his profession. He is an accomplished historian and a number of his books on history and government are standard school texts. His abilities as an administrator are exhibited in the college he now heads.

He believes inferior education is a detriment to the State. He is working to improve the educational system of Texas at all levels, and is particularly concerned with the demonstrated need of improvement in our institutions of higher learning.

The type of leadership Dr. Steen is furnishing is the type of vigorous young leadership that must ultimately result in improved educational facilities. He realizes that it takes money to build colleges, and he is too sensible to be frightened by the scare-crow of Federal control of education.

The needs, and the means of meeting our educational needs, are cogently stated in a recent article about Dr. Steen in the Houston (Tex.) Post.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exceptionally good article by Jim Mousner which appeared in the Houston Post for Sunday, June 14, 1959, under the heading: "Titled Texan—No Second Rate Education, Says Dr. Ralph Steen."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Post, June 14, 1959]

TITLED TEXAN—NO SECOND RATE EDUCATION, SAYS DR. RALPH STEEN

(By Jim Mousner)

NACOGDOCHES.—Providing second rate educations is no way to become a first-class State.

This is the firm conviction of Dr. Ralph Steen after 30 years as an educator. And the president of Stephen F. Austin State College is deeply concerned about the fate of his State's institutions of higher learning.

"The people of Texas must realize that its colleges are facing a crisis and something must be done about it," says the noted historian, author, and educator.

Steen was aware of the crisis long before he resigned as head of the Texas A. and M. College department of history to become Stephen F. Austin's third president last November 1, but his new duties have sharpened his appreciation of its seriousness.

"I wish the State would realize the precarious position of its colleges. We can't compete with business or even other schools.

SALARY HIKES TOOK TEACHERS AWAY

"Since I have been here, we have lost excellent faculty members to colleges in New Mexico, Oklahoma, and Louisiana," says Steen. "They went at substantial salary increases * * * by substantial I don't mean a few hundred dollars but as much as $2,000 or $3,000."

Steen believes the answer—or at least part of the answer—lies in more State funds for its colleges.

"It's true," he says, "that the legislature has provided larger appropriations for education in recent years, but we were already behind and these funds have not enabled us to catch up."

The SFA president argues the case for a better educational system with a professional historian's insight into the impact that the dissemination of knowledge has had on mankind, and particularly upon his State and Nation.

Dr. Steen is the author of a dozen books on Texas and American history and government, several of which are standard texts in Texas schools. Quite an accomplishment for a man who "drifted" into his field.

When Ralph Steen was growing up in the west Texas town of Clyde where he was born December 26, 1905, a career as a historian or an educator was the furthest thing from his mind. He was one of three sons of Preston C. and Maude Flemming Steen. His father owned a hardware store and when young Ralph enrolled in McMurray College after graduating from Clyde High School, his choice of business administration as a major seemed a natural one.

PROFESSOR'S INFLUENCE WAS STRONG

Steen had not counted on the influence of William C. Holden, a history professor at McMurray. His admiration of Professor Holden led him into a more than casual study of history, a subject which he quickly found fascinated him.

After graduating from McMurray in 1927, he worked for a year in his father's hardware store. The experience convinced him that he did not want a business career and he returned to his studies.

Entering the University of Texas, he earned his master's degree in 1929 and his Ph.D. interspersed with teaching assignments—a year at McMurray, 2 years at Reagan County High School at Big Lake, and a year at Hillsborough College.

In 1935 Steen joined the staff of the Texas A. and M. College history department and spent the next 23 years there, the last 4 years as head of the department.

For more than 2 decades he divided his time between teaching, lecturing, historical research, and writing. Among his books are "20th Century Texas," an economic and social history of Texas from 1900 to 1940; "The Texas Story," a general State history; and "The Texas News," a history of Texas presented in newspaper style.

SOME OF HIS WORKS ARE TEXTBOOKS

Some of his books on Texas history and government have been adopted as junior and senior high school texts, and another recently-published U.S. history and civics book is in the process of being adopted on a national level.

He has also written numerous articles on Texas history, economics, and society. He retired recently after 2 years as president of the Texas State Historical Association.

Steen believes that the greatest advantage afforded by a study of history is some possible insight into what lies ahead.

"We cannot hope to make an intelligent guess about the future without a study of the past," he says.

Dr. Steen shies away from his reputation as a debunker of popular Texas historical myths, calling it "undeserved."

"I do think, however, that the historical facts are so colorful that we don't have to embroider them," he says.

As a historian, Steen's chief interest is in contemporary Texas history and his pet subject is the late Jim Ferguson, the Texas governor who was impeached.

"I would like to do a book on him some day," says Steen, but admits that "the books have been coming slower" since he became president of the Nacogdoches College.

CREDITS WIFE FOR HELP ON BOOKS

The 53-year-old educator credits his wife the former Gladys Edmonds of Bernice, La., with much valuable assistance on the books. He and Mrs. Steen, whom he married in 1929 while she was teaching school in West Texas, have one son, Joe Steen, a journalism major at A. & M.

After 23 years at an all-male school Dr. Steen has had no difficulty in adjusting to a coeducational institution which he says he prefers.

"All through life men and women work together. I think this pattern should continue through their college years. Of course, I have no argument with those who prefer a non-coeducational institution," he says.

Dr. Steen observes that today's student has much wider interests. He also points out that most people who attend college today have a specific goal.

Few students attend simply for a general liberal arts education any more. And the prestige factor of a college education has diminished from the student's viewpoint.

The SFA head says the "tremendous difference" between today's colleges and those of his day is the presence of married students on the campus. Thirty-seven percent of SFA's student body is composed of married students.

Steen says the married student is, as a rule, a serious student.

The school has under construction an apartment unit for married students, a boys' dormitory and an addition to a girls' dormitory.

"If we had 500 more apartments we could fill them without any trouble," he says.

The apartment unit and dorms are part of a $3.5 million building program planned to handle the growing enrollment which has increased at a rate of 10 percent a year for the past 3 years. A total of 2,017 students enrolled last fall and Steen says another 200 plus are expected this fall.

Also under construction is a $1.3 million fine-arts building. College officials plan to let a contract this summer for a $1 million student union building.

A $600,000 Federal loan for a boys' and a girls' dormitory has been approved for the school but the money has not been appropriated.

On the subject of Federal aid to education, Steen says the lower interest rates on Federal loans make them attractive to colleges.

"I don't believe that these loans put the colleges that receive them in danger of Federal control," he says. "We must get the money somewhere."

The president points out that some construction at the college was financed with funds from private lending institutions.

More serious than the problem of facilities, according to Steen, is the shortage of funds with which to pay good teachers. Stephen F. Austin's chief says he is having increasing difficulty finding instructors with the qualities that make a good professor. These qualities, says Steen, are:

1. Excellent preparation in the subject to be taught.

2. Ability to express oneself clearly and precisely.

3. A personality that makes him liked coupled with an ability and willingness to cooperate with others.

Dr. Steen regards Stephen F. Austin as "a good liberal-arts college serving a region."

"We don't try to compete with the University of Texas or other big schools. We attempt to serve an area within a radius of 100 to 150 miles of Nacogdoches. We don't seek to attract students from high schools in towns with junior colleges," he says.

Stephen F. Austin was founded in 1923 as a State teachers college but while the majority of its students still major in education, the school is now a liberal-arts institution. It is the only college in Texas offering a 4-year course in forestry.

Dr. Steen believes the U.S. education system is basically sound.

"I don't think we need to apologize too much," he says.

On the subject of college athletics, he says: "They have become so much an accepted part of American college life that it wouldn't be the same without them."

Steen says athletics will never be overemphasized at Stephen F. Austin for a very practical reason—lack of funds.

"We simply don't have the money to support a large-scale athletic program," he says.

Dr. Steen describes himself as a liberal-arts man, believing that a broad foundation of knowledge should precede specialization.

"Our goal here is to teach a student public responsibility as well as to train him in the field of his choice," says Steen. "No matter what field a person specializes in he should be prepared and willing to accept his role in society."

The historian-educator summed up his philosophy of education and the direction in which he intends to guide his school in his inaugural address as president of the Nacogdoches college last February 27, said Dr. Steen:

"We will have more than an ivory tower at Stephen F. Austin."

More on Olympics

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. BRIDGES. Mr. President, last month I stated before this body that the sanctioning of Red China's participation in the Olympic games should raise serious doubts in the minds of the American people concerning the activities of the International Olympic Committee.

I felt then, and still contend, that this action diametrically opposes the specific provision that National Olympic Committees must be entirely removed from all political, religious, or commercial influences.

Since that time, Mr. President, newspapers across the country have devoted considerable space to this situation. I would like to call the attention of my colleagues particularly to a column which appeared in the Washington (D.C.) Post and Times Herald under the byline of an outstanding newspaperman and columnist, George E. Sokolsky.

This is a very informative and interesting commentary on the Olympics situation, and I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE ON OLYMPICS

(By George E. Sokolsky)

Apparently the official attitude of the Comite Internationale Olympique is that Nationalist China should change its name. Perhaps one day, this august committee of sportsmen will request the United States to change its name because there are other countries which call themselves United States or something like that.

Otto Mayer, chancellor of the Comite, takes the position that no politics are involved in asking Nationalist China to change its name although by all the rules of international relations, Nationalist China is the successor state to the Manchu monarchy. Sun Yat-sen, the leader of the Revolution of 1911 against the Manchu Dynasty, gave the name to the Republic of China. There is legitimacy among nations and the legitimate government of China is Nationalist China, situated on Formosa. Avery Brundage, of the International Olympic Committee, might ask the State Department about that. Of course, Soviet Russia does not hold with the American State Department on that or most other questions, but an American citizen is expected to.

Apparently the International Olympic Committee does not "make politics." The Peking-China Committee is permitted to enter the International Olympic Committee on condition that Communist China does not claim "to control sport over Formosa."

Writing to an American, Mayer says:

"You live in a complete different ideological world than we do in Europe and I think that Mr. Brundage is perhaps one amongst the few Americans who understand what is going about on this side of the ocean. Mind you, I would much prefer to be under American domination, if there should be any, than under any others."

Of course, what Otto Mayer does not understand is that we have no wish to dominate him or any other European. As a matter of fact, we do not look kindly upon human beings who permit themselves to be dominated by anybody. But the remark about an American living in a complete different ideological world than they do in Europe is a bit puzzling. What kind of an ideological world do those who manage the Comite Internationale Olympique live in? What is the nature of their belief?

It would seem to me that the United States has no place in this Olympic situation. Brundage, who is chairman of the American Committee and president of the International body, makes the point in his statement:

"The International Olympic Committee, which has as one of its fundamental principles, 'No discrimination is allowed against any country or person on grounds of race, religion, or politics'."

But the United States does make a distinction as to politics. It does not recognize Red China. It does not issue passports to Red China.

This is Brundage's statement and Brundage's logic:

"At our meeting in Munich it was pointed out that if the Peiping Committee has no authority in Taiwan, it is equally true that the Formosa Committee has no authority in China. It was for this reason that the following action was taken in Munich:

" 'The Chinese National Olympic Committee having its seat in Taipei (Taiwan) will be notified by the International Olympic Committee chancellor that it cannot continue to be recognized under that name since it does not control sport in the country of China, and its name will be removed from that list.

" 'If an application for recognition under a different name is made it will be considered by the International Olympic Committee.' "

Why not ask Red China to change its name? In fact, what is its name and what does it derive from?

It is difficult to understand the logic of this situation, unless it is as stated in the words of my friend, Gen. John V. Grombach, who says:

"I believe the International Olympic Committee has stepped into the realm of politics by dictating what name the Republic of China has to adopt. If this is not meddling in politics, I will eat Mount Blanc. What possible difference can it make to Mr. Brundage or the International Olympic Committee if the Chinese athletes from the island of

Formosa enter as representatives of the Republic of China or as representatives of Taiwan or Formosa—unless the International Olympic Committee is meddling in politics? They are, after all, Chinese and not Formosans."

How Not To Manage the National Debt

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. NEUBERGER. Mr. President, one of the most thoughtful Members of Congress is Hon. HENRY S. REUSS, of Wisconsin. Representative REUSS has written for the Progressive magazine of July 1959, an informative and challenging article entitled "How Not To Manage the National Debt," in which he demonstrates that excessively high interest rates have retarded national growth and expansion. He also shows how these increasing interest tolls have added to the cost of all our schoolhouses, highways, private housing, public-utility facilities and other manifestations of American progress.

I ask unanimous consent that the article by HENRY S. REUSS from the Progressive of July be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW NOT TO MANAGE THE NATIONAL DEBT
(By HENRY S. REUSS)

I

Though it is paying the highest interest rates in 25 years, the Treasury is having trouble refinancing the national debt as bonds mature and become payable. In May, when an issue of 1-year, 1.25 percent securities came due, the Treasury had to offer a 4.05 percent 1-year note in exchange—and even then a third of the security holders spurned the new offering and demanded cash.

The Government has just about given up attempting to issue long- or medium-term securities. It will probably not even try to refund with long-term debt the $22 billion of 1-year debt which comes due in the second half of 1959.

This is the crisis in debt management. One result is to doom the administration to violate each of the three canons it has itself set up as essential to sound debt management:

1. Keep the national debt away from the banks. Former Secretary of the Treasury George Humphrey said in 1953: "The concentration of short-term debt in the banks by the previous administration was one of the causes of inflation and the increased cost of living which has cost the American people billions of dollars. A gradual placing of more securities in the hands of nonbank investors is a necessary step for economic stability." Yet, 6 years later, the administration has been unable to reduce the amount of the national debt held by the commercial banks—it was $63 billion in 1953, and it is $63 billion today.

2. Keep the national debt as long term as possible. In his first state of the Union message on January 2, 1953, President Eisenhower said: "It is clear that too great a part of the national debt becomes due in too short a time." The objection to too much short-term debt, of course, is that it puts the Treasury constantly into the market for refunding and thus requires the Federal Reserve to create bank reserves sufficient to absorb the offering at a time when creating such credit may be inflationary.

When the President spoke, the average length of the marketable interest-bearing debt was 5 years and 8 months. Today, the average length has declined to 4 years and 9 months.

3. Keep Treasury financing from contradicting other governmental economic policies. The administration has many times contended that the Treasury, in order to gear itself in with general governmental economic policies, ought to be issuing long-term bonds during prosperity, and short-term notes during a recession. But in practice, it has done just the opposite: the only time it can sell long terms is during a recession; and during prosperity, when it ought to be sopping up long-term investment funds, all it can sell are short terms.

The cynic may point out that the administration, by grossly violating its own canons of financial probity, may inadvertently have done the economy a great deal of good. To the extent that the administration has departed from its avowed canons of debt management, it has, despite itself, had to relax its excessively tight-money policy.

But the three main consequences for the Nation of our present debt management policies are more serious than any mental anguish the administration may suffer by its failure to follow its own criteria. These are the principal damaging results:

1. Higher interest burden. The interest burden on the national debt—$8.1 billion for fiscal 1960—is the fastest-climbing, as well as the largest single nondefense item, in the Federal budget. A rise of only one-half of 1 percent on the carrying charge of the $285 billion national debt adds nearly $1.5 billion to the taxpayers' annual burden.

2. Scaring off investors. The Treasury's present course of steadily increasing the interest rates on new securities which it offers compounds the problem of debt management. Even a small increase in the interest rate may result in a disproportionately large decrease in the market price of a long-term bond. Suppose you own a 2.5 percent, 20-year bond for which you paid $100. If the going rate on Government securities increases to 4 percent, your market price drops to $79.50. Is it any wonder that investors seem more and more allergic to any but the shortest-term Treasury notes?

3. Tight money's harm to economic growth. Most serious of all, when the Treasury raises the interest rate on the national debt, these increases are quickly communicated throughout the economy because the Treasury, in refunding nearly $80 billion annually, completely dwarfs all other borrowers. And high interest rates choke off economic activity wherever interest charges are a major consideration—housing, schools, public utility expansion, small business.

II

How did we get ourselves into this debt management muddle? Not through any lack of administrative skills. Secretary of the Treasury Robert Anderson and Federal Reserve Board Chairman William Martin are honest, capable men. The size of the debt cannot be the cause. We found a national debt of $267 billion no insuperable problem in 1946 even though our gross national product was then only $209 billion. Certainly, it should be possible to manage a $285 billion national debt in 1959, with a gross national product of more than $460 billion.

Why, then, can't the Treasury find people who want to buy the national debt? The easy answer, and one frequently given by the administration, is that the public is sacred away by budegt deficits and the fear of inflation. Now, sound national policy does require both that the budget be balanced at high levels of production, and that we have reasonable price stability. Attaining these goals would make debt management easier.

But today's debt management crisis would be with us even with balanced budgets and reasonable price stability.

In both 1956 and 1957, for example, we had budget surpluses, not deficits. Yet the Treasury was unable in those years to sell any long-term securities. As interest rates increase, and bond prices decline, investors become more and more wary of Government issues. So long as interest rates are going up, it does not matter whether the Treasury is issuing new debt to finance a deficit or is merely refunding.

Likewise, the idea that our debt management problems stem from investors' fear of inflation cannot withstand analysis. I strongly suspect that the influx of elevator boys into the stockmarket is caused more by a desire to make a speculative profit than by a lack of confidence in fixed-income securities. Fortunately, a large and increasing amount of individual and institutional funds remain anchored in fixed-income methods of saving and investment-insurance policies, saving and loan shares, savings accounts, corporate bonds, mortgages, State and local government securities. But individuals and institutions are decreasing their holdings of both U.S. savings bonds and other U.S. Government securities, and are greatly increasing their holdings of these other types of fixed-income securities. What this proves is not that fear of inflation is driving people away from fixed-income investments—our dollar holdings of these are the largest in history—but that something is driving investors away from that segment of fixed-income investments issued by Uncle Sam.

What, then, is the cause of the debt management crisis? More than from anything else, it arises from the administration's own one-track economic policy: tight money and high interest rates. High interest rates, in turn, have caused the price of Government bonds to fall so far and so continuously that investors have turned to other types of securities.

Except for 8 months during the 1957–58 recession, the Federal Reserve System has pursued a policy of choking off demand by a restricted money supply and high interest rates. From 1954 to 1958, our money supply grew by only 6.5 percent, while gross national product increased 27 percent. As the British economist Barbara Ward said: "The technique of checking production in order to stop inflation—the most drastic 'cure' conceivable in the face of Russia's rising production—does not cure at all. Inflation goes on. New thinking is thus in order."

III

The same new thinking—a reexamination of our overly restrictive monetary policy—which will be necessary if we are to achieve simultaneously adequate growth and reasonable price stability, is needed in order to solve the crisis in debt management. Attaining these goals will in itself make debt management easier. And the best way of attaining them—an adequate money supply—happens to be, in addition, just what the doctor ordered to ease the crisis of the national debt.

If the goal of adequate growth (4 to 5 percent a year, rather than the present 2.5 percent) is attained, debt management will become easier for two reasons:

1. As the economy expands, tax revenues will increase and some debt retirement will be possible. The fiscal year ending June 30, 1959, with its wholly unnecessary recession, will show a deficit of around $13 billion.

This contrasts with our experience in 1947 and 1948, when, with a high level of prosperity and an adequate tax base, the Treasury was able to reduce the Federal debt by $17 billion. As the debt is reduced, of course, the carrying charges likewise decrease, even if interest rates remain high.

2. As the economy expands, higher individual and corporate incomes will produce a higher volume of savings. All fixed-income securities will benefit as well as U.S. Government issues.

If the goal of reasonable price stability is attained, this, too, will make debt management easier. Administration spokesmen overdo it when they blame all their troubles on the public's fears of inflation. But for the future, fixed-income investments of all kinds, including Federal bonds, can be appealing only if there is some reasonable prospect of price stability.

Just as the attainment of growth and price stability would help debt management, so would the appropriate means of reaching these goals—an adequate money supply.

Monetary expansion need not be inflationary so long as men and resources are idle. We have recently learned that excessive demand is by no means the only factor at work when prices go up. Particularly in such concentrated industries as steel and automobiles, powerful corporations have been able to administer prices upward without immediate regard for market demand. For example, the steel and steel-using industries are responsible for seven-eighths of the 8-percent rise in the wholesale price index since 1953. Because a tight-money policy has little or no effect on administered price inflation, new methods to deal with the problem must be developed. One such technique is proposed in a bill sponsored by Senator JOSEPH CLARK, of Pennsylvania, and myself. The bill empowers the President to focus an informed public opinion upon price increases, and associated wage increases, in the concentrated industries. It aims to moderate the upward demands in these industries, without invoking compulsory wage or price controls.

Where demand inflation threatens, however, steps to curtail overall demand must be taken. By far the most effective instrument here is fiscal policy—running a substantial budget surplus, by raising taxes where necessary. Monetary policy—raising interest rates and decreasing the supply of credit—should complement fiscal policy, but should not be expected to do the job alone. Selective credit controls over installment sales of consumer goods and over housing should also be available.

Of the several ways open to the Federal Reserve to increase the money supply, only one is really helpful from the standpoint of debt management. This is through purchases by the Federal Reserve of U.S. Government securities. Since the Treasury-Federal Reserve Accord of 1951, the Federal Reserve has looked upon helping the Treasury in debt management as something shady, to be practiced surreptitiously if at all. The accord was based on a sensible proposition: That the Federal Reserve should not be expected to support the Government bond market come hell or high water. But there is every reason for the Federal Reserve, when national policy requires an increasing money supply, to expand it by purchasing Government securities. This will reduce fluctuations in interest rates and in the prices of Government securities, thus markedly improving their relative attractiveness for investors seeking fixed-income investments.

Federal Reserve purchases of Government securities have two additional advantages. To the extent that the national debt is held by the Federal Reserve, the interest paid goes back to the Treasury. And the Treasury is spared the unpleasant surprise of attrition—when holders of the debt suddenly demand cash.

What this boils down to is: Where more and easier money is essential for general economic reasons, the Federal Reserve should supply needed funds, at least in part, by buying U.S. securities, rather than depending entirely on lowering reserve requirements or reducing interest rates.

But the administration continues to look at debt management as if it were an isolated problem. The crisis will not be solved by appeals to patriotic investors to buy now, or by investigating speculation in the Government bond market, or by raising interest rates still higher. The crisis will continue and deepen until the managers of our economy reverse their policies and create an adequate money supply by methods that will restore the confidence of investors in what should be the soundest investment in the world.

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram I have received from representatives of Americans of central-eastern European descent, expressing their approval of resolution designating the week following the Fourth of July as Captive Nations Week.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

NEW YORK, N.Y., *June 30, 1959.*

Hon. WILLIAM LANGER,
Senate Office Building, Washington, D.C.

On behalf of subjugated peoples, assembly of captive European nations American friends of captive nations and conference of Americans of central-eastern European descent join in expressing their gratitude to you for joining in sponsoring resolution designating week following Fourth of July as "Captive Nations Week." Resolution particularly timely in view Khrushchev's ultimatums, Geneva conference and Kremlin's efforts to persuade captive people that free world is no longer concerned with their liberation. In particular, it helps to give the lie to Khrushchev-Mikoyan assertion that United States has renounced policy of liberation. Passionate hatred of captive peoples for Communist tyranny is chief deterrent to Soviet expansion in Europe. It is to Kremlin's advantage to destroy liberation spirit by persuading people that there is no hope. It is in West's interest to keep liberation spirit alive and to give it every moral encouragement. Your resolution we are confident will immediately be known to all the peoples behind the Iron Curtain, will give new hope and new determination to them, to assure broadest possible national observance of "Captive Nations Week" respectfully suggest that President's message call upon all editors to bring issue of captive nations to readers attention during week, and upon clergymen to offer prayers for the liberation of enslaved peoples.

STEFAN KORBONSKI,
Chairman, Assembly of Captive European Nations.
CHRISTOPHER EMMET,
Chairman, American Friends of Captive Nations.
Msgr. JONAS BALKUNAS,
President, Conference of Americans of Central-Eastern European Descent.

Member Bank Reserve Requirements

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

Mr. PATMAN. Mr. Chairman, I deplore the fact that we cannot have adequate time to discuss an important bill like this. The hearings were not developed. The main document upon which the bill is predicated was not even put in the hearings. This bill ought to go back to the committee. I do not see how we can get adequate consideration for these amendments under a 3-minute rule.

The amendment I have offered will transfer the $15 billion in bonds that have been paid for with Government money once. Why should we expect the taxpayers to pay for these obligations twice? Not only will they have to pay for them twice, but they will have to pay the interest on them each year from now until the time they mature. And if we set a precedent here today of permitting the Reserve to give these bonds to the commercial banks, we are setting a precedent for the people paying their debts not only once, but requiring them to pay them twice. There is nothing to keep them from making us pay this debt three times or four times or five times. How will the American people ever get out of this when after one debt is paid, this debt has been paid by the U.S. Government obligations, it is a bona fide payment. There is no question about it. If we vote to let these bonds be given to the commercial banks as they propose to do and as the evidence conclusively discloses is contemplated to be done by this bill—there is no way on earth for the American people to ever pay the debt they have to pay today.

I ask, Mr. Chairman, that this amendment be adopted because it will stop this transfer. There is no question about it.

That is what is contemplated. That is what is intended. I do not believe, the gentleman from Georgia himself, would say that the Federal Reserve will not transfer these bonds or a part of them, certainly, to the private commercial banks. He cannot say that because his own hearings disclose that. I state respectfully, Mr. Chairman, that we should have this transfer made for the purpose of cancellation, and not to permit the transfer to the private commercial banks, and then permit those banks not only to take a half billion dollars a year away from the taxpayers, which is now going to the Treasury of the United States, but permit it to go into the hands of the private commercial banks. It is absolutely wrong and I do not think it should be permitted. I hope the Members of the House will vote for this amendment. If you cannot see your way clear to do that, then vote to recommit this bill because it ought to go back to the committee.

Remarks of Vice President Richard M. Nixon at the 11th Biennial Young Republican National Convention

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Vice President NIXON at the 11th biennial young Republican convention:

REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE 11TH BIENNIAL YOUNG REPUBLICAN NATIONAL CONVENTION, DENVER, COLO., JUNE 19, 1959

The Republican Party will have an unbeatable case to present to the American voters in 1960.

American wage earners will have the most jobs at the highest wages, with the best standard of living in the history of the country.

Our foreign policy has today, and will have then, the support of the overwhelming majority of the American people, Democrat and Republican alike. It is tragic but true that the death of Secretary Dulles helped to make people in this country and throughout the free world realize that the "inflexibility," "brinkmanship," and "peaceful liberation" for which he was so caustically criticized, represented basic principles of the highest order.

His "inflexibility" represented simply firmness where fundamentals were involved. As he said: "Communism is stubborn for the wrong, let us be steadfast for the right."

His so-called "brinkmanship" was the recognition of another ancient and honorable principle—by looking a great danger in the face we may avert it and lesser perils, that the United States would refuse to be bluffed into surrender.

And to those who scoffed at his advocacy of peaceful liberation for the captive peoples, he was stating the only position that a self-respecting free people could take. The Communists have no hesitancy in proclaiming their faith in the eventual domination of the world by dictators, let it never be said that we were less determined in our dedication to the cause of freedom from tyranny for all people.

History will be the final judge as to the wisdom of the policies of this administration. But of this we can be sure, the Eisenhower-Dulles foreign policy firmness and strength is right, it has worked and the American people, regardless of party, want it continued.

In 1960, the overwhelming majority of the American people will recognize the striking comparison between the high standards of conduct of this administration and the low state of ethics and morality of the 7 Truman years. No greater service has been rendered by President Eisenhower and his administration than that of restoring confidence and respect of the American people in the honesty and integrity of our Federal officials.

One of the greatest weaknesses of the Republican Party is in its failure to win the support of more younger voters.

It is not enough to ask young people to vote Republican. They must be given an active and important part in our campaign organizations. And one of the most effective ways to enlist their support is to put more young candidates on the ballot at the local, State, and Federal levels.

In 1958, one of the major advantages the Democrats had at all three levels was that generally their candidates were younger, more vigorous and articulate than ours. It is not enough to ask our young Republicans to be simply the balloon blowers, the confetti throwers, and whistle tooters in a campaign. If we want the support of young people, we must earn it by giving them more positions of responsibility and leadership in our organizations.

There is no question but that we have the ingredients for victory in 1960. The great issues will be on our side. The best 8-year record of any administration in history will be working for us. Our Republican organization, learning from the defeat of '58, will be revitalized and strong.

A comparison of our record with that of our Democratic opponents should be enough to assure victory but we have a better case to present, one even more worthy of the great traditions of the Republican Party.

Why is the Republican Party weakest among younger voters? In analyzing the reasons for this, let us see what young people want from government. The great issues of peace, prosperity, security for the future, and honest government have the same appeal to younger voters as to older voters. But in another respect, I believe young people differ from older voters.

There are two conflicting theories as to what is the major motivation for people when they vote. There is one theory that people primarily vote their fears, that they vote against fears—the fear of depression, the fear of inflation, the fear of war—that they vote against rather than for. The other theory is that people vote their hopes—that they vote for those candidates and that party which promises the better life for the future.

But, while both of these motivations affect voters, I do not think there is any question but that generally speaking young people vote their hopes rather than their fears; young people basically are idealistic and progressive; they are not concerned primarily in keeping things as they are; they are more concerned with getting ahead.

Therefore, I believe that if we are to appeal to young people we must do these things. We should point out the magnificent record of accomplishment of the past. We should point out weak points of the record and programs of our opponents. But we should not stop here. We should go further and put our primary emphasis on the hope the Republican policies offer for the future of America.

Let us apply this formula to the issue of inflation. We should point out why inflation is wrong. The fear of what will happen to the value of our pensions, our social security, our life insurance, and the cost of living will concern young people just as it does older voters.

But we should also point out why a sound dollar is right. Only when the dollar tomorrow and 5 years from tomorrow will buy as much as it will today, can you save and plan for your future. And only on the sound foundation of price stability can we avoid a boom-bust cycle and assure that the expansion of our great American economy will be based on solid investment in the future of the Nation rather than on the illusory value of inflated dollars. Let us take deficit spending as another example.

It is pretty well established in the public mind that Republicans generally are for a balanced budget. On the other hand, the Democrats claim that they are for more schools, hospitals, highways, jobs, and security—things which they say more government spending can produce. If this is the way the issue is presented to the people, they will win and we will lose.

We must not allow our Democratic opponents to have a monopoly on being for what people want. The record proves that we have the better case to present.

There are 5 million more jobs in America today than there were in 1952.

In 1952, only 26 percent of American families earned over $5,000. In 1958, 43 percent had an annual income of over $5,000.

The average weekly wage of factory workers today is $90. In 1952, it was $67.97.

In the 7 years of the Truman administration the cost of living went up 50 percent. Under the 7 years of this administration, the increase has been held to 8 percent.

Six hundred thousand more houses were built in the 6 years of this administration than in the 6 years of the Truman administration.

Sixty percent of all American families own their homes today as compared with 56 percent in 1952.

More money has been apportioned to the States for highways under this administration than during the previous 40 years.

More than twice as many school classrooms have been built during the 6 years of this administration than during the 6 years of the Truman administration.

Over four times as much money has been appropriated for medical research than under the Truman administration.

Eleven million more Americans have social security today than had it in 1952 and benefits have been increased by 25 percent.

In summary, the Republican administration produced the things that the Democrats promised.

The choice is not between a balanced budget and progress as the spenders try to make it appear, but between real progress based on a sound foundation as compared with the illusion of progress on an unsound base. In essence, they want Government to spend more. We want people to spend more. Our programs work and and theirs don't.

The lesson for Republicans, if we want to win the support of millions of younger voters, is very simply this: A defensive static, keep-things-as-they-are philosophy, never wins against an offensive, dynamic, progressive program.

The trouble in the past has been this: The spenders' words are dynamic, their actions static. Our actions are dynamic, our words static. What we need are words to match our actions.

We should be proud of the fact that the Republican Party is the party of sound policies, of safe policies, of conservative policies. But we must constantly reiterate basic truths—that we are conservative because we want progress, that we oppose the big Government programs of our opponents not because they promise too much but because they will produce too little; that as a party we have faith in America, a belief in its future—a future in which people, rather than government, will play an ever-increasing and dynamic role.

Foreign Aid Serves a Purpose

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. CHAMBERLAIN. Mr. Speaker, to a greater degree than with most of our programs, the results which we get with our foreign aid expenditures are difficult to appraise.

When we embark upon a highway program, either the highways get built or they do not. When we fight a war, we win it or we lose it. But in a program of economic assistance to freedom-loving nations, we can never know with certainty how much improved the free world is because of the program, or how much worse off we might have been without it. The mistakes are often easier to see than the accomplishments.

The unfortunate result is that foreign aid too frequently is discussed with a passion, pro or con, which generates more heat than light.

A notable exception was a recent editorial in The Flint Journal of June 23, 1959, which approaches this controversial program with levelheaded logic, admitting its weaknesses and assessing its strengths, and finding in favor of foreign aid. Under leave to extend my remarks in the RECORD, I include the editorial, which follows:

[From the Flint (Mich.) Journal, June 23, 1959]

FOREIGN AID SERVES A PURPOSE

The central committee of the Soviet Communist Party meets in Moscow Wednesday, this time under a spotlight of publicity.

The reason for the unusual openness of the meeting is the Kremlin's desire for ballyhoo about the Russian position in the economic war with the West.

Ordinarily the central committee meets secretly. About all the Russian people, and the world, learn is contained in propaganda announcements afterwards.

This time it is different. Pravda announced the meeting date in advance and even published an agenda. It is obvious that the Kremlin is seeking world notice about its progress in developing industry and trade.

It became apparent many months ago that Premier Khrushchev was emphasizing trade in his efforts to sell other nations of the world on the superiority of communism.

Khruschchev declared war in the marketplace. Russian goods were offered the world at ridiculous prices.

The Soviet Government is using the sweat of its toil-burdened people to get into the world market at prices which democratic nations cannot match because their people expect a fair return for their efforts. The Kremlin doesn't have to operate under the handicap of proper compensation to Russian workers.

Experts see in the economic war a greater threat to the West than a shooting war. If the Russian people can carry the burden long enough, they envision Soviet domination of world markets at the expense of free nations.

The Moscow meetings, and their possible propaganda value, bring renewed attention to America's program of economic assistance to nations which need help if they are to avoid capitulation to communism.

Foreign aid is not the Nation's most popular program, either with Congress or the people. The thought of billions hauled from American taxpayers going abroad to help some nation we know little about brings an angry, tooth-gnashing reaction.

Statesmen and military experts may argue ceaselessly that foreign aid is essential to the security of the free world and the cheapest defense the United States can buy, but a lot of Congressmen and citizens are not convinced.

We cannot afford to lose this economic war if we are to retain world leadership and our high standard of living. There are more than a billion people in underdeveloped lands and they could line up in the Communist camp unless we help them.

Indonesia, Ceylon, and Afghanistan are among those nations. The people there know they can gain economic help from Russia, but they are convinced that the only place they can turn to for aid with freedom is the United States.

One newspaper editor in Ceylon said that "in the struggle between democracy and communism, we are on the side of democracy." But, he added: "The only way you can stop communism is in helping these countries help themselves."

Supporters of foreign aid cite Greece as the outstanding example of the benefits we can obtain from a program of economic and military assistance to foreign nations.

After Greece was liberated from fascism in 1944, it had a Communist revolution. The Reds appeared near victory because of economic conditions, but U.S. aid saved Greece from slipping behind the Iron Curtain.

Today, Greece is almost self-sufficient in food. It is the 11th greatest maritime nation, and would be fourth if all Greek-owned ships were registered under the Greek flag. Inflation has been licked. The currency is stable. Greece is a strong pro-American bulwark in the Eastern Mediterranean.

It cost us $1.8 billion to save Greece from communism. We're still spending a little there, but Greece is close to becoming self-sufficient. How much a Communist regime in Greece would have cost us is only a guess.

Not all American aid is successful. We have lost the friendship of some nations despite economic aid. There has been waste and corruption. Some of our dollars have gone to Communist nations.

Despite its failures and frailties, and they are many, the foreign aid program has been of great value in the conflict to keep freedom and democracy from being swallowed by communism.

It is difficult not to believe that eventually even the opponents of foreign aid will become aware of the contribution it has made to the preservation of peace and freedom.

Member Bank Reserve Requirements

SPEECH
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

The CHAIRMAN. The gentleman from Michigan is recognized.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield.

Mr. PATMAN. Mr. Chairman, here in the Brown committee hearings on page 28 there is an answer to the American Bankers Association committee that says they want to transfer $15 billion from the Federal Reserve Banks to the private commercial banks. And what does the Federal Reserve Board say on page 26 of the hearing before the Brown committee?

This would in effect insure earnings, assets, from the Federal Reserve banks to member banks.

What are they talking about if they are not talking about that $15 billion? There is nothing else before them. That is what they were discussing. That is what the American Bankers Association wants to do. That is the only reason they put this in here. And, furthermore, it says that the present systems portfolio is sufficient to permit it to be done. It is here in black and white. It is in fine print, but it is in this volume; and there was not a single question asked about this before the subcommittee or before the full committee, not one.

So this question has not been developed, and I believe we ought to have all the facts. We ought to adopt this amendment that will permit the transfer just exactly like the Federal Reserve Board says here can be done, by transferring the earnings, assets, $500 million will not go into the U.S. Treasury this year; it will go to the private commercial banks.

How can we defend that at a time when we are trying to balance the budget and we take half a billion dollars cut and transfer them and give them away, because you allow the reserves free of charge to take these bonds. You are giving them away because the private commercial banks are not paying 1 penny for them, just exactly like they did in 1953. They created enough reserves for the private banks to buy free of charge $10.5 billion worth of U.S. Government securities, and they bought them. The reserves were given to them for the purpose of making business loans to bring our country out of a recession, but instead of spending the money for

the purpose intended they bought U.S. Government securities. Mr. Martin admitted this when I interrogated him when he was before the Joint Economic Committee. So there is no doubt it. It has been done; it can be done; it will be done.

The Case for Fair Trade

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. ASHLEY. Mr. Speaker, I am hopeful that before very long we will have before us a most important piece of legislation known as the fair trade bill. The purpose of this bill is to equalize rights in the distribution of name brand merchandise by establishing a permissive national resale maintenance program. The bill, if enacted, will enable the small retailer to compete in marketing branded commodities with the large, independent manufacturers and wholesalers who are sufficiently integrated to control their own outlets.

What the public seldom realizes is that the larger retailers can afford profitless prices only if the leader loss is recouped somewhere else in unidentified or inferior goods. Manufacturers suffer because the leader-loss prices drive out smaller competition; profitless prices tend to become established prices; outlets are narrowed and there are fewer markets for the consumer.

An editorial which appeared recently in the Cincinnati Inquirer succinctly describes the hazards which face small businesses in marketing identified merchandise and gives a clear picture of the advantages which would derive to manufacturers, retailers, and consumers by enactment of a Federal fair trade law. I seriously urge my colleagues to take a minute to read this editorial before H.R. 1253 comes before this body:

[From the Cincinnati Enquirer, June 4, 1959]

THE CASE FOR FAIR TRADE

Few subjects in our modern economic life have been discussed as vehemently—and with less real comprehension of the underlying principle—as fair trade.

The popular concept is that fair trade laws are enacted to keep people from getting bargains, or to prevent healthful competition, or to make the public pay more for manufactured goods than they are worth.

To see what fair trade really means, and how it operates, let's suppose you organize a company. You're going to manufacture electric irons, good electric irons, the best that can be made. You pay for research, to obtain the latest features in your product. You buy expensive machinery, hire skilled craftsmen, organize a merchandising and advertising campaign to create a popular demand for your irons.

Your electric iron is not cheap, but you are convinced that the public will pay a fair price for a really good iron.

First, though, you must sell them to appliance dealers throughout the country—unless you intend to operate thousands of retail stores yourself, which would be uneconomical if not impossible.

The thing that the appliance dealer wants to know is: Can he sell them, or will he get stuck with them?

In your case, it being a good iron and properly promoted, he can be convinced of its salability. But he might be stuck with them in another way. Suppose, after he's purchased a good inventory and sold some to his best customers, a discount house or the like around the corner starts selling them at wholesale?

His best customers will accuse the dealer of having gypped them. And if the retailer tries to meet the wholesale price, he is soon out of business. After all, he is renting his store, paying his help and keeping going on the usual traditional spread between wholesale and retail prices.

This doesn't have to happen too often, or too long, before you and your good iron manufacturing company are caught in a deadly vise. Once your product has gone the round of the discount houses and the special sales, how many retailers are going to stock up on your iron? And when you lose the promotion and merchandising support of the ethical retailers, even the discount houses and special sellers will lose interest in you. Or they'll demand special price concessions that would make it impossible for you to continue manufacturing a good iron.

Fair trade, in essence, requires all dealers in your product to observe the suggested price. It is a protection for the independent retailer as well as the manufacturer of trade name wares.

It does not end competition. Nonfair-traded products are subject to any price manipulation. And there always is the compelling factor of rivalry between manufacturers in the various fields.

What is so heinous about permitting a man—you, in the electric iron business—to suggest a retail price that will be adequate to keep you and your retailers in business?

The issue is being threshed out in Congress and the State legislatures. The public, we think, would do well to look at the broad principle involved. The bargains available when fair trade breaks down may be very illusory.

Lansing Centennial

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 11, 1959

Mr. CHAMBERLAIN. Mr. Speaker, I have previously called to the attention of the House that this is an important year for the city of Lansing, the capital of the great State of Michigan. The city was incorporated an even hundred years ago, and during these intervening years we have had 100 years of progress, growth and improvement.

To review the accomplishments during this first century, to express confidence for an even better century to come, and also to give the rest of the Nation an opportunity to share in the pride of one of its greatest cities, Lansing staged a gigantic centennial celebration which started February 15.

On Sunday, June 28, the official centennial program drew to a close, after nearly 5 months of spectacular activities.

The story of Lansing's centennial celebration now becomes an integral part of Americana, and should be recorded and preserved. In the Sunday, June 28, 1959, issue of the State Journal, of Lansing, PAT MCCARTHY expertly summarized the highlights of this extended pageant. Under leave to extend my remarks in the RECORD, I include the article, which follows:

[From the State Journal, Lansing, Mich., June 28, 1959]

LANSING CENTENNIAL

(By Pat McCarthy)

When the final rocket sputters and blinks out after the "Four To Go" performance Sunday night, it will mark the end of the biggest event in Lansing's history.

Bringing together more people—both as audiences and participants—than any in the city's 100 years, the centennial year program officially began last February 15.

Food, music, and dances of eight nationalities will be featured in the Centennial International Day events Sunday afternoon at booths in the 100 block of South Washington Avenue. In the event of rain, the events will be staged in the Civic Center.

The afternoon program and final performance of the colorful outdoor spectacle, "Four To Go," will raise to a quarter of a million the total number of participants and audiences for the many phases of the 5-month program.

H. Andrews Hays, chairman of the program, noted that the centennial events brought out thousands of participants who had never taken part in a community program before.

Core of the centennial participation was the Centennial Belles and Brothers of the Brush chapters. The ladies developed a membership list of close to 7,000 and the men had 5,000 official beardgrowers.

There were another 1,000 men who wore the emblem of the chicken—a permit to keep faces clean shaven during the reign of the beards.

The numerous chapters were instrumental in promoting the wide variety of centennial events as well as developing individual chapter programs such as dances, benefits, or visits to the bedridden. One of the big activities, a coeducational one, involved the five Saturday caravans throughout central Michigan, with about 1,000, all told, taking part.

The two crowning events, of course, were the 5-hour history of transportation parade, May 23, and the nine-performance "Four To Go," each a superlative spectacle in its own right.

The parade, featuring units from all parts of the Nation as well as all phases of transportation, involved approximately 7,000 persons in the 2-mile line of march and was viewed by an estimated 175,000 persons—not including those who saw it on television.

The colorful outdoor show at Memorial Field involved a cast and crew of more than 1,200 persons and will have played to roughly 30,000 people.

Both events—as well as others—involved thousands of hours of hard work by volunteer committee workers. The actual committees themselves totaled close to 500 persons, many of them working on more than one committee.

It meant evenings away from home, hurried meetings sandwiched in along with a hastily gulped lunch—and a large measure of forbearance on the part of many employers whose workers were permitted to make use of working hours to help in the huge birthday program.

The businesses and industries themselves pitched in substantially to support the $134,000 budget of the overall program. Souvenirs, tickets, and Belle and Brother memberships also played a big role in finances.

While participation on a truly community-wide basis was the major outcome of the program, it was successful also in promoting the city throughout the State and Nation.

City officials exchanged felicitations with Oregon State officials, also marking a centennial year—and had a little fun arguing over which, the city or the State, was going to be first in line for a huge order of centennial hats.

It all stated 2 years ago with the organization of a planning committee by the Chamber of Commerce of Greater Lansing.

Consultation with MSU officials gained the benefit of experiences in their 1955 observance. A committee of 15 was named by the chamber in August of 1957, and in March of 1958 Mayor Ralph W. Crego appointed a committee of six which incorporated as a nonprofit corporation. It included Councilman Horace J. Bradshaw, Councilwoman Lucile Belen, Albert C. Boyd, secretary-manager of the Greater Lansing Chamber of Commerce; H. Andrews Hays, vice president of the American Bank & Trust Co.; Paul A. Martin, publisher of the State Journal; Elton Tubbs, president of the Greater Lansing Labor Council; and, later, Harold Fildey, public relations director of the State Journal.

A contest was sponsored to develop a seal and slogan—and the picture of the seal was virtually reproduced with the construction of a log cabin on the city hall plaza this spring.

The city and its centennial were publicized with a huge float which was entered in a number of celebration parades throughout the State, including the one at the Mackinac Bridge.

Stamps bearing the blue and red centennial seal were sold in a citywide drive in November. Later in the same month the centennial directors signed contracts with the John B. Rogers Producing Co. of Fostoria, Ohio., which has since supplied professional personnel and know-how for the planning of centennial events.

Centennial Sabbath, February 15, officially marked the opening of the observance with the week devoted to the dedication progam and open house for the new city hall—with officials from all parts of the State attending.

The same date, February 15, 100 years ago marked the approval of the Lansing city charter by the legislature.

Then came the famous citizens banquet—with 26 presented at a formal dinner program in the civic center, the centennial fashion show presented by the women's division of the Greater Lansing Safety Council, the Arbor Day planting of the centennial tree, the 2-day century of music show at the civic center featuring local talent, the transportation and industrial show in conjunction with the history of transportation parade, a vintage car rally, and the innumerable events and activities throughout the 10-day climax which ends today, featuring every phase of the city's life.

Like a youngster who has enjoyed his first birthday party, the city can now draw a deep breath of relaxation after celebrating the passing of its first century.

UNESCO Sister-City Program

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the city of Boulder, Colo., is continuing to demonstrate the kind of friendly international cooperation between people of similar cities that ultimately will do much to build friendship and understanding among the peoples of the nations. I commend to the attention of the Members the latest friendly exchange between Boulder and Meppel of the Netherlands:

[From the Colorado Daily, University of Colorado, Boulder, Colo.]

BOULDER RESIDENTS SEND GREETING TO DUTCH CITY ON TAPE RECORDING

A friendly greeting from Boulder residents is on its way overseas to the Dutch city of Meppel.

The greeting, a tape recording featuring some of the Colorado city's civic and cultural leaders, is accompanied by a package containing such gifts as photographs, and typical work projects of elementary and secondary schools, as well as the university.

Produced by the radio-television department, the tape recording will be broadcast over Holland radio stations, as well as in school and civic groups.

The tape and gift package were placed with a representative of KLM, Royal Dutch Air Lines, last week in Denver. They will be flown to New York and placed aboard a KLM plane for shipment to the Netherlands.

The tape, consisting of messages and sound pictures of life in Boulder, is in response to a similar greeting from Meppel containing messages from Burgomaster and Mrs. Atonie Kleijn and several other Meppel leaders.

Other gift items being sent to Holland include a loaf cake baked by Mrs. W. Post van der Berg, of Boulder; some typical recipes used in Colorado kitchens; miniature rock collections; and photographs of the State of Colorado.

In charge of the tape recording in Boulder has been a group made up of Mrs. Ethel Auger, Boulder High School United Nations Educational, Scientific, and Cultural Organization; Miss Helen Schlytern and Miss Barbara Williams, Casey Junior High UNESCO; and Mrs. Addison M. Talbot and George F. Reynolds, Boulder UNESCO Council.

The Boulder tape to Meppel is narrated by a 21-year-old student at the university, Miss Hendrika Dina "Ridi" Stolker. Miss Stolker is at the university majoring in premedicine. Her home is in Driebergn, Netherlands.

Conditions in New York Kept From New Yorkers by Paper Curtain

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, therewith, the reproduction of an editorial from the Shreveport (La.) Journal as it appeared in the Charleston (S.C.) News and Courier on Sunday, June 28, 1959.

The editorial, dealing with two editorials from the Shreveport paper, indicates how the paper curtain of the North suppresses its news and demonstrates how humanity is prevented from knowing what goes on in the New York jungle. When will the truths about conditions in New York be told to the people of New York?

REPORTING THE NEWS NORTH AND SOUTH

(EDITOR'S NOTE.—The following is the text of two editorials published in the Shreveport (La.) Journal June 22 and June 25, respectively. The editorials make clear the difficulties under which southern newspapers labor in their efforts to obtain full and complete accounts of racial crime in the North—accounts which are equal in scope to those readily made available to northern papers by southern members of press associations. Many southern newspapers, including the News and Courier, recently made efforts similar to those cited by the Journal.)

Last Friday the Associated Press teletype machines in the Journal's editorial rooms ticked out eight tiny paragraphs which related that a 14-year-old white schoolgirl in New York had been raped by a Negro.

After reading down to the sixth paragraph we learned that there were six Negroes involved—not just one. And, reading on to the seventh paragraph, we found out that the girl had also been beaten and dragged across the schoolyard—not merely raped.

In the meantime, not a line had been received from the AP's rival, United Press International. A few lines showed up later.

The lack of attention which the New York case was receiving as compared to that which was given the rape of a 19-year-old Negro coed by four young white men in Florida was all too typical. When a crime against a Negro is committed in the South, the northern press turns out en masse for a field day. Newspaper reporters, biased magazine writers, television cameramen with eyes trained for the seamy side of life, and motion picture photographers descend upon the scene and stage a little carnival of their own. When they're finished with their chores the South is smeared again.

But let a crime against a white person be committed by a Negro in the North and the silence is deafening. Seemingly, the wire services' prize-winning reporters suddenly become blind and paralyzed and are unable to write a single line about the horror which has occurred.

Cameramen are away on distant assignments and the ones left behind can't get their equipment into focus.

News magazines, which Gov. Orval Faubus of Arkansas says are printed for people who can't think, and picture magazines which he says are printed for people who can't read, are completely disinterested. We're used to this sort of treatment by now.

Still, the slighting of the New York rape case by the wire services Friday caused us to make one more protest. We ignored the United Press International but—with tongue in cheek—we sent the following telegram to New Orleans' Bureau of the Associated Press and to the AP's general offices in New York.

"Appreciate 2,000 words on gang-rape of 14-year-old white girl in New York. Want comparison between New York case, in which girl raped by one Negro while five others looked on, and Florida case in which Negro co-ed raped by four whites. Point out no brutality in Florida, while white girl in New York beaten and dragged to her fate. Appreciate dispatching Relman Morin (the AP's reporter who won the Pulitzer prize for smearing Little Rock) to scene. Interview parents. Get editorial reaction North, East, South, and West. Want full picture coverage. Contact president of the American Association of Citizens' Councils in Greenwood, Miss., for statement. Ask NAACP if any prayer groups, organized to seek justice for Negroes. Anything from Eisenhower? Please keep story running daily till settled. Please expedite."

Ridiculous requests? Not at all.

Every one of these steps would have been taken by the AP and UPI at the urgings of

northern newspapers if a 14-year-old southern Negro school girl had been raped by a southern white man on her school grounds in the South while five other southern whites looked on.

Our protest could not have been given better timing. Whether it had anything to do with subsequent developments we do not know, but by Saturday morning it was apparent the Associated Press was giving greatly increased attention to the New York rape case.

For one thing, the AP's reporters had discovered by Saturday that the 14-year-old white girl had been raped by three of the Negroes, instead of one, as originally reported. In addition, the AP had discovered that one of the six Negro gangsters involved in the attack had actually held the 14-year-old white girl while the three Negroes criminally assaulted her. And it had reaffirmed the fact that the girl was beaten and dragged across the schoolyard—adding the new information that she was also gagged.

But best of all was this additional Associated Press story which bares the hypocrisy of the northern press:

"NEW YORK.—New York newspapers, which gave considerable page 1 attention to last week's Tallahasse, Fla., race trial, Friday did not front-page the New York rape of a white teenager by six Negro youths.

"The Post gave the New York story a column on page 4. * * *

"The New York rape made page 10 of the Journal-American, page 21 of the World-Telegram, page 5 of the Morning Daily News, page 3 of the Morning Mirror, page 3 of the morning Herald Tribune, and page 11 of the Times."

We congratulate the Associated Press, the world's largest news gathering organization, on its awakening to the gravity of the New York rape case.

We still have no details from United Press International, but we are forwarding to UPI a copy of our telegram to the AP.

(EDITOR'S NOTE.—The following is the Shreveport Journal editorial published June 25.)

Now that the Associated Press and United Press International News Services are no longer asleep and there is at least a semblance of interracial-strife news flowing out of New York, it will be interesting to note the progress in the trial of four Negro rapists who assaulted a defenseless little 14-year-old white girl.

After 3 days of silence, United Press International finally came through Tuesday with a story of the rape. Revelations that the girl had previously been in a 10-minute "kissing session" with one of the Negroes stands as an indictment of the whole school integration scheme.

Although utterly ridiculous, the Negroes' request through their attorneys that the press be barred from their trial should not be surprising to anyone.

Having observed that the Supreme Court has overruled the U.S. Constitution in ordering the individual States to force white and Negro children to mix in the public schools, the Negro rapists probably figure the Supreme Court will uphold them in their demand that freedom of the press be abolished.

After all, the Negro rapists possibly have reasoned if the Supreme Court can outlaw the 10th amendment guaranteeing States rights in matters not delegated to the Federal Government, then there is no reason why it can't destroy freedom of the press as guaranteed in the first of the Bill of Rights.

The Negroes' attorneys argued that the rapists' chances for leniency were being hurt by newspaper publicity. For this reason, they said, no newspapermen—not even the northern integrationist variety—should be permitted in the courtroom.

Judge Milton Solomon, who deserves the Nation's praise for the manner in which he has handled the case thus far, quickly informed the Negroes' attorneys that the rapists would receive a fair trial in his court—that the presence of newspapermen would not influence the outcome. All Judge Solomon has to worry about now is a possible reversal of his decision by the Supreme Court—meeting in emergency session at the request of the National Association for the Advancement of Colored People.

The NAACP, of course, did not object to the great amount of attention which newspapermen gave to the Tallahassee trial of four young white men accused of raping a 19-year-old Negro coed.

The Florida rapists should watch the outcome of the Negroes' trial in New York. If the Negroes' attorneys should somehow get their wishes, then the Florida rapists could appeal for new trials on the grounds that newspapermen were present when they were found guilty and given life sentences.

Member Bank Reserve Requirements

SPEECH
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

Mr. COAD. Mr. Chairman, I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, this amendment eliminates two features of the bill to which the Federal Reserve Board has objected: First, the elimination of the "central reserve city" classification of the New York and Chicago banks; and second, mandatory reduction in required reserves of these banks. It would leave in the bill the vault-cash provision, and it would leave in the bill the authority for the Federal Reserve Board to permit individual banks in New York, Chicago, and other cities to carry required reserves against demand deposits at the same level as is prescribed for country banks.

This bill, as the gentleman from California said, has no mandatory provision for the country banks, with respect to the vault cash. They are left out. In trying to drum up support for this bill they say that this is a country bank bill. This will help the country banks. But in writing the bill there is no requirement that the Federal Reserve Board must use vault cash as reserves at any time in whole or in part. In the New York and Chicago banks where these fellows are playing for keeps—they are not overlooking a thing—they got theirs put in. It is mandatory that by 1962 they have this reduction down to a 10 percent minimum. How can you justify not having the mandatory requirement for vault cash to be used by 1962 for the small banks and at the same time have it for the big city banks that profit more from our system than the banks of any other system of the Nation? I do not understand that.

So I urge the Committee to adopt this amendment. I thank the gentleman for yielding to me.

The Serbian Struggle for Freedom Continues

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. BRADEMAS. Mr. Speaker, last Sunday, June 28, was a Serbian national holiday known as Vedovam, an event which marks the 570th anniversary of the Battle of Kossovo.

It is important today that all freedom-loving people understand the significance of Vedovam and its contemporary parallel in the Soviet-dominated countries.

Vedovam commemorates a defeat, a defeat which was so tragic that its repercussions have been felt for over 500 years. Its memory can still inspire the Serbian people to victory over repression.

It is not easy for those of us who are not brought up in the Serbian tradition to appreciate the real impact of the Battle of Kossovo unless we compare it to similar situations in Western history. To the Serbians, Kossovo was more disastrous than was Flodden to the Scots, a defeat in 1513 in which king and army perished; and it was more deflating to the empire than the Battle of Hastings was to England in 1066, a defeat which enabled a conquering race to impose its will on all England.

The decisive Battle of Kossovo was fought on June 28, 1389, against Turkey.

On that day, the Serbian forces met the Turkish Army on the fatal "field of blackbirds," in the plain of Kossovo, and lost the fight.

The echoes of the battle reverberated in all parts of Serbia, for from that day in the 14th century until early in the 19th century, the Serbian people were subjected to a suppression of their language, civilization, nationality, religion, and culture.

Domination by a foreign power did not subdue the indomitable spirit of the Serbians, and despite centuries of oppression, this proud people retained their national traditions and their love of freedom.

Today the Serbians are again enslaved, by the bondage of Soviet tyranny.

Many of these brave people were fortunate enough to escape the Communist regime, and I am proud to say that a number of them have settled in Indiana.

Mr. Speaker, it is vital that we realize the valiant history and freedom-seeking spirit of the Serbian people. The Serbians have faced and surmounted severe

difficulties with courage and strength; they have shown unconquerable loyalty and devotion to their traditions; and they have consistently demonstrated their independence of spirit.

Mr. Speaker, in calling attention to Vedovam and its importance as a Serbian national holiday, I express the firm hope that, on the 570th anniversary of the Battle of Kossovo, we may recall the past struggles of the Serbian people and not forget their present struggle to achieve freedom and independence.

Sound Vetoes

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Sound Vetoes," which appeared in the Rockford (Ill.) Morning Star of June 30, 1959:

SOUND VETOES

President Eisenhower's statesmanship and courage are apparent in his firm vetoes of the wheat and tobacco bills. He has shown far greater concern for the best interests of the farmers and the national economy than has the Democratic-controlled Congress, which is intent on playing politics with the farm problem.

There is little prospect that either veto will be overridden by Congress, because neither bill was enacted originally by a two-thirds margin. There are enough sensible men in Congress to sustain the vetoes.

The wheat bill was another Democratic bid for farm votes at heavy cost to the taxpayers and scant benefit to the farmers. Under the measure, wheat acreage of individual farmers would have been reduced 25 percent in 1960 and 1961 and the Federal support price would have been raised from the present $1.81 a bushel to about $2.20 a bushel. The formula of cutting planting allotments and boosting price supports is a proven failure.

President Eisenhower said in his veto message that the bill prescribes for a sick patient another dose of what caused his illness. Return to discredited high, rigid price supports, he declared, would hasten the complete collapse of the entire wheat program.

The President's stand is strongly supported by responsible farm leaders. Charles B. Shuman, president of the American Farm Bureau Federation, said recently that the wheat bill passed by Congress would further stimulate surplus production, increase the cost to taxpayers, and reduce farm income. He pointed out that farm income has declined under present Government price-fixing programs which encourage surplus production.

President Eisenhower and Secretary of Agriculture Benson are striving to reduce the surplus burden and restore the independence of the farmer by keeping price supports flexible and reducing them to move production into balance with demand. The administration has proposed that Congress either base wheat supports on previous market-price averages or give Benson authority to set supports between zero and 90 percent of parity. The present wheat program provides for 75 percent of parity on a total allotment of 55 million acres.

The greatest improvement in farm prices has been in commodities not subject to price control. Where the forces of supply and demand are allowed to work more freely, the farmers are doing better. Congress will not help the farmers until it lets natural market needs guide farmers in what they produce.

Annual Report of Dairyland Power Cooperative

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. WILEY. Mr. President, recently I received from Mr. John P. Madgett, general manager of Dairyland Power Cooperative, of La Crosse, Wis., a copy of their 1958 report.

The report represents the splendid way in which this cooperative is bringing improved and expanded electric service to more than 100,000 rural consumers throughout a four-State service area.

Over the years, Dairyland Power Cooperative, and others like it, have aided our farmers tremendously in helping them to weather the economic storms.

Through cooperative electrical service, for example, power and light have been brought to marginal areas not profitable for other power-providing interests. As a result, more American farm families today are enjoying the benefits which light and power through electricity can bring to the American home and farm.

We recall that, from time to time, cooperatives have been the targets of criticism.

We recognize, of course, that there is a need for fairness and equity in treatment of all segments of the economy—whether this relates to taxes, competition, or other factors.

Within their proper role, however, I believe the co-ops have—and should be afforded the opportunity to continue, and strengthen their constructive efforts to bring benefits to our farmers as well as others in the economy.

As an illustration of the scope of services being provided by cooperatives for rural America, I ask unanimous consent to have excerpts from the annual report printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SUMMARY OF OPERATIONS FOR YEAR 1958—GENERAL MANAGER'S REPORT

Continued growth and development were significantly evident in the operations and activities of Dairyland Power Cooperative during 1958. New high levels were established in almost every category in bringing to farm people and rural businesses more electric power at lower cost.

REVENUES

Revenues from increased power sales reached a new high, being in excess of $8.4 million, or 11 percent over the year before. With member cooperative dollar purchases being 10.7 percent higher, they accounted for 93 percent of total revenues. Receipts from sales to member utilities were 14.7 percent higher.

ENERGY SALES

Systemwide energy sales were 9.1 percent greater. Member cooperatives increased their purchases by 11.2 percent, their requirements being in excess of 645 million kilowatt hours. Wholesale power sales of 106 million kilowatt hours to eight utility members were 3.5 percent higher. The demand for more electricity throughout the Dairyland service area is emphasized when we realize that sales to member cooperatives were almost six times greater than in 1947.

The almost 100,000 member consumers in the Dairyland system increased their average monthly usage of energy from 513 kilowatt hours to 562, an increase of 9.6 percent. Part of this increase can be attributed to the sustained cold of December. The usage that month was 22 percent higher than the year before. This experience illustrates that our system load is becoming more temperature sensitive. As indicated later in this report, our long-range plan studies show that the 15 to 20 years' loads are expected to be more than four times greater than at present.

GENERATION

Systemwide gross generation of power reached a new high, in excess of 861 million kilowatt hours, an increase of 7.5 percent. Steam stations produced 90.4 percent of this total, hydro stations 9.1 percent, with 0.5 percent coming from diesel. This was the fourth straight year that water flow in the Flambeau River was below average, even though hydro generation was one-fifth higher than in 1957.

The new 50,000 kilowatt reheat unit at Alma experienced its first complete year of operation and generated more than 334 million kilowatt hours, or 38.8 percent of total gross generation. This was more power than Dairyland sold to all member cooperatives during 1952. By using this largest and most efficient unit to the maximum, it is estimated that fuel cost savings of $185,000 resulted during the year.

This saving is reflected in yet another way. Although there was an increase in systemwide steam generation in 1958 over 1957 of 7.1 percent, yet there was an increase in coal consumption of only 8,900 tons, or 2.4 percent. With the addition of the 80,000 kilowatt Alma No. 5 unit scheduled for operation in the late fall of 1959, even greater savings are expected.

Generation of power

[In kilowatt-hours]

	Gross	Net
Steam:		
Alma	541,845,000	510,870,100
Genoa	3,039,100	2,407,600
Stoneman	238,091,700	221,659,600
Hydro:		
Flambeau	52,590,600	52,371,300
Ladysmith	10,153,700	10,138,250
Port Arthur	3,093,800	3,086,840
Thornapple	8,379,000	8,363,448
Diesel:		
Chippewa	117,600	66,300
Twin Lakes	4,159,400	3,963,100
Total generation	861,469,900	812,926,538

Dairyand's 1958 net margins exceeded $1.4 million and were the largest for any single year in its history, despite increased operating expenses induced by inflation. When related, however, to the size and scope of Dairyland's operations, these margins, however satisfactory, are modest. They represent 2.4 percent of the original cost of electric plant, or 2.1 percent of total assets. These margins build up member equity

which in the long run is highly important in terms of securing Dairyland's future. With increased investment in an expanding system, Dairyland's interest and principal payments will be increasing each year. In addition, it is important that we protect our reserves for depreciation to provide for eventual replacement of facilities.

COST OF PRODUCING POWER

The year 1958 brought realization to a long-sought goal. For the first time in Dairyland's 21-year history, 1-cent electricity became a reality. The net average cost per kilowatt hour delivered to the member cooperatives was actually .987 cents. This represents a reduction of 7.1 percent below 1957 costs and is 34 percent below 1947, which was 1.496 cents. It is noteworthy that during 9 of the last 11 years the cost was reduced, even though during the same period the cost of living was increased by 29.2 percent. As the farmers in the Dairyland system keep on finding that electricity does more for them while costing less, Dairyland is fulfilling its basic major objective of contributing to rural progress.

OPERATING EXPENSES

The auditor's statement of revenues and expenses portrays the overall financial operating picture for 1958. Operating expenses, when added to interest and other deductions, totaled $7,225,614, an increase of $289,911 or 4.8 percent. Operating expenses, considered separately, were $6,238,209, an increase of $216,563 or 3.6 percent.

Production expenses in generating plants amounted to $3,061,986, representing an actual decrease of 1.5 percent over the previous year. Two major factors account for this decrease: (1) increased efficiency because of the operation of the Alma No. 4 unit, and (2) decrease in net coal costs of an average of 19 cents per ton, or 3.1 percent.

Dairyland, for the first time, had its own fleet of barges operating during the navigation season of 1958 and was able to haul a considerable portion of its own tonnage requirements. Even though the fleet did not operate a complete season, it proved to be a profitable venture and should be even more so during the complete navigation season of 1959. These various savings offset increases in personnel and supply expenses. Steam production expenses amounted to 93.3 percent of total expenses in generation.

Total operating and maintenance expenses in transmission decreased $12,959, or 2.6 percent less than in 1957. Transmission line operating and maintenance cost per mile decreased from $156.40 in 1957 to $138.48 for 1958. Substation operating and maintenance cost per kilovolt-ampere increased slightly from 19 cents to 21 cents.

A major increase in operating expenses was the item of depreciation. $1,809,203 was charged for this purpose to operating expenses in 1958, a 15.5 percent increase over the prior year. This represents 21.4 cents per dollar received as compared with 20.6 cents in 1957. The statement of assets shows that Dairyland's total depreciation reserve at the end of the year was $10,786,491, an increase of 11.1 percent. Dairyland's total direct tax bill in 1958, as charged to operations, amounted to $313,377, somewhat less than the year before due primarily to property reassessment adjustments and increased charges to construction.

Interest and other deductions for the year amounted to a net of $987,404, or 8 percent over the prior year. Dairyland again, as it has throughout its 21-year history, met all principal and interest payments on time, and in addition has a cushion of credit, or payments ahead of schedule of $1,629,540. At the end of 1958 scheduled principal repayments to the Rural Electrification Administration aggregated $8,168,000. Interest payments made to date on outstanding loans amounted to $5,285,000—a repayment record which it is our every intention to maintain.

NEW CONSTRUCTION DURING 1956

During the year total expenditures for additions and improvements to the system were $6,266,000, of which 81 percent was for generation, 16 percent for transmission, and 3 percent for general plant. Major additions completed during the year were as follows:

1. Five 1,500 kilovolt-ampere distribution substations with connecting 69-kilovolt transmission lines were contructed as follows:

Member served	Approximate location	Miles 69 kilovolts
Lafayette	Argyle, Wis	6.38
Vernon	Hillsboro, Wis	5.55
Buffalo	Cochrane, Wis	10.77
Barron	Cumberland, Wis	8.59
Oakdale	New Lisbon, Wis	13.37

2. A 4.86-mile 69-kilovolt line and a 69-kilovolt bay addition to the Rochester transmission substation for an interconnection with the city of Rochester municipal powerplant.

3. A 3,000 kilovolt-ampere substation located near Mt. Carroll, Ill., for an emergency interconnection with Interstate Power Co.

4. Supervisory equipment was partially installed to operate 10 transmission substations by remote control from La Crosse.

5. Construction work began on the new 80,000 kilowatt reheat unit at the Alma station.

PLANT IN SERVICE

Dairyland requires large sums of money for initial investment. The construction program of 1958 exceeded $6¼ million which when added to scheduled expenditures of almost $9½ million during 1959, means a 2-year program of $15¾ million.

Classified and unclassified plant in service at original cost at the end of 1958 amounted to $59,610,438, an increase over the previous year of $3,029,115, or 5.4 percent. The average cost of plant in service per member consumer is $618, or $2,292,709 per member cooperative. At the end of 1947, electric plant amounted to $3,677,994. At the end of 1959, plant in service is scheduled to exceed $72 million.

Dairyland's pioneering diesel station at Chippewa Falls went on the line in March 1938. The five remaining units were sold during 1958 and are scheduled for removal during the summer of 1959. Facilities in service at the end of the year were as follows:

Generating stations

	Number of units	Total plant net capability in kilowatts
Steam:		
Alma	4	118,300
Genoa	4	14,700
Stoneman	2	51,700
Hydro:		
Flambeau	3	20,000
Ladysmith	2	1,800
Port Arthur	2	500
Thornapple	2	1,400
Diesel:		
Chippewa	5	3,400
Twin Lakes	4	9,600
Total generating capacity in service		221,400

Transmission lines

Voltage:	Length (miles)
161 kilovolts	166.62
69 kilovolts	865.29
34.5 kilovolts	1,334.69
Total	2,366.60

Substations

Type	Number	Capacity in kilovolt-amperes
Distribution	122	162,200
Transmission	15	169,500
Generating plant	6	390,500
Total	143	722,200

CONSTRUCTION PLANNED FOR 1959

The ever-increasing use of electricity throughout our service area requires continuous construction of new facilities. Major construction projects in 1959 include:

1. Completion of the 80,000 kilowatt Alma fifth unit scheduled for operation in late fall of 1959.

2. Existing 34.5 kilovolt transmission lines and substations serving the Lafayette Electric Cooperative, the Jo-Carroll Electric Cooperative, Inc., and one substation of the Grant Electric Cooperative will be rebuilt and converted to 69 kilovolt operation.

3. Approximately 54 miles of 60 kilovolt line and five substations will be constructed to extend Dairyland's service to the Winnebago Rural Electric Cooperative Association, whose headquarters are at Thompson, Iowa.

4. Construction of the Pine Lake interconnection near Baldwin, Wis.

5. Installation of voltage regulators, increases in transformer capacity, additional substation facilities for new outgoing distribution circuits, and other additions as required to maintain high standards of service to member cooperatives.

INTERCONNECTIONS

Dairyland continued its policy of making mutually beneficial interconnections with neighboring utilities which would defer the construction of transmission and generating facilities, reduce power losses, and provide sources of emergency power. They have contributed to the lowering of the overall cost of energy.

An interconnection with the Municipal Power System of the city of Rochester was placed in service on January 30, 1958. Two emergency type interconnections were completed during the year with Interstate Power Co. One of these near Mount Carroll, Ill., will provide emergency service for the Illinois and Wisconsin area southeast of Lancaster and will make it possible to maintain continuous service during the period that transmission lines and substations are converted from 34.5 kilovolt to 69 kilovolt operation. The other near Elkader, Iowa, supplies similar emergency service from Interstate.

Two additional emergency type interconnections are planned for completion in 1959 with Northern States Power Co., one near Viroqua, Wis., and one near Cameron, Wis. A new major interconnection with Northern States near Baldwin, Wis., is scheduled for service in July 1959. Studies are being made for possible new interconnections.

MEMBERSHIP

Member consumers during the year increased by almost 2,000. A systemwide membership of 100,000 became a reality, however, when in late 1958 Winnebago became the 27th member distribution cooperative.

A review of systemwide membership again emphasizes the completeness of area coverage in the service areas of member cooperatives. Those having service areas adjacent to growing cities continues to add more suburban householders—a trend which we believe will accelerate. Cooperatives in the tourist and resort areas continue to add to their membership with more seasonal users, both summer and winter. Two other continuing factors are (1) a few remaining farms are being connected to the lines for

the first time, and (2) farms continue to be consolidated or abandoned.

Barren County Electric had the distinction of adding about 150 members when they purchased the Farmers Light & Power Co., of Cumberland, Wis., a 40-mile system originally organized in 1919.

PERSONNEL

Dairyland continued to lay stress on its job training and safety program. The overall record for 1958 equals that of 1957, our best previous year. Although the 1958 accident frequency rate was a little higher, the severity rate was substantially lower, the combined rate being one-third to one-fourth of that which we experienced in our earlier years. Dairyland's motor vehicle accident rate was approximately one-third that of the national average for utility fleets.

The monthly average number of employees was 300, 11 higher than the previous year. Personnel turnover continued to be low, emphasizing again the career aspect of our employees' association with Dairyland. Effective as of February 1, 1958, a new 2-year agreement was negotiated with Local Union 953 IBEW, which provided for wage increases and increased fringe benefits.

Our employees continued to provide for their own savings and loan needs through the operation of DAPOCO, their credit union. At year's end 302 Dairyland employees were participating in the NRECA retirement and security program.

In late fall a group comprehensive health care plan was put into effect for all employees with Dairyland sharing 50 percent of the cost. This comprehensive plan insures adequate care for the hazards of illness and accident and gives additional security for our employees and their dependents.

* * * * *

PLANNING FOR THE FUTURE

Work continued throughout the year on long range plan studies, which were started 2 years ago, the objective being to plan the best possible coordinated generation and transmission system based upon the expanding needs of member distribution cooperatives. All member cooperatives completed their distribution studies during the year. Dairyland engineers completed the AC network analyzer studies. All of this data is now being evaluated to determine the direction of investment 15 to 20 years in the future when loads are expected to be more than four times greater than at present. New system additions during the year were constructed in accordance with the long range plans.

Three major interconnections are being studied for the future. A 161-kilovolt transmission line from Alma north to Elk Mound will be used initially for an interconnection with Northern States Power Co. of Eau Claire. Two future 161-kilovolt interconnections with Interstate Power Co. are planned, one between Genoa, Wis., and Lansing, Iowa, and the other in the vicinity of Dairyland's Adams transmission substation.

Preliminary engineering and feasibility studies were completed on proposed pumped storage type hydroelectric stations along the Mississippi River between Alma and Genoa. Studies and negotiations with the railroad continued on the proposed hydroelectric stations on the lower Chippewa River. No conclusions have been reached in regard to the construction of any of these projects.

At year's end a new organization called the Eastern Missouri Basin Power Pool was being formed by the electric power systems having service areas in Iowa, Minnesota, Nebraska, North and South Dakota, and part of Montana. Its purpose is to promote to the maximum practical extent coordinated operations and joint planning of new facilities so that all parties may share in the benefits. The Dairyland system is in the pool area and is tied to other participants in the pool through its interconnections with Northern States Power Co. and Interstate Power Co. Study is being given to the possibility of a subpool with Northern States and Interstate.

Government Financing

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Must We Delude Ourselves Into Disaster?" written by Hon. Maurice H. Stans, Director of the Bureau of the Budget, and published in the Reader's Digest for July 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUST WE DELUDE OURSELVES INTO DISASTER?
(By Maurice H. Stans, Director, Bureau of the Budget)

As the Federal Budget Director—and as an American and a certified public accountant—I must pass on to you a solemn warning. Unless we as a Government insist right now upon living within our income, we face certain inevitabilities. Either there will be more tax increases, piled on top of our already heavy tax load; or there will be a mounting national debt and growing inflation with disastrous rises in the cost of living and a dangerous weakening of our national strength.

Either way the prospect is menacing. Few of us want to pay more taxes. And all of us have been victimized by past cycles of inflation, the economic fever that jacks up the prices of everything we buy, that mercilessly drains our earnings and savings. Yet inflation is a manmade sickness, one we can combat—if every citizen recognizes the causes and does something about them.

Inflation feeds on the delusion that the Federal Treasury is a free-flowing well, that money from Washington doesn't cost anyone a cent. It is this something-for-nothing delusion that allows special-interest groups to smooth-talk the public into believing that all their Federal spending proposals are possible. This is why gigantic spending bills are passed without tax measures to pay for them. This is why astronomic national spending goes on regardless of the revenue that comes in and despite the efforts of economy-minded members of both parties in Congress. And this is why these pressure groups are trying to push us headlong into ever greater debt, heedless of the nightmare of inflation that would result.

The President, his Cabinet, all the rest of us in the executive branch feel it is essential that America wake up and face these grim facts. Behind this conviction is a significant series of events you should think about.

Despite our warnings a year ago against too much panicky recession spending, and in the face of dwindling tax receipts, Federal spending surpassed all expectations. Last September, when staff experts at the Bureau of the Budget came to me with sheaves of figures for the 1959 fiscal year, our worst fears were confirmed. The Government was piling up the biggest 1-year budget deficit in peacetime history—a staggering $13 billion. And, with a nearly $3 billion deficit from the year before, the Treasury for the 2 years was in the hole by almost $16 billion, or an additional new debt of $360 for every family across the land. The total national debt has risen to an all-time high of $285 billion, or some $6,400 for every family.

To add to our worries high Government officials returning from trips abroad met us with disturbing news. They told us that other nations were beginning to question America's financial stability, and its will to face up to dangerous fiscal practices that in the past had almost destroyed them.

Next, signs began to emerge of an inflationary psychology, influenced by the Government's deficit spending. The public, perhaps uneasy about the dollar, was tending to speculate rather than save, an attitude that could lead to boom and bust. This was serious. As Secretary of the Treasury Robert Anderson said, "If we ever reach the point where people believe that to speculate is safe but to save is to gamble, then we are indeed in trouble."

These were some of the compelling reasons why the President and his advisers considered that it was more imperative this year than ever before to get the Government out of the red. With the country obviously getting back on its feet and entering a prosperous period, here was a chance to shake off our deficit habit. I we couldn't do it now, when could we ever?

By balancing the budget there is still time to counter intolerable inflation—the force that has made hot dogs today more expensive than round steak in 1945, that has doubled the cost of bread and pushed the price of hamburger up 90 percent. For these are the back-door ways that inflation steals part of your earnings, your pension, your insurance, your life savings.

Take the citizen who put $100 in a savings account at 3 percent interest in 1939, setting it aside for old age. Today that $100 investment is worth $175, rewarding him with $75 in compounded interest. But how good is that money now when he needs it to buy groceries? In 1939 his $100 bought 1,266 loaves of bread, but today the $175 purchases only 999 loaves—a loss of 357 loaves for his prudence. That is not all. The $175 buys 127 fewer quarts of milk, 128 pounds less of leg of lamb, 215 pounds less coffee than did $100 in 1939.

Moreover, if future inflation were to occur at the rate which prevailed in the 7 years following World War II, the mattress you now pay $50 for will cost you $85 by 1966. A $4 man's shirt will be $6.40. The children's shoes you now lay out $6.50 for will cost $11.27.

Despite the plain evidence of what Government deficit spending and inflation have already done to our dollar, bills have been introduced in Congress this session that would burden the national debt by another $30 billion a year.

Federal expenditures have multiplied 25-fold in the last 30 years, and half of that is due to inflation. Today the combined governmental tax in this country—Federal, State, and local—claims more than 30 percent of our national income. How much more taxation can the people take? We must curb spending now.

We can't excuse ourselves on the ground that we don't know where spending cuts can be made. Vast sums can be saved in such

areas as farm price supports;[1] urban-renewal and slum-clearance projects, in which cities ought to carry at least half the load; benefits to veterans who have means of support and no service-connected disability; rural electrification (95 percent of our farms now have electricity); and public assistance, an emergency measure inherited from the 1930's, for which the Federal Government has needlessly increased its contribution so that now it far exceeds the State and local share.

The budget which the President gave Congress this year lists 18 ways to save your tax dollars. If they are adopted we can even look forward to cutting taxes, instead of increasing them. And if we are willing to do it we can certainly begin to cut our enormous debt and put the budget in order.

Yet too often when a penny is taken away from entrenched Federal spending programs, letters and telegrams deluge Congressmen. The voices of those who speak out against spending are lost in the tumult that the pressure groups drum up. That is why you heard wails of protest when the President presented his balanced budget. Special interests claim it cripples essential activities and threatens the economy. However, these are the facts:

The President's $77-billion budget for the fiscal year 1960, which begins July 1, 1959, provides more money for the Nation's military security than in any other peacetime year in our history. The Joint Chiefs of Staff, the National Security Council, the Secretary of Defense and the President gave exhaustive attention to our military needs. As a result 59 cents of every dollar in the budget goes toward national security. This budget also provides more money for water resources, scientific research, education, health and welfare than ever before. After all, $77 billion is not petty cash.

If, on the other hand, you wonder why our budget is so large, don't forget that it contains gigantic sums totally beyond budgetary control: for example, more than $8 billion in interest on the $285-billion national debt. Also, the budget is loaded down with heavy spending required by laws passed in previous years. Because of these inescapable commitments expenditures cannot help but go up by $2 or $3 billion in 1961 even if the President's 1960 balanced budget is approved. And if Congress goes over the $77-billion spending mark we will be on the way toward a $90-billion budget in a few years and a still greater national debt.

We, all of us, have the power to halt this ruinous race toward calamity.

If you are a businessman who believes Government spending must be cut to keep our enterprise system free, then you can make sure that you do not support industry groups driving for Government subsidies, direct or indirect.

If you are a union member who wants to keep your living standards high, you can fight against labor leaders who urge huge Government programs that rob your wages by forcing higher taxes or deficit spending and inflation.

If you are a farmer, veteran, or schoolteacher, or belong to any group that is asking for Government money or special treatment, stop and ask yourself whether the Nation's interests shouldn't come first.

If you are just a citizen who doesn't want economic calamity for yourself and your children, then insist on prudent government. To block the self-serving special interests that are ceaselessly driving us toward bankruptcy, I urge you to mobilize yourselves. Make yourself heard. Now. It is your own future that is at stake.

"What's Wrong With U.S. Foreign Policy"

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. FULTON. Mr. Speaker, I am calling to the attention of the Congress and the American people the excellent volume published by my good and intelligent friend, "Cy" Sulzberger, entitled "What's Wrong With U.S. Foreign Policy."

I am including among my remarks the report on the book published in the New York Times of April 7, 1959, as follows:

BOOKS OF THE TIMES

(By Charles Poore)

"What's Wrong With U.S. Foreign Policy," C. L. Sulzberger, challenges in the title of his new book. And one answer, of course, is that it has not made us as secure and beloved in the modern world as we should like—by a long chalk.

Nor has this country's foreign policy ever been able to do that. You have only to look into another book on our table, "American Diplomacy: A History," by Robert H. Ferrell, to see what a tough row to hoe the agrarians of our diplomacy have faced since our forefathers brought forth on this continent a new nation.

The American Revolution itself, the War of 1812, the affair of the Barbary Pirates, the Mexican War, the Civil War era, the War with Spain, the brinkmanship forced on Woodrow Wilson by Mexico's upheaval in this century's second decade and two World Wars are salient points in Mr. Ferrell's informing profile of our dynamic history.

Meantime we have had to contend with a thousand and one other challenges and chances. They pop up continually, all over the map. The scene may be Guam or Lebanon. The story may have a continuing thread to it. Such as? Well, such as the history of our relations with Japan, say, from Commodore Perry's visit there as President Fillmore's representative in 1853 (to open doors) to John Foster Dulles' visit there as President Truman's representative (that's right; President Truman's) in 1951 to arrange a treaty of peace.

MANY TREES BORE NO FRUIT

We never seem to have got all we wanted in our foreign relations. But neither, come to think of it, have other nations. The British and the French no doubt have grounds for believing right now that they deserve more ample places in the world than they find they have. And there must be bitter Bolshies in the Kremlin who are not, in P. G. Wodehouse's phrase, exactly gruntled by the failure of their agents to get Greece or France or Italy. Of course, a certain measure of disenchantment must have set in when the Molotov-Ribbentrop Pact turned out so poorly. And now China seems to show traces of becoming a disquieting sort of payment-deferred menace to the Russians.

Mr. Sulzberger takes up far too many world problems in his book. You can't possibly hold them all in your mind at once. No more can you hold all the details of a Persian rug or the Yankee baseball team's farm system or a painting by Hieronymus Bosch. But the total effect impresses your consciousness effectively. And the fact that he has made his job for this paper a sort of continuous summit meeting with heads of government all over the map gives his book the authority of first-hand information about what's going on in the world.

He is as unsparing in criticizing a Republican administration's policies as he is in showing what was wrong with measures taken by their Democratic predecessors. He is aware of the differences that arise when members of the same party become embroiled—as when Harold Stassen has one idea about disarmament and John Foster Dulles another, or when Dean Acheson takes public issue with thought advanced by George Kennan.

The tendency to travel displayed by recent Secretaries of State is not, in his eyes, an unmixed blessing. When Edward R. Stettinius, Jr., completed his work in the formation of the United Nations and gave way to the gentleman from South Carolina, you may recall, someone said "the State Department fiddles while Byrnes roams." And when Mr. Dulles came on the scene, a Washingtonian suggested that his genius lay in an infinite capacity for taking planes.

What this country needs, Mr. Sulzberger suggests, is a more consistent, a more coherent, a more far-seeing foreign policy.

RESPECT, NOT POPULARITY

He says that:

"Bland steadiness in explaining our fundamental views will gain us much more than irked press-conference statements or frenetic special missions.

"It is not essential always to strive for action. In foreign policy it is better 9 times out of 10 to sit still than to do the brilliant thing.

"Charity rarely inspires love. Anyway, a craving for popularity is naive. What we should above all covet is respect.

"The time has come for new self-scrutiny, a reexamination not only of the style and methods of our policy but the objectives to which it aspires. And no such scrutiny can take place unless we assume a more humble position regarding ourselves, our Nation, and our faults. We must abandon a tendency to moral hectoring of others and an addiction to apocalyptic slogans designed, at best, to appeal to our voters. These frighten our friends at least as much as our enemies."

Or, as Mr. Ferrell puts it in his "American Diplomacy: A History," "One thing was certain, that foreign relations by the middle of the 20th century had become the central problem of the great republic of the New World."

Resolution of Jackson School District, Stark County, Ohio.

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. BOW. Mr. Speaker, the Jackson Local School District of Stark County, Ohio, has adopted the following resolution:

Resolved, That we do not wish to avail ourselves of the offer of the National Defense Education Act, title 3, for the purchase of science, mathematics, and foreign language equipment and teaching aids, as it is against the policy of our board of education to accept Federal aid.

Members of the school board are R. M. Bent, president, R. G. Tilton, M. L. DeWalt, J. W. Gilmor, and Dr. J. A. Mack.

Mr. W. S. Essig, clerk, informs me that the resolution was adopted June 10, 1959, with one dissenting vote.

A Worthwhile Suggestion for Making the Use of Plastic Bags Safe

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. STRATTON. Mr. Speaker, several other Members of the House and I have recently introduced legislation designed to meet the threat that has been posed to American children by plastic bags entering American homes in increasing numbers in connection with laundry and drycleaning. On the heels of the mounting number of deaths attributed to this cause, the plastics industry and the laundry and drycleaning industries have undertaken extensive campaigns to alert parents to the dangers involved in these bags. In some cases laundries have even voluntarily given up the use of the bags rather than continue an unnecessary risk to little children. While this action has gone on, efforts have also been undertaken to develop a type of bag which would eliminate the danger involved.

In that connection, I have been very much impressed with an idea which was first publicly mentioned in an editorial appearing in the Schenectady Gazette of June 29, containing a suggestion made by a constituent of mine, Mrs. Robert Jetter of Schenectady. Mrs. Jetter's suggestion that the bags be constructed in such a way that they become automatically self-destructing as soon as they are removed from the clothing involved, is one which I think deserves the immediate attention of the plastics, laundry, and drycleaning industries and of all who have concerned themselves with this serious problem. The editorial follows:

PLASTIC BAG IDEA

The following letter was sent to us by Mrs. Robert Jetter of this city:

"Would it be possible or practical for plastic bag manufacturers to use a pull tape on their plastic bags similar to that used to open packages of cigarettes and gum? The drycleaner or laundry would seal the open end of the plastic bag after inserting the clothing, thereby making the pull tape the quickest way for the customer to open the bag. If the pull tape ran in a continuous diagonal line upon one side of the bag and down the other, the bag would automatically be made useless as a mattress cover, and in the case of smaller bags would not fit over a child's head.

"Perhaps this suggestion is not practical as it would make the bag too expensive for commercial use. Or maybe the plastic could not be torn by a pull tape. It is merely an idea this writer had after reading news articles concerning the potential danger of this handy new packaging material."

Mrs. Jetter is to be commended for thinking about the problem of plastic bags and coming up with an idea. Even if there are flaws in her suggestion, as she says there may be, we are happy to publicize her idea because someone else may think of a way to overcome the objections or think of a better method.

American Society of Composers, Authors, and Publishers—Department of Justice Announces the Filing of a Proposed Amended Order in the U.S. District Court in New York City

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. MOORE. Mr. Speaker, the Antitrust Division of the Department of Justice is to be commended for its long, patient, and able attention in behalf of the 1,200 publishing concerns and 4,000 authors and composers in endeavoring to work out equitable rules and regulations in ASCAP's distribution of some $28 million annually which the society receives from licensing for commercial use the copyrighted material published by its members.

Subcommittee No. 5 of the House Small Business Committee, of which I am a member, held extensive hearings and issued a report on this subject during the 85th Congress. While it has been more than a year since these hearings were held and considerably more than a year that the Antitrust Division of the Department of Justice has been working on the ASCAP matter, I personally believe the expenditure of time was in the best interest of the members of the society, as well as in the public interest. It is my thought that antitrust cases should be pressed forward as rapidly as possible, but, at the same time, the basic rights of the litigants must always be preserved, regardless of the time consumed in bringing a case to its conclusion. In view of the importance of the proposed order to the members of ASCAP, the dispatch with which the Antitrust Division has handled this complex matter is commendable.

I particularly desire to commend the earnest efforts of the present Acting Assistant Attorney General, Robert A. Bicks, who testified before our committee and who has so earnestly and conscientiously endeavored to work out the difficult problems surrounding the ASCAP matter.

For the information of the Members, I include the release of Attorney General William P. Rogers of June 29, 1959, which follows:

Attorney General William P. Rogers today announced the filing in the Federal district court in New York City of a proposed order directing the American Society of Composers, Authors, and Publishers (ASCAP) to carry out in certain specific, detailed ways the terms of an antitrust judgment entered against the society in 1950. ASCAP is composed of approximately 1,200 publishing concerns and 4,000 authors and composers. The terms in question related basically to the rules and regulations of ASCAP governing the distribution to its members of over $28 million annually which the society receives from licensing the commercial use of the copyrighted music composed or published by its members. These licenses are to the radio and television industry and the more than 25,000 other users such as hotels, bars, skating rinks, and restaurants.

At the time the proposed order was submitted to the court it was pointed out that ASCAP after prefiling negotiations had agreed to the terms of the order. The court entered an order requiring the parties on October 15, 1959, to show cause why the proposed order should be entered and directed ASCAP to mail a copy of the proposed order to each member and the members may then make application to be heard pursuant to the terms of the show cause order.

The practices which the proposed order seeks to remedy, relate to six fundamental factors. These factors relate to the conduct of ASCAP in its dealings with its members or concern the manner in which it divided the amounts of its revenues due its publisher and writer members.

Thus: (1) The proposed order requires that ASCAP pay resigning members on the same basis as others when the society continues to license their works. Resigning members are thus permitted to continue licensing existing copyrights through ASCAP when a cowriter or publisher is also licensing the same work through ASCAP. But the resigning member is free to license new works through another organization.

(2) ASCAP would be ordered to conduct a scientific census or sample of performance of its members' compositions. The results of the survey must be weighted in proportion to what the society receives from the licensees where the surveyed performance occurred. A provision is included to permit reexamination by the court of the survey after 18 months of operation. A court appointed expert will report to the court and the Government on the design and operation of the survey and will prepare estimates of the accuracy of the samples of performances.

(3) Each ASCAP writer would be given an option to receive payment based on the results of the survey or in the alternative to receive payment based on such factors as a 5-year average of performances of recognized works and on the length of time the writer has been a member of ASCAP. (A "recognized work" is defined as one which has received performance credit in the ASCAP survey at least 1 year prior to the performance in question.) The proposed order seeks to assure the maximum feasible area of individual choice. An exception from these options is made for the top 100 writers in ASCAP. These writers may vote to deny themselves the option to receive payment on a per performance basis.

Each publisher member would be given an option to receive payment on the basis of the results of the survey. In the alternative, a publisher may take into account the length of his ASCAP membership and the number of performances of his recognized works.

The order contains detailed provisions governing payment for theme songs, background music on dramatic programs, advertising jingles, copyrighted arrangements of works in the public domain, and serious compositions of more than 3 minutes' duration.

(4) ASCAP would be directed to weight the votes of its members, if at all, only on the basis of the performance credits which they received in the survey. No member may have more than 100 votes. This is in sharp contrast with the existing practice where the publisher members having the most votes in 1957 had 1,469 votes and the writer

member having the most votes in that year had 5,116 votes. A progressively higher number of performance credits is required for each vote above 20. Provision is made to permit a minority of one-twelfth to elect a director. The 10 largest groups of affiliated publishing firms are limited to a maximum of slightly less than 41 percent of the total publisher vote.

(5) ASCAP would be ordered to keep certain records and make them available to any member upon various conditions. ASCAP must make the addresses of its members available to other members and it must inform the membership of all changes in its rules affecting distributions to the members. Provisions are included designed to speed up direct appeals to the impartial panel of arbiters. Other procedural safeguards are included to protect the rights of members in these appeals.

(6) ASCAP would be required to admit all qualified applicants for membership and to publicize the qualifications for membership twice a year in certain trade papers.

Gen. Maxwell D. Taylor

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. SIKES. Mr. Speaker, yesterday I witnessed the colorful retirement ceremony for Gen. Maxwell D. Taylor, Chief of Staff of the Army. Impressive as this ceremony was, I watched it with much regret. The Department of Defense and the Nation have lost one of the most competent and capable military leaders of our time—a loss that this Nation can ill afford during these critical times. General Taylor now turns in his uniform, after a lifetime of service to his country climaxed by 4 years as Army Chief of Staff. Universally recognized as one of our greatest field commanders, he would at 57 seem to have many years of useful service left. He is one of the few men in high place who have had the courage to state his beliefs when those beliefs did not conform to policy. He has not hesitated to oppose the fiscal and manpower raids which have been made upon the Army. He has felt this policy was wrong, as, indeed, it was, and he has said so.

Time after time he has expressed the conviction that the Army must be kept strong because of the great danger of Soviet expansion through limited war. All U.S. experience since World War II, says Taylor, is right, but the administration fails to recognize it.

The most recent proof of the Soviet threat by means short of all-out war came from the Geneva Foreign Ministers' Conference. The Russians there demonstrated most clearly that they do not want to settle the Berlin and German unification questions now. They believe time is on their side in efforts to strangle West Berlin. Missiles and H-bombs cannot combat such pressures. The existence of a strong U.S. Army can be a very important factor in the considerations over Berlin.

America is losing a valuable soldier and with him the best chance of achieving an equilibrium of arms. However, this great soldier and scholar has left legacies which could materially assist in the security of this Nation. I would like to summarize what I believe to be the most important of these legacies.

First. It is hard to believe that a strategy dating back to World War II and retaining main dependence upon atomic attack is still valid in coping with the changed conditions of the world. A changed situation affecting our military strategy is the condition of mutual deterrence arising out of the Soviet possession of long-range atomic weapons. It has become increasingly clear that both sides of the power bloc have or soon will have the means to effect mutual destruction and, consequently, it seems increasingly unlikely that either side will deliberately resort to general atomic war. This fact does not mean, of course, that the Communist bloc will abandon those offensive and aggressive techniques which have been so successful in the past. Rather, it may be expected that the Soviets will present us with increased levels of provocation, feeling that if their aggressions have been successful during our atomic monopoly, they may take greater liberties with us now that we must respect their atomic strength. Events have justified this anticipation of increased provocation. The increased likelihood of limited war is obvious and in light of past experience it seems inherent in the problem of limited war that atomic weapons will have limited usefulness.

Second. In regard to the Army's capabilities, we have very material assets to cope with limited war. However, those assets are not sufficient. We must have a program—a five-point program—to improve our capabilities. First, we need to modernize weapons and equipment; second, we must improve the strategic mobility of our limited war forces; third, we should predesignate a certain amount of strategic air and sealift so that the Army knows what to count on in the early and critical days of a limited war situation; fourth, we need improved arrangements for joint planning and training, to include possibly the creation of a unified command; and, fifth, we should adopt a national program to advertise the fact that we are indeed ready to cope with a limited war.

The last point is on the formulation of the defense budget; as a member of the House Appropriations Committee I am intensely interested in General Taylor's thesis and I am sure that he is right and that the Department of Defense should accept his counsel. I will offer you my interpretation of General Taylor's ideas on the formulation of the budget. The time has come for a drastic overhaul in our strategic concepts and planning. We should start at the beginning, in the National Security Council, and redefine in clear and unmistakable terms the military objectives which must be met in order to obtain our national objectives. Then, the Joint Chiefs of Staff, initially without restrictive budgetary guidance, should be invited to establish the requirements for various categories of military forces, without regard for the service which provides them. These categories are the atomic deterrent forces, continental air defense forces, our oversea deployments, the mobile strategic reserves available for general or limited war, the forces required for antisubmarine warfare, and the strategic air and sealift necessary to afford rapid reaction in case of hostilities any place in the world. We need yardsticks of sufficiency for these categories, determined by our best military thinkers, to provide the point of departure for our overall military program. Once the criteria of sufficiency have been established, it will not be too difficult to determine the specific forces in terms of divisions, airplanes, missiles, and carriers required to meet them.

Such a procedure would inevitably result in increased attention being paid to the requirement for limited wars. I am personally a great admirer of SAC—Strategic Air Command—which maintains a readiness around the clock for the outbreak of general atomic war. We have no such command charged with responsibility for limited war. I have often regretted that thus far we have never established a unified command similar to SAC charged with the limited war responsibility. I do not believe that we will ever achieve the required limited-war readiness until some such command is established in the United States to which all services would allocate those forces available for limited war reaction.

In making these suggestions neither General Taylor nor I necessarily recommend vastly increased defense budgets. I feel that most of the objectives which I have in mind can be accomplished by a readjustment of the funds presently available to the three services. It is interesting to note that the so-called limited war forces are all applicable to general war, whereas the reverse is not true. By the same token, in adding to our limited war forces we are adding to our general war capability, but again the reverse is not true. The main point in adjusting our military policy would be to accept the fact that we cannot rely upon any single service or any single weapons system. Rather, we must be prepared for threats in many forms and be sure we have Armed Forces capable of providing the appropriate response. Continued preponderant reliance on massive retaliation is a dead-end strategy.

These then are some of the legacies left by this great soldier which if used could mean the difference of survival or defeat. In closing I can think of no better summation of the attributes and capabilities of General Taylor than those given by the President in presenting the Distinguished Service Medal to General Taylor and those cited in the scroll presented General Taylor by the Secretary of the Army. I offer these for the RECORD:

THE WHITE HOUSE.

The President of the United States of America presents the Distinguished Service Medal (Second Oak Leaf Cluster) to Gen. Maxwell D. Taylor, U.S. Army, for excep-

tionally meritorious service as set forth in the following:

CITATION

"For exceptionally meritorious service and distinguished achievement as Chief of Staff, U.S. Army, from June 30, 1955, to June 30, 1959. In this position of great responsibility, General Taylor demonstrated outstanding professional competence, selfless devotion to duty, and leadership of a high order. As a member of the Joint Chiefs of Staff, advising the President and the Secretary of Defense on matters of greatest consequence to the Nation's security, he has brought his wide experience and deep insight to bear on the deliberations of that body. He has made a major contribution to the work of the Joint Chiefs of Staff in providing for the strengthening of unified planning and operational direction of the Armed Forces. Within the Army, he has with foresight and determination put into effect far-reaching new concepts of military organization and devoted great effort to the modernization of the Army and to the readiness of Army forces as a powerful and effective component of our Military Establishment. Dedicated to the advancement of mutual security of the community of free nations, General Taylor has made an outstanding contribution to the high degree of combat readiness of other armies of the free world. In the performance of his duties, General Taylor has rendered service of the highest value to the Nation and has reflected great credit upon himself and our Armed Forces."

DWIGHT D. EISENHOWER.

MAXWELL DAVENPORT TAYLOR, GENERAL, U.S. ARMY, THE CHIEF OF STAFF, JUNE 30, 1959

As you relinquish the office of Chief of Staff of the Army, and retire from the active military service after 37 years in uniform, your friends and colleagues unite in this testimonial reflecting the high honor and true esteem you have earned during a distinguished career which has significantly enriched the great tradition of the U.S. Army.

Throughout the years, in assignments of increasingly grave responsibility and critical importance to the security of the United States and the worldwide advancement of the cause of freedom, you have consistently demonstrated outstanding leadership, extraordinary skill in command, diplomacy, and administration; unerring judgment and dynamic initiative, splendid vision and foresight, remarkable breadth of knowledge and understanding, magnificent moral and physical courage under all circumstances, and unswerving devotion to the highest concept of duty.

In World War II, you were one of the pioneers in the development of airborne warfare, and wrote a magnificent combat record as Commanding General of the famed 101st Airborne Division, which you led with brilliant success in the airborne invasion of Normandy, the airborne invasion of Holland and the Ardennes and central Europe campaigns. Prior to the time you assumed command of the 101st Airborne Division, you had received the highest commendation for the manner in which you carried out an exceedingly difficult and dangerous mission through the enemy lines as a preliminary to scheduled airborne operations in the invasion of Italy. During the Italian campaign, you also performed with admirable tact and ability notably delicate diplomatic tasks as Chief of Staff of the Allied Control Commission.

Following the war, you served with great distinction successively as Superintendent of the U.S. Military Academy, Chief of Staff of the European Command, first U.S. Commander in Berlin, and on the Army General Staff as Assistant Chief of Staff for Operations, and Deputy Chief of Staff for Operations and Administration.

Early in 1953, you assumed command of the 8th U.S. Army in Korea, and led it with outstanding sucess through some of the bitterest fighting of the Korean war. After the armistice, you supervised the building up of the Republic of Korea Army into a redoubtable 20-division force, and also initiated the Armed Forces Assistance to Korea program, which was a major factor in the rehabilitation of that war-torn land. Subsequently, you commanded all ground forces in Japan, Korea, and Okinawa as commanding general of the U.S. Army forces, Far East, and the 8th U.S. Army. At the time of your appointment as Chief of Staff of the Army, you were Commander in Chief of the Far East Command and the United Nations Command.

During the 4 momentous years you have served in the Army's highest military post, your manifold and fruitful efforts to increase its strength, effectiveness, and readiness as a major element of our Nation's defense have been of incalculable value. Among the achievements under your leadership in which you are entitled to take particular pride are: The formulation of the Army's comprehensive national military program, the implementation of a five-point program for improving our capabilities for limited war, and the development of a 5-year modernization program; the reorganization of all Army divisions under the Pentomic concept; the organization of missile commands; the establishment of the Strategic Army Corps as a highly mobile and powerful ready force prepared for immediate action in any part of the world; striking advance in all categories of Army missilery, and the development of space vehicles; the development of the Davy Crockett weapons system; success in securing the modification of restrictions seriously limiting Army development and utilization of missiles and aircraft; a marked enhancement of the quality and efficiency of Army personnel; the establishment of the Combat Developments Experimentation Center; the progressive strengthening and improvement of the vital Reserve components; the adoption of the Combat Arms Regimental System; the adoption of a new, lightweight rifle and machine gun; the stabilization of tours of duty, and the adoption of the new Army green uniform.

Throughout your service as Chief of Staff you have proved yourself a highly effective advocate of the Army, and a fighting champion of fully adequate national defense within and without the Military Establishment. You have greatly improved congressional appreciation of the Army's role and its requirements, and you have increased to a marked degree public awareness of the problem of limited war, and the importance of the Army's mission.

In every way you have set an example of courage, vigor, determination, professional capability, and force of character which will be a source of lasting inspiration to the entire U.S. Army. We join in wishing for you a long life, success in your every future undertaking, and the happiness you so richly deserve.

WILBER M. BRUCKER,
Secretary of the Army.

A STATEMENT OF THE ARMY'S PHILOSOPHY ON PARTICIPATION IN THE BUDGET PROCESS BY THE JOINT CHIEFS OF STAFF

A sound military posture for national security and the effective deterrence of war is composed of three interrelated and interdependent elements. These are (1) a national military strategy of flexible response to a wide spectrum of possible military actions against the background of a dynamic world situation; (2) agreed qualitative and quantitative criteria for force requirements in support of this strategy, as determined by the highest level of professional military advice; and (3) a distribution of the resources made available in the annual defense budget which is in consonance with the requirements of (1) and (2) foregoing. The latter is of vital import if our military strategy is to be meaningful, for it is the allocation of Defense resources which translates strategic concepts into military capabilities.

Normally, more than one service contributes to the strategic mission or tasks that must be performed. For example, the strategic nuclear retaliatory forces are composed of the Strategic Air Command supplemented by elements of the Navy, each using long-range aircraft and long-range missiles—the IRBM's and ICBM's—as the latter become operational. The continental air defenses of the United States are comprised of the interceptor aircraft of the Air Force, and the Army's surface-to-air missile units, augmented by the capabilities of the Navy and our Canadian allies.

From this, it would appear that the analysis of military requirements should be made on a defense-wide horizontal, functional basis, rather than in the vertically compartmented departmental structures of the Army, Navy, and Air Force. Historically, this has not been the case. The development of force requirements, weapons systems, and supporting budgets have been accomplished on a unilateral service basis, as have the subsequent budget deliberations in the higher echelons of the Department of Defense and the executive and congressional branches. This has precluded a consolidated military analysis of strategic missions and tasks relative to the nature of the threat to our security, and has resulted in an apparent imbalance in the types and quantities of forces and weapons systems required for a national military strategy of flexible response.

As such a functional, horizontal analysis is properly a joint military action, the Chief of Staff, U.S. Army, has proposed a procedure for the consideration of the Joint Chiefs of Staff whereby the Joint Chiefs would directly participate in the process of developing the defense budget. This would be done as an included element of their joint strategic deliberations so that they can provide to the Secretary of Defense timely defense budget recommendations which are directly related to and in harmony with the military requirements and forces which the Joint Chiefs consider as essential to support our national security program.

Under the procedure recommended by the Army Chief of Staff, the military forces required for a sound posture of national security and deterrence are broadly classified into five functional, operational categories. These are (1) nuclear retaliatory forces; (2) continental air defense forces; (3) forward deployed forces; (4) strategic Reserve forces including the provision of strategic air and sealift; and (5) forces for maintaining essential sea and air communications.

Concurrently with the development of joint strategic concepts and plans, the Joint Chiefs would develop and forward for the approval of the Secretary of Defense, criteria of sufficiency for the broad functional categories of forces listed above. These criteria may be described as the yardsticks which are necessary to measure the adequacy of each category of forces to fulfill its missions in the light of the changing nature of the threat and the agreed strategic concept for countering the threat. To illustrate, in event of general war the strategic nuclear retaliatory forces have the mission of attacking deep strategic targets. An analysis of the number of targets which should be attacked and the operational factors involved—including enemy opposition, assurance of suc-

cess on each target—together with consideration of dates of availability of more efficient new strategic weapons systems, would provide a calculated measure of the numbers and types of nuclear weapons and delivery vehicles required in this category of forces.

Using the approved criteria of sufficiency—as indexes of how much is enough to fulfill the missions of each broad category of forces—the Joint Chiefs of Staff would then prepare tabulations of the forces required from each of the military services and the necessary supporting logistical requirements. These forces tabulations would be grouped by the broad categories of forces earlier described, and arranged by priority of their strategic tasks within these categories. Following this, the force and logistical requirements would then be referred to each of the three services for the development of cost estimates within their respective fields of responsibility. These costed force tabulations, arranged by priorities in the five broad categories and in keeping with the strategic concept which they support, would then provide the Joint Chiefs with a firm basis for recommendation to the Secretary of Defense on the allocation of available fiscal resources.

The Army strongly believes that such a procedure which objectively relates the adequacy of all the Armed Forces to the support of the national policy for the deterrence of winning any war, general or limited, is an essential prerequisite to the economical achievement of a balanced, integrated military posture, based on the considered judgment of the Nation's professional military leadership.

Poison in Your Water—No. 137

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Smithtown (N.Y.) Messenger of April 9, 1959, entitled "New York State Can Make River Pure."

The article follows:

NEW YORK STATE CAN MAKE RIVER PURE

State Conservation Dept. officials are hopeful of lifting a long-standing ban on the taking of shellfish from the bottom of generously supplied Nissequogue River before too many tides.

A spokesman for the shell fishery management section of the Department said yesterday the promised 1-mile extension of outfall from Kings Park State Hospital into Long Island Sound should clear the river's mouth of pollution that has ruined shellfish crops in the waters for the past quarter of a century.

"We can't predict with certainty that the waters will be made pure," the State spokesman said, "but we have every indication to believe this will be the result."

Last week, Assemblyman Prescott Huntington of St. James advised the Smithtown Town Board that $400,000 has been included in this year's State budget to remove the hospital's sewage outfall line from the river.

Smithtown Supervisor Hamilton Potter hailed the announcement as good news. Last January, Potter joined L.I. State Park Commissioner Robert Moses in a plea to the State to do something about the sewage disposal. Moses said the fallout could possibly pollute waters around State operated Sunken Meadow Beach in Kings Park, a facility used last summer by about a million persons.

NATO's 10th Anniversary

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent statement of June 9, 1959, prepared by the Committee on Juridical Institutions of the Catholic Association for International Peace, commenting on the 10th anniversary of the North Atlantic Treaty Organization, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATO'S 10TH ANNIVERSARY

(Statement by the Committee on Juridical Institutions, June 9, 1959)

The 10th anniversary of the foundation of the North Atlantic Treaty Organization has been the occasion for an almost unanimous vote of confidence for its achievements and prospects by responsible students of contemporary international relations. It is eminently appropriate that the Juridical Institutions Committee of the Catholic Association for International Peace join in this vote of confidence.

As a military arrangement NATO has been, on the record, a marked success. It has held the boundaries of the non-Communist world in Europe, boundaries which were very unstable in 1949. Indeed, the shield of NATO has become a sine qua non of the defense arrangements of the free world while at the same time serving as a model for similar arrangements in other areas. The progress achieved in the NATO system with respect to interallied cooperation and the development of coherent strategy and tactics for defense against communism is by now well known. In fact, it is often remarked that the greatest proof of the efficacy of NATO is to be found in the persistent efforts of the Communists to break it up, efforts which, as we know, are increasing daily.

In the political sphere, NATO has dramatically widened the basic combination of allies—the United States, Great Britain, and France—to encompass 15 states. It has brought together former enemies and it has survived serious contemporary disputes between its members, as in the case of the Cyprus controversy. More important than the peaceful solution of such differences, NATO has clearly begun to develop the characteristics of an institution for the transaction of serious international business. The combination of free criticism followed by acceptance of compromises which has marked its debates, notably over the use of tactical nuclear weapons, shows promise of achieving that mixture of representation and responsible decision making which differentiates an effective organization of any kind from a mere collection of uncoordinated entities. Out of this process has emerged something which may turn out to be the greatest contribution of the organization—the "NATO way." The "NATO way" is that intangible psychological habit of cooperation which cannot be accurately defined or evaluated but which is nevertheless clearly identifiable as an indispensable basis for fruitful international action. As late as 1945 the wartime cooperation of the United States and Great Britain was hailed as remarkable. In 10 years of the most difficult efforts to maintain an espirit de corps in face of the frustrations of containing Communist imperialism, NATO has achieved a comparable unity in spite of difficulties of language, temperament, and national outlook.

We should not forget, moreover, the achievement of the NATO powers in the field of international law. The problems raised by the continued presence of foreign troops in the member states when they are technically at peace with the Communist world have been unprecedented. The solution in large measure of those problems through the development of the status-of forces-agreements system has been a singular contribution to international law while at the same time resolving many difficulties of constitutional law within each member state.

As an international organization, therefore, NATO has achieved in the fields of international security, diplomacy, international administration, and international law most of the things which the CAIP Committee on World Order and Subcommittee on Juridical Institutions, in their joint policy statement of May 1949 ("The U.S. and the North Atlantic Pact") hoped it would achieve. In large measure it has filled the breach left by the collapse of the original United Nations security system resulting from the reflection of East-West conflict in the Security Council. Moreover, NATO has vindicated the faith of the framers of the CAIP statement of 1949 by remaining within both the spirit and the letter of the provisions of the United Nations Charter for collective self-defense.

This is not to say that NATO does not have room for improvement. There is a constant problem of maintaining the determination of all members to keep the shield strong. It is sometimes difficult to persuade a member state that it must forfeit ephemeral advantages promised by independent action in order to contribute to the staying power of the organization as an ever-present, every-ready defense system. States which are grimly determined in the face of a threat such as the Berlin crisis tend to lose their interest when the Kremlin shifts its tune to a more mellifluous strain. As in the United States, the temptation to sacrifice defense for budgetary considerations is also ever present. Thus, the real strength of NATO's forces, while enough to give an aggressor pause, is far below realistic levels, and there is some question as to whether its chain of command has yet been sufficiently simplified to permit prompt and effective action.

As we consider the overall picture of NATO, however, it may well be that its greatest contribution has been and will be its realization of a higher unity within the area which comprised a good deal of ancient Christendom. It was from this Christian community that the institutions of modern international law and organization largely developed. In a world where respect for international law and organization is retarded by deep ideological rifts, there appears to be good reason to turn to this community for inspiration and progress in building a true international juridical order. Jacques Maritain has warned us that it is illusory to reach for a higher level of unity among governments until we have that psychological, indeed, spiritual, unity among human beings which must always precede a successful political commu-

nity. We may hope that NATO, in addition to its services as an international security organization, will contribute increasingly to the attainment of such a higher spiritual unity in the free world.

Centennial Celebration at Waukegan, Ill.

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mrs. CHURCH. Mr. Speaker, it is fitting that due notice be given and due honor paid to the city of Waukegan, Ill., which has just celebrated its 100th anniversary. Its glorious centennial celebration, entered into with glad hearts by present inhabitants and many from afar, covered 10 days of significant events commemorating the growth and progress of this great city.

Thoughts turn appropriately to the early history of Waukegan. Excavations reveal that the city lies in a region first populated by the Moundbuilders. The earliest historical reference, however, points to the possession of the land by the Potawatomi Indians who came down from the Green Bay territory with Father Marquette in 1674. Legend says that the area was also visited by LaSalle and Hennepin in 1679. Old records indicate that a French trading post was established at Waukegan about 1695, and a 1783 map of the Northwest Territory shows only two points on the western shore of Lake Michigan—Chicago and Little Fort, the name which Waukegan bore during the first 8 years of its corporate life.

Lands around and including the present Waukegan area were ceded to the U.S. Government by the Indians in 1829, and white settlers began moving in during the 1830's. By 1847, Little Fort had 300 dwellings and business places and a population of 1,234. In the same year, the Congress appropriated $4,000 to build a lighthouse at Sheridan Road and what is now Water Street, atop the bluff overlooking Lake Michigan.

In 1849, the citizens voted to change the name of the village from Little Fort to Waukegan. In 1859, by an act of the State legislature the village of Waukegan was given the status of a city under a special charter, providing a set of powers and responsibilities for self-government.

Today, Waukegan has an estimated population of 52,000. Some 25,000 persons are employed in 100 manufacturing enterprises in the immediate area and 1,027 retailers do business in the city.

Serving some 17,800 families in the Waukegan area are 39 churches of all faiths. In the city of Waukegan itself, under the jurisdiction of the city school system, there are 16 K–6 elementary schools and 2 junior high schools. The existing township high school currently is in the process of building a second high school building on the city's west side. In addition, there are five parochial elementary schools and one parochial high school. Waukegan residents have a total of more than 19,600 telephones and the number of motor vehicle registrations within the city total 13,000.

The Waukegan of today abounds with vitality and vision. The rapid growth of industry and the expanding population, including sturdy representatives of many nationalities, cultures, and faiths, point to phenomenal future development and progress. Above all, its possession of a harbor available for use as an ocean port following the completion of the St. Lawrence Seaway indicates to all of us that no limit can be placed on the future of Waukegan. Reference can also be made with gratitude to the part that a great newspaper, the Waukegan News-Sun, has played and will continue to play in the sound development of the city. And those of us who know this city and its people rejoice in the assurance that despite the great growth and development, its essential character as a city of homes, of schools, of churches, where life is good, will never change.

To mark the 100th year of Waukegan as a city, the civic, religious, industrial, and military groups have worked together to make the centennial celebration one to be long remembered. Although verily every inhabitant seemed to take individual responsibility, the actual leadership of the celebration was entrusted to the following:

The president of the board of directors and of the committee chairmen was Glenn G. Boyd. The active general chairman was Richard Kennedy. The following alphabetical list of other officers and committee chairmen has been sent me: Taisto (Ti) Aho, A. H. Anderson, Rosemary Anshuler, Oranda Bangsburg, Mrs. Walter Barndt, Thelma Beaubien, Robert Beckmann, Gunnar Berg, William Bergmann, Mrs. Harry Breger, Theresa Brown, Don Buhmester, Frederick Burgess, Ed Callahan, Dr. George B. Callahan, Leo Carvis, Augie Christensen, Helen Christenson, Tony Christopulos, Seymour Cohn, Mrs. Bess H. Cook, Dolly Curlee, George Davison, Bert Diamond, Pat Durkin, Jack Ehemann, Jack Emerick, Harris Estes, John Faubel, Harry W. Finch, Richard Flagg, Ellis E. Fuqua, Mrs. Gus Gorgan, Otto Graham, Ross Grana, Glenn A. Gunderson, Ed Holmberg, Jr., Robert Hutchins, Joe Irvine, Stan Jaronik, R. L. Jones, Merle M. Kauffman, Charles H. Kaye, D. F. Kirk, Mrs. Garfield Leaf, Mrs. William Lewis, Mrs. Max Litschin, Norman Litz, A. B. Marchant, James W. McCulla, Stewart McDonald, Cecil Miller, J. L. Miller, Robert Morris, Robert Morrison, Boyd Mulder, Fred Nicola, Herman Nies, William O'Meara, Charles Parsons, Leo Porett, Marge Porter, John Prowett, Joseph G. Rayniak, Marvin Ross, Mayor Robert Sabonjian, Bill Scott, Tom Shroeder, Mrs. Gordon Simmons, Fritz Sorenson, James Stiles III, Henry Tonigan, Larry Turner, Lloyd Van Deusen, Bob Vogel, Robert Weismantel, Brad West, and Robert Williams.

The over 2,000 citizens who worked on one or more centennial committees unfortunately cannot be listed in full.

Months were spent in preparation, so that during the glorious 10 days the presence of bearded gentlemen and hoopskirted ladies in Civil War costumes appeared to be natural inhabitants of present-day busy streets.

The opening day, Centennial Queen's Day, saw the premier performance of the mammoth historical spectacle, "By These Waters," portraying in drama, comedy, and music the highlights of Waukegan and Lake County history.

The biggest parade of the centennial, featuring floats, marching units, drum-and-bugle corps, and antique vehicles of all descriptions, highlighted Lake County Day on Saturday, June 20.

On the morning of Sunday, June 21, Religious Dedication Day, churches of all creeds in the Waukegan area observed the centennial with special services. An all-community, interdenominational observance, honoring the religious growth of the community and dedicated to "the Glory of God, the Fatherhood of God, and the Brotherhood of Man," was held that evening under the stars at Weiss Field. At this centennial interfaith observance, it was my privilege to address the gathering.

Young America Day, on Monday, was, of course, marked by events for the youth of the community and was climaxed by a young America street dance and gigantic fireworks display.

On Tuesday, June 23, Waukegan celebrated All America Day, with national festivals, centennial folk dances, and music.

Armed Forces Day on Wednesday was highlighted by military exhibits of equipment, materiel, and missiles and a giant military parade. The U.S.S. *Worman* in Waukegan Harbor welcomed the public aboard. The Lake County Council of the Navy League of U.S., J-M Club sponsored international friendship night in honor of the foreign officers representing the Armed Forces of the free nations of the World.

Thursday, Pioneer Day, brought back to Waukegan one of its favorite sons, Jack Benny, who was, of course, most heartily welcomed and acclaimed.

Friday, Industrial Progress Day, offered historical exhibits and window displays featuring the old, the new, and the future.

Saturday, June 27, was dedicated to the Waukegan of tomorrow. A time capsule was buried with appropriate ceremony on the corner of Courthouse Square. Above was placed a marble slab with a bronze marker identifying the capsule and stating that it would be opened at 11 a.m. on June 27, 2059. The steel capsule contained many documents and mementos of present-day activities, together with personal notes from any citizen who wished to include in the capsule a message of his own choosing, directed, if desired, to descendants of that day.

Probably the spirit of this centennial was best expressed in the following striking words of Robert Hutchins of the Waukegan News-Sun:

Waukegan, Ill., this year is observing its 100th anniversary as a city. The centen-

nial celebration, however, is not one in the sense that it is the anniversary of the arrival of the first settler, or the original organization of a group of people into a corporate community.

Rather it is a recognition that a government of laws can be far more enduring than any government of men. It is the charter which originally created Waukegan as a city that is 100 years old this year. Parts of basic concepts contained in this charter, granted by the General Assembly of the State of Illinois on February 23, 1859, still govern unique and vital aspects of the municipal government of Waukegan.

It is a recognition also that the drafters of the charter and the citizens of Waukegan who subsequently approved the charter in a public referendum on March 21, 1859, had built well, and had provided for their descendants and those who came to the city at a later date a basic framework of government that has allowed her citizens to grow and prosper. * * *

Today, the more than 50,000 citizens of Waukegan are looking backward to recall the varied cultural heritage of the American people of this city. And at the same time, they are looking forward to a future bright with opportunity for growth—a city which stands in the heartland of America, but also, by reason of its location on the Great Lakes, stands at a new gateway to the world.

Chance To Display Unity

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. FASCELL. Mr. Speaker, we all hope fervently for the success of the Geneva talks which are scheduled to resume on July 13.

Many judgments have been passed as to how successful any meeting at the summit would be, based upon accomplishments at Geneva to date. One plan has been set forth to hold a meeting at the NATO foreign ministerial level prior to resumption of the Geneva meetings, in addition to the consultations which have been carried on within the North Atlantic Council continuingly. The object of such a meeting would be to further unify the Western powers' position in the Russian eyes. In this connection, I set forth the following noteworthy and thoughtful editorial from the Miami News of Miami, Fla.:

CHANCE TO DISPLAY UNITY

There is much merit in Italian Foreign Minister Giuseppe Pella's proposal that the foreign ministers of the North Atlantic Treaty Organization countries meet before the Geneva talks are resumed July 13.

Such a meeting would afford an excellent opportunity for a demonstration of Western unity at a time when the Soviet Union is apparently gambling on disunity.

There are some good reasons why the Russians believe the Western alliance is coming apart at the seams. At the Geneva talks on the Berlin controversy, the United States, Great Britain and France were not always of one mind. This must have been evident as Soviet Foreign Minister Andrei Gromyko talked separately with the allied foreign ministers.

Since the recess in the Geneva talks, Secretary of State Christian A. Herter has told the American people that nothing has been yet accomplished at Geneva. He ruled out a summit meeting based upon Geneva accomplishments.

On the same day Mr. Herter spoke, British Prime Minister Harold Macmillan told Parliament that there had been a degree of success at Geneva. He said he was hopeful of a summit meeting. Foreign Secretary Selwyn Lloyd subsequently reported on the Geneva talks in a similar vein.

A NATO foreign ministers' meeting before July 13 could ratify the West's position and serve notice on Soviet Premier Nikita Khrushchev that the whole West supports the Big Three position.

After all, if war should come over Berlin all the NATO nations will have to fight it.

Atomic Waste Disposal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. THOMPSON of Texas. Mr. Speaker, the proposal by the Atomic Energy Commission and other Federal agencies to dispose of atomic waste material by dumping it into the Gulf of Mexico has caused great uneasiness among the people who live along the gulf coast of Texas, together with their representatives.

Atomic energy and the resulting radioactive waste material are fearsome and comparatively unknown quantities to the layman. He knows only that they contain something extremely dangerous and with far-reaching consequences.

When the proposal to dump the waste into the gulf was first made, I joined with many colleagues of mine in strenuously objecting to it until the time arrived when the Atomic Energy Commission and other Federal agencies could thoroughly dispel the concern of the general public. That time has by no means arrived.

The feeling of the more-or-less helpless general public is reflected in an excellent editorial appearing in last Sunday's the Galveston News. I commend it to the careful consideration of Members of Congress and of the Federal agencies involved.

The editorial follows:

ATOMIC WASTE DISPOSAL

The problem of the disposal of low intensity atomic industrial waste has become one of prime interest to the people of Galveston, and the entire nation.

The fact that the Atomic Energy Commission may license a Houston firm with permission to deposit atomic waste material in the Gulf of Mexico some 150 miles offshore from the Texas coast has brought complaints from Galveston and other sources.

Even scientists are by no means agreed about various facets of atomic fallout, waste disposal, and certain harmful effects of ordinary radiation from radioactive substances.

It is only natural, therefore, that the masses, public officials and some of the atomic experts themselves should feel doubtful about the advisability of dumping radioactive material into the ocean anywhere, let alone fairly close to the shores of the Gulf.

Even a layman well knows that deterioration of almost any material containing atomic waste matter is certain to result in a matter of years or decades if it is submerged in salt water, or even near it.

Who wants to take a chance on the judgment of some scientists to the effect that by the time the proposed containers deteriorate, the atomic waste matter will have lost most of its lethal effects?

And if our own gulf fisheries and other activities and even lives were not immediately endangered by the disposal plan, how does one think the people of northern Europe, whose climate is tempered by the Gulf stream, would feel about taking a chance on this lethal material being deposited in their "weather-conditioning" current.

The Government of Mexico was quick to join Texas officials and other doubters in opposition to the Gulf disposal plan now before the Atomic Energy Commission. Doubtless, European lands will be heard from next.

On behalf of at least one interested element of our population, the people all along the Gulf coast, we urgently suggest that the AEC and other responsible authorities of our Government give the atomic waste disposal problem a great deal more study.

Amending Mutual Security Act of 1954

SPEECH
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. MEADER. Mr. Chairman, I rise in support of the amendments offered by the gentleman from Virginia to require that the General Accounting Office and congressional committees be permitted to have access to the files and records of the International Cooperation Administration with respect to the administration of the foreign-aid program.

My record has been clear in asserting the right of the Congress to obtain information from the executive branch of the Government. I have denounced the growing tendency in the executive branch of the Government under both Democratic and Republican administrations to withhold from the Congress and its committees information concerning its operations.

There has been an effort on the part of spokesmen in the executive branch to establish by assertion a so-called privilege in the executive to withhold such information. I have discussed this matter extensively in an exchange of correspondence with the Attorney General, and my remarks will be found in the CONGRESSIONAL RECORD as follows: March 10, 1958, pages 3280–6; March 31, 1958, pages 5239–41; April 16, 1958, page 5864 and page 5877.

His Statesmanship Is Lauded—Dwight Eisenhower Becomes Skilled in Presidential Role

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following article by Holmes Alexander, entitled "Dwight Eisenhower Becomes Skilled in Presidential Role," which appeared in the Rockford (Ill.) Register-Republic of June 29, 1959:

HIS STATESMANSHIP IS LAUDED—DWIGHT EISENHOWER BECOMES SKILLED IN PRESIDENTIAL ROLE

(By Holmes Alexander)

WASHINGTON.—Two questions loom for the 1960 campaign—and the second of the two is more important than the first. Who's going to be elected? Where will the country find as good a President as Dwight D. Eisenhower has turned out to be?

Let us admit that Mr. Eisenhower started rather shakily as a campaigner and as President—but as of today he has become the unsung master of his trade and a champion in the game which he took up in the evening of an entirely different career. If this fact is not more often reported from Washington, it is because the focus is on the problems rather than the personality, and because most of us are usually too busy chopping wood to break into rhapsodies over the forest.

My own eyes were lifted for the longer view in recent months because both living former Presidents have lately visited this city. Mr. Truman bounced in and out, brushing off a White House invitation to dine, and testifying like Sir Oracle before a Senate committee on the subject of the 22d amendment repealer. Mr. Hoover came in and went quietly, with wise, grave words at the dedication of the Robert A. Taft memorial. Mr. Truman insisted upon his historical greatness with every syllable and gesture. Mr. Hoover contended that "greatness" of men does not much matter in a true republic.

Both men served to put the same conviction in the observer's mind. It was this: While Presidents Hoover and Truman served well enough in the White House, no living American has seen a better President than Dwight Eisenhower has been.

It is a conviction which few of us here could have mustered a year or two ago. Also, it is a belief which might not assert itself in the mind of a reporter who saw and heard President Eisenhower day after day. My own work is such that I catch only every third or fourth press conference and hardly go to the White House more often than once a year. It happens that I was just back from a fast dash to West Germany when I attended the June 17 conference and had not laid eyes on Mr. Eisenhower for some time.

For these reasons the impressions were firmer and more clean-cut than would otherwise be probable. Barely once or twice in the question-packed 30 minutes did Mr. Eisenhower misspeak himself, as he so frequently used to do. None of his sentences lost their predicates and swam away, as often used to happen. He did not duck any questions, and did not take off in a haze of moralizations. On the contrary, the President not only fielded every query within reach, but he did something that Mr. Truman was incapable of doing, and which Mr. Hoover evidently did not attempt.

Mr. Eisenhower gave to a majority of his answers a quality that a literary critic has called high seriousness. The responses went beyond bare fact. They became interpretive, revealing, philosophical commentaries on Presidential procedure and constitutional affairs. Paraphrased for the sake of brevity, here are some samples of the President's ideas—points which possess, I think, an actual historical, textbook value in their separate fields:

What should be the Federal Government's position when a labor-management dispute threatens to tie up a basic industry, such as steel? The President did not care for the grandstand play of calling union-industry representatives to the White House. He said there was an unfortunate historical precedent for this sort of thing which had ended in a Government attempt to seize the steel industry.

Later, the President responded with beautiful graciousness to a question and turned his reply into a constructive idea. St. Louis Post-Dispatch Correspondent "Pete" Brandt asked if governmental facilities could not be used to the public straight on rival claims by union and industry as to profits, price structure, and productivity. Mr. Eisenhower called this "the most intelligent question" he had heard on the subject. The President added that he would try to follow up the suggestion of Government truth-seeking.

What was the significance of a Communist fighter plane attack upon an American Navy bomber off Korea? The President declined a chance to demagog by saying: "I always try to stay away from motives."

This was his statesmanlike way of saying that even a Communist action should not be judged without evidence.

What were the prospects of a summit meeting? The President deplored the idea that modern heads of state should meet (as Russian Emperor Alexander and French Emperor Napoleon once did, he noted, on a raft in the middle of a river) and attempt to settle the affairs of the world. He pointed out that the American head of state had regular duties at home, and that the foreign ministers of all free countries were clothed with sufficient authority to deal with matters which came up at foreign ministerial conferences.

These are only a few of the several nuggets of genuine political analysis which President Eisenhower dropped at a single press meeting. A year or two ago he was not capable of such a rich yield. Mr. Eisenhower, toward the end of his tenure in office, is reaching a high and unexpected plateau of performance.

American Educational System

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. MEADER. Mr. Speaker, the education of our children is one of the most important activities of government. By and large, this has been a responsibility of the States and local governments with minor assistance from the Federal Government in the form of grants.

Recently I received a letter from Mrs. C. L. Faust, a resident of Jackson, Mich., who arrived in this country from Germany in 1955. Mrs. Faust completed her education in German schools.

Not long ago one of Mrs. Faust's sons sought to take an overload of five subjects instead of the standard four at Jackson High School. Before he was permitted to do so his parents were required to give their consent because such an overload, said school officials, might result in a breakdown. The episode stimulated Mrs. Faust to write a letter to the principal of the Jackson High School expressing her views on the American educational system in the light of her own personal experience in Germany.

Mrs. Faust's letter is so well written and contains such a logical and thoughtful analysis of our educational system that I believe it should be brought to the attention of my colleagues as well as educators and parents. Therefore, I incorporate it at this point in my remarks.

APRIL 11, 1959.

Mr. W. EARL HOLMAN,
Principal, Jackson High School,
Wildwood Avenue, Jackson, Mich.

DEAR MR. HOLMAN: This letter is a belated expression of a series of thoughts, retained and considered for a long time, and brought out yesterday upon my husband's having to sign the statement, required by high school, that we will assume full responsibility for our son Rainer's taking on the overload of five subjects instead of four; for the necessity of study at home; and for possible failure or breakdown.

I do not intend this to be unconstructive criticism, but sincerely hope that you may have an opportunity, as the head of the largest school of the city of Jackson, to take this letter with you to one of the educators' conventions, held regularly in the State, and present a (former) foreigner's view of a problem that has never as yet surpassed the state of discussion.

To introduce myself, I was born and raised in Germany, living there until I came to this country in January 1955 with my mother and two sons of 10 and 11 years of age. Purpose of the change—to give these two boys the chance of the great opportunities in the widest variety of fields of endeavor possible, a matter, which became more and more of a problem in small Western Germany with the steadily increasing population in its limited geographical area. There appeared to be no logical outlet to take care of such organic growth. We have found a most happy new home in these United States and have become citizens last summer. And there is only one item that mars that pleasant picture—the schools. Knowing what I know now about our U.S. school system, and disregarding every other wonderful aspect of our lives, this is the point that set me to wonder whether I should not have waited to take this great step into emigration until both my sons had graduated from their German high school.

To give you a picture of the German educational system, here is a small outline of the types of schooling established over there. And, before giving these details, I must say that every child, unless entirely ungifted in the fields of learning, or uncared for (the latter is very rare) chooses one profession or another, be it academic, clerical, mechanical, manual, or other.

1. Academic type of education: (a) 4 years of grade school; (b) at age 10, rigid examination for admission to high school (9 years), graduation at age 19; (c) university.

2. Business type of education: (a) 8 years of grade school, (b) 2 years of business school (in all business fields, such as accounting, clerical, etc.).

3. Girls' full education without academic aim: (a) 4 years of grade school, (b) 6 years of high school with graduation examination.

4. Education for trade (skill—plumber, electrician, steelworker, etc.): (a) 8 years of grade school, (b) apprenticeship with proper examination, and then up in the trade from there.

The high schools vary in type, adapted to the different types of academic requirements. For example, young people aiming to become lawyers, doctors of medicine, ministers, etc., will chose a school which offers such languages as Latin, Greek, Hebrew, and so forth; others will choose a school that offers such languages as Latin (which is almost impossible not to find in a high school), English, and French. Coeducation is quite rare and rather limited to smaller towns and villages.

In every type of school, mentioned above, every subject is mandatory, and the number of subjects is gradually increasing through the years, reaching its high in the last 3 years of high school (academic career). I am attaching a detailed curriculum of my own school, which should be of great interest and concern to any educator in this country. And I wish to add that I am a happy and very healthy woman, in no way overworked at any time by this pattern of upbringing. I am running a large home with 3 teenage children and am a full-time secretary. To prove the point—in spite of this seemingly rigid schedule of learning, we had lots of time to play. In summer, school was held from 7 a.m. to just before 1 p.m.; in winter, from 8 a.m. to just before 2 p.m.—no unnecessary studyhall or lunch periods. We brought a sandwich and some fruit for the recesses, and had opportunity to supplement this with milk or chocolate milk in a very pleasant place provided therefor. I was home by one-half after 1 or 2 p.m., depending on the season, had my main meal of the day (not hotdogs or hamburgers), took a brief nap, or just did nothing at all for an hour or so, then sat down to 2 or 3 hours of studying, depending on the amount of assignments. Then I was free to play tennis, swim, get out on my bicycle, skate, play pingpong or took music lessons. The evening meal was served at about 7 to 7:30 p.m.; in between there was tea and sandwiches. Bedtime was arranged by age: 8 p.m. up to age 12; 9 p.m. up to age 14; 10 p.m. until end of school years, exceptions only for social events. Dancing school started at age 15; "coming out" officially at age 18.

There is one thing that, it seems to me, is the deciding factor in the comparison of the schools of belief—the European and the American. The concept of freedom, the most cherished basis of our U.S. way of living. It is my strong conviction that, until maturity, no human being is fully equipped for what they believe is freedom. I rather think that freedom with proper and inconspicuous control is the right solution for a growing youngster. And this is so easy to achieve (exceptions always considered), when education begins the first day of life, not at age 8, when the fertile soil has dried out and, suddenly, what was right for years, is supposed to be wrong.

Any type of commodity in life comes too easily to an American child. Most anything that is a precious value to a European kid, is a self-understood, everyday thing to an American child. At age 2—for a boy—it's a tricycle, age 5, a bicycle, replaced by new and faster ones, as they grow, at 14, a scooter, at 16, a car. In between, cowboy games, BB guns, comic books, television, records, horror movies, steady going and—boredom. If a European child's parents are well to do enough to provide for some of these things, they are still appreciated as a great gift. But the young minds are occupied with such a great variety of things that the constant desire for being entertained and kept excited will never exist to such extent.

Europeans, at an average, do not lead a Spartan life at all. They know and like luxury as well as we do. But they own one precious property—discipline, not only of the body, but also—and significantly—discipline of the mind, a trait I find sadly lacking in the United States. Also, from childhood on, they learn to appreciate the deep values of fine art—such as true music (not rock 'n roll), poetry, and the like, which deepen character and both broaden and cultivate the mind.

Most certainly, there are outstanding, excellent, good, fair, average, and below-average people everywhere in the world; but I feel, if a country, as the United States, by virtue of its almost unlimited resources, becomes a born leader of the globe, it must not neglect the great and profound truth of the definite obligation that goes hand in hand with the assumption of such leading status. Such country must produce the human intellectual basis, capable of carrying on the leadership, and not resting upon the glory of pioneer generations who made all of this possible by their great spirit.

As it is now—instead of promoting the gifted students in our schools, and trying to educate those less qualified to the best possible extent, the intellectually inclined student material is pulled down to a degrading average level, that proves fatal to any individual ambition and initiative a youngster can muster on his or her own (and I have proof of this in three children of my own, 14, 15, and 16 years old).

There is so much discussion at all levels about the teacher problem. There are not enough teachers, and those we have are underpaid. Result—who wants to make teaching a profession, who plans to lead a successful and gratifying life?

The financial problem first. I strongly believe it would be a great step forward if, in building new schools, architects and planning educational institutions would consider reducing the extent of almost luxurious comfort provided for the pupil, such as huge classrooms, studyhalls, lounges, cafeterias, beautiful swimming pools, etc. I know by personal experience that such things are not a necessity. Our high school was large and beautifully designed, perfectly serving its primary purpose—simply to be an efficient institution of learning, and we all were perfectly healthy and happy schoolkids. Our school did not have a pool—how terrible. Instead, we held our school swimming at a pool, strictly reserved and built for schools of the city (population 360,000), in an ultramodern swimming-pool building, owned by the city. In the school building, each class is assigned a permanent classroom to which the teachers come for the various subjects. The only times we moved were to biology, chemistry, physics, music, and art class, the first three built in amphitheater shape and equipped with laboratories. Even though we were girls, our gym held every type of athletic and gymnastic equipment, and we had to use it, too—good or bad at it, we had to. In summer, it was track—dash, long-distance run, shotput, javelin, broad and high jump discus, all sorts of ball games, etc. And we did grow up to be graceful, but strong and well-disciplined, too, and we did not have to be chauffeured every place we had to go—we walked or used the bus or a streetcar. I should like to say that my entire growing life never knew a dull moment. (Overloaded in learning, by U.S. standards, as I was then, I easily won my first junior championship in tennis at age 14. I obviously was strong enough and had time to train.)

The other teacher problem is—how can youngsters be taught to the extent mandatory, when the system does not provide an education that could possibly produce the caliber of teacher needed for such purpose?

My personal thoughts of improving matters are:

1. Go right ahead and overload the kids with a reasonable, and increasing, number of subjects. They can very easily stand it.

2. Get away from the electives. Kids want to play all the time; but once they get used to a certain pattern of living—learning and playing, they most easily adopt it and get along fine.

3. Break down the educational system into the proper categories that suit the true needs of the economy of the country and of the different personalities.

4. Build a little more modest schools, rather than the shiny exhibition places we now get, and divert the money saved into the teachers' salary channels.

5. Break down the vacation periods into a more suitable pattern. The very basis of our present-day vacation schedule has, I am sure, to do with a rather outdated concept of helping in the harvest. Comparing the number of vacation weeks in the United States and in Europe (with small variations, of course), they are the same and were as follows, as I remember them:

[In weeks]

	United States	Europe
Fall vacation		2
Christmas vacation	2	3
Easter vacations	2	3
Whitsuntide vacations		1
Summer vacations	11	6

It is easy to see that the European scheme provides for a much better balanced learning-resting tenure.

Since about 1 year now, both my sons, who are 15½ and 14 years old, have been worrying over the fact of what they might finally decide to make their career. They had to take "aptitude" and "interest" tests. They have been urged, since age 12, to elect their subjects to well-found their future. Just look at what I had to learn with no choice at all; but, at age 19, I could sit down comfortably, well-equipped for any career, and could choose at that point just what that career would be. I could go through my school years, entirely unburdened by worries about the distant future—how can an adolescent definitely make up his or her mind about such things in those years of much publicized changes, restlessness, and growing pains? If he or she does, 3 years later, their thinking and their physical makeup may have changed completely. One may want to become a lawyer instead of a mechanical engineer; another a steelworker instead of a carpenter. Then what? The curriculum had to be built around the idea of a 13-year-old and will no longer fit that of a 17-year-old. Exactly, how much unnecessary pressure on youngsters' minds could be eliminated by making them do things, rather than letting them choose them. Even though they pretend to be so free and so independent, you might find that they are quite glad to have decisions made for them, even though they do not consider it very smart to admit it.

This is a rather extensive discourse. But the card of "assuming responsibility," signed for our son yesterday by Mr. Faust, gave me a very concrete basis for finally saying out loud—as may be seen by the carbon copies of this letter—what has bothered me ever since I came to this country. I am one

small voice only, and convenience is a great foe; but I do not give up hope for betterment, as I believe firmly that the situation our "fine" world is in, warrants more effective action than committee discussions and House-floor filibusters can provide.

Thank you for reading it all. It is but a brave effort to put across something that seems to be obvious to most progressive countries except our own.

Sincerely,

ERIKA F. FAUST.

CURRICULUM OF HIGH SCHOOL (CHEMNITZ, GERMANY) FOR LAST 3 YEARS (GRADUATION AGE, 19)

Six school days a week; all subjects mandatory; additional subjects may be taken, if desired.

Five recess periods during the morning: Three, 5 minutes each; two, 20 minutes each. Two afternoon periods of 2 full hours each.

(a) Laboratory (biology, chemistry, or physics).

(b) Athletics.

Subject and number of periods[1] *in the week*	
German	4
Latin	4
English	4
French	4
History (of the world), civics	2
History of arts	1
Geography	2
Biology (plus two afternoon laboratory periods)	2
Chemistry (plus two afternoon laboratory periods)	2
Physics (up to and including astral physics)	2
Mathematics (up to highest degree of mathematics)	5
Philosophy (last year only)	1
Religion (all-of-the-world creeds)	2
Music	2
Art	1
Athletics (plus two afternoon periods)	2

[1] Every period was 50 minutes long.

Member Bank Reserve Requirements

SPEECH

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

Mr. HIESTAND. Mr. Chairman, yesterday, and to some extent today, the membership, I am quite convinced, enjoyed a good deal of the discussion. I am sure they appreciated it. The distinguished gentleman from Texas was in wonderful form. He made a number of rather shocking and astounding statements, some of which may have been considered as misleading or, let us say, easily misunderstood, and some not quite in accordance with the facts. Because of the apparent enjoyment of the membership, I am a little hesitant to set the facts straight and thus disillusion the Members.

But let us have no misunderstanding. Some of his statements sound so plausible I am convinced he believes them. The gentleman has repeated them so often he has come to believe them himself. I credit him with complete sincerity, but I charge him with great misunderstanding.

Let us examine some of the facts. The very distinguished gentleman has repeatedly asserted that these $15 billion worth of U.S. securities have been paid for and could be retired. Certainly, Mr. Chairman, they have been paid for, but who paid for them? By whom were the paid for? Why, the people who bought them, and the people who bought them paid the Treasury for them. The Treasury does not own them. The Treasury has sold them, the Treasury has received the money. Of course, if any one of the bonds or securities had been handed around among various dealers, from dealer to dealer, they would have been paid for, several times, maybe 10 times. But still the Treasury does not own them because the Treasury has not paid for them. The Federal Reserve Bank owns them because they have paid for them. That statement that we want to retire them because we own them is quite a general statement, and it is misleading because the Treasury does not own them. The Federal Reserve Bank owns them. I think we should get that clear. The Treasury has been paid for them.

The gentleman said that they could be transferred simply by a bookkeeping transaction and canceled by the Treasury. Well, now, Mr. Chairman, that is quite a statement. The Federal Reserve Bank like any other bank has to stay in balance and solvent. It cannot give away $15 billion worth of assets unless it can also reduce its liabilities by a like amount. It would be bankrupt overnight. Those securities, the $25 billion that they hold plus the $20 billion gold certificates, are needed to back up the $27 billion worth of Federal Reserve notes—that is the cash currency that you saw—plus $20 billion worth of reserves on deposit. These assets are needed to back up the liabilities.

But again, viewed from the Federal debt angle, if we could pay $15 billion worth of debt simply by printing that much unbacked currency, why not do it all? Why not print $280 billion worth? Just think of the savings in interest and the headaches and the grief and everything. We have today some $28 billion of currency in circulation outside of banks. If we started the printing presses and printed $280 billion worth and put it into circulation, the present dollar would quickly drop to less than a dime in purchasing power. It happens that is a coincidence between the $280 billion debt and the $28 billion worth of present currency outside of banks.

Remember in this matter of depreciation of the currency the German prewar mark and the French franc, the Italian lira, and Brazilian cruzeiro, the Chilean peso, and, yes, recently the Bolivian boliviano. True, the Federal Reserve does not need just now all of the $26 billion securities it has as a backup, but it must have a margin for safety and a surplus. They must have a generous margin of safety because we have got to be sure of the future.

But, there is another very important function of the Federal Reserve, for the Federal backlog of securities, and that is the most important operation known as the open market operation. Suppose with the present boom—and it is a small boom, shall we say, but suppose the present boom perhaps by uncontrolled Federal spending or an uncontrolled wage price spiral should turn into a really wild spiral of inflation. How then can it be brought under control? Raising reserve ratios? Yes. Stiffening rediscount rates? Yes. But, more than either of these, selling securities in the open market. For every billion dollars sold on the market a billion dollars goes out of circulation into the Federal Reserve bank. A billion or two taken out of circulation will go a long way toward controlling a wild spiral. The less money there is in circulation in proportion to the supply of goods and services, the more the dollar is worth and the sooner prices and the cost of living stop jumping.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. HIESTAND. I yield to the gentleman from California.

Mr. McDONOUGH. The $15 billion referred to here, in order to cancel out those bonds, would take out of circulation $15 billion worth of currency, would it not?

Mr. HIESTAND. It would either have to do that or something else like it.

Mr. McDONOUGH. Well, if it did not take out $15 billion worth of secured currency, it would then put in $15 billion of unsecured currency.

Mr. HIESTAND. Yes.

Mr. McDONOUGH. Then we would have two types of currency in the market: $15 billion of greenbacks unsecured and the balance would be secured currency.

Mr. HIESTAND. The gentleman is exactly right. I thank him for his contribution.

Now, the gentleman from Texas claims we would save money by the transfer and cancellation of these bonds. But, would we? The bank today turns over 90 percent of its earnings to the Treasury annually. Furthermore, since there would be little, if any, transfer of securities, there would be no perceptible reduction of earnings.

It is claimed that such a reduction of reserve requirements would be a sudden bonanza in profits to member banks. True, it would enable banks to accept more deposits and make more loans. But, where will the deposits come from, other than from the gradual growth of the economy, a bank's loans and investments cannot grow faster than its deposits. Furthermore, to assure liquidity a portion of its increased deposits must be invested in Government bonds. Those have to come from other sources than the Fed. Growth in deposits and investments requires increased payroll

and facilities. Rising costs have been keeping pace with growth and the earnings ratio all through this growth has held close to an even 8 percent of capital accounts. Increased income taxes of member banks—that is, at 52 percent—would gain the Treasury as much as any slight loss of earnings from the Federal Reserve.

The gentleman claims that the Fed now has authority to increase the money supply by $386 billion. In this I suggest, Mr. Chairman, he is completely in error, and this is why. With large growth in demand deposits, increases in currency naturally have to occur. Currency is now $31 billion. That is, including the $28 billion outside banks, roughly 20 percent of the privately held money supply. For a growth of $386 billion, according to history, an added $30 billion currency would be required. Under the law 25 percent backing in gold is required. For that $30 billion currency $7.5 billion additional gold would be required in addition to the present $6.8 billion required for the present $27 billion Federal Reserve notes, making a total of $14.3 billion gold.

With such growth, time deposits now $64 billion would increase by $180 billion, requiring at 3 percent, an additional reserve of $5.4 billion plus $1.6 billion backing or a total of $1.8 billion gold reserves. A total of $356 billion growth; that is, the $386 billion minus the $30 billion currency, in demand deposits would require, in addition to the $18 billion reserve requirements on the present $100 billion demand deposits, $44 billion added reserve requirements which, in turn, would need gold certificate backing of an added $11 billion.

Total gold requirement to back $386 billion deposits would be $27 billion. That is in addition.

It figures out this way: $14.3 billion for the currency, $1 8 billion for the time deposits and $11 billion for demand deposits. Thus $386 billion growth in money supply on the present $20 billion gold is completely impossible. Where would this added $20 billion worth of gold come from?

True, irresponsible policies on the part of the Federal Reserve could wreck the money supply, but that could be done under present law, and I submit that the Federal Reserve has retained an objective position, a carefully judged position, a carefully maintained and conservative position, over the years. It has been a tower of strength to our economy.

The gentleman claims that counting vault cash as reserves was tried and found wanting. This is not in accordance with the facts. We did count vault cash as reserves for many years. In 1917 they were called in because of the need to centralize the existing gold supply. It was a war measure. Gold is no longer in circulation. It presents no obstacle today.

It is said that the object of this bill is to lower reserve requirements. The facts are that the bill's objective is to remove structure inequities and difficulties of administration. That is shown in the hearings. Also, to provide for long-term growth of the economy.

The gentleman has always professed his endeavors in behalf of small business and small banks. Why, indeed, should he insist that the present disadvantage to small banks and country banks be continued and perpetuated? I suggest that we should correct these things now.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. HIESTAND. I yield to the gentleman from Texas.

Mr. PATMAN. That $386 billion increase was included in a proportionate growth in our economy. But that is looking far into the future. What I really wanted to bring out with the gentleman is the fact that when the Federal Reserve bought these bonds, the Federal Reserve paid Government money for these bonds.

Mr. HIESTAND. May I suggest to the gentleman that all money is Government money, that this money was not owned by the Treasury, it was owned by the Federal Reserve?

Mr. PATMAN. It was owned by the U.S. Government, the people. You see, the Federal Reserve banks create money on the credit of the people. They created this money to buy these bonds.

Mr. HIESTAND. They created it in accordance with the law, under limitations. But this was paid for, dollar for dollar out of the Federal Reserve, not out of the Treasury.

Mr. PATMAN. The Federal Reserve belongs to the Government of the United States.

Mr. HIESTAND. Exactly.

Mr. PATMAN. It is a part of the Government.

Mr HIESTAND. And that reasoning is right at the bottom of the gentleman's whole philosophy.

Mr. PATMAN. That is right.

Mr. HIESTAND. That all Government agencies are in one pot. That, I submit, is a wrong basic principle. The Treasury has been paid for these bonds. It has not paid anybody else for them. The bonds did not belong to the Treasury, they belonged to the Federal Reserve and we cannot transfer them without disaster.

Mr. PATMAN. The gentleman is incorrect if he assumes that the Federal Reserve bought these from the Treasury. The Federal Reserve cannot buy bonds from the Treasury.

Mr. HIESTAND. I stand corrected. They have to buy them in the open market.

Mr. PATMAN. All bonds must be bought in the open market.

Mr. HIESTAND. The gentleman is correct.

Mr. PATMAN. The Federal Reserve, which is a part of this Government, issues a part of the Government's own money to buy these bonds.

Mr. HIESTAND. I submit the gentleman is completely incorrect in the last part of his statement.

Mr. PATMAN. Of course, that is a point on which we differ.

Mr. HIESTAND. The Federal Reserve paid cash for those bonds. They belong to the Federal Reserve and not to the Treasury.

Mr. PATMAN. They did not pay cash, but got them on the credit of the United States.

Mr. HIESTAND. Well, it is all the same.

Mr. PATMAN. And it was the Government's credit.

Mr. HIESTAND. Mr. Chairman, I am quite convinced that this is a good bill. It is a sound bill, and a very progressive bill. It is a bill that plans for the far ahead future. It is a bill that will remove inequities and will give the country banks a better break in comparison to the big city banks. I believe it should be approved. I believe it should be approved without any amendment whatsoever.

Mr. Chairman, I reserve the balance of my time.

Proud of Our National Guard

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. WILLIAMS of New Jersey. Mr. President, this great body needs no reminder of the contributions which the National Guard has made in terms of our national welfare and safety. Its accomplishments are well known to all of us. None of us here will forget its instantaneous response in times of national crisis, its answer to distress calls in lesser domestic emergencies such as natural disasters, riots, catastrophes, and so forth. And it continues to guard our country's safety through its excellent training program of our citizen soldiers. The knowledge and stamina and skill which are indispensable if we are always to maintain a constant state of readiness can be derived only from consistent and thorough training such as the National Guard provides.

We as a nation are proud of the National Guard and I was happy to see the tribute which a local hometown newspaper recently paid to this outstanding organization.

I ask unanimous consent that the attached editorial from the Elizabeth Daily Journal of July 1 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROUD OF OUR NATIONAL GUARD

Union County's National Guard units are on active duty, although they are engaged only in their routine summer maneuvers at Camp Drum in the undulating terrain of upper New York State. Casualty lists are not streaming homeward daily and even when they are reported will be attributable primarily to blisters, a touch of sun, and the ill-humored response of muscles to Army activity.

Two weeks in the open in a zestful atmosphere is no hardship and it harbors little similarity to the fatigue and discomfort of combat conditions. Neither is it a summer holiday in luxury and idleness.

Summer maneuvers exact much from the citizen-soldier, although he has been preparing for months and has time for rest and a bit of recreation. Mechanization in the Army is not the automation of civilian industry and the new tools of the fighting man's trade always seem to introduce new work. This the guardsman recalls quickly, if he was in camp in prior years, or absorbs sharply in his first experience.

These details of summer camp are a segment of the program of developing citizen-soldiers trained and equipped for instant response in a national emergency. They are the testing of the training and the drills of the preceding months and the awakening of the lessons of preceding camps. Summer camp includes a lot of fun, but basically it is a rehearsal in the serious and lethal business of soldiering, a duty required all too frequently of every American.

America always has eschewed the Old World policy of huge professional armies, trusting instead the willingness and the ability of its citizens to answer a call to arms. More and more the mere readiness to respond is inadequate for the job then at hand. Knowledge and skill and stamina are indispensable, and these derive only from consistent and thorough training. These the National Guard endeavors to instill into those young men who recognize their obligation to their country and hence the guard becomes the first to dash to the support of the regular forces.

The National Guard was called out for the trouble on the Mexican border, it went to France with the AEF, it circled the globe in World War II, and was in the Korean police action. Those major exploits overshadow duty in a variety of lesser domestic emergencies—natural disasters, riots, catastrophes. The people of Union County are proud of their citizen-soldiers now afield at Camp Drum; they have abundant reason for that pride.

Toward Understanding India

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 2, 1959

Mr. BOWLES. Mr. Speaker, in recent years a gradual reevaluation of Indian-American relations has been taking place. I like to think that misunderstandings of our position are slowly being clarified in India, and that a greater appreciation of India's role in Asia is steadily growing here.

The June 25 issue of the Christian Century contains a thoughtful article entitled "Toward Understanding India," which should help immeasurably in precisely that direction.

The author, Arthur McLean Stillman, is an informed observer who spent 2 years—1955 to 1957—in India as Second Secretary at the American Embassy in New Delhi.

I congratulate him on this balanced and effective presentations, and, under leave to extend my remarks, I include his article as follows:

TOWARD UNDERSTANDING INDIA

(Arthur McLean Stillman)

Americans should appreciate that despite points of disagreement with Indian foreign policy, their Nation has an important stake in India's future.

Since 1951, the U.S. Government has extended over $1.5 billion in grants and loans to India. The magnitude of this assistance is symbolic of American interest in the continued freedom of that great Asian nation. Many Americans, however, still do not understand the necessity or desirability of such largesse. They realize that India is economically handicapped, though only those who have seen it firsthand can fully comprehend the extent of the poverty and misery of her people. But they have little understanding of the dramatic political and economic developments which have occurred in India during the 11 years of her independence. Some Americans feel that India has moved too close to the Sino-Soviet bloc, and that she is too ready to criticize the West unduly. They consider unrealistic the neutralism of her foreign policy in a world where the line between freedom and communism is being drawn with increasing sharpness.

Since U.S. policy has called consistently for support of India's economic development, it is important that Americans better understand the bases for that policy, and realize why they have a vital interest in India's future.

DEDICATED LEADERSHIP

Under the idealistic influence of Mahatma Gandhi and the political leadership of Jawaharlal Nehru, India emerged as a republic within the British Commonwealth of Nations on August 15, 1947. The Indian constitution, proclaimed on January 26, 1950, is patterned after a combination of British and American governmental structures and contains guarantees of freedom and protection of the individual common to Anglo-American jurisprudence.

Two general elections have been held under this constitution, in 1951 and in 1957. In both, despite challenges from extremists of Left and Right, Nehru's Congress party, standing for moderation and democratic principles, was victorious nationally and in an overwhelming majority of the States. The election of a Communist government in the State of Kerala in 1957 has been the principal note of dissension, though there are indications that the rank and file of Kerala's voters turned to the Communists primarily in protest against the instability which had continually plagued that state's government.

The dedication of India's leaders to the maintenance of a democratic system and the support by the people of that type of government are reasons enough to command moral and material support from the United States. India is demonstrating throughout Asia that a society based on democratic principles offers an alternative to communism, and that such a society better serves human aspirations than does totalitarianism. Her differences with the West over foreign policy should not be permitted to obscure from the rest of the free world the fact that India is still a free and democratic nation.

THE 5-YEAR PLANS

The problems of economic development in a country whose more than 400 million people have a per capita annual income of less than $60 are enormous. However, despite seemingly insurmountable obstacles, the Indian Government has moved ahead ambitiously and optimistically in an attempt to transform an underdeveloped, agricultural economy to one based on modern industry. The first 5-year plan of economic development, entailing an outlay of about $8.5 billion, was completed in 1956. Certain phases of this plan were highly successful, although acute problems remained unsolved.

The second 5-year plan, launched in 1956, envisages an expenditure of $15 billion. Serious obstacles to the effective and timely implementation of the plan have been imposed by such factors as inflation, the Suez crisis, and exceptionally heavy withdrawals of foreign exchange reserves. In the face of suggestions that the plan be substantially modified or its life span extended, Prime Minister Nehru has steadfastly maintained that its fulfillment within the period envisaged is vital to India's future development.

The fact that India has undertaken such bold measures to improve her economic position calls for our sympathetic understanding. The Indian Government has mobilized domestic resources to a very large degree and has pursued a course of balanced economic development. While Indian officials have been reluctant to request foreign assistance, feeling that this would compromise India's independent foreign policy, they have nevertheless welcomed and appreciated the help extended by other countries.

Since 1952 the United States has been the principal foreign participant in the development of India's economy, and the Ford and Rockefeller Foundations and CARE have made notable contributions to her people's welfare. In addressing the annual conference of the U.S. Technical Cooperation Mission in India on November 20, 1957, Prime Minister Nehru declared that India was grateful to the United States for all the aid she had received over the years. He said that he wants American cooperation in the "mighty adventure" of building a new India. American technicians in agriculture, health, industry, engineering, education, and community development have worked with Indian colleagues in an effort to bring about the economic transformation so earnestly desired by the nation. Substantial sums of dollars have been utilized for steel, for industrial and transportation equipment and for imports of food grains. A spirit of friendly cooperation has developed through the technical assistance program, and American techniques have made a significant impact. The United States has firmly supported the efforts being made by the Indians to make use of their own resources and skills. The ambition shown by the leaders of India in seeking to provide a better material life for their people is worthy of note by Americans who would understand the bases for continued assistance to India.

Whereas in the political and economic spheres it is not difficult to recognize the desirability of close cooperation with India, in the area of international relations Americans are often bewildered and concerned when they see the course India is pursuing.

NEHRU'S FOREIGN POLICY

Prime Minister Nehru has consistently maintained that India must follow an independent foreign policy, eschewing power blocs, and that the basis of Indian policy must be predicated on peaceful coexistence with all countries regardless of their political character. This policy is based not only on the realistic contention that India must devote her major effort to economic rather than to military development but on the belief that a peaceful world order can be achieved only by dissolution of power blocs, disarmament, and pledges of good faith on the part of all nations that they will not resort to aggression.

India's neutral position is not substantially different from that pursued by our own country prior to World War I. Americans can more readily understand this position if they recall their historical desire to be free of European conflicts and to devote their full effort to solving internal economic problems.

Harder than neutralism for Americans to appreciate, however, is the support which India has appeared to give to international positions taken by the Sino-Soviet bloc and her frequent criticisms of American policy. Examples of this support are India's championship of admission of Communist China to the United Nations, her general agreement with Soviet proposals for suspension of nuclear tests without regard to adequate inspection procedures, and her constant criticism of SEATO and the Baghdad Pact.

India feels that since the Communist regime has effective control over the mainland of China, that regime should represent the Chinese people in the United Nations. She feels that admission of Communist China into the world body would bring about more international harmony and greater stability in Asia. Whether recent developments in Tibet will lead her to reassess her policy toward Communist China is uncertain, though it appears that Prime Minister Nehru does not wish to take any action that would compromise friendly Sino-Indian relations.

Indian leaders have long maintained that nuclear test explosions should be terminated. Some Indians have considered this objective so important that they have criticized the United States for refusing to accept Soviet proposals for test suspension even though those proposals do not include inspection safeguards. While nuclear tests are presently suspended de facto, there is no guarantee that this situation will continue. If tests should be resumed divergencies may again arise between the American position, which holds that inspection is vital to suspension agreement, and the view of those Indians who hold that good faith should be accepted as the basis for insuring compliance.

Relations between India and Pakistan have been strained because of a number of basic differences, as the dispute over Kashmir has dramatically illustrated. India has strongly resented the military assistance the United States has extended to Pakistan and the inclusion of that country in the SEATO and Baghdad alliances; she feels that these actions unduly strengthen Pakistan, thereby leading possibly to armed conflict over Kashmir. Prime Minister Nehru has said that while he does not question American motives, he does question our judgment in furnishing military aid to Pakistan. This issue has tended to dominate all others in Indian thinking; it makes close cooperation between India and the United States extremely difficult.

As a result of its experience with the Communist world since the end of the war, the United States has become convinced that collective security is basic to national survival and that a position of strength is essential to the continued independence of countries in the free world. While the United States respects the right of nations to remain neutral in the cold war, it will not alter this basic assumption, which it believes will preserve and extend freedom and individual dignity.

COMMON OBJECTIVES

Although U.S. and Indian policies diverge in important respects, it is nevertheless important that people in both countries realize that their ultimate objectives do not differ. Both want a peaceful world order, but both seek this end by methods dictated by their own national interest.

India and the United States can and do work together, of course, despite their differences on certain issues. During the 12th General Assembly of the United Nations, the two countries voted together on important resolutions calling for study of the effects of atomic radiation and for enlargement of the disarmament subcommission. The United States warmly supported a resolution proposed by India, Sweden, and Yugoslavia which urged the nations to "make every effort to strengthen international relations and to develop friendly and cooperative relations and settle disputes by peaceful means as enjoined in the charter." Appreciation of the general similarity of outlook on the part of India and the United States was expressed by Ambassador Henry Cabot Lodge in an address to the Indian Council of World Affairs February 14:

"It might surprise many people both in India and the United States to realize how often in the United Nations our two countries have agreed. In the past 5 years India and the United States have voted the same way in 45 major rollcall votes in the United Nations General Assembly. They have included resolutions on the all-embracing question of disarmament; on the treatment of people of Indian origin in South Africa; on the atoms-for-peace program, in which India has played a most distinguished part; on the effects of atomic radiation; on Morocco, Tunisia, and Algeria; and, finally, on the Middle East crisis. In that crisis, in which peace hung in the balance, India and the United States voted together on eight separate resolutions and worked together all the way. * * * Mention is seldom made of our common belief in the dignity of man and the necessity of freedom; our adherence to the view that government exists to serve the people and that the people are not pawns of the state; our common belief that strong and successful states can be built on a foundation of many races and many creeds; our conviction that material progress can take place without sacrifice of civil rights; and our common belief that the job of the government is to work for peace and a better life."

It is important for Americans to realize that two of the greatest assets of the free world are the diversity of its members and the freedom allowed for mutual criticism and independence of action. If members of the free world were automatically to agree with all American policies, precious independence and sovereignty such as are denied to the Communist satellites would also be lost to the free world, thereby seriously undermining its moral strength.

The United States has a unique opportunity to support India in one of the most significant undertakings in the postwar world—transformation of an impoverished nation of 400 million persons into an industrialized nation wherein improved living standards will be possible. The instinctive humanitarian nature of the American people, coupled with compelling political reasons, should result in substantial support for continued aid to India. American economic and technical assistance can enable India to maintain an example of freedom and economic progress throughout Asia. India and the United States have common ideals and common objectives. Both desire a world society in which free men can live in security. If people in both countries appreciate that basic fact, understanding will be possible despite differences.

Member Bank Reserve Requirements

SPEECH

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

Mr. MOORHEAD. Mr. Chairman, S. 1120 presents one fundamental question to the House today. Is the bill a relatively simple bill designed to give the Federal Reserve System permissive, discretionary power to rectify certain inequities in the banking system.

Or, is the bill a gigantic fraud designed by some malevolent genius to force the Federal Reserve to give away $15 billion of Government assets?

Mr. Chairman, I want to state as emphatically as I know how that if I believed for one moment that this bill was anything like the gigantic giveaway that its opponents claim, I would have opposed it vigorously in subcommittee, in the full committee, and I would oppose it today on the floor of the House.

I do not believe that it is such a bill.

I have great respect for the opinions of the gentleman from Texas [Mr. PATMAN]. For that reason I listened very attentively to his testimony before our subcommittee. I have also heard his testimony before the Rules Committee and have read his speeches before the House.

However, Mr. Chairman, the testimony before our subcommittee of the very responsible and knowledgeable witnesses in this field was unanimous in support of this bill.

This testimony and the opinions of my learned and experienced colleagues on the Banking and Currency Committee convinces me that S. 1120 is what I thought it was and what the other body thought it was—a reasonable, moderate proposal for improvement in our banking system.

This bill will not do what its opponents charge.

What is the position of the opponents? On page 9 of the report accompanying the bill in the dissenting view, it is said:

> Under this bill the Fed will have authority to reduce required reserves of the private banks by a total of $11.3 billion. This means that the Fed could transfer to the banks $11.3 billion worth of these obligations immediately.

This assertion is true, but misleading, because under existing law, without the enactment of S. 1120, and under the theory proposed by the minority, the Fed has had for many years and now has the authority to reduce required reserves of the private banks by a total of $9.3 billion. Therefore, this bill merely increases the theoretical power of the Fed from $9.3 billion to $11.3 billion.

How do the opponents of this legislation compute the figure of $11.3 billion? As shown from the table on page 27 of the report, the opponents assume that the Federal Reserve will reduce the reserve requirement for time deposits to 3 percent. This would free $1 billion of reserves. The misleading thing to note is that this amount can be released under existing law and S. 1120 makes no change whatsoever with respect to reserve requirements for time deposits.

The second assumption made by the opponents is that the Federal Reserve will reclassify all banks, central reserve city banks and reserve city banks, as country banks and reduce their reserve requirements to the statutory minimum for country banks which is 7 percent.

Mr. BARR. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from Indiana.

Mr. BARR. That, in effect, would mean that the Federal Reserve Board could change the classification of, say, a bank like Chase Manhattan or the First National City, two of the greatest banks in the United States, to the same status as a bank in a small town in the State of Indiana; is that not correct.

Mr. MOORHEAD. That is the assumption made by the opponents of this bill.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from Texas.

Mr. PATMAN. I have made no assumption like that. I have not assumed that at all. And, I think the gentleman overlooks the fact that there are two ways that the bonds can be acquired, either on a ratio of 2 to 1, 7 to 1, or even 20 to 1.

Mr. MOORHEAD. Mr. Chairman, I refer as authority for my assertion to page 27 of the report, which, in the dissenting views prepared by the gentleman in the second column there appears:

> Central Reserve city banks, New York and Chicago, percent minimum required reserves under proposed bills—7 percent.

That is the reason for my assertion. This would mean freeing approximately $8.3 billion of reserves. There is absolutely no basis whatsoever for assuming that the Federal Reserve would take this ridiculous step. Furthermore, under existing law the Federal Reserve could conceivably redefine Reserve cities and central reserve cities in such a way that all banks would qualify as country banks and the statutory minimum reserve requirement of 7 percent could thereby be fixed for all banks.

In other words, under the existing law the Federal Reserve could release $9.3 billion of reserves, and if S. 1120 were enacted, the Federal Reserve could release an additional $2 billion of reserves.

The Federal Reserve has not used its theoretical power to release reserves of $9.3 billion, and there is no reason to believe that if this bill is enacted the Federal Reserve will use its theoretical power to release $11.3 billion of reserves.

If this legislation permits a giveaway, so does existing legislation which has been on the statute books for years.

Mr. BARR. Mr. Chairman, if the gentleman will yield, the Federal Reserve Board, when it releases reserves, is not doing so to perpetrate a fraud on the American public. It will do so to meet the demands of the customers of the banks, of every Member of this House.

I would like to point out what the demand for money is today from bank customers, farmers, businessmen, from small industrialists, from private individuals. I would like to point out that the demand for private money in the gentleman from Texas' own district is at an alltime high. That is the Dallas Federal Reserve. Take the farm belt, St. Louis, Minneapolis, Kansas City. It is at an alltime high. In the Pacific coast it is at an alltime high. In the Southeast, Richmond, the demand for private money is at an alltime high. The only place they do not need money today is in New York.

Mr. MOORHEAD. It is my position that if this legislation permits a giveaway, so does existing legislation under which the Federal Reserve System has operated since the beginning of its existence. In other words, this bill does not, as its opponents charge, make a fundamental change in the Federal Reserve law.

This bill does no more than make a simple, but important, modernizing change in Reserve requirements.

What will this bill actually do and is it good legislation?

This bill would modernize some outmoded provisions of the law relating to the reserves that member banks of the Federal Reserve System are required to maintain against their demand deposits.

This modernization is needed, as has already been explained by the able subcommittee chairman, the gentleman from Georgia [Mr. BROWN].

The principle change would make it possible, in time, for member banks to count vault cash in satisfying reserve requirements. The present law on treatment of vault cash was enacted in World War I to centralize gold reserves. It became completely outmoded when the Gold Reserve Act of 1934 prohibited private holding of gold in monetary form. This provision will place member banks in a fairer competitive position with the State banks, almost all of which are permitted by State laws to count vault cash as reserves.

It is a reform which would help small banks, which in turn would help small business.

I know that most Members of this House are vigorous supporters of small business. If we are for small business, we should be for small banks because small banks serve small business. Active, vigorous small banks are needed in our economy to foster the growth of small business generally.

Because this legislation will aid small business by aiding small banks and because it will provide for a fairer, more workable system of reserve requirements, geared to meet the expanding credit needs of this country, this legislation should be adopted.

Retirement of Gen. Maxwell D. Taylor

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, July 2, 1959

Mr. HART. Mr. President, this country knows no finer military historian or critic than Brig. Gen. S. L. A. Marshall. I am delighted that he has recorded a dramatic day in the distinguished career of Gen. Maxwell D. Taylor, and I ask unanimous consent that an article he has written, entitled "Last Hurrah Day Early for Retiring Army Chief," which appeared in the Detroit News on June 30, 1959, be published in the Appendix of the RECORD.

I make this request in the belief that the widest circulation possible is deserved by the writer and his subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAST HURRAH DAY EARLY FOR RETIRING ARMY CHIEF

(By Brig. Gen. S. L. A. Marshall, Detroit News Military Critic)

FORT CAMPBELL, KY., June 30.—Gen. Maxwell D. Taylor, the "Quiet Eagle" and great daddy of all the "Screaming Eagles," did his recessional here yesterday.

According to the official calendar, the Chief of Staff of all the Army will be retired today at Fort Myer, Va., amid formal pomp and circumstance, as is the Washington custom.

Don't believe a word of it. The event is 24 hours too late. As happens so frequently in military matters, the Capital is running somewhat behind the troops and the country.

Taylor turned in his fighting suit yesterday to the booming of the largest, last hurrah ever heard by an American general. The show staged today within stone's throw of God's orchard at Arlington is merely one for the road as he happily sheds his bureaucratic vestments.

All of the grandeur and misery of spirit which may attend a man when he finishes his life's main work, with scarcely a moment to reflect on wins and losses because others are so loudly cheering the score, Taylor knew here yesterday.

For a few fleeting, precious hours, he was back with his own and the sunlit air was heavy with adoration, flowing both ways like an electric current.

The cast for the occasion was the "Old Man" and his progeny, the Taylor-made 101st Airborne Division, trouble-shooter for the Nation. They might well have been singing to each other: "You made me what I am today, I hope you're satisfied."

But the theme song was: "I Have a Rendezvous With Destiny," the division air. It seemed to fit. For though Taylor would have to sing it in the past tense, his "Screaming Eagles" kept marching on as if toward the sound of guns.

PRIME DIVISION

It is a prime division. It could move out ready for battle by today's sunset. Its manner, look, and action suggest that it has plumbed the secret of the old division's power, imparted it by Taylor.

His rule: "Make surprise your watchword; if you are but a handful, go forth and hit."

Boldness shone in the review, which was not simply a march past by 12,051 soldiers, their fighting vehicles, guns, and guidons, but a review of Taylor's richest years.

OTHER TOUCHES

Before a man moved out, all regimental flags and colors moved front and center in closed line directly to the stand. There the banners with their battle streamers were dipped to the chief who had made each streamered name spell victory.

There were other spectacular touches, worthy of the late Cecil B. De Mille, but supplied by Maj. Gen. W. C. Westmoreland, the present commander.

After the division light planes had raced past the stands spilling, red, white, and blue smoke, three large choppers followed, spelling out the words: "Good Luck—Chief."

Coincidentally occurred the day's one small tragedy. The division's feathered mascot, named Max D. Eagle, gave up the ghost, a victim of sunstroke. But he was a patriotic eagle; he saw the show through.

Later there was iced tea wassail and luncheon in the clubhouse. While the regiments paraded, a background voice told the battle feats of each under Taylor's hand. That was enough solemnity for 1 day.

OFF BALANCE FIRST TIME

Over the tables the background voice kidded Taylor, that greatly dignified soldier. For maybe his first time in the Army, he stayed off balance, moving between a choke-up and deep belly laughter.

But the details hardly reflect the mood. It was a day for sentiment and so had to be, since the laws of the heart are not the laws of history. The hour was ripe for recalling his almost boastful words at war's end: "I made this division; it is mine."

Old Eagles who had stood the fire with him Carentan, Nijmegen and Bastogne came homing to Fort Campbell to validate those words. Names like Kinnard, Higgins, Moore, Michaelis, Sink, Harper, and Chappius got their luster under him while young. Most are generals now or soon will be.

HONOR GUARD

Of the new division, 50 formed an honor guard, to lead the march past and then join Taylor in the reviewing stand. All but a few higher noncommissioned officers. That is all of the original 101sters who still wear that patch on the left shoulder.

Even so, the rest of the new legion, which Taylor has never led in war, alined and strode as if knowing that it was under father's eye, with its number embodying all that Taylor loves best within the Army.

In cadence, the "Old Man," who still has the lean look and hard stride of youth, kept saying: "Wonderful, wonderful, aren't they wonderful?"

REVIVES NUMBER

In this lay no exaggerated pride on either side. At war's end, the 101st, a nonpareil in combat, as good its first time in battle as at the close, was dismantled while still in Europe. Taylor thought he had assured its preservation and the bureaucratic defeat rankled.

One of his first acts after becoming boss of the Army was to reconstitute the 101 number as spearhead of the U.S. airborne. Amidst his frustrations and disillusionments, this one part of his handiwork shines like a star, the perfect model for an army which may someday be tuned to the grave needs of this Republic.

But few of its ranks will ever thrive under a self-discipline equal to Taylor's own. The main life task is over. In the immediate aftermath, he'll write his memoirs. Thereafter he would like to find a place in the university world.

This is not as he imagined it would be. Always he looked at far horizons. In youth, he believed that he would be chief of the Army some day and he drove himself unsparingly to get there.

UNSKILLED AT RELAXING

He never learned how to rest or relax, except in hard physical exercise or by getting his full sleep at night, which he did even in combat.

During operations in war, while moving by jeep or plane, he rode book in hand, a language text or manual, to improve his mind and conserve every minute.

By sheer intellect and diligence, he gained his pinnacle, but it did not glisten as his young eyes had seen it. The power to control and to build high was no longer vested in the office. Above it was a ponderous bureaucratic mechanism, made inert by its own overstructuring.

MANY ROADBLOCKS

No one really had power and those who held its fragments were loath to use them to decisive ends. The chief of the Army, and above him, the Secretary, had no touch with the President, and the downed lines could not be restored.

From the view at the top, the landscape piled roadblocks on entanglements with no open highway.

There remained the right of protest. He went as far as dignity and a soldier's oath permitted. It could not be far enough to gain the ends he sought for the Army in the national behalf.

Quitting too early, Taylor must feel that he failed in what counted most. But for once, his Army will not concur.

Honor is his today as never before because he tried, and the heir to his task must also try at the same risk of defeat, if the once great Army is newly to insure its abiding obligation.

Modern Superhighways Paying Off in Safety Fight

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Modern Superhighways Paying Off in Safety Fight."

MODERN SUPERHIGHWAYS PAYING OFF IN SAFETY FIGHT

With the National Safety Council reporting another alltime low in traffic fatality rates—5.6 per 100 million vehicle-miles in 1958—evidence continues to pile up that the growing Interstate System of limited-access superhighways already is making an important contribution to highway safety.

Many factors underlie the steady improvement in the fatality rate, which has dipped to record lows in 9 of the past 13 years. Involved are the concerted efforts of car and truck makers, traffic engineers, enforcement officials, the organized campaigns of a multitude of local, State, and national safety groups—but improvements in highway design and the accelerated pace of highway construction have been particularly significant.

When the Interstate System was under consideration by Congress, a strong point in its favor was an estimate by U.S. Bureau of Public Roads experts that the network would carry as much as 20 percent of all U.S. traffic and save as many as 4,000 lives a year. Recent reports from States operating the first few thousand miles of highways built to interstate standards lend strong support to this prediction.

Topping the list is the report from the New York Thruway Authority, revealing a record low rate of .88 fatalities per 100 million vehicle-miles in 1958 (down from 1.94 in 1957).

The older Pennsylvania Turnpike showed a rate of 3.3 in 1957.

The New Jersey Turnpike and that State's Garden State Parkway reported 1957 rates of 1.99 and 1.3 respectively.

The Northern Indiana Toll Road shows a coumulative experience of 3.8 fatalities per 100 million vehicle-miles since it opened in 1956, compared with the State average of 5.8 in the same period.

A 13-State network of toll roads extending from New England to the Midwest contributed only four fatalities to the July 4 total—after having completed the Memorial Day holiday without any fatalities at all.

A nagging fly now buzzing around highway-builders' heads, however, may wind up in the ointment for a 2-year stay unless Congress can devise an effective repellent.

Under pay-as-you-go provisions built into the legislation through which the Federal Government will pay 90 percent of the cost of the Interstate System, it appears possible that no Federal funds at all will be available in 1961 and only $300 million in 1962—a drop in the bucket compared with estimated total needs of $4.7 billion for those years. Further, increased construction costs and other factors may leave the program more than $13 billion short in following years unless more money can be allotted.

Federal lawmakers are working on the problem now, with a stopgap solution possible while they study the long-range shortage.

Major factors that combine to make possible safety records such as that of the New York Thruway are rather widely known: Separation of opposing traffic lanes; limiting the number of entrances and exits and designing these to blend incoming and outgoing traffic smoothly into the main traffic flow; elimination of all street, road and rail crossings at grade; elimination of pedestrian traffic, usually a major contributor to fatality statistics; elimination or near-elimination of highway-bordering business establishments.

Not so widely understood may be the plus factors that include: Extra-heavy police details, with strict enforcement of speed limits and other safety rules; in many cases, quick inspection of the mechanical condition of every vehicle seeking entrance and rejection of those obviously unfit; use of such "extras" as reflective striping at interchanges and along the highway edges; liberal use of deflecting guide rails around bridge piers; special service crews to clear disabled cars from the highway, and continuous attention to roadway maintenance.

Many advantages of the Interstate System were cited to the Nation's lawmakers when testimony was taken in 1953 hearings. The Automobile Manufacturers Association listed, after safety, the elimination of billions of dollars in wasted time, vehicle wear and property damage caused by inadequate highways. Testimony by the armed services stressed the value of good roads to national defense.

As low fatality rates continue to be recorded on the superhighways, however, it becomes increasingly more apparent that the biggest benefit of the new Interstate System will be greater highway safety.

Basic Misconceptions in U.S. Military Thought on the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, July 2, 1959

Mr. DODD. Mr. President, I recently read in the Ukrainian Quarterly, an internationally known source of authoritative information on the Soviet Union, an engrossing article by Dr. Lev E. Dobriansky, who is a professor of economics at Georgetown University.

Dr. Dobriansky ably outlines the thesis that the deep nationality divisions within the Soviet Union seriously impair the effectiveness of the Red Army.

Mr. President, I ask unanimous consent that his article, entitled "Basic Misconceptions in U.S. Military Thought on the U.S.S.R.," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BASIC MISCONCEPTIONS IN U.S. MILITARY THOUGHT ON THE U.S.S.R.

(By Lev E. Dobriansky)

In the past 2 years there has been an increasing amount of literature written for public consumption in the United States on the vital subjects of Russian Communist military strategy and the armed forces of the Soviet Union. A careful survey of the literature discloses the fact that much of the material adequately equips the reader with satisfactory descriptive accounts of these subjects. * * *

* * * * *

However, in this growing body of military literature dealing with the Soviet Union one is struck by the existence of a defective conceptual framework. The defects are primarily attributable to a marked unfamiliarity with some fundamental facts in the situation.

The three important cases examined below will, I believe, impress the reader with the basic misconceptions upon which their treatments of the military power and resources of our enemy rest. Two of the cases are privately written books, the third is an official report of the Department of the Army. The two books are used extensively in our highest military institutions. * * * But certainly more important than either of these cases is the official Army report. * * *

Before plunging into this analysis it should be borne in mind that the prevalence and general acceptance of these misconceptions can lead to extremely serious consequences. One needn't tax his imagination to visualize the costs in human life and material equipment that would result from a blind adherence to these misconceptions. * * * Both Napoleon and Hitler worked on false conceptual premises with reference to the subjugated nations of Eastern Europe and central Asia and both, despite their imperialistic designs, met with disaster. With motivations of only self-defense and fitting retaliation it is quite possible for us, operating on the same premises, to meet an equal fate.

In addition, it should be observed that these particular defects in military thought about the Soviet Union are ultimately but a reflection of fundamental errors in our political understanding of the U.S.S.R. Fortunately, in our highest military institutions there is a firm methodologic awareness that significant military thinking cannot be pursued in a vacuum. The heavy ingressions of economic, political, and other factors have to be weighed and accounted for before sound military generalizations and conclusions can be formed.

When it comes to the Soviet Union, the environment of our mortal enemy, this awareness becomes unfortunately beclouded by an uncritical acceptance of conceptual forms which are standardized by a nonmilitary department. * * *

This observation on our current military thinking can be easily substantiated. The three pieces of evidence considered here should prove to be sufficient. For the perceptive reader they should indicate far more than what they actually contain. * * *

THE KISSINGER OUTLOOK

The first case to be considered is the work by Henry A. Kissinger on "Nuclear Weapons and Foreign Policy." * * * Our comments on this work are directed at the couple of chapters devoted to the Soviet Union. They need only be brief since the work itself concentrates on other topics of military and political policy. However, these critical comments are essential in character for much that is advocated by the author as a proper buildup in policy and operation is ultimately predicated upon his understanding of the enemy as disclosed in the two chapters. * * *

A critical examination of chapters 10 and 11 immediately shows the defective nature of Kissinger's outlook toward the peculiar character of the enemy. His outlook is the unrefreshing and borrowed orientation of the Department of State with its characteristic occupational bent toward status quo stability and equilibrium as concerns the Soviet Union. For those who stress an imaginative penetration into the real historical forces operating in Eastern Europe and so-called Soviet Asia, much of the ostensibly philosophical material on Communist doctrine in these chapters may be regarded as practically useless. * * *

The author comes up with the usual fundamental errors that distort his framework of reference, one which is supposed to guide U.S. military thinking. Russia, for him, is the Soviet Union. Throughout his discourse the two are erroneously identified. One would think that the lessons of Napoleon, Wilhelm, and Hitler never existed. In one place, for example, he states that "The emerging middle class in Russia may, of course, in time ameliorate the rigors of Soviet doctrine" (p. 357). One may well ask "What middle class is emerging; and if there is one, what effect could this have on the traditional imperio-messianic bias of the Russian Nation?" This is the real and significant element, not the contrived misleading item of "Soviet doctrine." * * * From these few examples, particularly the basic misidentification of the U.S.S.R. and Russia, one can logically deduce what the tactical planning boards and maps look like for purposes of so-called strategic bombing and the like. Inadvertently, we would be winning the war for the enemy. This has been done in the past. * * *

From the above errors it follows, of course, that there is no perspectival conception in Kissinger of the multinationality of the armed forces in the Soviet Union. The absence of such a conception in turn closes the door of further thought along imaginative lines of methodical preparation for the early and spontaneous disintegration of these forces in the event of war, whether global or limited. * * * Kissinger makes the forceful point that Russian training emphasizes the political and the conceptual, which unfortunately is a lagging feature of our own. However, due to his evident unfamiliarity with East European history, he fails to appreciate the fact that totalitarian Russian doctrine has always given scrupulous precedence to political and psychological pressure over direct military action. What we witness today in many areas of the free world was started by Moscow 500 years ago. The cold war is an old Russian institution, not a product of Marxism or even Russian Leninism.

THE GARTHOFF TREATISE

The second book is titled "Soviet Strategy in the Nuclear Age" and authored by Raymond L. Garthoff. In contrast to the Kissinger work, this treatise concerns itself almost exclusively with the military strategy and armed forces of the Soviet Union. Its tone is predominantly expository and descriptive. * * * On the basis of USSR sources, the author persuasively demonstrates that even in this thermonuclear era the military high command of the USSR continues to adhere to the classical military strategic concept that victory lies in the decisive and complete defeat of the enemy's armed forces. Flexibility and balance punctuate USSR military thinking. * * *

Here, as in the previous case, certain basic misconceptions emerge to distort the analysis in Garthoff's treatise. The distortion becomes even graver in view of his apparent acceptance of Moscow's belief that a nuclear exchange would involve a canceling out of initially expressed power. This phase would be a crucial one but not decisive. Yet, despite the swing of military balance to ground forces in which the USSR enjoys a distinct superiority at this time, this first phase would be marked by havoc, and with this condition one begins to wonder whether the armed forces of the USSR would remain in the compact and loyal condition that Garthoff uncritically assumes throughout his treatise. Again, past experience shows that this would not be the case. For Garthoff, too, the USSR is in effect Russia, the forces are "Soviet forces," and, quite fallaciously, we are supposed to regard them as unified and integrated nationally as we had in the past the enemy forces of Germany, Japan, and Italy.

* * * * *

The author's constant use of the reference term "Soviets" blurs and conceals the multinational character of these forces. It brushes aside the fact that twice in this century such disintegration took place along national lines and with scarcely any external inspiration and aid. Here, too, with evidently no grasp of centuries of Russian cold-war activities against Moscow's neighbors, the author fails to perceive the historical and traditional basis of Moscow's strategic concept. He predicts that in 1970 this concept will remain unchanged and states that the "new political strategic concept of deterrence plus pressure is accompanied by military preparation for any kinds of wars." The plain fact is that this concept is not new in Russian history. As far back as Ivan the Terrible precedent emphasis has always been placed on the political, the psychological, the subversive, and when the object of prey has been sufficiently paralyzed the military would move in. Underlying this allegedly new concept has been Moscow's own frequently verified estimate of the intrinsic unreliability of its armed forces. This estimate is founded on historical experience and is fully justified by the empire nature of the Soviet Union. It is truly amazing that this fundamental factor is not even considered by our current thought. But false conceptions are like dikes which can only be pierced by time and stress.

* * * * *

THE DEPARTMENT OF THE ARMY ASSESSMENT

If these basic errors were confined to the field of private inquiry and study, the situation would not appear so ominous. But, as indicated above, this is not the case. On May 15, 1958, the Department of the Army publicly released a study of "The Soviet Army." This assessment of the military forces in the U.S.S.R., consisting of 14 pages in all, obviously purports to treat of basic essentials.

* * * * *

With regard to technical military and technologic essentials, the treatment in the assessment appears to be comprehensive and persuasive. It follows traditional Western lines of military analysis and evaluation which, as shown below, can be most misleading in relation to the Soviet Union. The

usual emphasis is placed on quantitative magnitudes and technologic types.

* * * * *

General inferences drawn from simple technologic facts, which are considered in void of other determining factors, are hazardous enough, but to base a whole assessment on such an erroneous methodology, especially with reference to the Soviet Union, is clearly unwarranted. A critical reading of the report shows this to be the case. It shows the presence of an almost exclusive technologic and quantitative determination of the value of the armed forces in the Soviet Union, supported at the margin by several fallacious assumptions in history and contemporary politics.

* * * * *

This report plainly employs concepts and assumptions which not only fail to conform with fact and reality but also lead to false conclusions. If these misguiding concepts and assumptions are indicative of the dominant thinking in the Department of the Army about the enemy, then one cannot but wonder as to what extent we have come to learn the nature of the enemy, the composition and quality of his forces, the real subordinate role of these forces in his expansionist foreign policy, and the pointed lessons of both world wars on the East European front, not to mention those of Russian military-political policy in the imperialist tradition of Moscow.

Since words and concepts are the mirrors of one's understanding, let us examine the dominant ones of this report. First, the title of the report is "The Soviet Army" and at the very outset, on page one, referring to it, it is stated that "In this capacity, it is prepared to inforce the national policies of the Soviet Union and the international ambitions of world communism." Lest one quickly counter that "this is just a matter of semantics," it is well to bear in mind that the art of semantics itself deals with the meaning of words. The monolithic terms used here would lead us to believe that the armed forces in the U.S.S.R. are like the nationally united forces of Japan and Germany against whom we fought. Nothing could be further from the truth. The outstanding fact is that there is no national integrated Soviet Army. Approximately 43 percent, very likely even more, of the armed forces in the U.S.S.R. is made up of non-Russians derived from various nations now held captive in the Soviet Union.

It is not intended here to elaborate upon this crucial fact in terms of demography, history, and politics. Data in these fields are available for the asking. Instead, one begins to wonder again whether the writers of this assessment ever probed into the causes accounting for the disintegration of the forces of the Russian Empire in 1916 and also in 1941 under the legalistic guise of the Soviet Union. Among many significant questions which can be raised, one may ask, "Why in the face of constitutional provisions for war ministries in the various republics of the Soviet Union does Moscow rigidly follow the policy of dispersing non-Russian military personnel into areas away from their respective native lands and of preventing at all costs the formation of compact and nationally united Georgian, Lithuanian, Ukrainian and other non-Russian divisions?" Complete and satisfying answers to this and cognate questions can only be found in the historically uninterrupted struggle of the non-Russian nations against imperialist Russian domination. Although the West has not fully understood this, this fundamental and grave weakness in the unnatural body politic of the U.S.S.R. afflicts its multinational armed forces, too.

In the light of these few fundamental considerations, accuracy in thought and concept would cause us to entitle a work of this sort "The Multinational Armed Forces of U.S.S.R." This would semantically, and thus meaningfully, negate Moscow's purposeful usage of Soviet which we inadverently and at disadvantage to ourselves have adopted. Little is it realized that in the same way the Czars, from Peter down, employed the term Russian to cover every colonial acquisition of Russia, the Russian Bolsheviks, at the very beginning of Russian Communist aggression in 1918, skilfully introduced the generalized use of Soviet to conceal from the outside world their early imperialist acquisitions of a number of newly independent non-Russian states. Specially for free world consumption and thought habituations. the Russian masters have consistently urged and stressed such terms as "the Soviet people," "the Soviet man," "the Soviet Army," etc., with the obvious and apparently successful aim of creating the impression of real union, a oneness of forces, and a monolith of strength in the U.S.S.R. * * *

However, what one would clearly be unable to find in any Russian Communist literature is such a thoroughly incongruous and inept usage as "the national policies of the Soviet Union," which appears on page one in the report. By force of political circumstance Moscow cannot help but recognize the multinational character of its shaky empire. One would think that by force of self-interest and thus sympathic study we would recognize the same. Moreoevr, whether world communism has international ambitions or, in realistic terms, these ambitions of world domination are nurtured by Russian Communist totalitarians with a national tradition of over 500 years, is rapidly vanishing as an issue in many areas of advanced thinking on these subjects. Here, too, one would think that the prime slogan in the recent Hungarian revolution, "Russki Go Home," would have suggestively led many to realize that ideologic communism is another tool in the arsenal of traditional Russian expansionism and "cold war" activity. It is perhaps sufficient here to suggest the reading of the Marquis Astolphe de Custine's classic, "Journey for Our Time" (New York, 1951) for one to appreciate that the basic institutions of Russia itself have scarcely changed in the past 100 years.

A further point of essential criticism may be directed at a statement appearing on page 14 in the report: "This formidable war machine is in a constant state of military readiness to fulfill any tasks which Soviet policy may require of them. They are subjected to effective political control." It is readily recognized that it is sounder to overestimate the enemy and prepare to meet his challenge in these terms than to underestimate him and find oneself ill-prepared. Despite this, however, in the complex of politico-military interrelationships an overestimation exaggerated by adjectives, as underscored above, can create many false impressions with unfavorable political effect. This approach, which admittedly has practical use for domestic objectives, provides unwarranted leverage to the enemy in his cold war demands and diplomatic offensives.

Again, for students of imperial Russian history all this is not new. In the 19th century and up to World War I, for example, the cold war activities of St. Petersburg succeeded in having the West believe that the armed forces of the Russian Empire constituted a formidable steamroller, a term which evolved into general use. So long as there was no major conflict, the illusion built up had enormous political effect. When the wholesale debacles of the Russo-Japanese War and World War I occurred, this illusion came into full view for those who asked "Why was this so?" This report plainly supports the resurrection of the steamroller illusion.

The conclusions to be drawn from these criticisms obviously run counter in some degree to those stated on page 14 in the report. First, the U.S.S.R. war machine is not as formidable as Moscow would have us believe. The Hungarian revolution itself provides us with the most recent evidence of significant Ukrainian desertions from the so-called Soviet Army, hundreds joining the patriots in Budapest in pursuit of a common cause. Second, by their very nature these forces are hardly able to fulfill any tasks posed by Moscow. Fully conscious of its own history and past policies, Moscow, more than anyone else, knows how fundamentally unreliable its polyglot forces are; and in the tradition of Russian imperial policy, it exerts maximum effort in avoiding any major commitment of its own forces. Third, these facts and more cause one to disaccept the groundless assumption that these forces are subjugated to effective political control or that political activity in the armed forces is intensive and influential.

On the basis of these critical conclusions the threat to the free world which the Soviet Army today presents is, contrary to the assessment, not so obvious. It is concluded in the assessment that "The Soviet Army is capable of * * * supplying manpower as 'volunteers' and providing material support for operations in areas roughly contiguous to the Soviet Union and vulnerable to Communist exploitation. The Soviet Government can do any of these confident in the knowledge that initially it is the only major power in the world today which has the great preponderance of ground forces in being."

This conclusion is, of course, logically based on the contents of the report and their implied steamroller illusion, but it is unfortunately not based on evaluated fact. Indeed, the major elements of this conclusion serve to support some propaganda themes employed by Moscow.

Repeating one of the first criticisms in this analysis, the concept of capability embraces not only quantitative content but also, and in this case more important, the qualitative as well. To repeat further, concerning the U.S.S.R., the qualitative element refers not only to the skills of military training but also—and again more important—to the national and political diversities of the armed forces. In this realistic light Moscow is not as capable as it may seem to provide "volunteers," which, despite its propaganda boasts, it has not done when opportunities presented themselves. Moreover, as in the Hungarian case, its provision of material support was not without gaping holes which furnished the West with decisive opportunities for which it proved to be ill-prepared.

In conclusion, the assessment given by the Department of the Army is to a regrettable degree out of context in relation to East European and central Asian realities. In this fundamental connection it is misleading and could be put to effective use by Moscow propagandists. Its broad equalitative significance is virtually nil. It offers further evidence of the critical lag in American thought concerning not only the Soviet Union but also the intertwined relationships between the military and political factors in the modern scene. In the U.S.S.R. as in the previous Czarist Russian Empire, such relationships are basic to any assessment.

As Hobbes once pointed out, "Force and fraud are in war the two cardinal virtures." Whether in a cold war or hot one, the Russians surpass all in the second virtue. In this they are sustained by the perpetuated and lingering misconceptions that Westerners have of their empire. Our current military thinkers are abetting their skillful play on fraud.

The Philadelphia Textile Institute

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. TOLL. Mr. Speaker, the development of textiles in America was a tremendous stride forward in our country's march toward its present world industrial status.

For this reason, I think it appropriate that a brief outline of the development and growth of the Philadelphia Textile Institute, the first and largest school of its kind in the United States, be brought to the attention of the Congress and the American people. The institute, which was established to engage in research and teaching of manufacturing skill and the art of design, is celebrating this year its 75th anniversary. Under leave to extend my remarks, I include a statement concerning the growth of the institute as prepared by Mr. Alan M. Richter.

THE PHILADELPHIA TEXTILE INSTITUTE

The Philadelphia Textile Institute was founded in 1884 and represented the first and most important effort that had been made in the United States to offer classroom instruction directly applicable to textiles. The realization that such an institution was of absolute necessity occurred following the Philadelphia Centennial International Exposition in 1876. The exposition plainly showed that European products, particularly in textiles, were far superior to those being produced in the United States.

Mr. Theodore Search, a member of the firm Erben, Search & Co., yarn manufacturers of Philadelphia, was largely responsible, in 1882, in establishing the Philadelphia Textile Association whose primary object was the promotion of textile education in the United States. These industrialists were well aware of the progress of textile schools in Europe and recognized that the United States could not hope to maintain the best markets for its textile products unless these products combined the highest skill in manufacturing and the best taste in design. When the association failed to reach its goal of $50,000 needed to start the school, Search contributed generously and also assumed some of the teaching responsibility.

This project was made known to the trustees of the Pennsylvania Museum of Art who agreed to absorb the new school as one of its departments and placed at its disposal rooms in the Industrial Art School, then located at 1336 Spring Garden Street, Philadelphia, Pa.

A few short years proved conclusively that this new educational undertaking was not only a great addition to the textile manufacturing community of Philadelphia but an element of strength to the entire country. Friends of the enterprise visited the best schools in Europe in the interest of the institution and many foreign methods and procedures were adopted and put into practice.

In 1893, because of the increased enrollment, it became necessary to acquire larger quarters and the institution purchased a building on the northeast corner of Broad and Pine Streets, Philadelphia, Pa. The new building contained accommodations for over a thousand students and remained the home of the institute for the next 56 years.

In 1941, the 58th year of existence of the Philadelphia Textile Institute, was a notable one. It was in this year that the State of Pennsylvania first authorized the school to grant the degree of bachelor of science in textiles to graduates who satisfactorily completed the 4-year course. At the suggestion of the Alumni Association, the word "school" was replaced by the word "institute" in the title of the college and the college became known as the Philadelphia Textile Institute.

In 1943, the committee of instructions, which had served in a dual capacity for both art school and the textile school of the parent Philadelphia Museum of Art, the new name for the old Pennsylvania Museum of Art, agreed to the formation of separate boards of governors of the two schools.

This was done because the growth of both schools plus their individual differences created complications making administration difficult by a single group. This creation of a separate board of governors for the college was the beginning of movement that was to be culminated in the complete separation from the museum of art in a very few years. Members of this new board of governors felt that the time was ripe to find other quarters for the institute. Before making any commitments it was realized that a tremendous amount of money would be needed for such a venture, and out of this came the creation of the Philadelphia Textile Institute Foundation, 2 nonprofit corporation devoted to the advancement of textile education. In June of 1944, after months of preliminary organization, corporate papers were granted to the foundation.

A campaign was started to supply the funds so necessary to allow the institute to obtain other quarters. The Foundation in 1946 purchased a 12½-acre site in Germantown, Philadelphia, Pa., for the college's new home. Two years and over a million dollars later, in September 1948, ground was broken for the new building. In April 1949, 90 percent of the building was finished for the cornerstone laying ceremonies. On October 6, 1949, the building was completed and ready for occupancy and classes began. The new Hesslein Library, constructed concurrently, was finished soon afterward. It was shortly after moving to its new location that the college was incorporated and separated completely from the Philadelphia Museum of Art.

In 1954, the Philadelphia Textile Institute took another step in the expansion and improvement of its facilities when, in October ground was broken for the new residence hall. The dormitory houses 150 students and contains 4 common rooms. In 1957 a wing was added to the Hesslein Library.

In 1955, there occurred the realization of one of the major educational goals. The college was accepted for membership in and fully accredited by the Middle States Association of Colleges and Secondary Schools. At this writing, the Philadelphia Textile Institute is authorized to grant the bachelor of scince degree in textile engineering, textile management and marketing, fabric design, and textile chemistry and dyeing, and, as mentioned, is a fully accredited technological educational institution.

The fifth structure, a student union building, is currently under construction. This badly needed addition will give the institute the major facilities to insure a well rounded educational program.

Today, the Philadelphia Textile Institute continues to be recognized locally, nationally, and worldwide as having the finest educational programs to be found in textile education. The graduate of Philadelphia Textile Institute is not limited to a career in textiles. The curriculums in chemistry, in management and marketing, and the technological curriculums prepare him for graduate study or for a wide and rapidly increasing number of positions with chemical corporations, retailing posts, and clothing manufacturers as well as the whole range from art to production throughout the textile industry.

The department of chemistry prepares students for the textile and related industries such as synthetic fiber, chemical, plastic, paint, etc. The aim of the department is to provide the student with an understanding of the basic fields of chemistry and the major fields of textile chemistry. He also has available the facilities of a complete dyeing laboratory.

In basic research the textile chemist may be concerned with modifying the chemical structure of existing fibers or synthesizing new fibers, new dyestuffs, new finishing agents, etc.

In development the textile chemist searches for methods of dyeing and finishing new fibers, while constantly looking for better methods of treating existing fibers. He must also help determine the uses for which a fiber is best suited. For example:

1. Why is nylon used for tire cord when Fortisan is stronger?
2. Why is asbestos and not fiberglass used for insulating jet enginees when both are mineral and fireproof?
3. What fibers, because of their chemical and physical properties, are suited for artificial arteries—teflon, vinyon, dacron, etc.?

There are a host of unsolved problems, and older problems awaiting better solutions, and there are far too few men now available in the area.

In sales engineering the textile chemist is concerned with solving technical and production problems of his company's accounts.

In production a textile chemist must help keep his company abreast of recent developments. Usually the wet processing operations of a textile plant are under the jurisdiction of the plant chemist.

In technical sales the textile chemist, not simply an order taker, sells his service as well as his product.

The course in textile management and marketing is offered to meet the expanding need for capable managers and executives in the merchandising and marketing of textiles. The opportunities available to young men and women are unequalled in any other field today—the graduates can look forward to an interesting future with a rapid rise to success without the need for graduate study and long competitive years in each position held.

The unique combination of liberal arts, business and technical subjects in this unusual course avoids over-specialization and provides the broad base of education so highly sought for by employers throughout the business world today. In no other field or program of study can this be accomplished in 4 years of undergraduate work. In the outline of the course there is a fine balance of management essential with the humanities—the subjects that develop the disciplines needed to assess the human situations that arise daily. These elements are nicely integrated with sufficient textile technology for the graduate to understand and evaluate the things as well as the people with whom he or she works.

Graduates of the management and marketing course will be of immediate value to the diversified textile industry—in administrative positions, in manufacturing, or in the challenging and fascinating areas of promoting, buying, or selling of textile products.

The first year of the fabric design curriculums encompasses a general course giving the student a chance to become accustomed to college life while studying academic subjects. Specialized studies and laboratory experience are added in the second year. Knowledge and skill, the tools of the fabric designer, are both artistic and technical. Fabric design courses train the student in the technology of weaves, fabric analysis, and construction, together with the knowledge of yarn types, sizes, uses, and the fabrics which are made of yarns.

Learning to plan on paper a fabric which will be produced in a loom is one goal of these studies. Yarn manufacture—limits of yarn sizes and types according to the spinning system—is demonstrated in lectures and laboratories. The fabric designer must also be informed about the methods of adding color to textiles—at all stages and for all of the raw materials. Studies in dyeing and printing combine the color ideas of the artist with the practical aspects of application and duplication.

Art, color design, and textile technology challenge the creative abilities of the future designer. And with all of the equipment available for experiment in any area of fabric design, you may test your ideas for their practicality, as well as for their originality. Art courses such as: color, design, nature study, form, and composition help the student explore methods of design creations. Application of these methods to specific problems follows in the textile, fashion, and interior design periods.

Textile engineering covers the manufacture of substances from basic materials through controlled chemical and physical change and through controlled mechanical alinements and transformations to fiber, to blend, to top, to sliver, to yarn, to fabric, woven or knitted, through the chemical and physical changes of dyeing and finishing to the fabric for use in a wide variety of subsequent forms.

Operations are combined in sequence to form a manufacturing process. Process control and instrumentation are increasingly important to provide automatic, manual or combined manual-automatic supervision of a process, particularly in dyeing and finishing.

Processes include making of fibers from cellulose, resins, glass, ginning of cotton, scouring and carbonizing of wool, retting of flax, carding, blending, gilling, drawing, spinning, weaving, knitting, dyeing, finishing. Most of these processes involve fiber length, strength, crimp, and many physical and chemical, qualitative and quantitative characteristics of fibers for selected end uses of fabrics.

Knowledge needed to work in the field includes mathematics, quantitative and qualitative analysis, inorganic and organic chemistry, physical chemistry, physics, mechanics, textile design, fabric structures, yarn-manufacturing systems, weaving, textile mill equipment.

Accessory techniques may be those used by the mechanical, electrical, chemical engineer, by management engineers, or by the physicist.

Textile engineers could work in any of the following activities: research design, development, testing, procurement, production, construction, operation, administration, teaching.

The credit for the development of this great college belongs to many people, both in and out of the textile industry. Philadelphia Textile Institute, with a great heritage, is fast approaching a period in its history incomparable with any that has passed.

Our Scientists Know How To Release Atomic Energy—Will Our Political Leaders Know How To Use It Wisely?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two stories I sent back from Geneva last fall reporting my observations as a congressional adviser to the American delegation to the Second International Conference on Peaceful Uses of Atomic Energy—and some reflections thereon.

The stories follow:

REPORT FROM GENEVA

I. AMERICAN SCIENTISTS LEAD THE FIELD—SEPTEMBER 6, 1958

This International Conference on Peaceful Uses of Atomic Energy at Geneva is the finest job of salesmanship for anything American that I have seen anywhere.

The U.S. scientific exhibits are walking away with the honors. Both the general public and the scientists themselves are voting with their feet. At any hour of the morning when only delegates are admitted to the exhibit hall, and in the afternoon when it is open to the public, there are many more visitors in the U.S.A. exhibits than in all the others combined.

One reason is the superiority of the exhibits themselves. Instead of long, printed descriptions of American accomplishments, frequently the machines themselves are here. Another is that the devices are live and working. When the actual machine could not be transported or reconstructed here, there is an animated portrayal on a screen, or a miniature, or an opened-up model in motion showing just what is happening inside.

Still more impressive to the visitor, especially to the scientific delegate, is the fact that at the machine to operate it and explain it in person is, in so many cases, the Americans who designed and developed it. It is interesting to watch the faces of these top scholars, professors, inventors from all over the world as they read the nameplate worn by each American and realize that the ordinary looking gentleman, generally in his thirties or even his late twenties, who will answer questions about the gadget is the great Doctor So-and-So of Los Alamos or Oak Ridge or Caltech, whose papers they have read with admiration. It is the equivalent of the movie-goer coming face to face with Cary Grant or Elizabeth Taylor.

Someone showed a stroke of genius when he placed a blackboard alongside most of the major devices demonstrating discoveries of principles in basic physics. So you see Dr. Stalinsky of the Soviet Union or an earnest student from Germany furiously drawing diagrams or writing equations as they argue it out with the American scientist, oblivious to the milling crowds around them.

Another 10-strike was the recruitment and training of about 50 attractive young women as guides. Most of them are Swiss medical or technical students, although some, including 3 or 4 Negro girls, are from the United States. They all speak French and English. The Swiss girls speak German and Italian also. There are others speaking Spanish, Russian, the Scandinavian languages, and a few others. So, almost any group of visitors finds a girl ready to show it through the American exhibits and explain them in the group's own language. The girls were given about 3 weeks of training by someone who succeeded remarkably in teaching them either an understanding of complicated processes or language that will explain the essentials—plus an enthusiasm for the new world being revealed that is contagiously convincing. They have a patter that would do credit to any Gray Line bus guide.

One of the most popular features is the 4 miniature theaters in which visitors can see one or another of 27 new technical films, 5 to 25 minutes long, with earphones describing in English, French, Spanish, and Russian the process being shown in color on the film.

Another crowded spot is the literature center. A whole wall is lined with books written by Americans on all aspects of atomic energy. One does not realize how much has been done in this new field until it is seen assembled in one place. The books, technical journals, a card catalog of all publications are all available for browsing by delegates. And they stand in lines to do so. The free literature table is swept bare as fast as the piles can be replaced. Both students and older men go away carrying pounds of printed material to study in laboratories from Japan to Romania to Argentina.

In the past I have often been critical of U.S. information centers in the various capitals of the world, because, in general, they were inferior to those of the Russians. The latter were better organized, better staged and lighted, more attractive; ours tended to look like the rows of ears of corn at a county fair. But the roles are certainly reversed in this conference. Our exhibits are superbly arranged, dramatically displayed, with simple, matter-of-fact descriptive legends. Not a word of self-praise, extravagant claims, or criticism of others.

In contrast, the Russian exhibit is largely photographs, diagrams, or architects' drawings with legends proclaiming what they say they have done or are about to do; or what they say others have said in praise of Russia's wonderful work for peace. A picture of the Red Square is thrown in, emphasizing that it is more a propaganda show than a scientific exhibit. The only place that I ever saw as many as a dozen people gathered was around a replica of Sputnik I. Just why that should be exhibited in a conference on peaceful uses of the atom was not explained.

The performance makes an American proud of his country. It renews one's hope that maybe we can get someone to do as good a job for American ideas, culture, values, motivations as these scientists are doing for American science.

II. WILL OUR DEMOCRACY KEEP ABREAST OF SCIENCE?—SEPTEMBER 9, 1958

There is a marked contrast between the scientists from all countries who are attending the International Conference in Geneva on Peaceful Uses of Atomic Energy and the political leaders of the same countries whom I was privileged to observe and work with while serving as a delegate to the United Nations General Assembly in New York a year ago.

Here are some general differences, of course with a good many individual exceptions:

The scientists overwhelmingly are young men; the U.N. delegates are predominantly older men, except from a few of the newly independent countries.

The scientists are full of enthusiasm and confidence about the future; most of the U.N. delegates seem tired, defeatist, even cynical about it.

The scientists care little about personal rank or protocol; they give credit to whoever is doing the best work, regardless of his nationality or the smallness or obscurity of his laboratory or his institution. The political leaders tend to be inordinately jealous of rank, position, personal prestige.

The scientists are bent only on finding ways to solve whatever problems arise; the political leaders are eloquent in explaining why the problems cannot be solved. They never have been solved, have they?

The scientists approach scientific problems as human beings searching for all facts that can be proved to be true; the political leaders approach their problems of what to do about the scientists' discoveries principally as partisans of differing political systems. Might it shake our side's position if we were to admit some validity to the other side's achievements?

Yet it is these political leaders who will determine how the scientists' remarkable accomplishments are to be used.

In such a frustrating and disturbing situation, a first urge might be to throw out the old, tired, defeatist political leaders and let the younger, more flexible minds which created the new machines decide how they are to be used.

And yet the evidence is not convincing that men who are outstandingly successful as scientists will be equally able in the political field. Everyone knows of the brilliant and dedicated doctor or professor touched with genius in his own realm who is at the same time notoriously incompetent in running his ordinary affairs. He has superior knowledge and ability in a specialized field; he does not necessarily have superior wisdom or commonsense.

Only 2 decades ago we saw gifted men in Germany—outstanding leaders in science, the arts, business—who at the same time followed and cheered a madman. Some outsiders protested in unbelief, "But the Germans are so highly cultured, they love beautiful music, they weep over moving passages in literature." True. The same people also threw human beings into furnaces for no reason except their race.

The unanswered question is whether men who examine everything critically in the scientific field will be equally critical and courageous with respect to political dogmas.

If they will be, then the tens of thousands of first-rate scientists that the Soviet Union has been feverishly training will reject the political theories and policies of those presently in charge and will pull down the tyrants.

Doubtless most of us in the West have believed, or at least desperately hoped, that such will be the case, that human beings given freedom of thought in one field will demand equal freedom in all other fields. Yet we must admit that it is by no means certain.

Some educators have long maintained that mental skills, habits, disciplines in one field are not transferred to other fields. And it is clear that scientists have put their abilities at the disposal of despots in pursuit of crazy ideas and cruel objectives about as often and as willingly as ordinary people have.

There is no easy way out for us. The common folks cannot shift to the scientists who released the new powers the responsibility for deciding for what purposes they are to be used. In a democracy that terrible responsibility falls on all of us. We must be willing to give time and effort to becoming informed on these matters of literally life and death importance, and to lead in finding the necessary political solutions.

Most political leaders probably tend to follow more than to lead, to reflect more than to create public opinion. This means that in a democracy, government leaders will not long get very far ahead of or away from what they think the people are thinking.

If the politicians are defeatist or unwilling to work as eagerly for change as the scientists are, it is because the politicians believe the people want most of all to maintain their own fairly comfortable status quo. They want more to relax than to be disturbed.

The research worker generally combines strict mental disciplines regarding the known with a certain openness of mind that approaches anarchy of thought regarding the unknown. But the political leader charged with preserving a nation recoils from the slightest suggestion of any anarchy anywhere.

The scientist pursues the unfamiliar; the political leader clings to the familiar, because the people seem to want him to.

Perhaps another reason for the differences in approach is the fact that the scientists deal largely with substances and forces that can be weighed or measured, however tiny or elusive. There is something tangible to pursue. But how can an emotion be measured? Or a desire, or a prejudice in the human mind?

Or perhaps these are not in the mind at all, but are reactions in the heart—as that term is commonly understood.

And, if so, what are the things that influence the human heart? Tradition does. Environmental conditioning does. Religion does. But are the historic religions that teach tolerance, kindliness, brotherhood influencing men today in many parts of the world as powerfully as the religions of nationalism, racism and communism are? And these latter teach intolerance, exclusiveness, unbrotherliness.

The more one sees and reflects on the awful potential for good or ill in the new knowledge of how matter was put together in the first place, and how it now, for the first time, can be both taken apart and put together by man, the more inescapable and sobering is the realization that our tasks as a people in deciding what to do with these terrible powers are far more difficult than were the tasks of the scientists in discovering how to release them. Will we do as well as they are doing?

Our present numbness in the presence of such a responsibility is perhaps inevitable. Certainly it is understandable. Within one 40-year period we have been thrust into the air age, the electronic age, the atomic age, and now the space age.

How can human beings hope to digest so much so fast? Yet digest it we must. There can be no survival for those who fail. I am confident that we can, if we will, play our part with as great success as the scientists are playing theirs—and with great benefit to all mankind.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Laredo, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. JOHNSON of Texas. Mr. President, the Rio Grande, the boundary between Texas and Mexico, was first bridged in 1889. This first international bridge was constructed at Laredo, in southwest Texas, but Laredo has always been the major point of crossing the river, even before Texas had won its independence from Mexico.

Laredo has shown tremendous growth since the beginning of the 19th century, and commerce between the United States and Mexico has increased correspondingly. Laredo is a delightful city with a colorful history as one of the largest and most successful Spanish settlements in Texas. I ask unanimous consent to have printed in the Appendix of the RECORD an article from Texas Business Review recording this history of Laredo and the city's rich promise for the future.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIVERSIFIED ECONOMY BUILDS OPTIMISTIC FUTURE FOR LAREDO

(By Charles R. McCord)

On May 14, 1755, Thomas Sanchez de la Barrera y Gallardo, acting in the name of Spanish colonizer, Jose de Escandon, founded the settlement of Laredo on the north bank of the Rio Grande some 200 miles northwest of the river's mouth. Until his death in 1796, Sanchez, holding concurrently the offices of chief justice and alcalde, was in effect the one-man government of the new settlement. Within the term of his administration, Laredo became the largest and most successful permanent Spanish settlement in what is now southwest Texas.

From an initial population of about 85 in 1755, by 1800 Laredo had grown to be a then impressive community of about 1,000 and had established itself as the major point of crossing on the Rio Grande between El Paso del Norte and the Gulf of Mexico.

As a condition of the treaty of Guadalupe Hidalgo, which terminated the hostilities of the Mexican War in 1848, Mexico agreed to recognize the Rio Grande as the international boundary and thus relinquished all claim to Laredo and all other Mexican settlements north of the river. Laredo was at that time designated as the seat of government of the newly created Webb County.

But the movement of people and goods is apt to follow the easiest and most accustomed route, regardless of political decisions. The boundary relocation effected by the treaty did not appreciably alter the course of commerce in the area, for it did not depreciate the comparative advantages of the river crossing at Laredo.

The new international division simply created a need for a new Laredo on the south side of the river. The importance of the river crossing itself—Laredo—Nuevo Laredo—as a major point of confluence of traffic between Mexico and the United States was never diminished; rather, it grew steadily as commerce between the nations increased through the years.

The Rio Grande was first bridged at Laredo in 1889. Until then passage across the river had been by ferry. The two predecessors of the present international bridge had unhappily brief careers—the first was destroyed by fire in 1920, the second by flood in 1954. The present bridge, an impressive four-lane span, was built on a scale sufficient to handle the tremendous flow of vehicular and pedestrian traffic that crosses the river each day.

The population of Laredo has increased steadily throughout the history of the community. As measured by percentage increase of population, the city experienced its most dramatic growth during the decade of the 1880's.

In 1881 both the Corpus Christi and Rio Grande (later the Texas-Mexican) and the International-Great Northern (later the Missouri Pacific) Railways completed the construction of their tracks into Laredo. Here, as in the West generally, the advent of the railroad was a powerful economic stimulus.

From 1880 to 1890 Laredo's population rose from 3,521 to 11,319, an increase of 221 percent. The years of World War I were Laredo's next period of explosive growth. From 1910 to 1920 its population increased approximately 53 percent, from 14,855 to 22,710.

Since 1920 Laredo has shown substantial percentage, and increasingly significant absolute, increases in each population census. The most reliable estimates available place the current population of the city at approximately 65,000.

As the population of Laredo has grown through the years, it has come to represent an increasingly larger portion of the total population of Webb County. At the turn of the century only 61 percent of the people of Webb County resided in Laredo. In 1957 it was estimated that the population of the city comprised, roughly, 93 percent of the population of the county as a whole.

The growth of Laredo has been paralleled by the expansion of her sister city across the river. In fact, most estimates now indicate that Nuevo Laredo's population slightly exceeds that of Laredo. It is now quite likely that the two cities together form a metropolitan area of approximately 140,000 population.

Webb County is located in the central western portion of the south Texas (or Rio Grande) plain, a subregion of the Texas coastal plain. The topography and vegetation of Webb County is typical of that which has caused much of the south Texas plain to be called brush country or Monte.

The land, rising from the river in gentle undulations, is covered by a dense growth of bunch grasses, cactus, and scrub. With the exception of a narrow band of irrigated truck farms on the alluvial shelf along the Rio Grande, the great expanse of the country is given almost exclusively to large-scale cattle ranching.

The southern portion of the South Texas Plain, including Webb County, has the longest summer and mildest winter seasons of any area in the State. The climate of Webb County is dry and warm with an average annual rainfall of 19.27 inches and a mean annual temperature of 72°. The irrigated farms of Webb County are favored with a 293-day growing season, only about 85 days of which, on an average, are cloudy.

In its natural state, the Rio Grande is not an unqualified blessing to Laredo. The river's flow—fluctuating from flood stage to a mere trickle—is too erratic for it to be an ideal municipal water supply. At present, there are two projects in advanced stages of planning, either one, or both, of which would solve Laredo's water problems for the foreseeable future.

One of these plans is to use Lake Casa Blanca as an off-river storage reservoir. By this plan, the city could borrow water from the reservoir in time of need and repay the amount borrowed whenever the Rio Grande was again running high. Lake Casa Blanca was created in 1950 by the construction of an impounding dam across Chacon Creek just northeast of the city limits. Apart from its possible function as a storage reservoir, the lake now provides the people of Laredo with an excellent recreation area.

The other plan, and it now appears the one most likely to be effected, consists in attacking the problem of the river's uncertain flow. This now much-publicized project, the Diablo Dam, will be a huge international dam on the Rio Grande near its confluence with the Devil's River a few miles northeast of Del Rio.

The Diablo Dam is one of the three such projects proposed in a treaty signed by the United States and Mexico in 1944. The Falcon Reservoir in Starr and Zapata Counties is the only one of these projects realized thus far. It is estimated that the Diablo Dam, as now planned, would produce a total storage capacity of 5,977,000 acre-feet, making its reservoir the largest in Texas. Construction of this great multipurpose dam would provide a permanent solution to the water problem of Laredo and would be of great value to the cities downstream.

Though the economy of Laredo is basically oriented to the functions of an international port, it has a modest, but growing, industrial sector. Through their chamber of commerce and industrial development committee, the business and civic leaders of the community are actively soliciting new industry for Laredo. City officials are also aware of the need for a more diversified industrial base for Laredo's economy.

The city planning commission has recently proposed an industrial zoning ordinance which would encourage, and set the conditions for, an orderly industrial development in the city.

Just north of the Laredo city limits, Texas Mining & Smelting, a division of the National Lead Co., operates the largest antimony smelter in the world. For years this smelter has been a major employer in Laredo. It smelts ores imported from Mexico, the leading supplier of this strategic raw material to the United States.

Another major industrial employer in Laredo, and one of ever growing significance, is the apparel and textile products industry. The principal manufacturer in the textile products category is the Texas Harvest Hat

Co., a firm whose products have been well known for years in international markets.

The leading firms in the apparel category are the Laredo Manufacturing Co., Amedee Frocks, Inc., and Salo Manufacturing Co. Together, these four leading concerns employ approximately 500 people. There is an abundant labor supply in Laredo particularly suitable for industries such as these, and electric power and natural gas are also available at attractive rates.

The principal minerals of Webb County are brick clay, sand, gravel, cannel coal, oil, and natural gas. As sources of income and employment, by far the most significant of these are oil and natural gas. Natural gas was discovered in Webb County in 1908, and in 1920 O. W. Killam brought in the county's first oil well.

The total value of mineral production in Webb County, largely from sales of oil and natural gas, was $7,368,590 in 1957.

The center of activity in petroleum and natural gas production is Mirando City in the southeast corner of the county. However, Laredo businesses receive a considerable income in providing goods and services for mining employees working in the oil and gas fields of Webb, Duval, Jim Hogg and Zapata Counties. The Texas Employment Commission estimates that, on the average, 375 workers were employed in Webb County in 1958 in mining, quarrying, and oil production.

In addition to manufacturing and mining activity, agricultural production makes a large contribution to the economy of Webb County. According to 1958 estimates of the Texas Employment Commission, approximately 13 percent of the persons employed in the county were engaged in agriculture. Though irrigated truck farming is an important element in the agriculture of Webb County, as a source of income to the area cattle ranching is of far greater significance.

The value of all farm products sold from the county in 1954 was $5,784,812. Of that total, $4,020,067 or 70 percent, derived from sales of livestock and livestock products. The value of all crops sold was $1,763,545, or 30 percent of the total.

Vegetables—primarily tomatoes, onions, and melons, but also including lettuce, peppers, spinach, broccoli, carrots, beets, sweet corn, mustard greens, grapefruit, oranges, and limes—accounted for 87 percent of the value of all crops sold in that year.

Laredo is served by two railways, the Texas-Mexican and the Missouri Pacific. Freight and passengers entering Mexico by rail are transferred at the river to the equipment of the Ferrocarriles Nacional de Mexico. The city also receives the traffic of three U.S. highways and one State highway. At Laredo these highways tie into the much-traveled Pan American Highway, which provides a popular route to Mexico City via Monterrey.

When present road construction is completed, Laredo will communicate with the national Interstate and Defense Highway Systems through a four-lane divided highway to San Antonio. The completion of this project is certain to bring a considerable increase in tourist traffic through Laredo.

The city is also served by air through the facilities of the Laredo Air Force Base where flights of the Trans-Texas Airlines are serviced. Tourists traveling by air can continue into Mexico on a flight of the Campania Mexicana de Aviacion, which operates a terminal in Nuevo Laredo.

Laredo Air Force Base was constructed during World War II to be used as a flexible gunnery training base. It was closed after the war in 1945, but on April 1, 1952, the Air Force reactivated it as a field for basic single-engine pilot training. There are now about 2,400 military personnel at the base and its operations give employment to approximately 650 civilian workers. A recent report from Washington indicates that there will be no change in the status of the base in the foreseeable future.

The recent growth of Laredo's economy is indicated by some of the commonly used measurements of business conditions. Total value of retail sales for the Laredo metropolitan area in 1950 was $46,441,000. In 1957 this value had increased to $52,814,000. The value of authorized construction rose from $1,102,000 in 1950 to $3,946,499 in 1957, and in that same period bank debits increased from $214,800,000 to $282,092,000.

It is estimated that in 1958 the total population of the Laredo retail trading area was 472,460. This market area includes several of the surrounding Texas counties and extends into Mexico as far as Monterrey. Laredo has 42 merchant wholesalers employing about 40 persons, and 17 sales agencies, brokers, and petroleum bulk stations with employment of approximately 240.

The extent of commerce between Laredo and Nuevo Laredo is suggested by the very large number of automobiles and auto passengers that regularly cross the International Bridge in both directions—in 1958, for exemple, 1,529,463 automobiles carrying 5,530,805 persons crossed into Nuevo Laredo, and a slightly greater number of both crossed into Laredo from Mexico.

Traffic on International Bridge, in fact, has increased at an average annual rate of nearly 10 percent in recent years. Part of the increase, of course, was craused by a greater number of tourists traveling to the interior of Mexico and the United States, but by far the greater portion of the traffic was composed of businessmen, laborers, and shoppers that daily crossed from one side of the river to the other and frequently back again in the same day.

A greater dollar volume of goods moves between Mexico and the United States at Laredo than at the other port on the two nations' common boundary. Laredo import customs collections exceed $4 million annually.

Last year, a daily average of over 180 railroad cars of freight crossed into Mexico from the United States at Laredo; there is also a very large amount of goods transportation by truck.

The city continued to be the leading port of entry for tourists going into the interior of Mexico in 1958, when it recorded 58,267 tourists' cars and 151,588 tourists crossing the border.

To accommodate the great number of tourists passing through Laredo, there are 4 hotels and 23 motels with a combined capacity of 1,100 rooms. The present trend in motel construction in Laredo is toward the large self-sufficient luxury-type operations, such as is now exemplified by the Sands Motel at the northern edge of the city on U.S. Highway 81. All indications are that the most dynamic element in the city's economy in future will be the rapidly expanding service industries catering to the tourist trade.

By no means all the tourists that come to Laredo are merely passing through; the varied recreational opportunities that the city offers—hunting, fishing, water sports, golfing, horseback riding, bullfights—attract tourists on their own account. They also help to create a positive community atmosphere that can be a major factor in future industrial growth.

Fine theaters, civic concerts, a first-rate school system (including private and parochial schools and fully accredited Laredo Junior College), good hospitals, a moderate tax rate, and a cooperative, progressive municipal government and chamber of commerce also contribute to an outstanding environment for future business and industrial growth.

The continued rapid industrial and economic growth of Mexico, and a consequent sharp rise in its commerce with the United States, is safely predictable. It is reasonably certain, therefore, that Laredo will retain indefinitely its established position as a leading port on our southern border.

Projected improvements in the highway systems of both countries, with Laredo as a major exchange between these systems, will encourage still further the flow of tourists and goods through the city. Benefits accruing from this rising flow will tend to encourage the growth of those sectors of Laredo's economy not directly related to the city's function as a tourist and transportation center.

Marvels of the American Outdoors

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. NEUBERGER. Mr. President, few of us truly appreciate the marvelous American outdoors, particularly when we are confined within marble halls and corridors as much as are Members of the Senate. Yet we of the Senate have jurisdiction over the public lands, wildlife, fisheries, and forests of many parts of the American West.

Nelson Reed, of Klamath Falls, Oreg., in the great southeastern uplands of my State, is a gifted writer in the field of nature lore. He has written a poem entitled "Before You Know It, It Will Be Fall," in which he heralds the wonders of wildlife in the vast outdoor solitudes and wilderness of Oregon.

I ask unanimous consent that the poem by Mr. Nelson Reed be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to printed in the RECORD, as follows:

BEFORE YOU KNOW IT, IT WILL BE FALL

When the algae's thick on the upper lake
And the leaping rainbow leaves a wake,
And the velvet's gone from a big buck's horn,
And the china's cackle at early morn,
Reminds the doves, they soon must leave,
The summer has only a short reprieve.

When the little creeks can run no more,
And the big blue grouse gets up with a roar,
And the mountain ash is a painter's dream,
In a mirrored lake without a seam,
And the lazy brook trout, fat with spawn,
Tell you plainly the summer has gone.

When over the marsh's gray twilight,
Young ducks are trying their wings in flight,
And the ground squirrels all have gone to bed,
And some of the leaves are turning red,
And the coyote pack has a different call,
For the pups are grown—it will soon be fall.

When the honkers fly at rosy dawn,
And the spots are faded from this year's fawn,
And the evening sun tints a dusty sky,
And the morning mists come drifting by,
And the mountain quail begin to call,
Before you know it, it will be fall.

—*Nelson Reed.*

Tribute to Floyd Waldo Duffee

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. PROXMIRE. Mr. President, Floyd Waldo Duffee, a University of Wisconsin engineer, recently received recognition from Cornell University for his work in devising technological advances which, among other things, lighten one of the heaviest and most burdensome tasks in the world, pitching hay from the ground onto the hay wagon.

I ask unanimous consent that an editorial tribute from the Green Bay Press-Gazette to Duffee be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, July 3, 1959]

THE MAN WHO LIFTED THE FARMERS' BURDEN

Farmers who labored to put up the huge Wisconsin hay crop a couple of decades ago will approve heartily the award of the Cyrus Hall McCormick Medal to Floyd Waldo Duffee, a University of Wisconsin engineer, for distinguished achievements in agriculture. Duffee received a medal recently at Cornell University, specifically for his work in relieving farmers of much of the back-breaking toil long associated with putting up the hay crop.

Today Wisconsin produces about 8 million tons of hay a year, all of which would have to be handled at least once by a farmer with a pitchfork if it were not for Duffee's skillful work to lighten the farmer's toil.

Think of the thousands of men with pitchforks that would be required to move 8 million tons of hay from the ground onto hayracks. These men are gone from the farm because of Professor Duffee's skill in developing machines to do the job and do it better.

As an example of his work the early ensilage machines were greatly improved because he made a careful study of the ones that clogged and failed to blow cut corn into the silos and the successful ones that did send it up as they were supposed to and made his report to the machinery manufacturer. The result was high speed precision ensilage machines which handle the corn crop speedily, and without long delays for repairs. He later adapted the ensilage cutting machine to a forage chopper which moved down the field cutting the hay and shredding it and blowing it back into a wagon ready to move to the barn for storage. As a result of his work there are machines now available which harvest a large percentage of Wisconsin's forage crops including much of the corn without a pitchfork being used.

He developed other machines which picked up hay from windrows, crushed it anl split the stems to hurry curing. Later he showed farmers how to dry the hay in the mow by blowing air into the storage space with fans and ducts. As long ago as 1921 he prevailed upon electric utilities to buy and equip a complete dairy and poultry farm near Madison. There the utilities showed all manner of electric power devices in action and convinced farmers that they could save money by using them. Since then electricity has been the farmers' "low cost hired man" and the demand for electricity has mounted rapidly since.

Duffee has noted that most of the field work on the farms has been mechanized, and he is now reported to be working on the electric augers which will carry feed such as chopped hay or silage from its storage place to the animals without the aid of the man with the pitchfork.

Duffee's work, of course, can be tied in with some of the modern farm problems. The departure of many farmers from the soil is due to the fact that they are no longer needed there. Many of them are not needed because of Duffee's inventiveness and thus while he has relieved farmers of back-breaking toil it may also be said that he has helped to relieve many farms of many farmworkers. On the whole, however, it is quite likely that most farmers would prefer the problems they have today to those of the early twenties when the strong back was an important qualification for success in farming.

Jefferson-Jackson Day Dinner Address by Hon. Stuart Symington, of Missouri, in Rockland, Maine

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. MUSKIE. Mr. President, on Saturday, June 20, 1959, my distinguished colleague, Senator STUART SYMINGTON, of Missouri, was the featured speaker at the Maine Jefferson-Jackson Day Dinner in Rockland, Maine. He was a welcome guest and made a deep impression upon Maine citizens with his warmth, his friendly interest, and his objective and informed analysis of some of the problems confronting our country. It is my priivdege to ask unanimous consent that his address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR STUART SYMINGTON, AT THE JEFFERSON-JACKSON DINNER, ROCKLAND, MAINE, JUNE 20, 1959

It is a real privilege to be here in Rockland tonight. You Democrats of Maine show great ingenuity in holding this dinner at one of the most beautiful sea resorts in New England.

And as a Democrat, I wanted to come to Maine to meet the people who brought about the "Maine miracle."

Last November you elected your second Democratic Governor in a row, two Democratic Congressman out of three, and the first elected Democratic Senator in your history.

The Democrats of the State of Maine have won these victories by giving the people responsible and responsive government in the interests of all.

And your leaders personify that formula for victory.

We in the Senate consider it a privilege to have as a colleague your great former Governor, ED MUSKIE. He is, as you well know, a man of principle, of kindness and of courage. He is going to be one of the real statesmen of our generation.

It was our pleasure to have Senator MUSKIE as our guest in Missouri a few months ago, when he spoke at our leading Democratic dinner.

It must also be gratifying to you that the Governor's office in Augusta is now occupied so very ably by your new Governor, Clinton Clauson.

He has developed a sound financial program for your State, and won for it the approval of the legislature.

Under Governor Clauson's administration, your superb Democratic program for highways, mental health, and education are going to go a long way.

These are the kinds of investments in progress the shrewdest Yankee would be proud of.

That philosophy of government is also represented in the House by your Democratic Congressmen: FRANK COFFIN, whom my colleagues from Missouri tell me is one of the hardest-working Congressmen in Washington; and JIM OLIVER, your newly elected Representative, already building a fine record, and with it a bright future.

These men, working together, are doing a fine job to help build up Maine's economy.

This is a State of abundant potential. Great riches lie in your forests; in your mountains; in your soil and fishing waters; but most of all, in the skill of your people.

Moreover, while Maine may be set off from the center of America, it is in the cockpit of the Atlantic community. Maine is almost equidistant from the west coast and the English Channel. This is a strategic position for both defense and peaceful international trade.

With these natural blessings, the only remaining ingredients for prosperity are leadership, vision, and the willingness to make investments in Maine's economy.

And this is just where Republican government differs from Democratic government.

The Democratic Party considers our economy as a whole, and realizes that the development of any part of it contributes to the prosperity of all.

From the day Thomas Jefferson negotiated the Louisiana Purchase and doubled the area of our country, the Democratic Party has consistently believed in and worked for increasing investment in America's growth.

The superiority of Democratic philosophy is shown by results.

Take the current situation: American families would have more money in their pockets and more available for investment today if the Republican administration had encouraged national growth.

If the Nation's rate of growth under the Republican Party had equalled the record made by the Democratic Party from 1947 to 1952, the average family would have been better off by $2,800.

This means $465 more family income each year for purchases, for recreation, education for the children, or for savings.

In addition, a Democratic standard of growth would have provided $31 billion more for our farmers and $39 billion more for private investment.

We hear a great deal these days about inflation—and certainly we should guard against it.

But the poor business management by the Republican government has cost American wage earners much more in recent years than inflation has, and dealt even more cruelly with those who are retired.

By cutting back investment in our resources, our people and our businesses, the Republicans have shown a lack of confidence in the very factors that have made our country great.

The policies of this administration have cost us the growth we must have to remain prosperous and secure.

Let me cite a few examples:

Failure to start new projects for resource development, despite consistent historical proof—TVA, Bonneville, and such—that such projects create great new income opportunities for underdeveloped parts of the Nation.

Failure to rehabilitate depressed areas, a policy which has perpetuated waste of manpower, plants, and managerial ability in many parts of the country.

Opposition to adequate slum clearance and urban renewal legislation, despite exhaustive proof that $1 of such Government investment returns $10 to $15 to the private economy.

Instead of making investments for a growing economy, the administration would have us spend the taxpayer's money for higher interest rates on Government bonds—a long-term charge against the Treasury which benefits only a tiny minority.

Republican high interest rates take money out of almost everybody's pocket—by increasing taxes, cutting down industrial investment, limiting employment opportunity, and curtailing research and development for the future.

I can think of no more wasteful spending than that involved in the tight money policy.

We Democrats in Congress will oppose unnecessary spending.

The Democratic Congress stands ready to support the President on any sound program of investment in the American economy.

With our population growing by 3 million each year, we must develop all our Nation's wealth, or face a decline in our standard of living.

To foster economic development, I recommend the following steps:

1. Appropriate action to keep down interest rates rather than push them up, including loans for essential business and local projects, when funds are not otherwise available on reasonable terms.

2. Increased investment in the education of our children, in a way that does not involve Government controls over the educational process itself.

3. Acceleration of slum clearance and public housing projects where private funds and private interests will not, or cannot, do the job adequately.

4. Elimination of waste in Government, particularly in defense and agriculture. The billions saved can be invested in our growth, or used to decrease the national debt, or reduce taxes.

5. More effective enforcement of the antitrust laws, and if necessary, stronger laws. The Government should guard continuously against economic concentrations and monopolistic elements, as they depress growth, raise prices and destroy small private enterprises and private initiative.

These programs will cost money, of course. The administration says we cannot afford them, unless we want to run a deficit or raise taxes.

But from my observation of the way this Government is being run, I believe that if we cut out the waste, funds will be freed for all these purposes.

As example: Last year, this country spent billions on weapons systems which are obsolete. As a result, most of this money was wasted.

Look what this Nation could have done with this money:

Built schools, for the education of our most precious resource.

Increased grants to the aged, the physically handicapped, and the needy.

Built more hospitals, under the Hill-Burton Act, like the one you have right here in Rockland.

Provided funds for our depressed industrial and agricultural areas, so that chronic unemployment need not plague this, the richest country on earth.

Modernized our airports in cities like Portland, Augusta, Lewiston, and Bangor.

Undertaken needed programs for water resource development and water pollution control.

America's economic strength is just as essential to freedom and peace as our physical and spiritual strength.

We can maintain and increase it if we make these wise investments in the future of America.

Through sound Democratic programs, administered with attention to the principles of business management, we can build that strength we need to keep our country free.

Dedication of Cumberland Gap National Historical Park

EXTENSION OF REMARKS
OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. MORTON. Mr. President, on Independence Day last Saturday, July 4, 1959, there was a dedication ceremony at the Cumberland Gap National Historical Park near Middlesboro, Ky. Within the confines of this park the States of Kentucky, Tennessee, and Virginia join. This is the largest historical national park in the United States comprising more than 20,000 acres.

The Secretary of the Interior, the Honorable Fred A. Seaton, was the principal speaker on this historic occasion. The senior Senator from Virginia [Mr. BYRD], the senior Senator from Tennessee [Mr. KEFAUVER], the senior Senator from Kentucky [Mr. COOPER], and the junior Senator from Kentucky were all present, as were prominent political and civic leaders from all three States. The junior Senator from Virginia [Mr. ROBERTSON], was there on Friday, July 3, on the occasion of the visit of the Vice President.

The development of this park is a fitting tribute to the significance that the Cumberland Gap played in the history of our western migration and the building of the United States.

I ask unanimous consent that the address given by the Secretary of the Interior be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON AT CUMBERLAND GAP NATIONAL HISTORICAL PARK DEDICATION, MIDDLESBORO, KY., JULY 4, 1959

It is a great honor to join with you today in the dedication of the Cumberland Gap National Historical Park.

Those of us who are gathered here have only to look about to see at a glance that this is a place of great scenic beauty. As we look, we are reminded of something else: that this is a place hallowed by history—the history of an expanding, restless people, exploring whatever was ahead, crossing old boundaries, breaking trails and building new roads through the wilderness, putting high mountains behind them, and pushing ever on westward.

Ours has been a glorious and a proud past, and what we are to do here today only takes proper recognition of a facet of that fact. Physical evidence of similar American history is now preserved in many areas under the jurisdiction of the National Park Service of the Department of the Interior. For example, there is Harper's Ferry, W. Va., with the Chesapeake & Ohio Canal and the B. & O. Railroad running west; at St. Louis, the site of the new Jefferson National Expansion Memorial; at Fort Laramie and Scotts Bluff on the old Oregon Trail.

It was Thomas Walker, an ancester of Kentucky's distinguished junior Senator, THRUSTON B. MORTON, who made the first recorded passage through Cumberland Gap on April 13, 1750. Probing northward into what was to become Kentucky, it was he who built there in the wilderness the first known white man's dwelling, a log cabin.

Nineteen years later there was to follow one of the storied and almost legendary figures of pioneer America, Daniel Boone. Traveling through the gap, fighting hostile Indians and exploring the rich and awsomely beautiful Kentucky countryside, he failed in his first attempts to settle there. In 1773, he had the heart-rending experience of losing his son James in an Indian attack, only to return 2 years later, hacking his way with the aid of 30 axmen through forests and swamps and over the Cumberland Mountains. He finally succeeded in driving through the 200-mile Wilderness Road and setting up at its far end a fort named Boonesborough.

That road once opened, travel could begin for the general populace. By 1783, a wave of 12,000 settlers had spread out into Kentucky. By 1791, when Kentucky became a State, it was the home of 100,000 souls. At the opening of the 19th century, the new State had more than twice that population, and many had traveled Boone's Wilderness Road, including among their numbers the undistinguished grandfather of one who was later and forever to be remembered as Abraham Lincoln, the great martyred President of the United States.

To recall to mind these facts as we stand on this hallowed ground surely prompts us to seek to acquire some of the drive and courage and vision of those early explorers and pioneers, qualities which helped make us great as a nation and qualities which we must never lose if we are so to remain.

It is incumbent upon us to preserve outstanding historical and scenic places for ourselves and posterity.

Fourteen such areas have been added to the national park system of this Nation since January 1, 1953.

All are nationally important, and all are different in character. For example, one is the Booker T. Washington National Monument in Virginia; another is the Thomas A. Edison Laboratory National Monument in New Jersey. A third is the 25,000-acre Cape Hatteras national seashore recreational area in North Carolina. Still another is the Independence National Historical Park in Pennsylvania, established just 3 years ago today. And there is the first new national park since 1949, the Virgin Islands National Park which was established December 1, 1956.

We plan to continue to add areas that deserve to belong to the systems, including the Chesapeake and Ohio National Historical Park—an elongated area stretching 185 miles up the Potomac River from the District of Columbia to Cumberland, Md.

We can all take satisfaction that as a result of these additions, and others, our national park system now includes 182 areas covering a record number of acres—almost 25 million.

This system is one of the proudest possessions of the American people, and it is one which has served as a model for several nations of the world. It ranges from one of the largest—Mount McKinley National Park—in Alaska to the newest in the Virgin Islands, from Acadia National Park in Maine to Death Valley in California. It includes the site of Jamestown, Va., where the first English colonists settled on this continent; the battlefield at Yorktown, Va., where American patriots finally won their long and hard struggle for independence. And within it are such scenic wonders as those of Yellowstone, Bryce Canyon and Yosemite.

This unparalleled group of national parks, historical sites, national monuments, and military parks is for all to enjoy. They represent an important part of our heritage, and they were won for us by farsighted, aggressive men and women in and out of the Government. The Department of the Interior, with the full backing of President Eisenhower, is determined to leave this system greater—far greater—than we found it.

That is why, in 1956, we launched a sweeping 10-year program to build new buildings, more parking areas and other facilities; to repair roads that had fallen into disrepair; and to construct and maintain all sorts of new facilities to make possible more outdoor recreation and enjoyment for ever greater numbers of people. That program bears the name Mission 66. It will long be remembered, I think, as a milestone in conservation achievement.

Mission 66 will go a long way toward taking care of the needs of the increasing numbers of people who come to such areas as Cumberland Gap every year—a number estimated to reach nearly 80 million in the year 1966. But I must warn you, Mission 66 is an effort—it can never be a guarantee, even though it today enjoys an almost unprecedented bipartisan backing in the Congress and the overwhelming support of the American people. The continuing job of preserving this Nation's historic and scenic treasures will necessarily fall, again and again, on the shoulders of every living generation.

As we dedicate this magnificent national historical park today, let us also rededicate ourselves to a full share in the continuing struggle for the preservation of such places of beauty and of history.

By so doing, we shall help assure that those who come after us will have no less opportunity than do we to know the greatest natural beauty of this land of ours and to feel, as we can here today, the power and thrill of our historic heritage.

Montana: An Uncommon Land

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. MANSFIELD. Mr. President, during the depression of the 1930's, Joseph Kinsey Howard wrote a book entitled "Montana: High, Wide, and Handsome." It was the best book which up to that time had been written about the Treasure State.

This year, K. Ross Toole has written a book entitled "Montana: An Uncommon Land." It is likewise an excellent book in its indication of just what it is that makes Montana. I ask unanimous consent to have printed in the Appendix of the RECORD a review, written by Stewart Holbrook, and published in the New York Times of July 5, 1959.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

HIGH, HANDSOME, REMOTE

Montana: An Uncommon Land. By K. Ross Toole. Illustrated. 278 pages. Norman: University of Oklahoma Press.

(By Stewart Holbrook)

There is little or nothing moderate about Montana, the fourth-largest State, stretching 650 miles across the northern plains and the Rockies, a region beuatiful and grim, parched, windbeaten, lonely under its big sky and in its seemingly infinite distances. Within the State live some 660,000 people. It is, indeed, an uncommon land and K. Ross Toole, among whose forebears were several of its outstanding pioneers, knows it well from genesis to the present.

Though he obviously loves his native State, Mr. Toole is no chauvinist. This excellent book is unlikely to bring about any considerable influx of potential settlers. It is possibly significant that its author, after many years in Montana, now lives in New York, where he is director of the Museum of the City of New York.

The Montana story is brief, explosive, often tragic. Its many villains have been as villainous as one could wish, yet the greatest crime of all appears to be due to the State's remoteness from the main stream of American life. Its wealth was of such nature that it could be converted into cash only "by devices and methods created and paid for outside of the region. Its raw material could rarely be fabricated on the spot because of the simple economics of distance." And, too, there was always the malevolent climate.

It has been thus from the first. Beaver, beef, sheep, gold, silver, copper, oil and, to a lesser extent, lumber and wheat, one and all have to be moved immense distances before reaching the ultimate market. "Distance meant cost," Mr. Toole writes, "cost meant capital, capital meant absentee ownership, absentee ownership meant * * * operation in the essential interest of outsiders with local interests a very secondary consideration." This is putting it on the line.

There were villains of wheat, of the range, of the lumber empire. Mr. Toole deals with these, but of necessity he must also deal with the life and times of the mine barons. No few of these fellows were attracted to the region first by gold and silver, but they soon discovered that the big money was to be in copper. Here in copper is the thumping great story of Montana's bloodstream. Copper means butte, where the mines cluster; and Anaconda (city), where the world's tallest stack rears up from terrain as terrible as could be imagined, stands for the smelter of the A.C.M., or the Anaconda Copper Mining Co.

The struggles for dominance in copper constitute in large part the economic, political, and social history of the State. Men named Marcus Daly, William Andrews Clark, and F. Augustus Heinze mustered small armies composed of front men, backroom men and newspaper editors, together with crews of assorted goons, to fight battles remembered as the wars of the copper kings. There were no rules. The weapons used were venal courts, district attorneys, legislatures, and police, while the common soldiers fought underground with dynamite, steam, hot water, and slaked lime. When the smoke at last cleared, the A.C.M. was seen clearly to be Montana's dominant and often dominating corporate influence.

During and since the copper wars, labor was periodically in upheavals of internecine struggle that matched anything known anywhere. The Western Federation of Miners and the Wobblies (the IWW) staged dynamite attacks and gun battles as fierce as those of the copper kings. Meanwhile, several of the big deep mines were hit by disasters of fire and explosion. The mile-high copper hill came to be known as bloody butte.

Later came another major tragedy, a result of the promotion by landowning railroads of homesteads in the shortgrass country. The homesteaders flocked in by the thousands. They plowed deep, they sowed, and they went broke. One sees their relics in the form of abandoned shacks, swaybacked barns and miles of rusting barbed wire, through which the everlasting wind moans while it piles tumbleweed against the melancholy strings.

Still later came oil strikes, and the tourists. Mr. Toole mentions both, though without much enthusiasm, as having possibilities. All he is certain about is that Montana is still high, wide, handsome, and remote. "There are many ways of looking at it," he writes, "and many ways of feeling about it. And there is room for all the ways."

Sustained Yield Management in National Forests

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. NEUBERGER. Mr. President, a most thoughtful editorial on forest conservation was printed on the editorial page of the Oregon Journal, of Portland, on June 24, 1959. The editorial was entitled "Resource We Can Have Forever." The editorial takes as its theme the basic importance of sustained yield management of our timber resources. I was particularly pleased to note that the editorial emphasizes a recent statement by Richard E. McArdle, Chief of the U.S. Forest Service, that his great agency will not allow the national forests to be overcut or decimated.

Mr. President, I ask unanimous consent that this editorial from the Journal, of Portland, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RESOURCE WE CAN HAVE FOREVER

In days past, there were men who believed that trees grew only to be cut. There were others who believed that putting the ax to a tree was a desecration of nature's handiwork and was an essential evil.

Today one can find, we suppose, persons in both categories, but they are much fewer and the area of disagreement between the timber cutter and the conservationist is much smaller than it used to be.

If one were not aware of this already, he would have learned it at the citizens' con-

ference on Pacific Northwest forest resources at Reed College last weekend.

On the program were spokesmen from widely diverse interests, but running through the conference was the theme that our forests are an asset which must be managed on a basis that we will always have them, not only for the production of the timber, but for the protection of our water resources, the providing of a habitat for wildlife and domestic animals and the offering of vast playgrounds for outdoor recreationists.

At present, timber in the Pacific Northwest is being cut faster than it is being replaced, but representatives of private industry point with great pride to the giant strides which have been made in "tree farming" and predict with confidence that timber growing and cutting will be brought into balance.

Some of them disagree with the custodians of our public timberlands on the rate at which old growth timber should be cut to make way for new forests, but few of them could take issue with the declaration of Richard E. McArdle, Chief of the U.S. Forest Service, that, "regardless of pressure, we will not overcut the national forests; we will not reduce rotation ages below what is technically desirable simply to rationalize increased cuts * * *." Conflicts exist in the use of the forests, but, as McArdle pointed out, "increasingly on the national forests we are demonstrating that many of these often-conflicting uses can live harmoniously side by side."

One of the most striking examples of this was given by Earl Coe, director of the Washington State Department of Conservation. Unwise timber cutting is inconsistent with watershed protection, he said, but controlled logging has been practiced in the Seattle watership for 43 years, and scientific studies have proved that this has actually enhanced water supply.

The U.S. Forest Service has long recognized the importance of recreation in its forest management. Increasingly, the private companies are making their lands available to the recreationist, including the hunter, the fisherman, the picknicker. The need for more recreational use in all categories of forest lands was told by C. J. Olsen, director, Utah State Park and Recreation Commission, who described in dramatic terms the "explosive" rise in leasure use of outdoor resources.

It is often said that Oregon suffers by its great reliance on timber as the bulwark of its economy. This is true. Oregon needs more diversity. But it is not true that we must inevitably accept some day the loss of our timber resource. Better management and better utilization are writing a new chapter in timber. Those engaged in it confidently believe this is a resource we can have forever, with all of its multiple values which all of us share.

Employment of Former Army Officers by Defense Contractors

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a wise and morally sensitive editorial from the Milwaukee Journal on the legislation recently introduced by Senators DOUGLAS and JAVITS, to prohibit former Army officers now employed by defense contractors from selling weapons to those who took over their military jobs.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, July 2, 1959]

INVESTIGATE CHARGE THAT UNITED STATES IS PRESSURED INTO OBSOLETE ARMS

Senators DOUGLAS, Democrat, of Illinois, and JAVITS, Republican, of New York, have introduced legislation to prohibit former Army officers now employed by defense contractors from selling weapons to those who took over their military jobs.

The bill would bar officers from selling anywhere in the Pentagon for 2 years after retirement. It would prohibit purchases from companies which use such officers in violation of the bill's provisions.

The Senators are concerned with the possibility of questionable ethics in which some former officers are drawing fat salaries for their Pentagon contacts, and using friendship as a basis for getting the kind of purchase decisions that benefit their employers.

Meanwhile the House Armed Services Committee prepares to look into the problem. There is basis for investigation. Lt. Gen. James M. Gavin, retired from his post as Army Chief of Research and Development, has said: "Industrial pressure is causing decisions to be made in favor of [weapons] systems that are already obsolete." And former officers are playing a role in that pressure. There are at least 721 of them on the payrolls of the 100 top contractors. Some are being paid as much as $75,000 a year.

The problem here does not concern those officers hired for legitimate purposes. Obviously, many defense contractors are anxious to get the services of real experts who can help them perfect their products. And among the retired officers are many experts who help not only their new bosses but the Nation to the extent that their knowledge helps produce better military weapons.

But when, and if, officers are used as lobbyists or influence peddlers, it becomes a different matter. It becomes a matter of ethics. And it is important that the Nation find out the extent to which such practices exist.

The House investigation, if it is conducted as fairly as Chairman HÉBERT, Democrat, of Louisiana, promises, can get the answers. And it is upon such answers that any legislation should be based. No one's interests would be served by barring former military officers from proper use of their experience and knowledge. But everyone's interests would be served by stopping any use of these retired officers in pressuring former friends to look with favor upon their new bosses.

The decision on what type of arms to buy should be made by objective military experts and their expert determination of what is best. If such decisions are based on friendship and pressure, they are not only unethical but dangerous to the national security.

Public Opinion Poll, 13th District of Illinois

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mrs. CHURCH. Mr. Speaker, because of the interest expressed by so many of the Members, I am happy to place in the CONGRESSIONAL RECORD today the results of a recent questionnaire seeking a scientific sampling of the current opinion within the 13th District of Illinois on 33 leading issues.

Signed returns, totaling 15,650, received from all sections of the district gave the following results:

Public opinion poll tabulation from MARGUERITE STITT CHURCH, Representative in Congress, 13th District, Illinois

	Percent		
	Yes	No	No opinion
1. Do you believe that it is essential to balance the national budget?	85.1	11.7	3.2
2. Do you favor a constitutional amendment to make mandatory the balancing of the budget?	52.1	39.0	8.9
3. Do you favor a constitutional amendment limiting taxing and spending powers of the Congress?	61.4	31.7	6.9
4. Do you support a mandatory annual payment on the national debt?	69.0	20.7	10.3
5. Do you favor granting the President a blanket item-veto authority?	32.7	43.7	23.6
6. If revenues do not meet the cost of the 1960 budget, should—			
a. The national debt be increased?	8.0	46.9	45.1
b. Taxes be increased?	18.4	39.6	42.0
c. Nonvital Government programs be eliminated? (If "Yes," what programs would you eliminate?)	79.0	3.5	17.5
7. If there should be a budget surplus, do you prefer—			
a. Tax cut?	32.9	26.9	40.2
b. Reduction in the national debt?	76.6	5.2	18.2
8. Do you favor the repeal of wartime-imposed excise taxes?	68.5	21.8	9.7
9. Do you favor an increase in the Federal gasoline tax from 3 cents to 4½ cents to provide needed funds for the Federal highway program?	39.0	55.0	6.0
10. Do you favor gradual transfer back to States and local communities of complete responsibility for local needs (education, slum clearance, old-age assistance, sewage-treatment plants, etc.) assuming a transfer of some tax sources from the Federal Government?	75.2	18.5	6.3
11. To meet educational needs, do you approve—			
a. Continued reliance on local and State support of education?	77.3	9.8	12.9
b. Federal grants to States for school construction?	29.1	48.4	22.5
c. Federal grants to States for teachers' salaries?	22.2	55.2	22.6
d. Federal aid for scholarships?	35.3	41.3	23.4
e. Providing some method, perhaps through tax benefits, for individuals and business to finance expanded education?	55.7	20.8	23.5
12. Where economic changes have resulted in decreased industrial activity and unemployment, do you prefer—			
a. Federal funds to solve the problem (such as Aid to Depressed Areas Act)?	25.6	44.6	29.8
b. State and local efforts?	75.6	7.6	16.8
13. Do you favor adding medical services under the Social Security Act, to be financed by increased contributions by employers and employees?	26.9	67.1	6.0
14. Do you favor lowering the retirement age of both men and women under social security, now 65 and 62, respectively?	31.7	63.7	4.6

Public opinion poll tabulation from MARGUERITE STITT CHURCH, *Representative in Congress, 13th District, Illinois*—Continued

	Percent		
	Yes	No	No opinion
15. At present, a person drawing social-security benefits is prohibited from earning in excess of $1,200 annually. Do you believe this limitation should be removed?	72.7	21.1	6.2
16. Are you in favor of expanding public power (TVA, etc.)?	20.9	65.0	14.1
17. Do you favor increasing the present 2 percent interest rate charged REA co-ops on funds borrowed from the Treasury?	58.9	14.1	27.0
18. Do you favor—			
a. Elimination of all agricultural price supports?	64.5	15.3	19.3
b. Sliding-scale supports of from 60 to 90 percent of parity?	21.5	29.6	48.9
c. Fixed supports at 90 percent of parity or above?	3.6	40.9	55.5
19. Should foreign aid be—			
a. Continued at present levels?	24.5	37.5	38.0
b. Cut sharply?	52.9	17.0	30.1
c. Expanded?	6.5	41.8	51.7
d. Ended?	17.8	34.7	47.5
20. Should less money be spent on military and more on economic aid under the mutual security program?	35.6	40.7	23.7
21. Do you approve of the President's "food for peace" proposal, utilizing surplus agricultural commodities?	80.8	8.0	11.2
22. Do you favor increasing the use of private capital and repayable U.S. loans for foreign aid?	59.1	19.5	21.4
23. Do you approve of the proposed summit conference?	68.1	16.6	15.3
24. Do you approve of our firm stand with respect to Berlin?	92.0	3.6	4.4
25. Would you favor diplomatic recognition by the United States of Communist China?	23.4	64.7	11.9
26. Do you favor repeal of that section of the Taft-Hartley Act which permits States to enact their own right-to-work laws?	27.7	59.0	13.3
27. Do you favor a law guaranteeing union members a secret ballot in the election or removal of union officials and in other vital union matters?	92.2	4.7	3.1
28. Do you favor the prohibition by law of secondary boycotts and organizational picketing?	72.8	16.3	10.9
29. Would you favor extension of coverage and increase in the minimum-wage law to $1.25 per hour?	51.0	35.8	13.2
30. Do you favor a Federal fair-trade law?	32.1	45.6	22.3
Would you leave enactment of such laws to States, as at present?	50.0	18.2	31.8
31. Do you favor a Federal law enacting the principle of equal pay for equal work without discrimination on account of sex?	52.4	36.1	11.5
32. Do you think that the non-Communist affidavit and loyalty oath required of recipients of funds under the National Defense Education Act of 1958 should be eliminated?	18.5	72.9	8.6
33. Are you in favor of stronger civil rights legislation?	46.0	37.0	17.0

Interest on Government Bonds

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. PROXMIRE. Mr. President, one of several pregnant and unanswered questions about the President's drive to knock out the 4¼ percent ceiling on long-term Government bond interest rates so that these rates can be shoved up, is this: Does not selling long term bonds at sky-high rates freeze the Federal taxpayers into paying this higher interest cost for many future years, although there is every likelihood, on the basis of all historical experience, that these rates will drop soon and sharply?

The Capital Times of Madison, a fighting and alert newspaper, puts this question very cogently, in a recent editorial, and I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD, as follows:

HIKE IN INTEREST RATE SHOULD NOT FOLLOW RAISE IN DEBT LIMIT

President Eisenhower has signed a bill which raises the legal temporary ceiling on the national debt to a record peacetime level of $295 billion. At the same time, the bill authorizes raising of the permanent ceiling to a new level of $285 billion.

The temporary limit will be in effect until June 30, 1960. The permanent ceiling will then be in effect, unless Congress authorizes a new change in the temporary limit.

Mr. Eisenhower had requested the legislation which he signed into law. He had warned that unless the limit was raised it would have been frozen at a figure $2 billion dollars below the amount actually owed by the Government.

Given the circumstances, perhaps the boost in the debt limit was inevitable. But there is a consequence of this which should be recalled now.

When the President asked Congress to raise the debt limit he also asked it for a companion bill which he said should be considered as part of single package.

In this proposal Mr. Eisenhower requested permission to allow the Treasury to pay higher interest rates for the money it borrows. He asked Congress to repeal the 41-year-old law which sets a ceiling of 4½ percent on the interest which the Treasury pays to bankers and other lenders from whom it borrows money when it sells them U.S. bonds which run for more than 5 years.

Mr. Eisenhower said such a boost in rates is necessary. Interest rates in general are high, he said, and the Treasury is forced to compete for loans with other borrowers who are paying the higher rates.

He also wants to float more long-term loans, which would expire in more than 5 years, so that the Treasury would be able to manage its financing in a more orderly way than is possible with short-term loans.

We find this reasoning a little strange, to say the least. What he is proposing is that the Treasury embark on a long-range program of heavy borrowing at a time when, by his own admission, interest rates are extremely high.

What would happen to the president of a large corporation who recommended such a course to his board of directors? Is it logical to do your heaviest borrowing at a time when you know you will have to pay the most for your money?

It seems to us that Congress should not feel bound to consider this request as part of the package on the raising of the national debt. For passage of the increase in interest rates would make it certain that the national debt would have to be raised again.

Youth Conservation Corps Receives Further Support From Organizations and Individuals

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. NEUBERGER. Mr. President, as a cosponsor of S. 812, a bill which would establish a Youth Conservation Corps for the dual purpose of conserving the Nation's human and natural resources, I have been quite pleased to continue to receive cogent endorsement of this bill from many individuals and organizations.

The American Recreation Society, a group which has contributed much to the conservation movement in our Nation, has forwarded me a resolution indicating full support of the YCC. Pomona Grange of Union County, Oreg., has also sent me a resolution endorsing the principles of S. 812. Mrs. Dorothy Shore, chairman of the East Multnomah County Democratic Forum Women's Activities Committee, has written me informing me that her organization has voted unanimously to go on record in support of S. 812.

I ask unanimous consent that these resolutions be printed in the Appendix of the RECORD together with a fine letter from Mrs. H. E. Lightburn of Salem Oreg., favoring establishment of a Youth Conservation Corps.

There being no objection, the resolution and letters were ordered to be printed in the RECORD, as follows:

RESOLUTION OF UNION COUNTY POMONA GRANGE

Whereas in our American economy we have little opportunity for boys to find and legally hold jobs, particularly city boys in vacation months,

Whereas idleness breeds delinquency: Now, therefore, be it hereby

Resolved, That a program similar to the CCC be provided for these boys; be it further

Resolved, That a copy of this resolution be furnished our congressional delegation.

HENRY WEATHERSPOON,
Master.

LAURA E. BATES,
Secretary.

Adopted by Union County Pomona Grange at their regular meeting June 27, 1959.

JUNE 25, 1958.

Hon. RICHARD L. NEUBERGER,
Senate Office Building,
Washington, D.C.

DEAR SENATOR NEUBERGER: The Women's Activities Committee of the East Multnomah County Democratic Forum voted unanimously at their June meeting to go on record in support of the program for Youth Conservation Corps (S. 812).

It was the consensus of opinion of our group that the benefits of this proposed program would be twofold; to give wholesome

employment to young boys as well as to conserve the beauty and promote the usefulness of our natural surroundings.

Our recommendation of support of S. 812 will be presented to the East Multnomah County Democratic Forum for their action.

Sincerely,

MRS. DOROTHY SHORE,
Chairman, East Multnomah County Democratic Forum, Women's Activities Committee.

SALEM, OREG., *June 20, 1959.*

Senator RICHARD NEUBERGER,
Senate Office Building,
Washington, D.C.

DEAR SIR: We read with interest an article which appeared in the Oregonian, June 16, 1959, concerning the bill authorizing a Youth Conservation Corps. It seems as though it would be a very worthwhile thing and one in which all would surely benefit.

The fact that it serves a twofold purpose makes it something to give serious thought to. The young people of today do not have enough to do constructively; nothing is left to their imagination and ingenuity. Parents, in many cases, do not or cannot take the time to discipline the child which makes for an unhappy and frustrated boy or girl. That, plus the fact that so many seem to find it hard to do something in a positive vein instead of a negative one, has a lot to do with the situation as it is today. I do think, however, that if all the good things which are done by the youth of today were played up, they would far outnumber the less desirable.

If for no other reason than for the "human resources found in the youth of our cities and towns," I believe this bill should be given more than just a passing thought by everyone. If nations can spend billions on defense measures, it seems to me that our first line of defense should be the youth, for it has been said that the strongest chain is only as strong as the weakest link.

It goes without saying that the conservation of our natural resources is very important to all of us, both from an economic standpoint and also from a recreational standpoint. This may sound a bit philosophical, but I sincerely believe that anyone who works or plays in our forests and parks cannot help but be a better person for it.

Sincerely yours,

MRS. H. E. LIGHTBURNE.

STATEMENT IN SUPPORT OF S. 812, BILL TO AUTHORIZE THE ESTABLISHMENT OF A YOUTH CONSERVATION CORPS, BY HOWARD JEFFREY

The American Recreation Society, representing 5,154 recreators throughout the Nation, urges support of this legislation. We believe it is important to provide healthful outdoor training and employment for young men and advance the conservation, development and management of national resources, of timber, soil, and range, and of recreation areas.

With the massive surge of outdoor recreation already underway, need for the provision of more abundant opportunities for recreation and inspiration are necessary for our Nation. These facilities would be built by youth.

The well-being of youth and the well-being of these outdoor recreation areas are essential. Indeed, it is fortunate that the needs of our outdoor recreation areas and the needs of our people fit so well together. Youth is made healthy and vigorous by work in the forests. Our youth represent America's future. Their work will be guided by older hands who have the cumulative knowledge and ideals of our culture. We need this legislation to build and rebuild our youth as well as our outdoor recreation resources. This legislation will help to shape the destiny of both, and thus contribute materially to our national security.

We, in our work in recreation, know that the linking of healthy recreation and work are two absolutely essential ingredients of building the right character. Character is the hope of men and of nations. Possessing it, there is the will to do the things that make for both the individual and the general welfare. Undesirability in citizenship is equal to the percentage of inefficiency in work and degeneracy.

Under competent leadership, young men keep their hands and brains active in doing things worthwhile, spending their leisure hours in worthy pursuits. We know this to be true from the history of the Civilian Conservation Corps of more than 20 years ago. We also know that no other program was so universally accepted and approved by the Nation. We would only urge that the committee expand the intent of this bill and make this opportunity available to more youth than are indicated. We would wish that all of our youth in terms of conservation could get off the city streets and spend their time in a healthier environment to their own benefit and also to the benefit of our lands, parks and forests.

Our members today still hear the story from those who had the benefit of the Civilian Conservation Corps experience. They believe that their lives were given a new start up the ladder to a better life. We cannot leave youth stranded before the closed doors of opportunity.

As a nation we have fallen far behind in meeting recreation needs. We are not only making it difficult for our generation to use its leisure time profitably but are jeopardizing the prospects of future generations.

We urge congressional acceptance of S. 812 and the establishment of a Youth Conservation Corps. We urge this so youth may advance in life as good citizens. We know that the provision of opportunity for healthful training and employment will help many. Some individuals who will join this program are capable of being seniors in any college and university throughout the Nation. Others will be illiterate and need the help provided by this bill.

We have all seen along our eastern seaboard the development of State park areas and national park areas by youth. We know that facilities which were established long ago are now 68 percent overloaded and that very little in the way of rehabilitation or the building of new facilities has been accomplished in spite of the fact that for the first time, just a few years ago, Senators and Congressmen made possible additional funds for the maintenance and needed sanitation. We would urge that the developing, managing, protecting of recreation areas by the enrollees of the Youth Conservation Corps fulfills the responsibility of the Nation's citizens which the Federal Government must maintain.

You have heard from the Governors of States where unemployment exists and critical personal situations are rampant. To preserve the good character and health of the teenagers in these States, the members of the American Recreation Society urge passage of this legislation which will aid in the work ability, the education, and knowledge worthy of recreation.

We would also urge that when the members of the Youth Conservation Corps return to their own communities an incalculable benefit would come to these individuals, to their families, and to our American institutions if they were welcomed back by representatives of local organizations, dedicated to all forms of young people's work, assisted in securing employment or useful activity, and introduced to the best life to which they are capable of responding.

We would urge that followup practices be established so that the benefit of this fine experience will not be lost and its firm establishment not be left to chance.

Respectfully submitted.

HOWARD JEFFREY,
Executive Director,
American Recreation Society.

President Eisenhower Should Pay Off the National Debt and Save Taxpayers Billions of Dollars in Taxes

---

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. McDOWELL. Mr. Speaker, in his 1952 campaign President Eisenhower promised to "tidy up" the national debt, but the national debt has actually risen from $266 billion to $285 billion during the 6 years he has occupied the White House. This tidy little increase of $19 billion means an actual increase of $760 million in interest each and every year from now on.

If the national debt were retired the interest we now pay, nearly $9 billion a year, would not have to be paid. This would save the average taxpaying family head some $275 in taxes each year which he could apply elsewhere.

The President wants to fight inflation, at least he says so. Here is the very best way to fight inflation that I know of. But he is probably only giving lipservice to this idea, as he did in the case of his 1952 campaign promises on reducing the national debt.

All of us want to fight inflation and to insure the continued growth of our country, but, as Senator LYNDON B. JOHNSON told the Senate on June 29, 1959, in commenting on the Cabinet committee report on this subject issued a few days ago—

> Nowhere does the report cover adequately one of the most serious aspects of inflation, that is, mounting costs of money. Few things have contributed so much to inflation as rising interest rates. The only thing the report says specifically about this question is that the sky should be the limit on interest rates.

In an editorial suggestively, but accurately entitled "Words, Words, Words," the Washington (D.C.) Post and Times Herald on June 30, 1959, said:

> The Nixon committee's interim report on how to promote "price stability for economic growth" (how deceptively that "for" bridges the chasm) is certainly one of the most redundant, uninspired and generally useless documents lately to come off the Government's mimeographing machines.

More is needed to fight inflation than unkept campaign promises and restatements of the obvious by such instrumentalities as the President's Cabinet Committee on Price Stability. Senator JOSEPH S. CLARK, JR. of Pennsylvania, made this point on Tuesday, of this

week, when he declared on the floor of the other House that—

I would point out, however, that the principal danger of inflation, as the last few days have indicated, results from the actions of our friends on the other side of the aisle, who have been unwilling to vote to close the loopholes in our tax structure. To close these loopholes would help balance the budget, help reduce the national debt, help stabilize the bond market, and, generally speaking, have a strong anti-inflationary impact.

Mr. President, I close by suggesting to my friend from Connecticut and to various others of my friends across the aisle that though they talk about balancing the budget, their primary objective is not really to balance the budget; their primary aim is to see to it that we do not, under any circumstances, get more revenue into the Federal Treasury than the $77 billion that has been projected, and that we then cut back national defense and important domestic programs in order to meet that sacred figure of $77 billion, a position which I must say, is pretty well discredited in the country today.

Mr. Speaker, I have introduced legislation to amend the Internal Revenue Code of 1954 so as to eliminate the special treatment of certain items for income tax purposes and to provide that the savings resulting therefrom shall be used to retire the huge public debt. My bill is H.R. 8022.

The public debt cannot be retired without the adoption of positive legislation, such as I have introduced, which will make sizable funds available annually for this purpose. I propose to obtain these funds from the following sources:

My bill would lower the special allowance for oil and gas companies from 27½ percent to 15 percent. The adoption of this part of my plan would result in raising approximately $325 million annually in additional governmental revenues.

Conservative estimates point out that approximately $1.5 billion in dividends paid out are never reported as income. My second section of the bill withholds the basic tax of 20 percent at the source, and this section would, if adopted, bring in an estimated $240 million a year.

Another section provides for the repeal of section 24 and section 116 of the Internal Revenue Code of 1954. These are the sections which allow credit against tax and exclusion from gross income for dividends received by individuals. It is estimated that the removal of this privilege will produce approximately $400 million a year in additional revenue for the Federal Government.

My bill also deals with expense account spending, and in this connection provides for additional information on certain income tax returns and prohibits the deduction of certain expenditures as trade or business expenses.

It appears that from $5 billion to $10 billion are being spent annually on excessive expense accounts, which are claimed as business expense deductions for income tax purposes.

A large portion of these expenditures should not be allowed as business deductions, and the enactment of this section of my bill would result in raising at least $800 million in additional taxes each year.

The tax allowances which my bill would disallow include such things as entertainment at nightclubs, theaters, sporting events, maintenance or operation of yachts and seasonal or vacational lodges and houses, gifts, dues or initiation fees in social organizations, and traveling expenses to conventions outside the United States.

These provisions of my bill are the result of an article in the Yale Law Journal of July 1958, which pointed out that in cities like New York, Washington, and Chicago it is safe to say that at any given moment well over half the people in the best hotels, restaurants, and nightclubs are charging the bill as an expense of their company. Uncle Sam pays 52 percent of the cost of theater tickets and nightclub expenses submitted by the new aristocrats of the expense account dodge.

There have been a number of rulings by the Internal Revenue Service that have been widely cited as showing the ridiculous lengths to which the present tax laws have been stretched. I would like to call to your attention one or two of these cases which, I think you will agree, conclusively demonstrate the need for the kind of legislation which I have introduced:

First. In one recent case the $17,000 cost of a big game hunting trip in Africa was held to be a business expense. The fortunate businessman-hunter took his wife with him and their trip included visits to several European capital cities.

Second. In another case a prominent movie star was allowed to deduct as ordinary and necessary business expenses, the costs of the following gifts: to her director a $920 silver tea set and coffeepot; to her agent a $775 oil painting; to her dress designer an $810 gold necklace and gold clips.

Third. Other publicized rulings have included as deductible business expenses all or part of the cost of food and liquor at nightclubs, tickets for hit musicals, expenses of attending the Kentucky Derby, the Mardi Gras, football games, country club dues and initiation fees, the cost of maintaining seasonal residences, the cost of yachts, and the costs of hunting lodges.

Senator JOSEPH S. CLARK, JR., one of the sponsors of legislation to plug tax loopholes declared that—

Permitting this type of tax deduction lowers public moral standards and results in an utterly unjustifiable reduction of the revenue which the Federal Government is entitled to receive.

I am completely convinced that my bill, H.R. 8022, will do what the President has so far manifestly been unable to do—that is, reduce the national debt and stop the present ruinous inflation.

I hope President Eisenhower and our colleagues on the other side of the aisle will strongly support my new bill. I have every confidence that the members of my own party in the House will do so.

Our Farm Surpluses Can Be a Blessing

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. SCHWENGEL. Mr. Speaker, the Des Moines (Iowa) Register recently carried an article on farm surpluses by the former Secretary of Agriculture, Henry A. Wallace.

Mr. Wallace presents a fair picture of our surplus problem and gives proper credit to the administration for its efforts under Public Law 480 to reduce these surpluses and get them into the hands of our friends overseas.

He makes a good point about learning to live with our surpluses. I agree that they should be regarded in the light of a blessing rather than a curse and feel that through research and application of scientific principles we can make more uses of our farm products and develop better and less expensive ways of storing them.

Because I feel that many of my colleagues will find Mr. Wallace's remarks an interesting and fair appraisal of the surpluses and their value to us, I asks unanimous consent that the article be reprinted in the Appendix of the RECORD.

OUR FARM SURPLUSES CAN BE A BLESSING

(By Henry A Wallace)

(Mr. Wallace, one of Iowa's better known native sons, today describes himself as "an editor and plant breeder." He was Secretary of Agriculture (1933–1940), Vice President (1941–45) and Secretary of Commerce (1945–46). His influence on farm policy in the 20th century has, perhaps, been second to none.)

SOUTH SALEM, N.Y.—Forty years ago, in the farm paper of which I was then editor, I began hammering for what I called the ever-normal granary.

In 1938, as Secretary of Agriculture, I had the satisfaction of seeing the ever-normal granary enacted into law with flexible loans ranging from 52 to 75 percent of parity, depending on the size of the new crop plus the old carry-over. Not only were there flexible prices but there was provision to cut down the acreage of the crops in surplus.

Knowing the possibility of war and bad weather, I insisted that in setting up the normal size of carry-over we go far beyond what had been looked on as normal in the days of the so-called free market. I had always felt that the old system made for wide swings in prices, which were bad for both producer and consumer.

Moreover, in case of war we would be caught dangerously short.

During the past 6 years the ever-normal granary has been made into an abnormal granary with supplies under Government loan or storage nearly four times as great as when the present administration took over.

AN EFFORT TO CHANGE URBAN ATTITUDE

I regret seeing the farmer kicked around by the city press as a result of the huge Government investment in these vast surpluses. The city taxpayer is very sensitive

these days and rightfully so. Any politician or editorial writer who denounces the huge agricultural appropriations meets a hearty response on the part of four out of five people.

The purpose of this article is to change city attitudes with regard to farm surpluses and the security of the United States and the welfare of the world.

In 1938 I felt that any surpluses we built up would come in mighty handy to protect us in case of war. In 1959 I feel trebly so. Our surplus corn and wheat is mostly stored in places where it would not be seriously contaminated even by atomic bomb fallout.

In brief, we may say that the fact of our agricultural surpluses, properly stored, will determine the outcome of the next war. Realistically, as a matter of pure military security, we may say that the nation which builds up $100 billion worth of military surplus is surely justified in building up $10 billion worth of agricultural surplus. Remember that extensive exploding of hydrogen bombs would rapidly make farm animals and growing crops exceedingly dangerous to eat.

The extensive storage of wheat, corn, grain sorghum, dried milk, and dried egg surpluses, then, becomes the determining factor in survival. I do not think we shall have an atomic war, but I do say that a nation which spends $40 billion a year on its military effort can well spend one-sixth of that amount storing surplus food in the right places.

Frankly I hate to use this kind of argument because its pessimistic implications are so great. In the final showdown of a world holocaust, after the military had done their most horrible worst on both sides, uncontaminated food would undoubtedly be the final arbiter. For myself, however, I would rather use our food surpluses in foreign lands in a really big and imaginative way.

It must be said in defense of the Eisenhower administration that it has used Public Law 480 to dispose of perhaps $2 billion worth of farm products in exchange for foreign currencies. It has also given away roughly $1 billion worth. Without the farm product loans and the operation of Public Law 480 to market stuff abroad, the chances are that corn today would be down to 35 cents a bushel and wheat to 50 cents a bushel, with livestock products proportionately down.

FARMER'S INCOME IS LOWER

But in spite of all that the Eisenhower administration has done the fact remains that in recent years the income of the average farmer has come down 10 or 15 percent at a time when the income of the average worker has gone up 20 to 30 percent.

The trouble is that the farmer has increased his efficiency faster than the worker in town. He works harder. He works longer hours, and his share of the consumer's dollar has been steadily cut. Our population increases at the rate of 1.7 percent a year but our agricultural output increases at the rate of 2.7 percent a year.

The farmer today has less than half as much income as the people in town. During the decade before I became Secretary of Agriculture I spoke to dozens of audiences saying that the farmer must have the moral, legal, and economic equivalent of what the tariff and the corporate form of organization and other subsidies give to industry and the labor union gives to labor.

To the best of my knowledge, every modern nation in the free world has a system of putting countervailing power from the government at the disposal of the farmer. And now throughout the Western nations surpluses build up, as production outruns demand and prices slip more and more. Russia and China, which have been woefully backward in their agricultural production methods, now give signs of sudden and great changes.

A CHALLENGE FROM KHRUSHCHEV

Khrushchev has challenged the United States to outrun Russia in the economic world on the road to peace. Let us respond by challenging Russia to join the Western world, through the United Nations, in putting the agricultural surpluses to work to end world hunger. Let our battlecry be, "End World Hunger by 1970."

Today hunger is growing in one-third of the world, whereas in the United States, Canada, Australia and Western Europe surpluses grow ever faster. Undoubtedly the United States can do more to bridge the gap between the hungry and the surplus areas than any single country. But the United States cannot do the job by herself. Even is she could, her motives would be suspect. Ideally it is a United Nations job, a job for a revived and revised UNRRA.

AN INTERNATIONAL GRANARY

Probably there should be an international ever-normal granary with an international plan for food distribution. The nations putting surpluses into the international granary should have voting power somewhat proportionate to their contribution. However, the hungry nations on the receiving end should have veto power with regard to the method of distribution. If the hungry nations propose distribution plans which obviously lead to graft and waste, the surplus-producing nations should have the right to turn down such plans.

How much capital should the international ever-normal granary have? Who will provide it? How cheaply should the international ever-normal granary sell to the hungry nations? Obviously there should be very wide latitude given the management but general rules must be laid down in advance.

If the U.S. Congress reaches the conclusion that it is too complicated to operate an international ever-normal granary, with or without Russia, then I say it is still possible to make our surpluses a blessing. In such case we must approach the problem in a far bigger way than we have hitherto.

FOOD SURPLUSES HERE TO STAY

I do not criticize the present administration for the way in which it has built up such enormous surpluses, provided it now gets busy on a really comprehensive plan—national or international. The time is far later than the administration seems to appreciate.

The very heart of the U.S. agriculture is that combination of feed grains like corn on the one hand and livestock products on the other. This part of agriculture is headed for the most serious and continuing build-up of surpluses, at a time when wheat surpluses have reached the point where they are almost unmanageable.

The administration thinks it can reduce surpluses by lowering the price to the farmer. This may be true in the case of specialties like eggs or potatoes but it is not true of corn, wheat and cotton. Many thousands of farmers may be ruined, but someone else takes over the land. The farmers grow fewer and the farms grow larger. The problem remains essentially the same.

The surpluses are here to stay and we must learn to live with them in a big and constructive way, taking into account our security needs and the mounting hatred of the hungry peoples for those who are better off than they. If we are convinced that our safety lies in this direction, we can slowly but surely work out the mean and difficult details of putting together a program.

From a narrow agricultural point of view I say to the farmer as I said repeatedly 35 years ago: "You must have equivalence of bargaining power. You must get it from Government as others have. If the Government handles your great surpluses constructively, the market will give you a living price. Fight those who urge that more farmers be driven off the land. Such persons are undermining our Nation's security and balance."

Pools of Jobless Remain

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. VAN ZANDT. Mr. Speaker, those of us in Congress representing districts with pockets of chronic unemployment have no difficulty in agreeing with the viewpoint of Sylvia Porter in her column appearing in the July 4 issue of the Washington Evening Star entitled: "Pools of Jobless Remain."

In inserting this column in the RECORD I do so in the hope that it will be read by every Member of Congress who will in turn assist those of us who are trying to get action in the House on the Senate-approved bill, S. 722, now tied up in the House Rules Committee.

YOUR MONEY'S WORTH

(By Sylvia Porter)

POOLS OF JOBLESS REMAIN

At this moment of high and rising prosperity almost 11 percent of all those able and willing to work are still jobless in 179 areas spread across 29 States in our land.

There is no question whatsoever about the power and breadth of today's business upswing, no doubt that our economy is surging to new heights.

Yet, while the rebound from the 1957–58 recession has slashed average unemployment in the United States to under 5 percent of our work force, the bitter facts are:

1. The boom has hardly touched the pockets of joblessness in cities hit by major industrial upheavals or migrations in recent years.

2. A full one-third of this nation's unemployed men and women are concentrated in these 179 chronically depressed areas.

3. Many of these cities hit by all-out depression long before the general economic downturn of 1957–58, and the nationwide recession made an already bad situation worse.

4. As an indication of the chronic nature of the unemployment, the area with 23.1 percent of its workers jobless in May, the highest unemployment rate in the country—Biddeford-Sanford in Maine—has been on the Government's official "labor surplus" list since 1954. In Providence, R. I., unemployment in May topped 11 percent, and this major city has been on the sick list since 1951. In Atlantic City, N.J., unemployment exceeded 15 percent, and this world-famous resort city has been in trouble since 1952. So it goes.

NO FLY-BY-NIGHT TOWNS

These are not ghost towns. These are not fly-by-night communities dying because of the stupidity or greed or laziness of their own citizens.

Rather these are communities with proud histories, well-built schools, established road and water systems, all essential facilities.

These are cities which actually are suffering from progress itself—changes in technology within the Nation, switches in production from the old to the new, development of new methods of operation, new processes. And while dotting the unemployment map are centers of coal mining, textile and metal manufacturing, also on the distressed list have been and still are, automobile and even aircraft production cities.

Let's face it. If an upsurge 14 months old and of this strength still leaves us with so many valleys of trouble, there is little chance that anything short of a great boom will erase them.

Let's face this too. Many of the jobless in these areas are too old or too set in their ways to move to booming regions. Large numbers don't have the skills and aren't now capable of learning the skills other regions are demanding. Most don't have the money to finance a move even if they dared try it.

CITIES CAN'T FILL GAPS

The cities of the most prolonged and worst distress simply haven't had and don't have the capacity to fill the gaps created in their economic structures by the decline of what were once basic industries, the migration of major corporations.

So, finally, let's face the one decent answer—a program of technical assistance, loans, and grants under which the Federal Government can help States and localities redevelop the distress regions.

The Senate already has passed an area redevelopment bill which would provide a few millions and the organization for this aid. The bill is making its way at molasses speed through the House Rules Committee. But just as the President vetoed an area redevelopment bill last year because it gave more than he requested, so he is likely to veto a bill this year—unless there is agreement in advance on details.

The legislation should be put on the books without delay. It will be a black mark against all of us if we permit our Government again to default on our responsibilities to aid our blighted areas.

Hazleton (Pa.) City Council Urges Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the city council of Hazleton, Pa., on June 26, 1959:

Be it resolved by the Council of the City of Hazleton, Pa., That the city of Hazleton approves the legislation now pending before the Congress, assuring local government, by granting home rule to the District of Columbia; and be it further

Resolved, That a copy of this resolution be sent to the Congressman from this District and the U.S. Senators from Pennsylvania.

Adopted by council this 26th day of June A.D. 1959.

S. THOMAS CAPPARELL,
Mayor.

Attest:

FLORENCE M. WEST.
City Clerk.

Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD I include a resolution adopted by the North Dakota Water Users Association on June 19, 1959, which points out the necessity for the full appropriation for preliminary work on the Garrison diversion unit. I concur fully in their presentation and trust that the budget estimates for this project will be restored:

RESOLUTION OF THE NORTH DAKOTA WATER USERS ASSOCIATION URGING RESTORATION OF INVESTIGATIONAL MONEYS FOR BUREAU OF RECLAMATION FOR THE GARRISON DIVERSION UNIT OF NORTH DAKOTA FOR FISCAL YEAR 1960

"Whereas the Pick-Sloan compromise for the Missouri Basin development provided for the irrigation of 1 million acres of North Dakota land in exchange for approximately half a million acres taken from production and the tax rolls; and

"Whereas this agreement was accepted in good faith by the State of North Dakota as reflected by action of three sessions of the State legislature, as well as by affirmative action of voters and taxpayers; and

Whereas the Bureau of Reclamation, through their investigations, have discovered sufficient acreages and have engineering plans which provide for development of areas over a 70-year period; and

"Whereas the Bureau of Reclamation is presently engaged in firming up more detailed land classification, topographical mapping, and engineering for canal, lateral and drainage layouts, cost estimates, and further economic studies in order to refine the project plan report complete in 1957 which indicates the economic feasibility by all rigid standards; and

"Whereas North Dakota, through its legislature, enacted legislation providing for the Garrison Diversion Conservancy District which has been activated and is presently cooperating with farm operators and six organized irrigation districts for the purpose of completing repayment contracts on a partnership basis in order to assure an expeditious program if and when construction moneys are made available; and

"Whereas the U.S. House of Representatives reduction of the recommended Bureau of the Budget estimate of $550,000 to $300,000 for the Garrison diversion unit, will impair and seriously hinder the efficiency of scheduled work because of disruption of the Bureau of Reclamation's technical staff, and thus will bring added costs to the National Government because of added delays: Now, therefore, be it

"*Resolved by the North Dakota Water Users Association, a statewide organization founded for the purpose of assuring orderly and maximum development of all of North Dakota's water resources*, That the U.S. Senate Committee on Appropriations restore the $250,000 reduced by the House of Representatives for the Garrison diversion unit and urges that the conference committee on public works appropriations for 1960 sustain the full amount because it is in the economic interest of not only North Dakota, but the United States; and be it further

Resolved, That copies of said resolution adopted by the North Dakota Water Users Association be transmitted to the U.S. Senators WILLIAM LANGER and MILTON R. YOUNG, of North Dakota; and Senator CARL HAYDEN, chairman of the U.S. Senate Committee on Appropriations, and to U.S. Representatives QUENTIN N. BURDICK and DON L. SHORT, of North Dakota, and to the Honorable CLARENCE CANNON, U.S. Representative and chairman of the House Committee on Appropriation."

The above resolution was adopted by the executive committee of the North Dakota Water Users Association at Bismarck, N. Dak., on June 19, 1959.

L. C. MUELLER,
President.
OSCAR BERG,
Executive Secretary.

Plains (Pa.) Rotary Club Honors U.S. Marbles Champ

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Times-Leader of Thursday, July 2, 1959:

U.S. MARBLES CHAMP HONORED BY ROTARY

Matthew Wysocki, 13, son of Mr. and Mrs. Stephen Wysocki, 71 Skidmore Street, Hudson, the new National Marbles Champion, was paid tribute last night by the Plains Rotary Club at a meeting in the American Legion post home.

The new titleholder, who was the Times-Leader Evening News Marbles Champion and was sent to the national competition by the Times-Leader Evening News, was honored by the Rotary Club in conjunction with numerous civic and service organizations of the community. Representatives of the Plains Board of Commissioners and School Directors were also on hand to pay tribute.

Rotary President Hugh A. Walsh opened the festivities by introducing program chairman Irving Kirshner who introduced the men that knew the youthful Wysocki best, the Wyoming Valley Playground Association director, Joseph Kane, who is also a member of the six-man National Marble Tournament Committee from Asbury Park, N.J. Kane gave a graphic description of Wysocki's rise from Luzerne County marble champ to national champ.

KANE CITES WINNER

"You have a youngster you can be proud of in Matty Wyspcki," Kane said. "His nerves were of steel and his courage great as he coolly and calmly subdued all competition. Before going to Asbury Park we were asked to bring home a champion. That was a tall order, but Matty is a true champion. His constant practice sessions paid off. You must remember there are almost 1 million boys playing marbles in the United States. Forty of the best in the Nation were at Asbury Park." Turning to a humorous side of the championship, Kane continued saying. "Perhaps the most dramatic moment at Asbury Park was when that girl marble shooter beat our Matty one game after losing 22 games. Matty must have been looking into her eyes."

Kane concluded by lauding the Rotary for its constructive part in promoting events such as this one. Dr. Walter F. Kozik of the Rotary introduced the many guests present.

Rotary President Walsh presented the gifts to Wysocki from individuals and organizations. Edward Lee, manager of the Sans Souci Park, invited the champ and his family as his personal guests any Wednesday afternoon with everything on the house. Plains Sport Shop presented him with a gift. Township commissioners and boosters gave a bond and also presented a wallet to young Richard Kimsal, the Wilkes-Barre Township youth who was county runner-up in the Times-Leader tourney and who was sitting at Wysocki's side last night. A congratulatory card from Miss Rosalie Moran, principal of the Cotton Avenue school building when Wysocki attends, was read; also telegram from Gail B. Young, governor of Rotary International; an invitation from Ben Sterling, Jr., of Rocky Glen Park for free rides; gift from John B. Stetz, clothier, who was present at Asbury Park when Wysocki won the championship; bond from the Yankee Dugout Club of Hudson; request from Michael Loptao, Pittsburgh, asking the champ to send an autographed picture of himself and one marble from the championship game for his international all sports gallery, and a congratulatory message from Judge Bernard Brominski.

GUESTS PRESENTED

Among the guests introduced was the champ's father, Stephen Wysocki. Boni Sabatini, the township's marble tournament director and Rotarian told how Wysocki's early practice sessions near the high school's football field paid off. "Proper coordination and steel nerves are needed for the feat accomplished by Wysocki." He concluded with an observation that Sweden for the first time has a world's champion in Johanssen and Plains Township for the first time in its history also has a world's champion.

Highlight of the evening was the reading of a resolution from the Senate of Pennsylvania, introduced by Senator Martin L. Murray. It was signed by secretary of the senate, Edward B. Watson, and in part read: "The new national marbles king is a young Pennsylvanian, Matthew Wysocki, of Plains Township."

"Crowned champion by taking 11 games of a 21-game playoff, 'Knuckles Down' Wysocki was presented with a 21-inch trophy by the mayor of Asbury Park, N.J.

"Matthew Wysocki has brought honor to himself, his family, his community, and his State and has demonstrated the qualities of a true champion.

"*Resolved*, That the Senate of Pennsylvania hereby extends its hearty congratulations to Matthew Wysocki on his outstanding attainment."

Those present were: S. Pelak, Elia J. Cross, Herman Barbacci, Joe Brulo, John J. Baller, John Yeosock, Bill Sincavage, Charles Filippini, Gene Berti, Paul Motsko, Mario Rocconi, William Jones, Stanley Rowny, Joseph Trosko, Michael J. Mikelski, Robert Juzwiak, Steve Tokach, Clem Falchek, John T. Hughey, Stanley Petroski, Joseph Mlodzinski, Lawrence Moretti, Boni Sabatini, Supervising Principal M. V. Hughes, Ed Henry.

Stephen Wysocki, father of champ; Al Karaska, supervisor of the Wilkes-Barre Township marble tournaments, who accompanied Wysocki to Asbury Park; John Juback, Irving Kirshner, Joseph D. Kane, Richard Kimsal, Matthew Wysocki, Hugh Walsh, Simon S. Russin, John F. Goobic, Leo Pensieri, Dr. Walter F. Kozik.

Rotary songleader was Elias Cross, with Frank Malachesky at the piano. The program concluded with the pledge of allegiance by the assembly.

Let George Do It

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, July 6, 1959

Mr. MONRONEY. Mr. President, one of the most dedicated of our country's aviation leaders is George Haddaway, publisher of Flight magazine, president of the National Pilots Association, president of the Texas Association of Sigma Delta Chi, a founder of the Aviation Writers' Association, and one of our delegates to the Moscow meeting of the Federation Aeronautique Internationale this year. He was a leader and one of the strongest advocates of legislation leading to establishment of the Federal Aviation Agency. He lives in Fort Worth, Tex., when he is not doing a job somewhere else. I ask unanimous consent to have printed in the Appendix of the RECORD a feature article published in the Dallas (Tex.) Morning News, which gives him part of the recognition he deserves, in a well-done journalistic tribute.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET GEORGE DO IT—AND HE WILL

(By Clardy McCullar)

Russia is the destination this week of a sandy-haired Dallas publisher who might be called an international commuter.

His work and his hobbies send him on scores of flights all around the United States and over the globe each year, and the traveling helps explain why he is better known almost anywhere else than in Dallas.

As one of the leading and loudest voices in general aviation (which takes in everything but military and airline flying), the 49-year-old native of Fort Worth edits and publishes Flight magazine. Small by most standards, Flight is generally recognized as one of the most effective forces in its field.

George Edward Haddaway's friends may have started the cliche, "Let George do it."

His friends, and there are legions of them, are constantly calling on him to head up an aviation committee or project, a church drive, a journalism group or to plan a party.

Just 2 weeks ago in Galveston he was elected president of the Texas State Association of Sigma Delta Chi, the professional journalism fraternity. With the honor he got the job of planning the association's convention in Dallas next spring.

He will go to Moscow as an American delegate to the 52d annual meeting of the Federation Aeronautique Internationale, the world's most important aviation organization. He will speak as vice president of the National Aeronautics Association and as president of the National Pilots Association. Up for discussion will come the complex question of what kind of electronic navigation system can all planes use all over the world and the problem of certifying flight records.

Flight navigation is a large part of aviation's current big headache: How to keep planes from running into each other.

Long concerned with this problem, Editor Haddaway in 1957 wrote a report suggesting how airspace should be assigned to nonmilitary and nonairline planes for President Eisenhower's Aviation Facilities Planning Committee. He helped found and was chairman of the General Aviation Facilities Planning Group which linked 12 national aviation organizations so all could have a say in the report. Now continuing as the General Aviation Council, the group cited Haddaway for his report.

He also served as chairman of the Aviation Development Advisory Committee for five administrators of the old Civil Aeronautics Administration, which became the Federal Aviation Agency last January.

And the American Association of Airport Executives think so much of his work he has been made an honorary life member.

His advice is so respected in the field that two aircraft makers moved to new plants on his word. He recently saved a Texas airplane company from bankruptcy by finding funds for it, although his own ideals keep him from investing in such a firm because it might influence what he writes in his magazine.

Journalism runs in his family. His grandfather was a newspaper publisher in Maryland, but his father left the paper to prospect for gold in Colorado and managed a railroad in Mexico before moving to Fort Worth in the 1890's.

Rochester Haddaway, his father, was an inventor who believed in the future of Texas. He put most of his money into land and had run up nearly a million dollars at the time of his death in 1953 at the age of 84. He was no spendthrift, but he believed in putting good food on the table and helping his children get an education.

He sent George $50 a month when he was at the University of Texas. But George, who also had an Eagle Scout scholarship, was following an early enthusiasm learning how to fly, and that cost $40 an hour. So he pressed pants for Phi Gamma Delta frat brothers to get the money for that. He first got interested in aviation when his mother (the former Mary Sherman, who still lives in Fort Worth and is 86) and an aunt entertained World War I Canadian air cadets in Forth Worth.

"They'd be at our house on the weekend, and on Monday several of them would crack up and die," he recalls.

He also had a neighbor a little later, Dutch Bartgis, who was an early barnstormer. He took George on many flights in old Jennies in the 1920's.

George just missed by a few points being a Phi Beta Kappa at the university. He took every Frank Dobie course he could, and has an autographed copy of everything Dobie has written in his library, which also includes some rare aviation books.

He probably had more fun than anyone else at the university, and he still loves fun. He is a cornerstone of the Quiet Birdmen, a publicity-shy group of longtime fliers dedicated to the kind of fun people in aviation seem to relish.

Ships and the sea fascinated George, too, and between semesters at the university he shipped as a merchant seaman. He got his pilot's license in 1928 and his bachelor of arts degree in 1930. By that time the depression had hit, and he couldn't get a job anywhere, despite Dobie's help. So he was a seaman for 2 years.

His father wanted George to follow in his footsteps and little understood the flying and the sea. But the family (an older brother and sister and a younger brother, in addition

to his parents) finally decided he was no black sheep.

Journalist Haddaway started his magazine in Fort Worth in 1934. He moved it to Dallas in 1939, so he could get more business, a motive even his friend Amon Carter understood.

He has spent as much time working for aviation in general as he has on the magazine. It was a struggle for years to get aviation the attention he was sure it deserved. He organized many aviation meetings like the airport management and operations conference series flight cosponsored with the University of Oklahoma, with the cooperation of the CAA.

Believing that war was near, he helped found the Civil Air Defense Service, forerunner of the Civil Air Patrol, in September 1941. He commanded, as a major, a CAP submarine defense base in Baumont, won the Distinguished Service Cross.

Many citations, certificates, and plaques have come to him, but he is proudest of being national Aviation Man of the Year in 1957.

Like his father before him, he is a devout Episcopalian. His family was one of the five which founded St. Luke's, and last Friday he helped lay the cornerstone for a new building, for which he served as finance chairman. He also served as building committee chairman for the Episcopal chapel at SMU.

He was a founder of the Aviation Writers Association, and is a past president. He has persuaded many papers to put writers on aviation news and taught them to be good aviation reporters. A charter member of the press club of Dallas, he has also been its vice president. He was president of the Dallas professional chapter of Sigma Delta Chi in 1954.

He has entertained a stream of foreign journalists visiting Dallas in recent years and works with the Dallas Council on World Affairs. He also belongs to the Texas Historical Association, the Wings Club of New York, the OX-5 Club, the National Press Club in Washington, and the Texas Ex-Students Association.

He lives with his wife, the former Gwendolyn Adelaide Sanders, and their five children at 9411 Hathaway Road. The children are: Gail Elizabeth, 19, an undergraduate at the University of Colorado; William Rochester, 16, in his third year at Phillips Exter Academy in New Hampshire; John Arthur, 15, a first-year cadet at Sewanee Military Academy in Tennessee; James Laird, 12, and Mary Anna, 10, students at John J. Pershing School here.

Tribute by Salem Statesman to the Late David C. Epps

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. NEUBERGER. Mr. President, a moving and deserved tribute to the late David C. Epps, chairman of the Democratic State Central Committee of Oregon, was published on the editorial page of the Salem Statesman of July 1, 1959. The Statesman is edited by ex-Governor Charles A. Sprague, one of our State's most distinguished chief executives. He has described Mr. Epps as a man of sincerity and dedicated liberalism. The description is accurate.

I ask unanimous consent that the editorial from the Salem Statesman of Salem, Oreg., be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DAVE EPPS

Dave Epps was one of the ardent liberals of the 1930's, and while he settled down to work in party (Democratic) harness he remained firm in his liberal faith. He was one of the young men who worked to make over the Democratic Party in Oregon, rising to State chairman himself and leading the party in the successful campaigns of 1956 and 1958. His death at the comparatively early age of 51 removes not only an active political figure but a man who made his way in the business world, who made many friends and who held the respect of those who might disagree with him in politics because they recognized his sincerity. He will be missed by his party and by the larger community of Oregon where he lived and labored.

Milwaukee Journal Commends High Court for Upholding Right To Confront an Accuser

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Milwaukee Journal warmly commending the Supreme Court for the blow it struck for American justice in the Greene case, that knocked out an arbitrary procedure that had threatened 3 million workers in defense plants with discharge from their jobs without due process of law.

There being no objection, the editorial was ordered printed in the RECORD, as follows:

RIGHT TO CONFRONT AN ACCUSER

The Supreme Court in an 8 to 1 decision has held the Government's industrial security program to be invalid on the grounds that it has no authorization in law.

Thus is struck down another arbitrary and unfairly applied procedure that affected 3 million workers in defense plants and threatened them with loss of jobs without due process or the opportunity for simple justice. This is another blow at secret informers who are protected from being confronted by those they accuse.

Although the Court did not decide the case on constitutional grounds, Chief Justice Warren strongly intimated in the Court's opinion that security proceedings must insure a basic right of confrontation. Four of those who supported the majority opinion showed the Court's normal reluctance to decide cases on constitutional grounds if other grounds are available. They concurred in the Chief Justice's opinion but pointed out that they felt he had gone too far into the constitutional question.

The case before the Court was a particularly notorious one. William L. Greene, an engineer and former vice president of an engineering and research firm, was fired by that firm when the Navy contended that he was a security risk. The firm had been making an aircraft flight simulator for the Navy—and Greene had designed it. The situation was ridiculous on the face of it. The Navy was saying in effect that it wasn't safe for Greene to know anything about something he had built. It was like telling a composer that he had no right to remember his own composition.

Protecting Humanity From Radioactive Fallout

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. WILEY. Mr. President, we recognize that today citizens in the United States, and throughout the world, are deeply concerned about the possible effect on humanity of oversaturation of the atmosphere with radioactive fallout.

Recognizing the dangers that higher proportions of radioactivity in the atmosphere pose for life on the globe, it is of course particularly important that we continue, as diligently as we can, to try to find ways and means for lessening these hazards.

At Geneva, U.S. representatives have tried diligently, unfortunately without success, to reach safeguarded agreements—and I stress safeguarded—for halting nuclear tests which, regrettably, continue to add to the degree of radioactivity.

Throughout the United States measuring points have been set up to obtain as accurate a picture as possible of the amount of strontium 90, for example, which is falling upon the earth.

According to experts, strontium 90 is by far the most dangerous of radioactive fallouts from nuclear explosions. Because milk has been used, from time to time, to measure levels of radioactivity, there is unfortunately growing in the public mind the idea that milk is more highly radioactive than other foods.

According to a recent report in the Farm Journal, however, today's milk actually contains only about one-tenth as much strontium 90 per unit of calcium as do cereal grains and vegetables. This is especially significant since milk supplies about 80 percent of the calcium in the American diet. According to this report, milk is still the safest source of calcium in this atomic age. To put the overall picture relating to radioactivity in food in proper perspective, I ask unanimous consent to have printed in the Appendix of the RECORD two articles: First, "Milk Safe from Atomic Fallout", from the July issue of the Farm Journal; and, second, "Scientists Are Keeping Close Track of Strontium 90 in All Food Items", from the June edition of Pure Milk News.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MILK SAFE FROM ATOMIC FALLOUT

The amount of radioactive strontium 90 in milk is still infinitesimal—nowhere near the concentration estimated to be harmful to humans.

And the possibility that the amount will ever become dangerous is extremely remote.

But if it should, we can filter out about 90 percent of the strontium 90 by forcing the milk through an ionizing device that works on the same principle as a home water softener.

This reassuring discovery—a major breakthrough in the effort to safeguard our food supply—was made by a team of scientists from the University of Tennessee and the Atomic Energy Commission. They announced it at the American Dairy Science Association meetings in Urbana, Ill., on June 15.

Strontium 90 is by far the most dangerous radioactive element in the fallout from nuclear explosions. It's extremely long-lived—loses only half of its deadly radioactivity in 28 years. Harmful amounts can cause bone cancer and leukemia in humans.

It gets into milk—all other foods, too—because chemically, it is almost identical to calcium. The strontium 90 falls on the leaves and accumulates in the soil. The plants—unable to tell the difference between it and calcium—take in both.

Fortunately, less than 5 percent of the strontium 90 in the forages that a cow eats ever shows up in her milk. The other 95 percent is eliminated by the cow's digestive system.

So today's milk actually contains only about one-tenth as much strontium 90 per unit of calcium as do cereal grains and vegetables—is already the "safest" source of calcium in this atomic age. That's comforting, since milk supplies about 80 percent of the calcium in the American diet.

And this new discovery indicates that it will continue to be even if the amount of fallout reaches harmful proportions.

Said the research team in their announcement: "The process is not yet ready for commercial use; there are many questions yet to be answered. However, should the need arise, we believe that the basic process could be used by commercial dairies for removing radioactive strontium 90 from milk."

SCIENTISTS ARE KEEPING CLOSE TRACK OF STRONTIUM 90 IN ALL FOOD ITEMS

Periodic reports by the U.S. Public Health Service in regard to the levels of radioactive in air, water, and food make it evident that radioactive fallout from atomic explosions is a problem which cannot be dodged or minimized today or for generations to come.

The problem has its roots in the natural law of self-preservation which has persisted since caveman days. Today, however, that law governs more strongly, perhaps, than in Alley Oop's time. Mankind has gone the limit in trying to protect itself and is now trying to find out what it must do to save itself from the things it has created for self-protection.

Apparently whenever either uranium or plutonium atoms are split in the course of a nuclear explosion they release in the atmosphere a number of radioactive fission fragments. Some are short lived, decaying in a few minutes, days, weeks, or months. Others are long lived, lasting for many years.

One of the most troublesome of these fission products is an element known as strontium 90. It has an average life of 40 years. Its chemical properties resemble calcium, the element present in bone tissue. When present in the air it increases the natural background radiation to which all living things are exposed.

It is absorbed by the plants which human beings and animals eat. Scientists are concerned that if it is accumulated in amounts beyond a maximum permissible dose it may lead to bone cancer and leukemia. Therefore, the National Committee on Radiation Protection and Measurement has set maximum permissible limits for lifetime exposure of the individual to specific radiation and radioactive materials.

The committee established a permissible level of strontium 90 for all items of the diet, including water, meats, vegetables, and bread as well as milk.

Why all the publicity, then, about strontium 90 in milk—when all foods containing calcium are involved?

The reason is that milk was selected for testing for strontium 90 because it is produced every day in all sections of the country and it, therefore, considered the most practical food to sample.

To date, the tests conducted in the milk sampling program have shown that the amount of strontium 90 present is far below the permissible level suggested by the National Committee on Radiation Protection. In fact, the committee has recently issued word that the human body can tolerate twice as much strontium 90 as previously had been regarded as acceptable.

Scientists point out that milk contains less strontium 90 per unit of calcium than do cereal grains, vegetables, and meats because the body of the cow discriminates against it during the formation of milk. Some foods, they say, may contain up to 10 times more strontium 90 per unit of calcium than does milk.

These facts have been obtained from writings of scientists and information from the U.S. Public Health Service. Dairymen can put them to good use in conversations with consumers who may have been frightened by the publicity milk has received as a result of the strontium 90 tests.

New President of Wyoming Seminary Preparatory School, Located at Kingston, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Friday, July 3, 1959:

MOSES WELL SUITED FOR SEMINARY POST

When the board of trustees of Wyoming Seminary meets on Monday to confirm the appointment of Benjamin Hopkins Moses as seventh president of the 115-year-old college preparatory school, it will bring to the service of education in Wyoming Valley a man whose talents and training eminently suit him to the office.

Mr. Moses is a graduate of Wyoming Seminary in the class of 1930 and holds undergraduate and graduate degrees from Syracuse University. His administrative experience in the field of education, to which he has devoted himself for a quarter century, was obtained as assistant dean of men at Syracuse University, director of admissions at Harpur College, and director of student records at Yale University, from which post he comes to Wyoming Seminary. In addition, he has served in positions of leadership in many civic and philanthropic enterprises.

A fact that strongly recommends him to the new post is the knowledge that he is thoroughly familiar with the history and traditions of the school as a former student and friend of the last three presidents of Wyoming Seminary.

A native of Scranton, Mr. Moses has known President Ralph W. Decker since boyhood. They were contemporaries at Wyoming Seminary where Mr. Moses had the rare distinction of acting as chauffeur to the late Dr. Levi L. Sprague who occupied the president's office from 1882 to 1936. During his student days, Mr. Moses was also well known to President Emeritus Wilbur H. Fleck, who served as dean before succeeding to the presidency at the death of Dr. Sprague.

His brilliant background in the field of education and familiarity with the school he has been chosen to head, make Benjamin Hopkins Moses a worthy successor to Dr. Ralph W. Decker and one who can be counted upon to perpetuate the quality of leadership which has established Wyoming Seminary in the forefront of secondary education.

Tribute to the Late Commodore Samuel Tucker

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. MUSKIE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the story of an almost forgotten naval hero of the American Revolution, written by Mr. Earle W. Gage of Jamestown, N.Y., and printed in The National Republic in December of 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GLORY THAT LED BUT TO THE GRAVE—COMMODORE TUCKER SANK 62 ENEMY SHIPS, CAPTURED 600 ENEMY GUNS, BUT DIED IGNORED BY THE REPUBLIC FOR WHICH HE SO BRAVELY FOUGHT

(By Earle W. Gage)

American seamen, from colonial days, through World War II and since, have lifted American seapower by their seaboots, from zero to world preeminence.

Perhaps because the Colonies were struggling desperately for economic capability during and after the Revolution, adequate rewards, and recognition were impossible for many of the early maritime heroes whose deeds merited far greater recognition than they ever received in life.

Commodore Samuel Tucker, buried in an obscure part of the little country cemetery of Bremen, Lincoln County, Maine, is one of the outstanding examples of the frequently repeated charge that Republics are ungrateful. His flat, untended headstone is simply marked "A Patriot of the Revolution."

It is true that President John Adams, paying tribute to Commodore Tucker said, "His biography, even at this day, would make him a conspicuous figure in naval annals of the United States."

Young Tucker, born in Marblehead, Mass., in 1742, answered the call of the sea at the age of 11, as a cabin boy on the *Royal George* an English sloop-of-war. By the time he was 17 he was second mate on a vessel sailing out of Salem. He made a creditable

record aboard this ship, on one occasion, when the captain was drunk, clearing away from pursuing Algerian corsairs, to escape, and save the vessel.

In 1763, at 21, he married Mary Gatchell, of Marblehead, and became master of a merchantman. When the Revolutionary War broke out he was in London, where he was offered his choice of a commission in the British Army, a command in the British Navy, or a high civilian job.

True to his American colonial blood, the young seaman flatly refused to join any British service and to become a traitor to his homeland. He cried out to the enlisting officer, "Damn His Most Gracious Majesty. Do you think I would fight against my native country?"

A friend, who happened to overhear the outburst, stepped forward and urged Tucker to retreat to the outdoors, and advised him to quickly leave England before his certain arrest. Captain Tucker immediately left London, traveled some 15 miles into the country and stopped at a tavern. He discovered a brother sailor kept the place and told him what he had done and, upon being assured that his statement against the King would bring quick, certain arrest, asked to be hidden just as officers rode up.

After the tavernkeeper had sent the soldiers on their way, Tucker made his way to the coast and, by a rare piece of good luck, shipped aboard a vessel in which a distinguished Philadelphia merchant, Robert Morris, was interested. During a furious Atlantic storm, when it was expected that the vessel would go down with her valuable cargo, Tucker, by his skill, saved the ship. Out of gratitude, Morris introduced him to Gen. George Washington, who recognized Tucker as a man the young and struggling American Navy could well put to service. He was named commander of the armed schooner *Franklyn*, and sent to sea.

From the very outset his raids on British shipping were a success, affording the Colonies supplies from captured British vessels, whose cargoes of arms, ammunition, and supplies were a bonanza in the storm and stress of 1775–76.

From the *Franklyn*, Captain Tucker was soon transferred to the command of the *Hancock*, another vessel of similar type. In a year he had captured from 30 to 40 British vessels, and won a commission as commodore, under the signature of Samuel Adams.

Through the year 1777, Commodore Tucker carried on similar raids with the *Boston*, to the command of which he had been appointed by President John Hancock. In February of 1778 he fulfilled the important mission of transporting John Adams and his 11-year-old son, John Quincy Adams, to France, when Adams was sent as an envoy from this country. That Commodore Tucker was entrusted with such great responsibility when the high seas were full of danger, not alone from the elements, but from the numerous men-of-war which infested the Atlantic, is an indication of the appreciation of and trust in his ability.

En route, they were twice chased by formidable opponents. They captured one frigate with a valuable cargo, and weathered a terrific storm in which the ship was partially disabled. Mr. Adams landed safely in Bordeaux. To this voyage Hon. Peleg Sprague, in 1826, made reference, in the eulogy on Adams and Jefferson, as follows:

"Mr. Adams was removed from the Congress to other scenes of important duty and usefulness. In August 1778, he was sent to Europe as commissioner of peace. The public ship on board which he embarked was commanded by the gallant Commodore Tucker, who took more guns from the enemy during the Revolutionary War than any other naval commander, and who has been far less known and rewarded than his merits deserved.

"One occurrence on their passage is worthy of relation as illustrating the character of both. Discovering an enemy's ship, neither could resist the temptation to engage, although against the dictates of prudent duty. Commodore Tucker, however, stipulated that Mr. Adams should remain in the lower part of the ship as a place of safety. But no sooner had the battle commenced than Adams was seen on deck with a musket in his hands, fighting as a common marine. The commodore preemptorily ordered him below; but, called instantly away, it was not until considerable time had elapsed that he discovered Mr. Adams still at his post, intently engaged in firing upon the enemy. Advancing, he exclaimed, 'Why are you here, sir? I am commanded by the Continental Congress to carry you in safety to Europe, and I shall do so'; and, seizing Mr. Adams in his arms, he forcibly carried him from the scene of danger."

So widely did this report of Commodore Tucker's gallantry and success spread, not alone among the Colonies, but in England, that his actions became daily talk among British officers, who, at last, connived to bring his career to an end. The British fitted out a frigate even larger than the *Boston*, and sent her forth with a hundred picked men. Commodore Tucker, ever alert, learned of the project; when the British vessel ran across him he met her under English colors. The British captain hailed him, "What ship is that?"

"Captain Gordon's," replied Tucker, who knew that Gordon's English ship was modeled after the *Boston*.

"Where do you hail from?"

"New York," replied Tucker.

"When did you leave?"

"Four days ago. I am out after the *Boston* frigate, to take that rebel, Tucker, and I'm bound to take him, dead or alive, to New York."

"Have you seen him?" anxiously queried the English captain.

"Well, Ive heard of him," rejoined Tucker. "They say he's a hard one to catch."

In the meantime, the men on the *Boston* had been bringing their vessel into a position where they could rake the decks of the enemy. Every man was at his guns. Just then Tucker was recognized by one of the enemy's crew, who shouted from the topmost mast a warning to the British captain. Tucker gave the order to his men:

"Down with the British flag and hoist the American colors."

Turning to the enemy, he shouted to the captain, "The time I proposed talking to you has ended. This is the *Boston*, frigate, and I am Samuel Tucker, but no rebel. Fire or strike your colors." The British captain saw the advantageous position of the Commodore and wisely took the only course open to him. Not a shot was fired and thus did the British fail in their undertaking, and the English captain returned home in disgrace.

Commodore Tucker played a conspicuous role in the naval operations at the siege of Charleston, S.C., when he rendered valuable service in the demolition of the Beacon Lighthouse and Fort Johnson. After 30 days' siege, he was one of the commanders to surrender, though it is said he was the last to strike his flag, saying, "I don't think much of striking my flag to your present force, for I have struck more of your flags than are now flying in this harbor."

Upon receiving his parole, Tucker returned to Boston and soon was in charge of another sloop-of-war, the *Thorn*, on which he continued his record-breaking raids and capture of British ships until his own last vessel fell into the enemy's hands. Again he managed to escape to Boston. By this time he had acquired much wealth and occupied a house on Fleet Street, close by Governor Hutchinson's residence.

After 6 years of affluence, he lost his property and again he returned to Marblehead vainly endeavoring all the while to secure from Congress "arrears of pay on account of services rendered his country." He tended a grist mill and granary until, in 1792, he purchased a farm in what was then Bristol, Maine, to which he brought his wife, aged mother, and widowed daughter. The place is now know as Bremen, and was incorporated in 1828. There Commodore Tucker lived as a farmer and taught navigation until his death in 1833.

During his active service in the Navy, during the Revolution, Commodore Tucker captured 62 British ships, 600 pieces of cannon, and 3,000 prisoners, besides a king's ransom of cargoes which aided the struggling American forces in feeding and clothing their armies.

In the War 1812, when British privateers and war vessels were devastating American commerce along the Maine coast, though Tucker was aged and whitehaired, he commanded a schooner, armed with two brass cannon from the fort at Wiscassett, chased and captured the privateer *Crown*, and cleared the Maine coast of all the war vessels of the enemy.

Denied the fortune that belonged to him from his share of the prizes he captured, he applied for compensation to the Congress and after years of dillydallying, the politicians reported that he was deprived of his just earnings because of the statute of limitations, so Tucker died an unsung hero and in poverty, and today sleeps in an almost forgotten grave, marked by an untended, crumbling headstone.

Mrs. Frederick Hillman, of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Friday, July 3, 1959:

MRS. FREDERICK HILLMAN

With the passing of Mrs. Frederick Hillman, a distinguished member of the community, it is comforting to her friends to know that she was repeatedly honored during her lifetime for contributions to the welfare of Wyoming Valley. Currently, due note has been taken of her role as the founder of Junior League of Wilkes-Barre, known at its inception in Wilkes-Barre under the name of Junior Aide. When the chapter was marking its 25th anniversary earlier this year, tribute was paid to Mrs. Hillman by members as the one who had conceived the idea of making a place in this community for an organization whose purpose was to foster interest among its members in social, economic, education, cultural, and civic conditions and to train its members through volunteer service. When the league addressed flowers and greetings to Mrs. Hillman during the 25th anniversary period it was in lasting recognition of Mrs. Hillman's inspiration from the beginning.

Mrs. Hillman served as the first commissioner of Wyoming Valley Girl Scout Council. She was its head for a number of years and resigned about 10 years ago as a member of the board of directors after 25 years' service.

Even after retirement her deep and enduring interest never lagged. She kept in touch with officials and by telephone or through letters contributed to advancement of the council her astute knowledge gained through years of experience.

Until recent years Mrs. Hillman's activities in cultural, philanthropic, and civic organizations were numerous. They took many useful forms.

Her husband will be recalled as a prominent lawyer and financial authority, and her father, Dr. Joseph Murphy, was an outstanding Wilkes-Barre member of the medical profession.

Texas Press Association Opposes Fair Trade

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. KILGORE. Mr. Speaker, the Texas Press Association held its 80th annual convention down in Brownsville, Tex., recently and during the business proceedings adopted the following resolution opposing Federal fair trade legislation:

RESOLUTION PASSED BY THE TEXAS PRESS ASSOCIATION AT ITS 80TH ANNUAL CONVENTION IN BROWNSVILLE, TEX., JUNE 25–27, 1959

Whereas there is now pending in the U.S. Congress a so-called Federal fair trade law being H.R. 1253 and S. 1083, which would allow manufacturers to fix the prices to be paid by consumers throughout the United States for merchandise sold through all local merchants, including the consuming public of the State of Texas; and

Whereas such price-fixing legislation has been strongly opposed by all responsible departments of the Federal Government, including the Justice Department and the Federal Trade Commission, because such legislation would be extremely costly to the consuming public and would eliminate price competition in the marketplace on all merchandise distributed nationally and would, in the opinion of the Justice Department, require a small army of Federal enforcement agents to compel compliance with any such law; and

Whereas the State of Texas has never weakened its antitrust laws by permitting so-called fair trade price fixing and in the opinion of the attorney general of Texas any such law would destroy the effectiveness of our State antitrust laws and would extend Federal regulation into the local retail commerce of this State without justification; and

Whereas the Texas Press Association has consistently opposed efforts by the advocates of price-fixing legislation to increase the daily cost of necessities to the consumer and has always sought to preserve and perpetuate the sound principle of free and open competition in the marketplace: Now, therefore, be it

Resolved, That the Texas Press Association hereby expresses its unalterable opposition to the passage of any so-called fair trade law; and further, be it

Resolved, That copies of this resolution be sent to all Members of the U.S. House of Representatives from Texas and to Senators LYNDON JOHNSON and RALPH YARBOROUGH.

Respectfully submitted by your resolutions committee.

ROWLAND R. PETERS,
Nocona News.
JAMES E. CORNISH,
Post Dispatch.
CARL R. MILLER,
Raymondville Chronicle.

How To Save Lives on the Highways

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. ROBERTS. Mr. Speaker, on July 7 the Supcommittee on Health and Safety will begin hearings on legislation designed to promote traffic safety.

I would like to invite the public and every Member of Congress who is interested in this terrible problem to attend these hearings.

In this connection, I wish to include in the RECORD the following article which appeared in the Boston Herald of June 20, 1959:

SAFETY EXPERTS SURE THEY CAN SAVE LIVES

(By Noah Gordon)

Fifteen thousand lives now lost each year in automobile accidents could be saved if the advice of traffic safety experts were heeded.

This is the opinion of John Moore, director of automotive crash injury research at Cornell University.

PLAN SYMPOSIUM

Moore was 1 of 17 safety authorities who met yesterday at Harvard Medical School to plan a symposium on the evaluation of survivability in automobile accidents.

The proposed symposium, to be held for 3 days at Harvard Medical School in the spring of 1960, would bring together in Boston from 50 to 100 of the Nation's leading safety engineers, medical authorities, and policymaking members of the automobile manufacturing industry.

"The reduction of 15,000 deaths annually could be accomplished within the next 10 years," Moore said. "And there is no telling what we would do with the annual injured figure of 4,700,000," he said.

According to Prof. J. Stannard Baker of the Northwestern University Traffic Institute, chairman of the planning committee, the symposium will deal with injury prevention rather than accident prevention.

According to the safety experts, each accident is made up of two distinct collisions. The first consists of impact of automobile on automobile, or vehicle against tree, wall, fence, etc.

The second is that of human being against some other mass.

"The meeting will result in a published summary which we hope will be a landmark of its kind," Professor Baker said. Data accumulated during the symposium could effect the design of cars and highways, according to the safety men.

It is possible to build a safe economical automobile, Moore said yesterday. "An automobile can be stylish, sexy, absolutely salable and yet perfectly safe," he said.

Pleasing appearance need not be sacrificed on the altar of safety, he emphasized. "There is no reason why the knobs on my washing machine shouldn't be appealing to my wife—and still not electrocute her," he said.

The people who solve the problems of automotive safety are not those in the research facilities, Moore said, but instead are "the people who make the product."

FOUR ADVANCES

Since 1956, he said, there have been four significant safety advances in the construction of the American car. They are a door latch which does not fly open easily on impact, positioning of the steering-wheel post away from the driver's chest, padded dash boards, and seat belts.

"Seat belts alone," he said, "could reduce injuries by 35 to 60 percent."

Prof. Derwyn Severy of the Transportation and Traffic Institute of the University of California told reporters that the automobile industry has failed to adopt any significant amount of innovations developed by safety researchers.

"Considering work which has been done in the past 10 years, you'd have to look for results in the automobile with a magnifying glass," he said. "This is not encouraging."

Other experts of the planning committee meeting included Richard O. Bennett of the National Association of Automotive Mutual Insurance Companies; Dr. Charles B. Burbank of Boston; Dr. Virgil G. Casten, chairman of the Committee on Prevention of Accidents of the Massachusetts Medical Society; Harry C. Doane of the Automobile Manufacturers Association, Detroit; Dr. F. Gaynor Evans, department of anatomy, Wayne State University; Dr. John J. Flaherty of the National Safety Council; and Dr. Richard Ford, chairman of the Harvard Medical School Department of Legal Medicine.

Also Dr. James L. Goddard, chief of the accident prevention program of the Department of Health, Education, and Welfare; Arthur S. Johnson, vice president, American Mutual Liability Insurance Co., Wakefield; Dr. Ross A. McFarland, professor of environmental health and safety, Harvard School of Public Health; Alfred L. Mosely, department of legal medicine, Harvard Medical School; Representative Kenneth A. Roberts, Democrat, Alabama; Prof. John J. Ryan, Department of Engineering, University of Minnesota; and Col. John P. Stapp, USAF, Air Research and Development Command, Wright-Patterson Air Force Base, Dayton, Ohio.

The Brookings Institution Has Taken No Stand For or Against S. 1120, the Bill To Reduce Reserve Requirements

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. PATMAN. Mr. Speaker, on June 29 I put into the CONGRESSIONAL RECORD and excellent letter from Dr. John G. Gurley, a distinguished economist, expert in the field of money and banking, and a member of the senior staff of the Brookings Institution. Dr. Gurley said that he was opposed to S. 1120 and specified three quite persuasive reasons for his opposition.

His letter is to be found at page 11067 of the RECORD for June 29. I now have a telegram from Robert D. Calkins,

president of the Brookings Institution, pointing out that the views expressed by Dr. Gurley are his own views and not necessarily those of the Brookings Institution, which has not considered the merits of S. 1120, nor taken any stand on the bill. That was my clear understanding from the beginning, and I thought certainly that Dr. Gurley's letter showed on its face that he was expressing his views and not speaking for the Brookings Institution. However, I presume that Dr. Calkins wishes to make this point doubly clear. His telegram is as follows:

WASHINGTON, D.C.

Congressman WRIGHT PATMAN,
House of Representatives,
Washington, D.C.:

Please understand that the Brookings Institution has taken no stand for or against the bill to reduce reserve requirements. Any views expressed on this subject by Dr. John Gurley of our staff were of necessity personal views and not those of the Brookings Institution, which has not considered the matter or issued any statement on the subject.

ROBERT D. CALKINS,
President, the Brookings Institution.

John Huss Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. MULTER. Mr. Speaker, John Huss was one of the most famous of Czechoslovaks of all time, who late in the 14th century became the best known defender of the freedom of conscience. He was the torchbearer and forerunner of many gallant men who advocated and fought for religious toleration and freedom. He is justly considered the pioneer of the Reformation movement in Europe.

John Huss was born in the small Bohemian town called Husinec, near the Bavarian frontier, in 1369. He was educated at the University of Prague. In 1398 he was appointed for a teaching position there, and from then on his rise was rapid. In 1401 he was made the dean of the faculty of philosophy, and in the following year he was elected president or rector of the university for the usual 1-year term. At the same time he was chaplain of the famous Bethlehem chapel, and from its pulpit his views on religious toleration and especially his criticism of the abuses of the clergy became well known. For holding clearly unorthodox views, and for expressing them forcefully in public, he was reprimanded, then deprived of his position in the university, and finally was forbidden the exercise of his priestly functions. Some time later, by a turn of political events, Huss regained his lost prestige and again was elected president of the university in 1409. But the authorities began to persecute him once more. He was excommunicated by the archbishop of Prague, banned from the city, and a papal interdict was laid against all places offering him shelter. In 1413 he was led out of Bohemia to Constance—in southwest Germany. There he was tried by a council and found guilty of holding and preaching erroneous, heretical, and revolutionary views. Upon his refusal to recant these views publicly, he was sentenced to die on July 6, 1415.

Today the 544th anniversary of the death of that illustrious and eminent man is properly celebrated as a Czech holiday. I gladly join in the observance of that holiday celebration and pay my respects to the blessed memory of a really great champion of the freedom of conscience and of religious liberty.

The North Still Has Much To Do To End Bigotry, Discrimination, and Racial Tensions

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 6, 1959

Mr. NEUBERGER. Mr. President, it is always easier to see the mote in the other fellow's eye than in our own. So it is with race relations in this country. Many in the North find it more convenient to berate the South than to correct discriminatory conditions in the North. It is, of course, politically safer for a northerner to assail Little Rock than Leavittown.

A courageous northerner, Representative CHESTER BOWLES, of Connecticut, spoke recently before the Health Welfare Council here in Washington, and his speech has ben reprinted in the New Republic of July 6. Its title speaks volumes. It is in the form of a question: "Has the North Clean Hands?"

Representative BOWLES has asked, searchingly:

> Almost any northern community that honestly examines its own racial relations will realize how far it is from living up to its professed ideals. And once we see what is missing in our own cities and States, we will be less inclined to feel that it is enough to denounce the foolhardy actions of white extremists south of the Mason and Dixon line.

CHESTER BOWLES points out that only nine States outside the South have adopted antidiscrimination legislation affecting publicly assisted housing. Yet there are 39 States beyond the borders of the South. Only 19 of these States have established fair employment practices laws to end unfair discrimination in employment. I am glad that my own State of Oregon was fourth in the Nation to enact such legislation, and I am proud that I was the first member of the Oregon Legislature ever to offer an FEPC law for introduction. My wife Maurine and I participated actively in these efforts to end discrimination at the State level, where we both were members of the Oregon State Legislature.

But I heartily endorse what Representative BOWLES has written about seeking actively to end injustice, inequality, and discrimination against Negroes in the North rather than confining ourselves to hurling wrath at the South. Let us not be too particular about the other fellow's backyard at the expense of letting our own go untended. I deplore the white supremacy councils and the bigotry of certain areas of the South, but I also believe there is much still to be done in the North in the realm of racial tolerance, decency, and fairness.

I ask unanimous consent that the article from the New Republic of July 6 by Hon. CHESTER BOWLES, of Connecticut, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAS THE NORTH CLEAN HANDS?
(By CHESTER BOWLES)

Half of all American Negroes now live in the North. There are five times as many Negroes in Chicago as in Birmingham, four times as many in Detroit as in New Orleans, six times as many in Los Angeles as in Miami. Yet many northerners still smugly look at racial discrimination as a sectional problem, condemning what they consider to be the slow pace of integration in the South, while remaining indifferent or nearly so to the discrimination all around them.

There are 39 States outside the South. Only 19 have established fair employment practices commissions, 3 of them without any enforcement powers. In 20 other nonsouthern States, there has been no legislative action on employment discrimination at all. Only nine States outside the South have adopted antidiscrimination legislation affecting publicly assisted housing. In 30 other nonsouthern States, no official action to end housing discrimination has occurred.

Some cities such as New Haven and Pittsburgh are now taking far-reaching steps to rebuild themselves, including the slum clearance and human rehabilitation essential to the easing of racial tensions. But in many northern cities the professed equal protection of the laws still hides extensive segregation in fact—by residential exclusion, and by the natural selection of poverty. In few of our major northern cities do more than 20 percent of the Negro students attend school with white children.

Almost any northern community that honestly examines its own racial relations will realize how far it is from living up to its professed ideals. And once we see what is missing in our own cities and States, we will be less inclined to feel that it is enough to denounce the foolhardy actions of white extremists south of the Mason-Dixon line. Nothing will speak more persuasively to the South than a better example among the too ready critics in the North.

The Constitution is colorblind. The 14th amendment does require the end of racial discrimination in all parts of our public life. The Universal Declaration of Human Rights, endorsed overwhelmingly by the people of the world, affirms this as one of the first principles of world order. Moreover, our Constitution will be enforced. The Supreme Court has ordered desegregation with "all deliberate speed," and Negro litigants will see that this is complied with; the new Negro, arising in the South and elsewhere, will supply all the litigants necessary, no matter what pressures are organized to stop him. Regardless of what party is in power, the observance of the law ultimately will prevail.

And of course law itself is a powerful teacher. The end of segregation in the Armed Forces, in the Nation's Capital, and on interstate trains did more to convince

many skeptics that integration in these made sense than any amount of talk could have done.

There appears to be a temptation, however, to rest on the oars of lawyers and judges and say that this is all now a matter of law and order. The President seemed to say precisely this when he stressed that he has told no one, not even his wife, whether he thinks the Supreme Court desegregation decision was right or wrong.

But court orders alone will not suffice to to change the minds and hearts of people.

The great hope is not for a reluctant and grudging acceptance of the inevitable force of the law. Our hope is that recognition of historical necessity will encourage an increasing effort to bring the various elements in each community into harmony.

If this were merely a legal issue between those who believe in upholding the law and those who seek to circumvent it, then there would have been no issue until the Supreme Court acted in 1954. But this turns the problem upside down. The Court acted because the constitutional guarantee of equality involves the deepest political principles of this Nation and because there was a moral issue presented which went to the heart of our Bill of Rights and our Christian civilization.

The law does not get its sanction merely because it is the law. It wins support because it embodies the moral purpose of society, and the task of political leaders, and of all who want to establish equal rights, is not only that of invoking and carrying out court decisions but also of convincing people that they are right.

That is why the proposal for an independent Federal agency like the Community Relations Service advocated by the Senate majority leader could be so important. Conciliation, provided it is consistent with the guarantees of the Constitution, is precisely what is needed to help the law.

The spectacle of Negro children in Little Rock, in Clinton and Sturgis and Nashville and in the integrating cities of North Carolina walking quietly but bravely to and from school through jeering, angry mobs shocked all Americans, as it did people around the world. When one remembers the fears of childhood—of changing to a new school, even when everyone is friendly and of the same race—one can imagine how these lonely Negro children felt in the midst of unfriendly white crowds.

Yet is not the old prophecy coming alive again? Are not the children leading us now? And not only the Negro children, but white children as well? In almost every city and town in the South where school integration has begun, the children are making out all right together. "If the grown-ups would just leave us alone, there would be no trouble," said a white student in Little Rock.

But many white southern grown-ups are still content to say that the problem will take a long time to solve and that the Negro must be patient, perhaps forgetting that a lot of time has already passed.

It is 96 years since Emancipation, 183 years since a southerner wrote the Declaration to which this Nation is dedicated. That all men are created equal, that they are endowed by their creator with certain inalienable rights, and that to secure these rights governments are instituted among men—these are not just the words of Thomas Jefferson. They are the political creed of this country.

However, the white southerner has a case he can and should make. Generations of slavery, second-class Negro citizenship, inferior schools, houses, and jobs are now plaguing us in the form of high rates of disease and crime and a low level of education in areas where Negroes predominate. To be sure, such demoralization is also the state of much of the rural poor whites of the South and Puerto Ricans brought up and trapped in our congested urban slums. But the Negro has been an outcast longest, has suffered most, and is now the most extreme example of a problem facing the whole country.

This argument is, indeed, a good reason for doing many more remedial things than integrating schools. But it is no reason for perpetuating the very conditions which produce the demoralization in the first place.

Take a county where a depressed Negro population outnumbers the white two or three or four to one. If that Negro community is ill-housed, ill-fed, ill-clad, if it is sick, ignorant and angry, can a relatively well-off white minority be safe in any meaningful sense of the word? Or take a big southern city. If half of the town is a Negro slum, breeding uneducated bitterness, juvenile crime, and racial violence, what kind of community will this be for the white people who say they want to live there?

The lesson is clear: The new South that is now taking shape has no room for low and inhuman standards of life for anyone, and instead of using demoralization as an excuse for doing nothing about integration, it should cause the southern moderate to insist that a vast amount more must be done in a number of fields.

By proposing a far-reaching program to end the demoralization of much of the Negro community and of the poor whites, including slum clearance and measures for adequate housing and public health, the white south can then ask the Negroes, the courts, and the rest of the country to accept a realistic pace for school integration: perhaps beginning only in the first grade and at the college and university level, with a voluntary transfer system, with even segregation by sex in some areas where co-education adds to the fears about integration. But by holding back, southern moderates leave the field not only to the white demagogs but to future Negro demagogs.

So far Negro leadership has been on the whole remarkably intelligent and restrained and the Negro people have accepted its counsel. A new Negro is standing up in the South and elsewhere. His expectations may not all be met, but some good and true men of the white South must meet him face to face, must talk with him and understand him. Without such a minimum response, it is too much to expect that the majority of Negroes will forever stand by the moderate ministers of the Gospel and the well-trained lawyers who now speak for them.

Let's face it: In many churches in America, a minister who goes against the prevailing sentiment of his congregation risks his job as much as the politician who alienates his constituents. Many bishops and ministers in the South have spoken against violence and in favor of law and order. But is this enough?

There will be violence, and the law will be frustrated, unless the two sides in the racial conflict now splitting every southern community begin to communicate again with each other, to negotiate, to reason together, to find common remedies. Is this not the time for the white and Negro ministers of every southern community to form a continuing roundtable conference dedicated to finding Christian solutions to community racial problems?

For, after all, no country should be in a better position than the United States to solve this problem this way. Not only do we have nearly two centuries of democratic experience behind us, but the racial groups in this country, particularly in the South, have the great good fortune and blessing to share the Christian faith.

In our hearts we know the final answer. We know that we have done those things which we ought not to have done and left undone those things we ought to have done. We know that the pride of race, the fear of the strange and the different is one of man's original sins—that it has been fully erased from man's mind nowhere; that the sins of the fathers are visited on the children.

But we also know, as Lincoln said, that the Declaration of Independence "gave liberty not alone to the people of this country, but hope to all the world. It gave promise that in due time the weights would be lifted from the shoulders of all men, and that all should have an equal chance."

My own perspective on this problem has been, I confess, affected by looking at it for some time from the other side of the globe. As a former Ambassador to India, I know how spectacularly American prestige rose as a result of the Supreme Court desegregation decision. While touring Africa 4 years ago, I sensed again how vital a successful solution of our racial troubles is for our future relationship with the two-thirds of the world's people who are colored. In the winter of 1957 in South Asia, I saw the enthusiasm generated by the successful conclusion of the Negro's bus boycott in Montgomery, Ala. Later in the Soviet Union, I saw the Communists take full propaganda advantage of the bombing of Negro churches in the same State.

No one but a cynic would argue that we should suddenly become interested in equal rights for Negroes merely because our propagandist position in the world would be helped by such progress. Nevertheless, it remains more true today than it was 1947, when one of our distinguished former Secretaries of State, Henry L. Stimson, wrote:

"No private program and no public policy in any section of our national life can now escape from the compelling fact that it is not framed with reference to the world; it is framed with perfect futility."

Finally, I should like to suggest that all of us can learn much from a study of that incredible man, Mahatma Gandhi.

There were always two sides to Gandhi's program. One was direct resistance to unjust laws or practices. The other was constructive popular action to create the conditions of justice. He began his career before turn of the 20th century in the Union of South Africa, where he went as a lawyer for some Indian traders. In 1893, South Africa was a land run by some million Europeans who sat on top of some 5 million Africans who had almost no rights at all. In addition, there were 100,000 Indians, most of whom had been recruited as cheap labor for the white plantations and mines. Soon after he reached Pretoria, the young man of 24 invited all the Indians in the city to a meeting. He urged them to fight racial discrimination but without hating or hurting their opponents. And since their aim was to reason with the whites, the first thing they should do, he said, was to consider the reasons given by the whites for their discrimination.

To the Indian merchants before him, known for slick dealings and sharp bargainings, he proposed complete truthfulness and more concern for the poor. He called on all Indians to do something to improve the unsanitary conditions in the Indian sections of town. Why wait for legal victories for the necessary drain cleaning, he asked. We can't blame the whites for all our troubles, he argued. Perhaps we can't by ourselves end all the poverty in which our people are trapped, but if those of us with some money and some education will join in, the slums can be cleaned up, freshened with a coat of paint, and made habitable; illiterate adults can be taught to read; volunteer schools can be provided for the children of the poor. And he began to build the institutions to do these constructive tasks.

In 1913 he returned to India after negotiating a settlement with Prime Minister Smuts

who once jailed him but later came to say to him, "I am not worthy to stand in the shoes of so great a man." And for more than 30 years in India, Gandhi pressed his constructive program of village improvement, the end of untouchability, and the reform of individual lives.

The bus boycott in Montgomery carried out with dignity and restraint represented an adaptation of Gandhian principles in democratic America. "We are seeking to improve not the Negro of Montgomery but the whole of Montgomery," said Rev. Martin Luther King on the occasion of the formation of the Montgomery Improvement Association which conducted the boycott. Instead of merely sitting by until the Supreme Court ruled bus segregation unconstitutional, the Negroes of Montgomery in amazing unity carried out a courageous, peaceful, direct action which took the Nation by surprise. It served as a kind of electric shock treatment shaking Negroes and whites alike from their lethargy. The long-term effects of this Gandhian-type action on the white conscience may take time to register. But it had an immediate effect in changing the Negroes.

Perhaps the change is best reflected in the story of the old Negro woman who, when asked if her feet were not tired from plodding so many miles each day to work replied, "Brother, for a long time my feet have rested, but my soul's been tired. Now my feet are tired, but my soul is resting." In this light, with good cheer, we can move ahead with all deliberate speed.

Western Pennsylvania's Spelling Champion, Miss Jean Jones, an Eighth-Grade Student From Munson, Pa., Was Among the 70 Champion Spellers Participating in the 32d National Spelling Bee Held Recently in Washington, D.C.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. VAN ZANDT. Mr. Speaker, the oldfashioned spelling bee that early became identified with the history of the little red schoolhouse in America has since been elevated to a place of national importance due to the revival of interest in spelling bees sponsored by the Scripps-Howard newspapers and scores of independent newspapers who joined in conducting annual spelling bees on local, district, and national levels.

One of the cooperating independent newspapers located in my congressional district is the Clearfield (Pa.) Progress edited by Mr. George A. Scott and published under the direction of Mr. William K. Ulerich, one of the well-known newspaper publishers in Pennsylvania.

This year, the Progress conducted a series of spelling bees in my congressional district and the winner, an eighth-grade student, Miss Jean Jones, of Munson, Clearfield County, was entered in the finals at Pittsburgh where she emerged as champion speller of western Pennsylvania. By virtue of her achievement, Jean Jones was among the 70 contestants who entered the National Spelling Bee at Washington, D.C., the week of June 8. Miss Jones was accompanied to the Nation's Capital by her mother, Mrs. Lenetta Muirhead; her teacher, Miss Ethel McCully, and the Progress and Pittsburgh Press representatives, Mr. and Mrs. George A. Scott and Mr. and Mrs. Joseph J. Williams.

Mr. Speaker, it was a privilege for Mrs. Van Zandt and me to greet and congratulate Jean Jones in person upon her arrival with her party at the U.S. Capitol on June 8 and to wish her good luck in her impending battle against the cream of the crop of spellers in the Nation.

The following editorial from the June 12, 1959, issue of the Washington (D.C.) Daily News sums up in the last paragraph what is in the minds of everyone in reflecting upon the beneficial results that accrue from stimulating interest in the art of spelling. The editorial concludes with this salute to the 70 spelling champions—"Hooray for these kids! And as for you youngsters, be proud of yourselves. No one of you was a loser."

[From the Washington (D.C.) Daily News, June 12, 1959]

OUR SPELLING WHIZZES

We hope every word of this comes out with substantial orthographic accuracy, because it is addressed to the Nation's best spellers, junior division, of 1959.

Congratulations to Joel Montgomery, 12-year-old seventh grader from Denver, winner of the national spelling bee conducted by the Scripps-Howard newspapers and others associated in the annual contest.

And our compliments to the 69 other boys and girls from all over the country who took part. They're all champions, as our Dick Peters said, or they wouldn't have been in those national finals.

They're an enviable crop of youngsters who can handle such jawbreakers as miscible, catechumen, fanfaronade, ephelis, and viniaigrous—to mention just a few which would have stumped us.

To a special extent, you might say that we are in the spelling game ourselves, but then try to name any vocation, avocation, or undertaking wherein good spelling isn't revealingly useful. To be sure, it doesn't come easy. We read of one contestant who finished high up; her father proudly said there wasn't a television in their house. That may or may not be a clue to the old-fashioned business of really digging in to a thing. That's the essence of spelling.

Hooray for these kids! And as for you youngsters, be proud of yourselves. No one of you was a loser.

Mr. Speaker, to give some idea of the wholesome experience gleaned from these annual spelling bees, I wish to incorporate at this point the following news articles by George A. Scott, editor of the Progress, as they convey the impressions made not only on the contestants but also on the adult population that accompanied them in their quest for national honors in the annual spelling bee. In this connection, Editor Scott of the Progress who conducts a weekly column titled, "The Monday Wash," which is deservedly popular with Progress readers deemed the 1959 spelling bees of such importance that he devoted his entire column of June 15, 1959, to an interesting resume of this year's battle of words. The articles from the Progress follow:

[From the Clearfield (Pa.) Progress, June 12, 1959]

JEAN JONES PLACES 22D IN SPELLING BEE COMPETITION—MISSES IN NINTH ROUND

(By George A. Scott, editor)

WASHINGTON.—Western Pennsylvania champion Jean Jones' dream of winning the National Spelling Bee title ended in the ninth round here yesterday, but she nonetheless finished a very creditable 22d in the field of 70 spellers.

The Munson School eight grader stumbled on the word "mendicant," which she spelled "mendecant," after successfully spelling eight words given her previously by word pronouncer Benson S. Alleman. Her earlier words were "eagle, campus, prospectus, inchoate, caitiff, viscid, denouement, and caliginous."

Until she faltered on "mendicant", Jean seemed to have things well under control and her misspelling of "mendicant" came as a surprise. She did exhibit a nervousness as she started the afternoon round with the comment "Well, I suppose I'll be next."

Jean took her elimination philosophically and without tears although she was obviously disappointed. On hand to comfort her were her mother, Mrs. Lenetta Muirhead and her teacher, Miss Ethel McCully, and the Progress and Pittsburgh Press representative, Mr. and Mrs. George A. Scott and Mr. and Mrs. Joseph J. Williams.

Although she is out of the bee competition, Jean will have plenty to keep her busy before she returns home Saturday. This afternoon all of the bee contestants and their escorts will visit Mount Vernon and Alexandria, with a boat ride on the Potomac as part of the trip. Tomorrow morning the contestants will visit the Government Bureau of Engraving and Printing and will take a barge ride on the Chesapeake and Ohio Canal.

The climax to the week of activity will come tomorrow night with the annual awards dinner. Jean will receive a cash award of $25. Saturday morning, Jean and her party will fly back to Pittsburgh on a Capital Airlines Viscount and will return to Munson via automobile that afternoon.

Six girls and five boys remained in the bee when the competition was resumed this morning. They included two Pennsylvanians, Susan Kirssin, Shippensburg eighth grader representing the Harrisburg Patriot-News, and Robert Crossley, who represents the Norristown Times-Herald and who finished 14th last year.

Eleven rounds of spelling and 498 words were required to reduce the field from 70 to 11 yesterday. The toughest round, from the standpoint of eliminations, was the seventh, last of the morning session, when 14 youngsters went to the sidelines.

Indicative of the tension that existed among most of the spellers was the first speller eliminated, eighth grader Jean Waycaster of Sophia, W. Va. Jean was back for a second try after finishing 43d last year, but went down on the word "lavender" in the first round.

One of the bee's favorites, Henry Feldman of Oak Ridge, Tenn., who finished 12th last year, was eliminated in the 10th round on the word "cognosce." Other words which felled spellers in the late rounds included "onomatopoeia, cedilla, ferriferous, meretricious, feral, and geophagy."

Yesterday's competition was conducted with a minimum of arguments. A check of a tape recorded disclosed that one boy had misspelled "dentifrice," but the judges agreed that the pronouncer had mispronounced the word and ordered that the youngster be given a second word. Two or three spellers were rung down by the judges

for delays in spelling words and one youngster fell prey to the seldom-used rule that once having started a word the speller cannot change the letters already pronounced.

[From the Clearfield (Pa.) Progress, June 15, 1959]

THE MONDAY WASH

(By George A. Scott, editor)

(Good evening. Notes from the diary of a reporter accompanying Spelling Bee Champion Jean Jones, of Munson, to the National Spelling Bee at Washington, D.C., last week.)

Monday: Up early for the 18-mile taxi ride to the greater Pittsburgh airport from the Pittsburgher Hotel, where Jean had experienced her first night in a hotel. Party of five filled cab to capacity, especially since all of the traveling bags had to be loaded on the front seat beside the driver, brandnew cab, but the company hadn't given the driver the key to the luggage compartment. Met Pittsburgh Press Promotion Editor Joe Williams and Mrs. Williams at the airport, where Joe had arranged for early boarding of the Capital Airlines DC-4 so that departure pictures could be taken. Aloft at 8 a.m., Jean, her mother, Mrs. Lenetta Muirhead, and her teacher, Miss Ethel McCully, were experiencing their first airplane ride. Flight Stewardess Barbara Rhoades went right to work serving breakfast to the some 70 passengers. Williams took Jean up to the cockpit of the plane where she met Flight Captain Tronovich, who explained plane's controls to her.

Jean met her first spelling bee rival before she even entered the Mayflower Hotel, headquarters of the week's activities. Struck up a friendship with Marilynne Myers, 13-year-old Memphis eighth grader, and they were constant companions the rest of the week. Even finished close to each other in the national bee, Jean 22d and Marilynne 19th. Hardly had time to get settled in our hotel rooms when we were off to the Capitol for greetings by Representative JAMES E. VAN ZANDT, picture-taking on the Capitol steps and lunch with Congressman VAN ZANDT'S gracious wife in the House restaurant. Back to the hotel. Jean, her mother and teacher off on the first of five special tours for the contestants and their escorts. We dropped into the Associated Press Washington office, where we once worked for nearly 3 years back in the midforties. Found 15 to 20 onetime fellow workers still there and wound up spending a couple of hours visiting from one end of the office to the other. First time we'd been in the office since we left there in June of 1947.

Dinner in the Presidential room of the Mayflower. Delicious food and deluxe atmosphere but tough on the pocketbook. After that a 2-hour get-acquainted or renew-acquaintance party for the escorts. Joe Williams, a veteran at taking champions to the National Bee, insisted Jean should have an autograph book and we finally found one in a drugstore a block from the hotel. Rest of of week Jean was busy getting autographs and her book was filled by Saturday.

Tuesday: Tours kept Jean and her mother and teacher busy all day, but we all got together for dinner in the hotel's "Rib Room" where the steaks are mammoth and delicious. It was early to bed for Jean and the other contestants.

Wednesday: S-Day for the contestants and "S" for Suspense-Day for their sponsors and escorts. Practice round that didn't count started off the spelling and then the chips were down. Fifty-two came through without error before the first contestant was eliminated and two more dropped out by the end of the first round. Sixth-grader Tommy Lewis of Albuquerque, N. Mex., was the only drop-out in the second round and he fell prey to the rule enforced only in the National Bee, which states that a contestant cannot change the letters once pronounced. Given the word "blossom," Tommy started out "b-o," then realized his mistake but it was too late. Judges rang the bell on another speller in a later round when she took too long in trying to spell "camaraderie." Seventh and last round of the morning session was toughest for contestants, 14 were eliminated, 6 of them in succession.

Boy versus girl competition was an interesting sidelight throughout the bee; 37 girls and 33 boys started and by noon the advantage had shifted to the boys, 16 to 12. Girls were back in control, 6 to 5, by the end of the afternoon round, but 4 of the top 5 spellers at the end of the bee were boys. Best showing boys have made in years.

Thursday: Up early again for the 8:30 a.m. start of the final rounds. Joe and Mrs. Williams, Jean, Mrs. Muirhead and Miss McCully reported a wonderful dinner at Gusti's an Italian food restaurant, the night before. We'd had dinner with our daughter and son-in-law, who drove down from Baltimore.

With the $1,000 first prize plus $500 for second and $250 for third place riding on each word, this morning's competition was tense and rugged. Very first word pronounced caused a hassle; Chief Judge Dr. Belmont Farley of the NEA (retired) suggested that "Capias" could be pronounced with a broad "a" and the Topeka, Kans., representative protested before the end of the round that he had tipped off the spelling of the word to the contestant, Betty Jo Abel, of Canton, Ohio. Judges then ruled that Betty Jo must spell another word, "triumvirate," which fortunately she did. Her newspaper representative then wanted to know if "this is a spelling bee or a pronunciation contest?" Curiously, Betty Jo lodged a protest of her own after she had gone down on "cacolet," which she spelled "cacolette," but her inquiry came after the round was completed, too late for consideration under the rules.

Sentimental favorite of the audience and most of the press was Robert Crossley, quiet but personable youngster from Center Square, Pa., representing the Norristown Times-Herald. Robert drew and spelled successfully such words as "smaragdine"; "bifurcation"; "syzygy"; "proscenium"; "contumelious," and "quincunx" to reach the final spelldown and each word he spelled brought a thunderous applause from the audience. Less enthusiastic was the applause, given all contestants when they were eliminated, which was received by fifth place winner Roger Cunningham, an 11-year-old seventh grader from Kenova, W. V., who had squirmed, jitter-bugged, and motioned to the audience in his seat while the others were spelling and had made a production of each word he spelled.

Spelling was forgotten Thursday afternoon by a 5-hour trip to Mt. Vernon and Alexandria and another tour Friday morning to the Bureau of Engraving and Printing, plus a trip on a Chesapeake and Ohio Canal barge. Sportsmanship and congeniality of the youngsters was impressive and heart warming. Too bad grownups can't accept defeat and congratulate the winner as easily and sincerely as did the 11- to 15-year-olds in Washington.

Friday: Tour took most of the day, but we worked in a shopping trip with Jean, her mother and Miss McCully Friday afternoon that left us exhausted and our good wife, who well knows our disinterest in shopping trips, marveling. * * * But we enjoyed it, despite 90-plus temperature on the streets and crowded Washington stores, because our "tourists" enjoyed themselves. Climax of week was awards dinner at night at which Scripps-Howard Spelling Bee Director Dick Peters handed out the cash awards (Jean received $25) and told the crowded ballroom that this year's spellers were "by far the nicest bunch of youngsters" of any National Spelling Bee. Jean marked up another "first," her first corsage, which was a beautiful arrangement of baby rosebuds presented her by the Progress and the Pittsburgh Press.

Saturday: Up early again to check out of the hotel and taxi to the National Airport, where we boarded a Capital Airlines Viscount for the trip back to Pittsburgh. A Japanese group apparently was meeting at the hotel that day and one woman must have come down to the lobby straight from bed. She wore a kimona. Rain clouds forced pilot to take big plane up to 11,000 feet or higher and Jean had some real qualms as we flew through clouds that blotted out everything else. Some others of the party found the occasional air bumps equally disconcerting. Back in Pittsburgh, we almost were trapped by a bicentennial parade, but fortunately our parking garage was out of the parade zone. Exhausted by the big week, Jean slept with her head on her mother's shoulder part of the automobile ride from Pittsburgh to Clearfield. Tired but still thrilled over her big week, Jean couldn't pick out any one thing that thrilled her most. But we know that she and her mother and Miss McCully had had a big time. So did we.

One Hundred and Eighty-first Anniversary of the Battle and Massacre of Wyoming, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Friday, July 3, 1959:

COMMEMORATION SERVICE

We have today reached the 181st anniversary of the Battle and Massacre of Wyoming. It will be marked by a commemoration service—the 82d annual assembly of its kind—Saturday morning, July 4, at 10 at Wyoming Monument. Maj. Bruce Payne, president of the Wyoming Historical and Geological Society, will be chairman, and Justice Benjamin R. Jones of the Pennsylvania Supreme Court will give an address on "The Legal Implications of the Settlement of the Pennsylvania-Connecticut Territorial Dispute."

Many distinguished speakers have graced the platform at the annual exercises held for many years on July 3. An early highlight was reached when, on the 100th anniversary of the battle, President Hayes was the orator. In succeeding years other eminent men distinguished in public life or as historians have spoken on the hallowed field, none of them perhaps more eloquently than former Gov. Arthur H. James who as the speaker in 1947 became the first of the Commonwealth's long list of Governors to appear on the platform at the annual exercises at the monument.

By consulting the program and the committees and members listed thereon, we observe that the record of devotion to a patriotic endeavor is being maintained at a high level. Shown thereby also is the fact that the Battle of Wyoming is faithfully remembered by the present generation as a turning point in the early history of our country.

Tomorrow will not only mark the continuance of a fine tradition but also the beginning of a new era in the appreciation of Wyoming Valley's history. The audience at the monument exercises and the public at

large are invited to inspect Swetland Homestead. In its architecture, associations and furnishings the Homestead symbolizes the development of a family, a community and a rapidly disappearing way of life in America. Mrs. Franck G. Darte is to be congratulated for providing the Valley with both a tourist attraction and an authentic teaching museum for our students and citizens.

A Doctor Talks About Traffic Safety

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. ROBERTS. Mr. Speaker, outstanding members of the medical profession are showing increasing awareness of the responsibility of the profession in the prevention of automobile accidents and in the prevention and the care of resulting deaths and injuries.

One of these outstanding doctors is Fletcher D. Woodward, M.D., department of otolaryngology, University of Virginia School of Medicine, Charlottesville, Va.

Dr. Woodward wrote an article entitled "Automobile Accidents," which appeared in the March issue of Medical Times. Under leave to extend my remarks in the RECORD, I include this article and I urge its being read by every Member:

AUTOMOBILE ACCIDENTS

(By Fletcher D. Woodward, M.D., Charlottesville, Va.)

Believe it or not the public is not yet interested enough in the prevention of automobile accidents with their resulting injuries and deaths to do anything about it. This attitude, no doubt, is the result of two things, the lack of knowledge from the lack of education and the human trait of believing that: "Such things only happen to the other fellow, not to me, for I am a safe and careful driver." However, since there is a crash every 3 seconds with 1 death and 25 injuries every 10 minutes, enough families will soon experience enough tragedies to enlist their active interest and support in preventive measure and in the enactment of adequate laws to curb this growing carnage.

The police see the broken bodies, the dead and the stark tragedy on our highways and learn to dread traffic crashes and especially holiday traffic and much as the doctors do who are called upon both night and day to pronounce death or to work long hours in the repair of these terrible injuries.

Automobile crash victims now constitute 8 percent of all hospital admissions and 20 percent of these are classified as from severe to critical. The repair of these injuries is one of the most frequent surgical procedures now performed in our hospitals.

The insurance companies are deeply concerned, too, in this problem, for the repair of the present-day chromium monster is nearly twice what it was a few years ago, and, in addition, they are confronted with the rising tide of hospital and disability costs plus liability costs.

The automobile companies have been so concerned with pleasing and selling to the 12-year-old mentality that they have ignored both the human occupant and the insurance company. The legal profession is also actively concerned, especially because of the mounting awards granted by juries in case of death or injury. Since the manufacturer is primarily interested in selling cars for dollars, he is not interested in providing safety features, nor in basic research in safety, because of the increased cost, and although many such items as hood ornaments, chrome trim, clocks, and other expensive extras could well be eliminated to partially compensate. He frankly says he does not intend to do anything unless the public demands it. When one considers the vast sums of money earned by the automotive industry over the years, he is astounded as to how little has been spent in basic safety research for the prevention of deaths and injuries.

In all ours wars less than 1 million men have been killed. The automobile counted its one-millionth victim some 5 years ago, and the number has been rapidly increasing since with increased speed and horsepower.

In 1925 there were 20 million cars, and the death rate was 19 per 100 million miles. In 1955 there were 60 million cars, three times as many, but the rate had been reduced to 6.4, a most commendable improvement. This was due to the indefatigable work of the many fine local, State, regional, and national safety organizations and the manufacturers.

Unfortunately, the total number of deaths and injuries is slowly but steadily increasing each year, and the rate of 6.4 deaths per 100 million miles is practically a static figure, and only by running hard can we hope to stand still. Something new must be added if we hope to cut this rate appreciably or reduce the number of deaths and injuries due to the rapidly increasing number of vehicles on our highways.

The doctor feels that he can help in the solution of this problem both as a physician and as a citizen by studying it from a medical standpoint and applying the remedies which are now available.

The leading cause of death in this country is cardiovascular disease. Second is cancer. But close behind are automotive deaths. If figured on man-years of life lost, for the first two are primarily diseases of the older age groups whereas the automobile rate is highest in youth, hence the man-years of life lost are great.

We feel that we now have enough facts, which if employed, would reduce the deaths and injuries 50 percent or more and, while at the same time, converting many of the more serious injuries to those of a relatively minor nature.

If doctors had waited until all the facts were known before starting the control of such scourges as smallpox, typhoid, diphtheria, malaria, syphilis, and poliomyelitis, as examples, their control would have been long delayed.

We realize the importance of basic research in the ultimate solution of these problems but, until these facts are at hand, we can use the remedies we now have in a practical clinical way and immediately begin the control of what we now feel to be the number one health problem of this country and, at the same time, carry on and encourage basic research in all the many phases of the problem to hasten the final solution.

The greatest cause of crash deaths is the drinking driver. He accounts for 50 percent or more of them. The next is speed and reckless driving, which accounts for 30 percent or more.

The remainder are caused by many things, such as mechanical failure, physiological states such as sleep and fatigue, pathological conditions as epilepsy, diabetics taking insulin and cardiovascular disease; also, drugs, emotional disturbances and many other conditions too numerous to list at this time.

As a result of Cornell and other crash studies we know that the most frequent source of death or injury in the car is: (1) The steering assembly; (2) ejection; (3) dash and windshield; (4) back of front seat and so on. The most frequent body areas affected are: (1) Head and neck; (2) chest; (3) extremities and so on.

To initiate control of this number one health problem we would like to recommend:

1. Education. In spite of sputnik and the hue and cry for our schools to emphasize mathematics and the sciences, I would like to speak a word for the languages and humanities, for as has been said, "Reading maketh a full man." In order for our youth to live to this desirable state I would like to urge the State boards of education to see that all public, parochial, and private schools initiate compulsory driver training courses which are far more important than many courses now emphasized, such as home economics, art, music, and physical education. They should provide both an adequate curriculum and behind the wheel instruction. Such schools should also be available to the public for the instruction of beginners, those referred by the court and for those whose licenses have been suspended or revoked. A certificate from such a school should permit a youngster to apply for a license at 16 instead of 18, which should otherwise be the minimum age limit. It could also earn lower insurance premiums and permit at times those whose licenses have been suspended or revoked to take the course and then reapply for a new license. These schools would be invaluable in teaching safety from all angles with emphasis on the danger of driving while drinking, on speed and recklessness and on the value of safety features of design as well as safety belts or shoulder harnesses.

2. (a) Since the average individual suffers impairment of driving skill at blood alcohol levels of from 0.03 to 0.05 percent, let's make 0.05 percent the critical level for conviction instead of 0.15 percent. The latter is a far too generous figure.

(b) A chemical breath test should be mandatory in all cases where driving when drinking (not intoxicated) is suspected. This test would free the innocent, as well as help convict the guilty. The alternative to such a law is the implied consent law as has been provided in New York and other States.

(c) The result of the chemical test should be accepted as primae facie evidence.

The present laws exonerating a driver of drinking and driving with a blood level of less than 0.05 percent are proper.

There should be enacted a new set of laws to cover those with a blood level of from 0.05 to 0.15 percent. This is the range of the social drinker. These laws should be mandatory and tough enough to stop the driver who is not drunk and thinks he is perfectly capable of handling a car in our modern high speed traffic. The results consistently prove him wrong. For the first offense, perhaps, a $100 fine, a few hours to 1 day in jail, and a 30-day suspension of his driving permit would be proper. For the second offense a $500 fine, 10 days in jail, and a license suspension for 1 year. For the third and final offense a $1,000 fine, 30 days in jail and a permanent revocation of his license.

For those whose alcohol blood levels are above 0.15 percent the laws should be really tough. Perhaps, for the first offense a $100 fine, 10 days in jail, and 6 months suspension of a license. For the second and final offense a $1,000 fine, 30 days in jail, and permanent revocation of his license. Many States have found a point of demerit system is the best solution to these problems of suspension or revocation of a license.

In answer to the many arguments pro and con in this complex problem the physician is not interested in whether the degree of intoxication is reached on an ascending or descending curve of intoxication; he is not concerned with the type or rapidity of consumption of the alcoholic beverage or whether consumed on a full or fasting stomach; he is not concerned with whether the individual is a beginner or an experienced drinker. He is only concerned with the fact that no one should operate an automobile in our modern high speed and complex traffic patterns who has an alcohol blood level of 0.05 percent or higher.

All of these laws should be mandatory and not left to the discretion of the judge or consulting physician for both have failed miserably in the past.

3. Since speed and reckless driving are causative of some 30 percent or more of crash deaths, I suggest more State police, that the public be educated to support them, and cease playing cops and robbers on the highways, and that tougher laws be enacted and made mandatory.

We should endorse the speed limits suggested by the National Safety Council for uniform adoption. These limits are 60 miles per hour for day, 55 miles per hour at night and 35 miles per hour in urban zones, all with a 5 mile per hour tolerance. Dual lane and other modern highways should likewise have a minimum limit of 40 miles per hour.

It is suggested that the first offense in this category carry a $100 fine and a 30 day license suspension; the second offense a $500 fine, 6 months license suspension and from a few hours to 1 day in jail; the third offense a $1,000 fine, 12 months license suspension, and 10 days in jail; the fourth and final offense a $1,000 fine, permanent revocation of the driving permit, and 30 days in jail.

The laws punishing both the drinking driver and the reckless speeder must be made tough, for driving a motor vehicle is a privilege and not a right. Nor should sympathy be wasted on the so called hardship cases for you may be his next victim. He knows the penalties for each offense whether set by mandatory laws or as a result of the point or demerit system and no deviation can be allowed if the number of deaths and injuries is to be curtailed.

4. Since some crashes are unavoidable and others inevitable it is important that the machine itself be designed and safety features provided to protect the occupants. At the present time the destiny of thousands rests in the hands of a comparative handful of men, the designers and engineers who plan next year's cars without benefit of medical advice or consultation.

The Committee on Trauma of the American College of Surgeons has been concerned with the importance of safety design of the vehicles and the provision of safety features as standard rather than optional equipment and their efforts have the wholehearted support of all physicians and particularly of the American Medical Association Committee on Medical Aspects of Automobile Injuries and Deaths.

The American Medical Association committee is primarily interested in the medical aspects of the problem but, as a result of their studies and the reports of research groups such as the Cornell Study Group, it has placed design high on its list of objectives. The reason for this decision is that 12 miles per hour seems to be the critical speed. For, at this speed the average steering wheel collapses leaving the steering post as a lethal projection and no one can protect himself from death or injury.

If thrown out of the car his chances of getting killed or hurt are five times greater than if he had remained inside the protective shell of the vehicle.

The seat belt, or preferably the shoulder harness, is the one best safety feature that can be provided at this time and, if worn, may well prevent some 60 percent or more of deaths and injuries. The belts should be anchored to the floor of the car and must meet the safety specifications of the Society of Automotive Engineers. If belts are not provided as standard equipment provision for their attachment should at least be provided.

Many suggestions have been made which would contribute to passenger safety at little extra cost for the manufacturer. Among these suggestions are a collapsible steering assembly, or Ford's deep dish steering wheel with a broad steering post covered with protective crash padding, the same type of padding over the dash, back of the front seat and other dangerous areas in the car, seating of the front seat passenger farther away from the dash, firm anchorage of seats, visual or audible speed signals, safety door locks, polarized headlight lenses and an oppositely polarized spot on the windshield to prevent night headlight glare and blinding, better designed windshields from an optical standpoint, high seat back extensions to prevent whip lash neck injury, a recessed shelf behind the back rest to avoid injury from secondary missiles, less chrome and other reflecting surfaces, eliminating projecting knobs, buttons and levers, also shock absorbers for bumpers or energy absorbing material in the front end and many other features. Most of this extra cost could be compensated for by less chrome, the omission of hood ornaments, clocks and radios and many other accessories as standard equipment. As I have said before, one is astounded as to how little has been spent on safety research by the manufacturers compared to the vast sums received from the sale of their product. The continuing research by Ford is commendable and is the one ray of light discernible at this time. These things must be provided, if not voluntarily by the makers then by Federal or State legislation, demanding certain safety features if their product is to be sold in interstate commerce.

Consultation with the medical profession on the aspects of human engineering as related to automotive engineering would soon establish many related facts which would bear fruit by reducing deaths and injuries at the time of a crash and convert many of the severe to critical injuries to those of a relatively minor nature.

5. Physicians in their dual roles as citizens have suggested that three classes of driver permits be granted: (1) private vehicles; (2) commercial vehicles; and (3) passenger carrying vehicles. Each individual could thus acquire one or more such permits depending on his vocation and desire and if suspension or revocation of a permit is ordered by the court it could apply to all three categories or to one or more depending on the offense or series of offenses. For instance, a truckdriver could continue to drive his truck but would be barred from driving his private car.

Reexamination should be required every 3 years for class 1, every year for classes 2 and 3. This would also apply to schoolbus drivers and those past age 65. The automatic reissue of driving permits every few years should cease for under this system the only requirement for reissue of a permit is to be alive.

Physicians have also suggested that referral medical clinics be established by cities, towns, and counties to be staffed by doctors appointed by local medical societies with consultants available in psychology and the medical specialties. It would be their duty to pass on the physical and mental fitness of those referred to it by the court, the police, or other physicians. Their opinion would be particularly valuable in consideration of the licensure of repeat offenders.

State medical societies are appointing traffic safety committees to serve as consultants to State legislatures and licensing authorities on medical aspects of licensure.

The American Medical Association recognized its responsibility in this field and through its committee on medical aspects of automotive crash injuries and deaths has prepared three pamphlets: (1) "Are You Fit to Drive?" written in lay language and illustrated for the instruction of the patient whose condition may pose such a query. (2) "A Medical Guide to the Physician" to determine a patient's fitness to drive. This pamphlet covers the medical aspect of the problem for the first time and serves as a reference to the physician when confronted with a patient who has a problem concerning a physiological state, a pathological condition, emotional disturbance, drug therapy, or alcohol. (3) "A Guide to Examining Traffic Officers" is being prepared now and will set definite physical standards.

Of course, the physician's first duty is to render adequate definitive treatment to the injured and of these results he is justifiably proud for those of World War II were much better than those of World War I. There was also further improvement during the Korean conflict. These results were due to advanced surgical and anesthetic techniques, chemotherapeutic and antibiotic drugs, improved methods of blood transfusion, better transportation of the wounded, and nursing care.

In civil life he is interested in seeing that first aid care and emergency transportation is adequate and available and that properly trained and equipped rescue squads are established.

In spite of his accomplishments in the care of the wounded his main interest as in all other major medical problems is in prevention and to obtain this goal he advocates:

New laws to curb drinking drivers;

Proper and uniform speed laws;

Minimum safety features in design and equipment as standard and not optional features;

Referral medical clinics;

Three classes of permits for private, commercial and passenger carrying vehicles;

Driver education schools for the public and in all public, private, and parochial schools;

A study of the newer laws of our more progressive States;

Point or demerit system;

Education of our youth, the public, the legislator, and the traffic court judge so that new and proper laws will be enacted, observed, and enforced;

The employment of more State police and for the public to stop playing cops and robbers;

Further engineering studies of highways and all related factors as well as of the machine itself; and

More time and money in basic safety engineering research.

But, for the present let's employ the information we now have for by doing so the deaths and injuries could be curtailed substantially, perhaps by 50 percent or more.

CONCLUSION

I would like to quote a statement from Col. C. W. Woodson, Jr., superintendent of Virginia State police, which is as follows: "With modern traffic what it is, pleasure driving has ceased to be. Survival on the highway today calls for a mechanically perfect vehicle and a driver who is mentally alert, in good physical condition, and aware of the dangerous task he is performing." And, I would like to add that the car should

have proven and built-in safety features in case a crash should occur.

The physician is proud of his definitive care of the injured but he does not feel that his duty as a citizen and a physician has been fully discharged until preventive measures have become a fact and are reflected in the daily gruesome statistics of the public.

Proposed Study of the Nation's Tax Structure

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include Keenotes which was released today:

KEENOTES

(By Representative ELIZABETH KEE, of West Virginia)

The end of the 1958-59 fiscal year on June 30 with a deficit of about $10 billion once again focuses attention upon the Nation's financial situation. Certainly a deficit of this magnitude makes it all the more unlikely that present tax rates can or will be reduced in the immediate future.

However, the House Ways and Means Committee will hold hearings on the Nation's tax structure this fall which may lead the way to relief for the Nation's taxpayers.

The committee is concerned, along with many other people, over large amounts of income which are escaping taxation each year.

Some reports place the amount of money which escapes taxation at $26 billion. This means that about $5 billion in revenue is lost to the Nation each year.

If the full amount of this lost revenue could be recovered by the Federal Treasury, this would make it possible to cut everyone's personal income tax by 13 percent without any loss in revenue. Or, it would be possible to increase the personal exemption from $600 to $800.

There are many loopholes in present tax laws. The Ways and Means Committee will examine all of these loopholes and see what might be done to eliminate them.

Certainly, individuals who are subjected to the present high tax rates are entitled to demand that everyone be treated alike. There has been much talk about abuses of expense accounts—such as charging a big game hunting trip to Africa as a business deduction.

Many tax officials contend that if the Internal Revenue Service could audit more returns hundreds of millions of dollars could be collected in additional tax revenue. It is estimated that $3 out of every $5 of all money paid in interest to individuals is never reported on tax returns. Also, many dividends from stocks are said to go unreported. At present, 4 percent of dividends are exempt from income tax. The provision is under heavy fire in Congress and should it be repealed the unreported dividends could cost the Treasury substantial amounts.

The proposed study by the Ways and Means Committee will be the first attempt in many years to meet this problem of tax loopholes head on. Chairman MILLS Democrat, of Arkansas believes that it may be possible, by closing loopholes and collecting taxes on income which is now tax free to provide tax relief for many wage earners.

There is no doubt that the man on a salary, who has his tax withheld, is hardest hit by present tax laws. With no other income, he cannot take equal advantage of deductions and exemptions. It is only fair that the same strict requirements imposed upon the salaried worker be extended to all other segments of our population.

A revision of tax laws, which maintain revenue at present levels by ending loopholes and evasions, may be the only hope for tax relief in the immediate future.

A Time for Understanding

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. HIESTAND. Mr. Speaker, there is much misunderstanding and much misleading oratory on so-called tax loopholes—especially concerning the oil depletion allowance. To me, this calls for real understanding, as explained in the able editorial of the Los Angeles Times for June 28. Under leave to extend my remarks, the editorial follows:

A TIME FOR UNDERSTANDING

There are ceaseless pressures in Congress to tamper with the depletion allowance, the key device for restoring our dwindling oil reserves.

A BASIC NECESSITY

There is a widespread and mischievous misunderstanding about the depletion formula, which is basic to our defense and even to our standard of living.

Those who would reduce or eliminate the depletion allowance say they seek to close a glaring tax loophole. But the basic facts remains: our civilization still floats on oil, and we must be sure adequate encouragement is provided to the oil industry to continue its oil explorations.

New uses for petroleum products are helping to use up reserves at a rate that by 1957 had exceeded the rate of new discoveries.

Thanks to the present depletion allowance, oil explorers are encouraged to seek ways to reverse the diminishment of supplies. Without the allowance much of the search could not be financed, unless there were a substitute kind of revenue, such as higher gasoline prices.

THE BETTER ALTERNATIVE

The depletion allowance appears the better way: it lets an oil producer claim exemption for up to 27.5 percent of his gross expenses before paying income tax, on grounds that extracted oil or gas is capital that is depleted when sold.

The allowance alone is inadequate for exploration. To each dollar gained through allowance, the producer must add two more—from retained profits or from new investment—to carry on the long-odds speculation known as drilling for oil.

The current odds are nine to one against a producing well. They go up to 50 to 1 against a well being moderately successful, that is, yielding a million barrels before running dry.

Expenses are rising beyond the 87 percent that drilling costs represented in the wellhead price of a barrel of oil in 1957.

The margin for potential profits is hardly enough even for large operators. Yet the large operators are in the small minority: of 16,000 prospecting, nine-tenths have fewer than 10 employees; only 53 have 500 or more. The largest single company produces only 5 percent of the Nation's output of petroleum.

MODERATE EARNINGS

Those who think the oil industry ought to bear more of the tax burden, Federal and State, are not supported by a survey or 22 years ending in 1957: a representative group of oil companies earned 9.6 percent annually on net worth, compared to 10.7 percent for all manufacturing companies.

Without a depletion allowance or higher retail prices, it is hard to see how companies could continue to look for oil: in 1957 they poured $2.2 billion into dry holes in the United States alone.

Costs are increasing as wells go deeper. Those going down 15,000 feet or more increased from 1 in 1938 to 192 in 1958. Cost has gone up from $14 a foot for the first mile to $110 a foot to 22,000 feet. One was sunk to 5 miles, and it was dry. Nobody gets a depletion allowance for a dry well.

One well, striking oil at 21,000 feet, will probably require 8 years to get back costs before profit begins—if the well doesn't peter out meanwhile.

Efficiencies in the business have enabled these added costs to be shouldered, while the price of gasoline, for instance, has gone up only 5.9 percent, exclusive of taxes, since 1949. The costs of materials, services, and wages have jumped far in excess of that, according to a survey in Steelways.

Moreover, oil yields in taxes to Federal and State treasuries about $1 of every $9.50 in the Federal budget—more to the several governments than to all stockholders.

Madison Capital Times Praises Congressman Patman's Opposition to Vault Cash Measure

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from a recent edition of the Madison (Wis.) Capital Times praising Congressman WRIGHT PATMAN'S determined and well-informed opposition to the administration's vault cash bill. The Capital Times also makes favorable mention of Congressman GERALD FLYNN'S position on this legislation:

PATMAN NEEDS SUPPORT IN HIS FIGHT AGAINST BIG GIVEAWAY

A strange story of double-talk, obscurantism and audacity was exposed Monday in the Capital Times by Ron May, our Washington correspondent.

It seems that the Senate Banking and Currency Committee has given its approval to a bill that nobody but two men in the entire Congress can understand. These two are Representative WRIGHT PATMAN, Democrat, of Texas, and Wisconsin's own GERALD FLYNN, Democrat, of Racine.

PATMAN, particularly, has been fighting this bill for many months. Persistently and doggedly he went through all the fine print and studied all the possible ramifications. When he had finished his research he announced his conclusion: the bill amounted to a $15 billion giveaway in Government bonds by the Federal Reserve System to big bankers.

PATMAN has extreme difficulty in getting anybody else excited over the proposal. Nobody, it seemed, understood what it was all about.

Furthermore, the Federal Reserve Board announced that perhaps the bill might permit a giveaway, but they didn't intend to use it that way. This, apparently, satisfied those who were too lazy to find out for themselves what was involved.

This week, however, PATMAN got some impressive support for his position by several of the leading economists in the Nation.

Among these was Dr. Arthur P. Becker, chairman of the economics department at the University of Wisconsin-Milwaukee. Dr. Becker has studied the bill carefully, and in a letter to PATMAN he gave his conclusions: the bill was a gigantic giveaway. He urged the House, which now is considering the bill, to reject it.

To Dr. Becker's analysis was added that of Dr. Seymour Harriss, chairman of Harvard's Economics Department, and Dr. Alvin Hansen, Harvard's renowned banking expert. Their conclusion coincided exactly with that of Dr. Becker: the bill provides for a $15 billion giveaway.

Exactly how the giveaway is achieved is a complicated thing. Essentially, what is involved is a lowering of reserve requirements for private banks, which has the effect of creating more money for them.

In order to offset a runaway inflation because of this, the Federal Reserve would be forced to sell about $15 billion in Government securities.

Since the big banks would be buying these securities with money created for them by Congress, these U.S. obligations would, as Dr. Becker has pointed out, in reality be given free to the banks.

Representative PATMAN is, we will concede, an able and unusually intelligent Congressman. The taxpayers owe him a great debt for sticking with this issue so tenaciously. But is it possible that he is the only man in the Congress who has been able to understand the essence of this giveaway bill?

Just what are the rest of our Representatives doing in Washington? It looks to us as if they all need a forceful reminder from the voters back home that they had better get down to business.

Appraising the Deficit

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. McCORMACK. Mr. Speaker, the within editorial, "Appraising the Deficit," appearing in the Washington Post of July 5, 1959, pointedly states the poor financial record of the 6½ years of the Eisenhower's administration. The editorial follows:

APPRAISING THE DEFICIT

As the last Eisenhower administration enters its last full fiscal year, it can hardly look back upon its performance in the financial field with much satisfaction. Judged by the administration's own standards, the 6-year $20 billion net budget deficit, the 10-point peacetime rise in the cost of living, the decline in the rate of national economic growth and the failure to improve the structure and management of the Federal debt amount to a disparity between its hopes and its accomplishments of considerable proportions.

But it would not be very instructive to appraise the $12.5 billion deficit for the year just closed in the terms which the administration itself persistently uses. There is much more to the business of government than the Treasury's ledger sheets and the Consumer Price Index. Indeed, this administration's fixation with these and certain other limited measuring sticks has probably accounted for much of our recent fiscal troubles. These have stemmed from an inadequate flow of revenues to the Treasury, leading to the imposition of tight, arbitrary ceilings well below what needed to be spent on defense and important domestic programs and resulting in the deficits which have marked all but two of the Eisenhower years.

In retrospect it appears that the tax reductions of 5 years ago, however much they may have contributed to recovery from the recession of that period, should not have been permanent. They were taken at a time when, by drawing heavily upon past appropriations, the administration made it appear that spending could be greatly reduced. This very quickly proved an illusion, but the tax rates were not restored. Had the reductions been made temporary, specifically tailored to combat recession like the temporary tax cut favored by this newspaper a year ago, the later investment boom might have been moderated and last year's decline been less severe.

Even with reduced rates, however, the tax structure might have produced more than enough to offset the net deficit and to provide for a more adequate defense and domestic budget today had budget and monetary policy been geared to promote a higher rate of economic growth.

This judgment of course benefits from hindsight, and if the administration now showed a greater willingness to reappraise what has happened and to learn from it, there would be less occasion for reproach.

Hard on the heels of a record peacetime deficit, however, its spokesmen still hint of tax cuts before the next election. Confronted with rising prices, they still reject taxation as the best and obvious inflation remedy. Surrounded with urgent and informed pleas for greater defense, foreign aid and domestic spending, they still seem to see no opportunity for the budget to grow with the Nation. Refinancing the debt on a hand-to-mouth basis, they offer nothing better than a mechanical, short-term remedy—an increase in the interest burden, itself an inflationary if presently unavoidable step.

With the recovery from last year's recession by no means complete, a modest deficit in the 1960 budget would hardly be a cause for alarm. The most liberal proposals so far made by responsible groups for schools, housing, foreign economic aid, and defense—to name some of the most critically short-changed areas—would not produce anything like the deficit just incurred in the past year. By closing some of the more glaring tax loopholes and providing some little Federal Reserve support for the bond market to ease interest costs, it is possible that no deficit financing would be needed to provide an adequate and realistic budget for the coming year. Then, if taxes cannot in an election year be adjusted to produce greater revenues and faster growth, thoroughgoing tax reform could become the first order of business for the next administration. This way, we think, lie both the monetary stability and the more rapid growth which the Nation must achieve.

Historian Crusade Lacks Objectivity

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal American of Monday, July 29, 1959:

HISTORIAN CRUSADE LACKS OBJECTIVITY

(By George E. Sokolsky)

The assumption must be that an historian is objective. His task is to discover the facts of man's existence upon this earth, to collate and correlate them, to record them, and sometimes, as Toynbee has tried, to make them into a system. When an historian writes, as Arthur Schlesinger, Jr., did, that he is "engaged in a private crusade to exterminate this particular myth that Herbert Hoover offered cooperation to Roosevelt in the weeks between the election and inauguration in 1932–33," he, Schlesinger, ceases to be an historian and becomes a propagandist.

Four men were engaged in the conversations concerning the cooperation under discussion. They were President Herbert Hoover, President-elect Franklin D. Roosevelt, Ogden Mills, and Raymond Moley. Of these four men, Herbert Hoover and Raymond Moley are alive. Concerning these events Hoover and Moley have written.

Schlesinger, at the time of these events, was 15 years old; he was not an intimate of these men and therefore can only know what transpired from a selected documentation of the case.

A journalist would interview Herbert Hoover and Raymond Moley, the two survivors of the conference; perhaps an historian rejects the testimony of the living and only deals with documenation. On February 17, 1933, Herbert Hoover wrote a long-hand letter to Franklin D. Roosevelt, which read:

"A most critical situation has arisen in the country of which I feel it is my duty to advise you confidentially. I am therefore taking this course of writing you myself and sending it to you through the Secret Service for your hand direct as obviously its misplacement would only feed the fire and increase the dangers."

Further he wrote:

"I do not refer to action on all the causes of alarm, but it would steady the country greatly if there could be prompt assurance that there will be no tampering or inflation of the currency; that the budget will be unquestionably balanced, even if further taxation is necessary; that the Government credit will be maintained by refusal to exhaust it in the issue of securities.

"I am taking the liberty of addressing you because both in my anxiety over the situation and my confidence from 4 years of experience that such tides as are now running can be moderated and the processes of regeneration which are also always running can be released."

LEADER OF THE BRAIN TRUST

Senator Carter Glass, of Virginia, agreeing with Hoover, refused to become Roosevelt's Secretary of the Treasury, because of similar fears. Raymond Moley was at that time closest to Roosevelt. He had been the lead-

ing person of the so-called Brain Trust. In his book, "After Seven Years," Moley deals fully with this situation. He accompanied Roosevelt to the White House for the conference with Hoover and Mills. This is what Moley says of Hoover's statement to Roosevelt:

"Before he had finished, it was clear that we were in the presence of the best-informed individual in the country on the question of the debts. His story showed a mastery of detail and a clarity of arrangement that compelled admiration."

The entire chapter on this subject in Moley's book needs to be read for a full, historical appraisal of Hoover's enormous effort to save the country's economy during the interregnum between November and March, that is, between election day and the inauguration.

I refer to this one instance because it is so fully documented and two witnesses are alive to give testimony. There was another conference on January 20, 1933, at which Hoover, Roosevelt, Secretary of State Henry Stimson, Secretary of the Treasury Ogden Mills, Ambassador Norman Davis and Raymond Moley were present. In fact, a joint statement was issued at the time.

In the curious document from which I quote, the historian Arthur Schlesinger, Jr., says:

"What kind of cooperation was this? Cooperation from a defeated President ought to consist of an effort to help the President-elect put his program into effect. Hoover's tenders of cooperation consisted instead of demands that Roosevelt repudiate the program on which he had been elected and accept Hoover's."

I wonder if, in his busy life, the historian has had time to look at the Roosevelt program of 1932. It had to do with beer and economy in government expenditures. It was nothing like the Roosevelt program of 1936 and 1940. It is the second New Deal Schlesinger is thinking about.

Donald Comer Writes Assistant Secretary Kearns

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. HUDDLESTON. Mr. Speaker, this morning I received in the mail a letter from Mr. Donald Comer, chairman of the executive committee of Avondale Mills, one of the outstanding textile manufacturing concerns in the Nation, whose head offices are located in my home district of Birmingham. The letter is addressed to Assistant Secretary of Commerce Henry Kearns and points up eloquently the great need for relief from many adverse conditions threatening our American cotton industry today. With the thought that the Members of this House will benefit from the factual information and the sound views contained therein, I am pleased to insert this letter in the RECORD under leave heretofore granted:

AVONDALE MILLS,
Birmingham, Ala., June 16, 1959.

Mr. HENRY KEARNS,
Assistant Secretary of Commerce,
Washington, D.C.

DEAR MR. KEARNS: Following up my letter to you of June 12 from Eufala, Ala., I wish to review with you our foreign trade program as it affects textiles now, and as it may affect them in the future. I am writing you because of what you said in your speech at Waco, Tex., on May 4 to the American Cotton Congress, copy of which you sent me.

We of the textile industry feel that we are in the same boat with the farmers for better or for worse. We are partners with them in the National Cotton Council for the protection of our common problems. We believe that the American economy depends upon a prosperous agriculture, and that we, the butcher, the baker, and the candlestick-maker are geared to that prosperity, and I know of no one who, in all the years of his life fought harder in defense of this truth, than my father. I know of no farmer, having prepared his pasture for his own cows, who didn't put a fence around it to protect it from strays across the road whose owners either have not anticipated such needs or who were hoping for some intrusion or some giveaway on the part of his more provident neighbor.

You speak as Assistant Secretary of Commerce, so I think I should explain just why I take the responsibility to speak for the industry. I am at present chairman of the executive committee of the Avondale Mills, Birmingham, Ala.; I am chairman of the board of Cowikee Mills, Eufaula, Ala. These two companies spin approximately 165,000 bales of American cotton, and had their beginning in 1897. They operate under a profit-sharing plan that had its beginning in 1938. After 4½ years' service in the Spanish-American War, I resigned from the Army and joined my brother Fletcher in the management of our father's 30,000-acre cotton plantation in Barbour County. Later, we both left the farm and came with Avondale. In your speech you spoke of the "inseparability of world trade and King Cotton." The price of cotton at that time did not permit a successful operation of anything approaching a fair income to the cotton farmer. As you may recall, our cotton at that time largely went abroad at world prices, and the money was spent by the cotton farmer for things made in the North behind a protective tariff.

Mr. David Lilienthal, while Chairman of the Atomic Commission, made a speech before the students of the University of Alabama, saying that if our Government had been as considerate of the cotton farmer as it had with the industrialist, people like the Comers would have continued growing cotton instead of spinning it. Most of the Comers' plantations were sold, and now are largely growing pine trees and pasture grasses. The Comers have moved to town and the management of our mills is now more actively in the hands of my youngest brother, Hugh Comer, my nephew, J. Craig Smith, and my son, Donald Comer, Jr. Hugh, Craig and I are all past presidents of the American Cotton Manufacturers Association.

In 1937 our textile industry began to feel the impact of increasing Japanese imports. President Franklin Roosevelt increased the tariff rate 50 percent, which was all the law allowed, but to no effect. As a result, with the blessing of our Government and the Japanese Government, a mission of American textile executives went to Japan to discuss the situation with the Japanese textile industry. The chairman of this mission was Claudius Murchison, president of the American Cotton Manufacturers Association, and the other members were Mr. Harry Harry Bailey, Mr. Cason Callaway, Mr. Bob Philip, and Donald Comer. We went to Japan and after some days of conference agreed with them on a quota of 100 million yards a year. At that time Japan had about 12 million spindles and we had 27,750,000. This agreement remained in effect until December 1941, when the war started. During the war the Japanese industry was very largely destroyed. It was either bombed out or they voluntarily melted down their spindles and looms for war needs.

After the war, General MacArthur asked for a committee of American textile people to come to Japan and help them reestablish their textile industry. So a committee of three was sent over under Dr. Jacobs, then president of the American Cotton Manufacturers Association, Mr. Fred Symes, and Donald Comer. General MacArthur congratulated us on our helpful suggestions. The U.S. Senate implemented our recommendations for providing a revolving credit fund, then there was a very quick revival of the Japanese textile industry. No one was more surprised than I was when this reborn industry began immediately shipping their unwanted and unneeded goods into this country in uncontrolled quantities. Local protests resulted in a voluntary quota fixed by the Japanese, and this matter has become aggravated in recent months because Japan has been over here insisting on increasing this quota. My interest became immediately involved because of a statement from you that "you considered the increase fair to both sides" and further quoted as saying: "Reciprocal trade between United States and Japan vital."

You may recall the article in Life magazine on June 23, 1958. It dealt with industry in Steubenville, Ohio: The Weirton Steel Co. there was shipping tin plates to Japan, and Japan was balancing the trade by shipping us chinaware, which shut down the local chinaware businesses. A local Ohio power man was quoted as saying: "The free world and the friendship of Japan are a damned sight more important to me than a few factories." I mention this particularly because in your speech you refer to Japan balancing her purchases of cotton and other raw products, by shipping us textiles, plywood and fine china. The chinaware was closing down the mills in Steubenville, Ohio: her plywood has shut down 50 percent of the hardwood plywood industry in this country.

Foreign trade, which should be directly under your Department, is presumed to be operating under a so-called reciprocal trade program. I asked you for your definition of "reciprocal" and your reply was: "An arrangement by which all parties to an agreement benefit to as near an equal degree as possible." I am not sure whether your word "parties" mean the State as a whole, or individual industries within the State.

In other words, I am not quite sure whether you are arguing that for the good of the whole we should sacrifice some American industry in order for some foreign industry to live. I mention this because the administration has been accused more than once in the handling of the reciprocal trade program of considering our textile industry as expendable. You know we saw the silk scarf industry in New York expended for the benefit of the imports from Japan: we saw the tuna fish industry of California expended for the interest of Japan's: the velveteen industry is fighting for its life, and the plywood, textile, chinaware and other industries are threatened. You say that there are some industries that possibly need some protection, and that some protective actions can be justified, and you refer to the fact that Congress has provided ample apparatus for relief.

The President himself, in his letter to Congressman MARTIN of Massachusetts, promised that his reciprocal trade bill would be administered without injury to a single American industry, and he himself cited these protective clauses that you mention. You surely haven't forgotten that the New England fisheries, threatened by cheap imports from Iceland, were granted the

right of a tariff protection from the Tariff Commission, but the President refused to provide the protection recommended by the Tariff Commission. These facts were put into the CONGRESSIONAL RECORD by Senator JOHN SPARKMAN, of Alabama. Your speech, of course, was to the cotton farmer, and in this whole program the need for an export market for cotton has been dangled before our cotton farmers. Under AAA the cotton farmers got their first Government protection. They were guaranteed parity. The purpose and plan was fair and long overdue, but its administration has been wrong from the beginning, and so recognized by everybody today, I think.

In giving the farmers these parity prices, which were away above the world prices, there has accumulated in our warehouses millions of bales of cotton. American mills pay the parity price. The foreign mills have now for some time been sold this surplus cotton at world prices, and this cheap American cotton in a Japanese mills, spun by Japanese wages, is coming back into this country at reduced prices, and in quantities still left to the whim of the Japanese exporter. The wheat farmers provided that their surplus, grown under this AAA program, if and when sold abroad at reduced prices, could not come back into this country in any form, and surely everyone will agree that it is only fair that the same restrictions should apply to cotton, and this is terrifically important at this immediate time, because the Government is considering a further reduction in price of our cotton to the foreigner.

We are taxed to encourage the farmers to increase their production of cotton at parity price, which can only be sold at a loss to the foreigner in competition with world prices, and without any restrictions of our own against this cotton coming back into this country at cut prices to supply my customers, to slow down my mills, and reduce my purchases of cotton at parity prices.

May I quote a paragraph from the New York Daily News Record, which was reprinted in the Underwear News: "It appears likely that the ROK will dip a cautious toe into the cotton fabrics market this year, with export of 10 million yards of heavy sheeting to the United States. That represents a single purchase by the American Uniform Co., Springfield, Tenn., for the manufacture of waiters' uniforms and similar articles. The cloth is 38 inches wide, bleached and priced at 14.5 cents a yard. On the financial side, there is a distorted rate situation. Since all of the raw cotton comes through U.S. aid channels, it is paid for at the official rate of 500 Hwan to the dollar. The going rate within the country is actually about 1,000 to 1, meaning that spinners are getting their cotton at half price, in effect, in addition to the fact that the price is subsidized to begin with under the United States surplus disposal program." When we quoted this same customer at that time our price was 19½ cents per yard.

In our foreign-aid program we gave our farm surplus food away to feed the hungry people: why not pay the Japanese to take our surplus cotton, turn it into cotton goods, and give these cotton goods away to the naked people in the world? I suggested such a program to Secretary of Commerce Sinclair Weeks, and his reply was we were not "realistic." I think it's much more realistic than letting them come back here and shut my mills down. Our argument has been that if this country owes Japan anything, the whole country should pay for it and the burden should not fall on just one or two industries. I still feel that we should encourage more travel to Japan and let our tourist dollars help bridge this gulf. It's a beautiful country, with friendly people: I know because I've been there three times.

The reciprocal trade program was first sponsored by the late Secretary Hull, and he's been quoted many times as explaining what the program meant: shipping what A nation has in overabundance that B nation needs, and taking in pay what B nation has in overabundance that A nation needs with some three-way trading. Japan wants to buy our cotton, which she needs, and wants to pay for it with her cotton goods, which we don't want and don't need. I don't call that reciprocal, do you? I call that just a gift, and in this case I think it's giving Japan something that belongs to me and my textile associates. This purchasing power was built up largely by the earnings of the American worker, and we must spend it largely among ourselves, and across our borders only, for what we need and do not have. None of us can spend it for things imitating a home product, just because they are cheaper, only cheaper because of cheap foreign wages. Our Government has no right to trade it across the water for this and that and shut down a home industry. Japanese raw silk for our raw cotton would be a natural. Over the years we have built our mills, and spread our money in advertising, developing, and encouraging the use and need of what we make. This expense went into our operating, and Japanese goods come in free, under our umbrella.

Our industry cannot live under this kind of competition. You say that present imports are only a small percentage of the whole. It's cheap prices and the threat that's disturbing our price structure and our production planning. We have no war today, but we are spending $40 billion just in case. It's Japanese and Hong Kong goods today: it's all Asia and Africa and the rest of the world tomorrow. Japan not only weaves cloth—she manufactures the looms and spindles, and she is supplying China and Southeast Asia as fast as she can with these looms, and we'll be hearing from them in due time.

You speak of the need of foreign trade, and you mention raw products, which we all agree we need, and there's nobody objecting, certainly not the textile industry, to your acquiring and stockpiling of our needs of such things as tungsten, antimony, bauxite, beryl, graphite and iron ore. There's no objection, Mr. Kearns, from anywhere that I know of, to such imports, and that's what we are talking about. In this case Japan is buying raw products—cotton and wood pulp from us—and selling us the finished product, of which we already have in overabundance. Let me quote from the annual report of the Singer Sewing Machine Co. They speak of the competition in this country with sewing machines made in Japan, produced at cheap labor rates, saying: "The Anderson (S. C.) and Elizabethport (N. J.) plants are fighting for their lives. Closing of the plants is a possibility if protection from imports cannot be provided. There's a possibility of moving them abroad. This question is particularly pertinent in view of the complete lack of reciprocity in sewing machine trade with Japan, that the Japanese Government for many years has barred the import of household machines made in the United States, and has generally restricted imports of industrial machines to types not made in Japan. They have always followed this policy of complete one-way trade." The Rockwell Manufacturing Co. of Pittsburgh, manufactures auto forgings, taximeters, etc. Mr. Rockwell told me that competition from imports had forced him to buy two plants in West Germany, and we know he is not the only one.

One of the Japanese textile spokesmen wrote to the Cotton Trade Journal, in Memphis, Tenn.: "Why wasn't Mr. Comer willing to live and let live?" My reply to that was that: "I was willing to live and help live, not just live and let live," as indicated by my acceptance of this voluntary Japanese quota. I also asked if they had permitted the velveteen industry or the tuna fish industry to live and what they were doing to the chinaware industry and the plywood industry; and what they bought from us of which they already had an overabundance. If, for the good of this Nation, Congress decided that foreign trade should be acceptable, by which one industry might be hurt in order that some other industry might profit, the right to life or death for an American industry should be retained in the hands of Congress and not turned over to some bureau chief in Washington.

I understand that we wanted airbases in Iceland, so that New England fisheries pay the price. I also understand that we want Japan as an ally against Soviet Russia. Billy Graham says: "Only religion will stop communism."

The Senate committee that recently investigated this whole textile problem issued a very helpful report. There was lots of testimony. You'll even find a statement from me on page 1889, part 5, of this report. I'd like to quote Mr. Charles Cannon, who appeared before this committee: "We think that the rules, regulations, and expense to which we have been subjected indicate that the bureaucrats in Washington feel that if the textile industry could be liquidated in this country, which would then depend on foreign countries to produce its textile needs, the United States would probably be better off."

We were encouraged by a statement by Mr. Robert C. Jackson, of the American Cotton Manufacturers Institute: "Foreign trade admitted harmful to industry. Government officials are becoming more aware of the harmful effects of our foreign trade program upon some U.S. industries. The policy that is now causing so much concern is the added subsidy expected to be placed on cotton in the near future which would subsidize the foreign buyer by 8 cents a pound. This would mean that foreign manufacturers would be able to buy American-grown cotton 8 cents cheaper than domestic mills could buy it." This is expected to take place August 31.

I have written to the Saturday Evening Post, Life, Time, and Fortune magazines, Reader's Digest, the New York Times, and the New York World-Telegram and Sun. I consider we are in a fight for the life of the textile industry in this country, and heaven help us if we can't have the full understanding and cooperation of the Department of Commerce.

Please don't let us lock the barn after the horse has gone.

I hope you read this even if you have to take it in easy stages.

I am enclosing a copy of our annual report for 1958, and making it a part of this letter. Also enclosed are several news items headings which have recently appeared in the various newspapers.

Yours very truly,

DONALD COMER,
Chairman of the Executive Committee.

Paying for Detroit Metro

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. MEADER. Mr. Speaker, many of my colleagues will recall my efforts to alert the old Civil Aeronautics Administration to the waste and high cost involved in shifting terminal facilities for 11 civil airlines from Detroit's Willow Run Airport to Detroit-Wayne Major Airport.

During a 1955 Detroit meeting of the Airport Use Panel, a segment of the Air Coordinating Committee, Federal officials scoffed at certain cost figures attached to the move and even encouraged Detroit and Wayne County officials to waste even greater amounts of tax money of their own with additional huge grants of Federal airport aid.

I attach the following editorial from the Ann Arbor (Mich.) News to indicate how close many of us were in assessing the actual cost of the airlines' move:

PAYING FOR DETROIT METRO

Wayne County Road Commission members are giving representatives of the seven airlines still operating at Willow Run the bad news about costs of following American, Northwest and four other lines to Detroit Metropolitan Airport. Cost of expansion of the former Wayne-Major Airport to accommodate the additional airlines has been estimated at $28,500,000.

The terminal building at Detroit Metro would be doubled in size; two runways would be lengthened to 10,000 feet; parking capacity would be boosted from 1,400 to 4,000 cars; hotel facilities would be increased by 38 rooms, and the number of loading gates would be increased from 14 to 55.

The seven airlines considering a move to Detroit Metro complain that they are to be asked to pay an average of $4.75 a square foot for terminal expansion, while the six lines already there pay only $2.48. The road commission says rising costs of labor and materials account for the greater costs which must be paid by the seven still operating at Willow Run.

All of this, of course, is what Congressman GORGE MEADER, of Ann Arbor and others said at the time the Wayne County group was making a pitch for Federal funds for Metro, at the exepnse of Willow Run. Representative MEADER pointed out that duplication of airport facilities, with the only real advantage for Metro being its location a few miles nearer Detroit, would be costly, and that the taxpayers would be forced to foot the bill in one way or another. The Wayne County Road Commission had invested vast sums in Wayne-Major and had to justify the expenditures by selling its airport to the airlines. American Airlines gambled on the apepal of an airport nearer Detroit and won. The other airlines either have moved or are considering moving, although it is likely to be several years before they can all be accommodated at Detroit Metro.

Detroit Metropolitan Airport is more modern than Willow Run, despite the substantial improvements for passenger comfort made at the University-owned airfield. Apparently the luxuries offered by Metro accommodations are what air travelers want; otherwise the fight put up to keep the airlines at Willow Run would have been more successful. The outcome only proves once again that economy is not a strong argument these days, particularly where any tax moneys are concerned.

Coal for the Nation's Roads

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mrs. KEE. Mr. Speaker, as the Representative of the Nation's second largest coal-producing congressional district, I strongly feel that officials of the Curtiss-Wright Corp. are to be highly commended for their farsightedness, their interest and research into the uses of bituminous coal. The successful efforts of this organization will result in good news for every individual interested in our miracle mineral.

In this connection, Mr. Speaker, I have full confidence that the experiments of Curtiss-Wright Corp. underway at Quehanna, Pa., will result in major new markets for bituminous coal—the effects will be practically unlimited. Therefore, I include a superbly written article on this outstanding research "Coal for the Nation's Roads," which appeared in the July 1 issue of the United Mine Workers Journal. I commend this factual report, written by the editor and assistant editor, to the attention of my colleagues in the Congress:

COAL FOR THE NATION'S ROADS

(By Justin McCarthy and Rex Lauck)

QUEHANNA, PA.—Soft coal may soon be paving the Nation's highways and shooting rockets to the moon.

Along with other representatives of the UMWA, the coal industry and coal trade publications, we visited this fabulous research center of the Curtiss-Wright Corp. on June 24 to witness the work that has been done to transform king coal into a road-paving material that will outlast and outperform petroleum-based asphalt and even concrete.

And Curtiss-Wright researchers are enthusiastic enough about their product so that they think it may be possible to use the new material as the long-sought solid propellant to fuel space rockets.

Potentially, if present experiments pan out, 2,200 tons of coal may be needed to surface a mile of road. The current laboratory-proven road binders will require at least 100 tons of additional coal production per mile of coal laid.

The use of coal as a road-paving material is not a new idea. Dr. H. J. Rose, vice president and consultant of Bituminous Coal Research, Inc., started experimenting with his theory that soft coal could be dissolved in heated coal tar 40 years ago. Rose, who was among those visiting the Curtiss-Wright research division here, said all authorities had been stating for years that you simply could not dissolve bituminous coal.

But Rose did. He heated coal tar to approximately 600° F. and then dropped in some chunks of soft coal and stirred the mixture.

The coal chunks literally disappeared.

DEVELOPMENT AWAITED DYNAMIC LEADERSHIP

Why then, we asked, was nothing much done with this discovery for so many years? The answer, Dr. Rose explained, was simply that the necessary money was not available at the time to develop and commercialize the new product.

It took the dynamic industrial leadership of Roy T. Hurley, president and chairman of the board of Curtiss-Wright, and the patient work of a team of the company's researchers and technicians headed by E. O. Rhodes under project director S. H. A. Young to develop the project to the point where it would be commercially feasible.

Curtiss-Wright made the first announcement of the development of the new blacktop, road-paving material early this spring. So, we wrote a letter to Hurley and asked him for information. The company's director of public relations and advertising, Arthur J. Donnelly, sent us a news release and a brochure describing the new material.

Subsequently, we were visited by G. Fred Brackett, a Curtiss-Wright staff representative, who explained why his company, known principally as a manufacturer of aircraft engines, had become interested in new uses for coal.

The soft coal industry can again thank Roy Hurley for initiating his company's coal research project. The town of Quehanna is nothing more than the Curtiss-Wright re-

search center. It was established in 1955 on a tract of land acquired from the Commonwealth during the administration of former Gov. George M. Leader. The agreement between the company and the State was that in return for the State's making the land available the company would include in its activities research aimed at developing new uses for coal.

Quehanna, situated 20 miles northeast of Clearfield, Pa., is in the heart of the central Pennsylvania coalfields, an area that has suffered economic distress for several years.

The new soft coal road material is not yet being manufactured on a commercial basis. But Kentucky, the Nation's third largest coal producer, is so enthusiastic about it that the State has signed a $200,000 contract to build a pilot plant to make the material in Frankfort. The plant will be completed in 2 months. The soft coal road binder manufactured there will be made from all types of Kentucky coal, which will first be tested at Quehanna.

The equivalent of 8 to 12 half-mile long strips of the new material will be laid out on highways, airport runways and city streets through the State to determine, over the next year and under actual highway conditions, its durability compared with asphalt.

Curtiss-Wright will not manufacture the road binder but is seeking to lease its method to potential manufacturers, including coal producers, interested in making the material. The company also is negotiating with a number of other coal-producing States to interest them in setting up test operations similar to that being carried on by Kentucky. It would certainly seem logical that Pennsylvania and West Virginia would be the next States to set up pilot plants for the manufacture of the binder.

What we saw in Quehanna convinces us that the new material can revolutionize the roadbuilding industry and probably will provide a vast new market for soft coal. The potential is so great that the manufacture of this road binder from coal may become soft coal's second or third largest market after the electric utilities and steelmaking.

Before witnessing the laboratory tests of the new material, we listened to a briefing by Rhodes, the brilliant Curtiss-Wright researcher who developed the material.

Rhodes said that asphalt, made from petroleum, is the Nation's most widely used road material but that it has many disadvantages. Coal tar is also widely used as a road-surfacing material, but it, too, has some disadvantages.

Asphalt, for example, becomes very slippery in rainstorms. Asphalt is soluble in petroleum products such as crankcase oil and gasoline. One of the major problems of the Nation's airports today is the constant repair necessary to asphalt runways used by jet planes. Jet fuel sprayed by the planes onto the runways during takeoffs and landings is very damaging to the asphalt.

Coal tar has the very practical disadvantage of costing more than asphalt which is a true waste product, like residual oil, and can be sold as cheaply as the market demands. This is partially counterbalanced by the fact that asphalt varies greatly in quality, while coal tar is a uniform product regardless of where it is made.

ASPHALT CRACKS UP UNDER POUNDING

Asphalt cracks up under the heavy pounding of trucks and automobiles. And when it cracks up it does not "flow" back together again and thus has to be repaired. Coal tar surfacing, on the other hand, has good skid resistance and will "flow" back together again when it has been damaged.

Asphalt hardens and becomes brittle with age and has to be replaced. Coal tar surfacing, while it has very poor resistance to high temperatures and will melt in a hot sun, is resistant to water and dissolving by petroleum products.

But the hot blasts of jet engines will melt coal tar surfacing on airport runways so that the tar separates from its aggregate, such as gravel or limestone.

With these advantages and disadvantages in mind, Rhodes explained, Curtiss-Wright set about developing a material that could be produced by existing hot mix equipment, such as is used to lay asphalt or coal tar surfacing, and that would have the advantages of both without any of the disadvantages.

Starting with the knowledge gained many years ago by Dr. Rose, namely, that coal is "digested" by coal tar when the tar is heated to a certain temperature, Rhodes and his fellow researchers and technicians produced a road binder. The binder was then mixed with limestone that had also been heated.

Rhodes then set about putting the new road material under all kinds of severe tests to check its ability to hold together.

The material, made from various kinds of bituminous coal and limestone found in the Quehanna area, was tested for its ability not to separate when immersed in petroleum products, such as jet fuels, motor oil, and gasoline. It held together. Asphalt fell apart.

It was tested for skid resistance. Compared with asphalt it was highly resistant to skidding, having a sort of sandpaperlike surface.

It was pounded to find out whether it would crack. Its ability to withstand such treatment was much greater than that of asphalt.

As much as 4,000 pounds of pressure was applied to it in a testing machine before it broke. This is more than twice the pressure necessary to cause a breakdown in asphalt.

It was subjected to extremes of both cold and heat and stayed solid and hard. It was soaked in water and did not fall apart as asphalt road materials do. Following Rhodes' briefing on the new material, we visited the test laboratory to watch Curtiss-Wright technicians putting the new road material through all of these tests. What we saw left no doubt in our minds that the new soft-coal-based road material will do just exactly what it is supposed to do.

In addition to its potential use as a road material, the material also may be used for roofing, shingles, floor tiles, tar paper, waterproofed kraft paper, drainpipes, conduits, automobile undercoating and many other products. Approximately 1,000 companies in Pennsylvania, alone, are producing products in which this new material could be used.

So far, only the type of coal found around Quehanna has been used to make the material. However, Dr. Rose told us there is no reason that other types of coal might not be used as new experiments are carried out and the process of manufacturing the material is perfected.

It makes no practical difference what sort of aggregate is mixed with the binder. In addition to limestone, gravel or slag could be utilized, for example.

The new Curtiss-Wright binder will not require any changes in present equipment used in preparing or using blacktop paving materials. It can be combined in existing hot mix batch plants, and, in actual road construction or resurfacing, will be handled in the same equipment now used by State and municipal road departments and blacktop paving contractors.

COAL BINDER PASSES SEVERE TESTS IN LAB

All the severe laboratory tests to which the new material has been subjected indicate that it will have a much longer life and will require considerably less maintenance than present asphalt surfaces. As a matter of fact, the tests show that roads constructed with the new coal binder and an aggregate will stand up four times longer than present asphalt surfaces under standard water soaking conditions. The coal-based road material has better self-healing properties when damaged by extreme changes in temperature. And it will support up to 30 percent greater loads without deformation.

It stands to reason that one of the best features of the new material is its skid resistance which will be a big factor in increasing highway safety.

As previously mentioned, the new material will be particularly valuable as an airport runway material because of its high resistance to the damaging effects of jet fuels and heat.

Curtiss-Wright research indicates that the new material will be commercially competitive with other blacktop binders. This will be the case especially when the process of low temperature carbonization of coal has been perfected. One of the principal by-products of low-temperature carbonization of coal is coal tar, a necessary ingredient of the new road material. The only source of coal tar at the present time is the steel industry, which produces tar as part of the process of coking coal.

If coal tar produced by low-temperature carbonization can be used to make a sturdy road binder, it would mean an additional production of 2,200 tons of new bituminous coal production for every mile of road surface laid. In view of the fact that the Federal highway building program alone calls for about 40,000 miles of superhighways, only a little arithmetic is needed to demonstrate the size of the potential new market for coal.

Because of the favorable results obtained by all the laboratory tests, Curtiss-Wright will continue development of its improved coal-based road binders. In addition to the road-paving material program, Curtiss-Wright also is conducting programs to develop other coal-based products, including pipe, conduit, building materials, and a variety of other products that will add to the large-scale utilization of coal and coal products.

Curtiss-Wright has announced that it will welcome inquiries from qualified firms to discuss the establishment of new programs for product development or improvement in selected areas. Inquiries regarding these programs should be directed to Minard W. Stout, vice president, research and development, or G. Frederick Bruckett, Curtiss-Wright Corp., 304 Valley Boulevard, Woodridge, N.J.

Representatives of the UMWA who witnessed the demonstration besides the Journal editors were: Michael F. Widman, Jr., assistant to President John L. Lewis and director of the research and marketing department, and his assistant, Joseph P. Brennan; District 5 Secretary-Treasurer John Seddon; International Representatives Leon Yablonski and Robert Gordon; and Peter Holvonik, district 5 board member for subdistrict 3.

Others in the party were James Kee, executive assistant to Representative ELIZABETH KEE (Democrat, West Virginia); Joseph McSweeney, assistant to the President, national coal policy conference; Ord Alexander, assistant director, engineering department, National Coal Association; Russ Flegal, development engineer, NCA; William Bailey, a real estate and construction man; Al Toffler, freelance magazine writer; Dr. Rose, Raymand W. Hiteshue, Chief, Coal Hydrogenation Section, U.S. Bureau of Mines; Howard W. Wainwright, Chief, Low Temperature Carbonization Laboratory, Appalachian Experiment Station, U.S. Bureau of Mines, Morgantown, W. Va.; and William Bradbury, editor, Coal Utilization.

Tribute to Gen. Maxwell D. Taylor

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. ANDERSON of Montana. Mr. Speaker, on June 30, 1959, at Fort Myer, Va., the retirement ceremony was held for one of the greatest, most esteemed officers in the annals of our military forces, Gen. Maxwell D. Taylor. Contemplation of his invaluable contributions and dedicated career in the service of our Nation makes it most appropriate that the following remarks of the Honorable Wilber M. Brucker, Secretary of the Army, addressed to both General and Mrs. Taylor on that occasion, should be the subject of our attention:

REMARKS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, RETIREMENT OF GEN. MAXWELL D. TAYLOR, FORT MYER, VA., JUNE 30, 1959

General Taylor, members of the First Battle Group of the 3d Infantry, Members of Congress, officials, and men of the U.S. Army, and good American friends who are gathered here, we are gathered here today for the purpose of observing the retirement of Gen. Maxwell D. Taylor. In the brief moment that I shall occupy I shall not attempt to recount the record of General Taylor. It is too well written and too well known by the American people. However, I want to speak just a word in this retirement ceremony about General Taylor as a man and an officer.

Forty-one years ago on the plains of West Point, Cadet Taylor began his long and successful military career. It ends splendidly today at Fort Myer, Va., as Chief of Staff. Gen. Maxwell D. Taylor steps down and takes his place in the civilian ranks of life as we Americans are wont to do. He is one of the most outstanding and eminently qualified men who ever wore the Army uniform.

General Taylor, if I were to pay you the respect today in the superlatives that you deserve, I would refer to the brilliance of your intellect, the greatness of your comprehension, the breadth of your character, and the magnanimous attitude that you always displayed toward problems of men as well as materiel. And I would point out to everyone the professional stature that you always maintained as you viewed these problems. This morning the President of the United States pinned upon your breast the Distinguished Service Medal with Second Oak Leaf Cluster—a magnificent recognition by our Commander in Chief—the highest source in our land. The turnout today in this heat and swelter is eloquent evidence of the confidence and friendship of people who regardless of the weather are here to testify to their high regard for everything that you stand for that is clean and wholesome and honest and upright. You have been a leader in every sense of the word. You have given direction and stature to every portion of the Army. It has been an inspiring spectacle to see you in the presence of your officers and men, wherever you have been.

Fifteen years ago this month of June you dropped—very early on that fateful morning of June 6 ,1944—helping to seal off Normandy Beach. Today, 15 years later, as you mark the completion of your military career, I know in your heart there is a sincere desire, if this country ever again needs Maxwell D. Taylor, you will come back into our ranks and do your part upon the drop of a hat as a patriotic American.

So, as a man—General Taylor—I here testify to the grandeur of your stature, plus the fact that your vision, undimmed by anything, and with pure professional purpose, zeal and courage, is an inspiration to everyone in this great Army.

May I say something about that loyal wife by your side, affectionately known to everyone in the Army, as "Mrs. Diddy Taylor." What a splendid thing it is to have a couple like the Taylors at the top of the Army—a picture presented to the world of wholesome Americans whom we admire and affectionately regard. To Mrs. Taylor goes a great deal of respect. Throughout these years, traveling to and from post, camp, and station, she has followed along and has been an ideal helpmate and an inspiration to us all.

Ladies and gentlemen, on behalf of all the men and women of the U.S. Army, I take my hat off to this great couple as they depart together.

Now, General Taylor, on behalf of the Army, as its Secretary, I officially present you this scroll and thank you humbly for your great service.

Mulchting the Little Fellow

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I call attention to "Sowing the Windfalls," an article written by Raymond Moley in the July 6 issue of Newsweek magazine. Raymond Moley is a man of broad political experience and accute perception. He sees both the forest and the trees.

Here follows Raymond Moley's valuable commentary on "something-for-nothingism," which invariably sprouts a few fat pocketbooks and inevitably grows a very few crafty kings, products of the taxpayers' dollars:

SOWING THE WINDFALLS

The Republican Party, in pursuing its policy of ridding itself of the tag of "the party of the rich and big business," might reveal the extent to which liberal legislation provides rich windfalls, in the name of "the little fellow," for a new rich and big business class. Consider the unfolding picture of public housing, slum clearance, and urban renewal in which windfalls are created for promoters, political lawyers, and bankers, investors, contractors, and others. Or note that the chief beneficiaries of the soil bank are large corporations whose major profit is not in selling the product of their thousands of acres, but in Government benefits. Many other avenues to riches might be cited for a few individuals and organizations who certainly are not needy or little, all in the name of general welfare.

The Humphrey-Price bill, which failed to pass over the President's veto, would have taken the Rural Electrification Administration away from the watchful eye of a fine public servant, Secretary Benson. The Washington lobby for rural electrification, many Members of Congress, and zealots for a Government power monopoly want to push "rural" electrification beyond the remote farmers, who are now supplied, to the suburbs and the cities. This would be deadly competition with investor-owned companies because the Government is lending money to the rural electrical cooperatives at 2 percent—half or less what the Government must pay for it.

SPECTACULAR GROWTH

No one questions the validity of the original purpose of the REA, nor the wholesome character of most of the 900 cooperatives. Most of them are content with sticking to their field with modest returns. But since they are associated in a sort of trade association-pressure lobby called the National Rural Electric Cooperative Association, they are being led collectively into a vast scheme which promises illimitable profits not in the production and sale of electricity but in banking and investment. That is, so long as the present 2 percent rate of borrowing from the Government and tax-free status can be retained.

The head of the NRECA, Clyde C. Ellis, is a man of vast imagination coupled with incredible political influence. At the last meeting of his organization he unfolded the plan.

It involves the brimming financial position of the cooperatives. The latest reports show a spectacular growth in their investments and savings account. In 1953 this was $43.7 million, in 1957 it was $192 million. The total earned surplus rose from $153 million in 1953 to $382 million in 1957.

Ellis proposed that the investment account be put into his NRECA in trusteeship—an unusual function for a trade association-pressure organization. Then he proposed that this pool be placed with a New York bank for investment opportunities. It is ironical that Ellis has always denounced the Wall Street financing of the private, investor-owned companies.

BLUE-CHIP POOL

"A pool," he said, "would be able to invest a reasonable portion of its funds quite soundly in the highest grate 'blue chip' industrial bonds and most of the balance in the highest-yield long-term Governments * * * The pool would have a constant inflow from maturing investments and from new investments and, therefore, would have to keep on hand only a relatively small amount of short-term low-yield Governments. This fact alone could appreciably increase the return over that of a single system's program with the same flexibility."

It would, indeed, if the cooperatives choose to relinquish their independence and give over to this sort of vast investment operation, made profitable by borrowing from the Government at half or less than half the price which Government must pay for its money. For this pool might become the biggest thing in Wall Street.

Space permits only a mention of another Ellis dream, recently proposed. It would have the Federal Government build a big Potomac River project on the TVA model. It would provide boating, swimming, picnicking for bureaucrats and employees of pressure groups, as well as Federal hydroelectric for the Capital community. This Potomac paradise would be a monument to that deathless fourth branch, the pressure group.

Federal Lamb Grading

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. DIXON. Mr. Speaker, false information and misleading statements seem to be running rampant the last few days with regard to the proposed suspension of

Federal lamb grading. Since some of these have gotten into the CONGRESSIONAL RECORD I think it is proper to clear the air.

Those who want to see the present archaic Federal lamb grading system continued have very carefully avoided making statements on the real issues or problems involved. Much has been said about how the housewife will suffer if she cannot buy federally graded lamb. Proponents of Federal lamb grading even have women's clubs writing to their Congressmen stating that removal of Federal lamb grading will mean meat inspection will be removed or relaxed. Nothing could be further from the truth. The housewife is not being helped by the present Federal lamb grading procedure but lamb producers have been hurt and hurt badly by these grading standards. These are facts that the proponents of Federal lamb grading do not mention.

The problems caused by Federal lamb grading are clearly pointed out in the attached letter from Dee Broadbent and I would like to read the letter into the RECORD at this time to clear the air of some of the misleading propaganda that is being disseminated, in order to hold onto a grading service which produces a large overfat carcass of meat which the housewife does not want. Here is Mr. Broadbent's letter:

UTAH STATE UNIVERSITY,
Logan, Utah, June 22, 1959.

The Honorable H. ALDOUS DIXON,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DIXON: Following up our telephone conversation, I want to again reemphasize the desirability of doing all that we can to suspend the grading of lambs by the U.S. Department of Agriculture.

I am convinced in my mind, beyond any question, that the present grading practices are detrimental to the interests of the sheep industry of this Nation. I say this without reservation. This is based on experiences in the field of livestock marketing, with which you know I am familiar, and from my first-hand experience of results of the present program on the industry in which I am engaged as a producer of lambs.

The consumers of this country are not getting what they want. It is costing them more for their product. We are misdirecting the feed resources of the Nation in the production of fat that nobody wants—sometime feed resources will have to be husbanded. The lambs are too big for the household market. They are wasty. They are unacceptable to the consumer in appearance. There is so much excess fat on the typical top-grade lambs that they are a drug on the market.

We are compelled to produce a product that the consumers are not demanding because of the grading system rather than trying to meet the preferences of the consumers who would like a tasty, pleasing product for their table. I think that, without much question, the reason why consumption of lamb per capita has declined during the past two decades is the result of the unacceptable product which by U.S. grades is supposed to be top quality but actually is not in top demand. If top grade represented the most acceptable product to the consumer of lamb, it would be an altogether different matter.

Last January I prepared a discussion for the Utah Wool Growers in which I was shocked to see what had happened during the past 18 years in this industry. While the consumption of beef had increased 25 pounds per capita, or about 40 percent, the consumption of lamb and mutton had declined one-third. While the parity price of beef as of December 1958 was 95 percent and that of all agricultural products 80 percent, the parity price of lamb was 72 percent in spite of a much smaller supply and a greatly increased market with double the purchasing power. With this shift in supply and purchasing power, one would expect lamb prices to be relatively higher than beef.

It would seem to me that the principal arguments for suspending present grading are that the grading specifications are not realistic in reflecting consumer preference and demands; heavy, fat carcasses are not preferred in the market but the only way to obtain top grade is by excessive feeding which converts feed into fat; present lamb grading standards are not uniform; consumers have an idea that unless they are eating graded meat, and top-grade meat, it is inferior (we have become a victim of our own system); the grading system becomes a tool of the marketing agencies to divert purchasing power from the producer of the product; the grader is placed in a position of stamping a carcass on the profit or loss side without having it reflect a corresponding item of utility.

I wish that I had time to go into this problem more thoroughly with you, but let me emphasize that this has the unanimous support of the wool industry. They are badly in need of help.

Respectfully yours,

DEE A. BROADBENT,
Business Manager.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. METCALF. Mr. Speaker, on June 22, 1959, at the annual convention of the Communications Workers of America, the following resolution was adopted urging the enactment of H.R. 22 providing for Federal assistance to education. The resolution follows:

Whereas many of our school buildings are unsafe for children to attend. Almost all classrooms are overcrowded and understaffed. More and more experienced educators are leaving the school systems each year because of the unbearable conditions and inadequate pay; and

Whereas most States and local governments have tried to keep pace with the growing population, but this is now a Federal problem which should be solved by Federal assistance. At the beginning of 1959 a survey by the Department of Health, Education, and Welfare showed a shortage of 140,500 classrooms. These are shortages now, as of today. This means nearly 2 million students are attending unsafe, obsolete, and overcrowded classrooms; and

Whereas in 1956–57 the average beginning salary for teachers was $3,600 a year and the average salary was $4,520; and

Whereas nearly 25,000 of our high school teachers and 91,000 grammar school teachers, without proper qualifications, have been granted temporary certificates because of the shortage of fully qualified teachers. Each year there is increasing number of such certificates issued; and

Whereas in this session of Congress there have been introduced two bills which would provide financial assistance for the support of public schools by appropriating funds to be used for constructing school facilities and for supplementing teachers' salaries; and

Whereas these bills are S. 2 and H.R. 22 and are commonly referred to as the Murray-Metcalf bill: Now, therefore, be it

Resolved, That this 21st annual convention of CWA goes on record as favoring the Murray-Metcalf bill; and be it further

Resolved, That the members, officers, and staff of CWA work actively in behalf of the passage of these bills to keep the United States in its place of leadership in the world; and be it further

Resolved, That copies of this resolution be sent to Senator MURRAY, Congressman METCALF, and all Members of the Senate Labor and Public Welfare Committee and the House Education and Labor Committee.

Setting the Record Straight

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. SHORT. Mr. Speaker, all too often there is a tendency to label any request for reclamation funds as "pork barrel" without investigating the merits of the individual case. The Minot Daily News in my State of North Dakota has performed a valuable public service in setting the record straight on the matter of investigational funds for North Dakota's Garrison Diversion Unit. These funds are now in danger of being slashed through congressional action. As is pointed out in the News' very excellent editorial, the question is not a matter of economy, or lack of it, but of the Government, through the Congress, keeping faith with the people of North Dakota.

The editorial follows:

[From the Minot Daily News, July 3, 1959]

A MATTER OF KEEPING FAITH

This is a big country. In most of its problems as they come to light in popular debate there is much more than meets the eye. How wrong sometimes are the faraway attempts to apply a general principle to the merits of a particular case.

We should not be too harsh with the Washington Post and Times Herald for failure to understand the historical justification of the Garrison diversion project. Editorially these newspapers have lumped this North Dakota project with a number of others, criticizing reclamation projects in general. The ground of the criticism is the thought that it is inconsistent for the Nation to be building new projects to increase productivity at a time when payments are being offered to keep other croplands idle.

The fact not appreciated is that the proposed Garrison diversion in North Dakota is part of a program which already has taken nearly 500,000 acres of North Dakota land out of production. In other words, North Dakota sacrificed that much good bottom land and prime grazing land to permit the Garrison Dam to be constructed on the Missouri. The diversion project takes the form of a recompense for lands already removed from the production of agricultural surpluses. It will be unjust if the Federal Government, having offered Garrison diversion in exchange

for other lands condemned or purchased, fails to carry out its part of the bargain.

This land was removed from North Dakota tax rolls, mind you, depriving the State and counties and school districts of a source of revenue. We feel quite certain no one has pointed out this fact to the Post and Times Herald. On the promise that there would be irrigation development to replace this loss of public and private resources, North Dakotans went to bat to help obtain for the Corps of Engineers and the Bureau of Reclamation a congressional agreement for a Garrison Reservoir pool level of 1,850 feet elevation. That required the acquisition of a considerable amount of additional land above the 1,830-foot level which would not have been required otherwise. Certainly the Post and Times Herald do not suppose there would have been support for taking this additional land out of production, had it not been for assurance of stabilizing the economy of other acreages through irrigation.

When the Post and Times Herald suggest that there is nothing to stop North Dakota from undertaking its own irrigation project, it is clear there is no appreciation of the feeling here that, in reality, North Dakota has already made its investment. And the investment in lands taken out of production is the kind of investment for which the Post and Times Herald are asking.

And in addition to the half million acres of reservoir land, consideration must be given to the fact irrigation in North Dakota will remove thousands of wheat acres to other crops, some of which might be sugar beets now supplied from Cuba.

As we said, we are not disposed to feel bitter toward the Post and Times Herald for the view expressed in the editorial. It was, in the main, a temperate expression of a general viewpoint which has to be taken into account these days. It did not single out the North Dakota project as one which is especially vulnerable. But at the same time it missed an opportunity to show that the North Dakota project can be, and is, justified on the very grounds on which the general criticism was leveled. Sensing that the Post and Times Herald mean to be fair, we would like to see their editors take a second look at the facts of this project.

The First Dialogue

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an item which I received from one of my constituents, Reeves Espy, San Clemente, Calif., entitled "The First Dialogue" which I think presents some very serious food for thought.

THE FIRST DIALOGUE

Uncle Sam left the consultation room and went to see the patient in 301. He entered without knocking.

"Well?" asked the Dollar, sitting up.

Uncle Sam nodded solemnly.

The Dollar lay back. "I've got it, eh?"

"Yes," said Uncle Sam, "the diagnosis was a formality. You've got it bad."

"Flat on my back with Inflation."

"The worst kind, I'm sorry to say. Cancer of the Currency."

"That means I'm a goner."

"Probably. It means I'm a goner, too."

"You said 'probably.' Is there any hope?"

"There's an outside chance," said Uncle Sam, "if the cure can be applied in time."

"There's a cure? What? What?," said the Dollar, jerking upright.

"Leadership," said Uncle Sam.

"Leadership? Are the scientists working on it?"

"No," explained Uncle Sam, "it's not a problem of exact science. It's a problem of the minds and the hearts and the toughness—or weakness—of men. It's a problem of character. Leadership is the only cure."

"Where does Leadership come from?" asked the Dollar.

"That's the question, Son; that's the question: Where does Leadership come from? Where do you find a Washington, a Jefferson, a Thomas Paine, a Lincoln, a Roosevelt."

"Theodore or F. D. R.?"

Uncle Sam was lost in thought. "Eh? Oh, both Roosevelts. Teddy in his time and F. D. R. in his. Of course the people kept F. D. R. on the mound too long."

"I've got it," said the Dollar, "this Leadership cure is up to the people; it's their responsibility."

"In a way, Son, in a way. They've got to want Leadership; they've got to recognize it when it comes along; they've got to seize it and establish it by their support. If it comes * * * if it comes at all * * * it will come from statesmen."

"You mean politicians?"

"I mean statesmen."

"That's doubletalk," said the Dollar, impatiently; "what's the difference between statesmen and politicians?"

Uncle Sam tugged at his whiskers before speaking. "To me it's the difference between men who want to be elected in any way they can and those willing to fight all out for principles whether they get elected or not."

Skepticism flitted across the Dollar's face. "You're looking for miracles."

"When the principle is sound and the need great I happen to believe in miracles. The miracle of Leadership is exactly what we're seeking."

Uncle Sam moved to the door. "The doctors said not to tire you. I must run."

"Thanks for coming," said the Dollar. "Try to locate some of that Leadership, will yuh?"

"Sure," smiled Uncle Sam. "I'm scouting for wisdom and courage. You wouldn't think it would take wisdom because the problem is so obvious but it will nevertheless in order to convince the people they face disaster. They must be persuaded of that fact. Leadership is the only cure for Cancer of the Currency."

"I'll see you later."

The Profits of Steel

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it seems to be popular in some quarters these days to criticize the profits earned by corporate enterprises. It is difficult for many of us to appreciate the justification for such an approach, particularly when we remind ourselves that the level of Federal revenues is dependent very largely on these profits—the present corporate tax rate being 52 percent.

For some months, Mr. Speaker, there has been a running debate in the columns of the Washington Post and Times-Herald between Mr. Eugene Havas, a private economist, and Dr. Simon N. Whitney, chief economist of the Federal Trade Commission. A letter from Dr. Whitney, which appeared on May 6, 1959, places the profit question in its proper perspective, in my opinion. His comments deserve the attention of our colleagues and all other interested persons, especially at this time when we are approaching a critical point in the collective bargaining negotiations involving the steel industry.

Mr. Speaker, under leave to extend my remarks, I wish to include at this point the letter prepared by Dr. Whitney:

THE PROFITS OF STEEL

[From the Washington Post and Times Herald, May 6, 1959]

I have read the April 20 letter of Eugene Havas and we are in agreement that steel labor costs should not be increased and that steel prices should come down. But Mr. Havas' sketchy statistics lead him to an incorrect estimate of the price reduction needed.

He says the industry has overcharged consumers by "about $1 billion per annum," and his next sentence infers that this was "in the postwar years." Profits before income taxes averaged $1.4 billion in 1946–48 and $2 billion in what he later calls "the highly prosperous 1955–58 period."

Profits after taxes averaged $0.7 billion and $1 billion respectively. Each reader must decide for himself whether or not the 50 to 70 percent reduction in Federal tax receipts and company profits which Mr. Havas is apparently calling for would have been desirable.

If Mr. Havas believes steel profits have been so much too high he should apply his remedy to many or most industries. Even in 1955–57, steel's rate of return on net assets ranked only 16th among the 40 manufacturing industries tabulated in the well-known First National City Bank of New York series. In 1958, it ranked 26th.

It may rank higher in 1959, but how can we tell, until the penalty is paid after July 1 for the early 1959 rush of orders to replenish inventories and anticipate a possible strike?

Mr. Havas says Wall Street estimates put expected steel profits in 1959 at 50 percent above 1958. (He does not say, and I do not know, whether these estimates assume a strike, a labor cost increase, or a price increase.) I heard 3 weeks ago from an officer of the Chase Manhattan Bank that the latest Wall Street estimates put average 1959 profits of all industries at 33 percent above 1958.

But steel profits had dropped 31 percent in 1958, and profits of all industries, 10 percent (First National City Bank data). Thus steel's profits in 1959 are predicted to be 3 or 4 percent, and profits of all industries 20 percent, above 1957. It is not my choice, but that of Mr. Havas, to play with these profit estimates or to place such emphasis on one industry.

He goes on to say that U.S. Steel's profits were $7.47 a ton in 1953 and are $20 now. (This company's labor costs were $63 per ton shipped in 1953, and $88 in 1958.) He concludes that a $12.50 price reduction is called for, and will leave U.S. Steel earning "about $6 per common stock." But the rest of the industry is much less profitable—perhaps because it is less integrated or less efficient on an over-all basis, but not because its prices are lower.

The 1958 decrease in profits for 48 smaller steel companies was 33 percent, so that a 50 percent increase will bring them back to the 1957 level. In 1957 the industry, omitting U.S. Steel, earned $13.10 per ton shipped. Mr. Havas would cut this to $7.10, resulting in a lower ratio of profits to sales than any since the war.

I suggest that a $5 average cut be tried (assuming, of course, no union-bargained labor cost increase), thus eliminating the 1958 price increase. This would leave the smaller steel companies with a profit-sales ratio at about the post-war low of 1951–54, except as they may control costs better or increase sales more than the 50 percent profit forecast assumes.

Lest some readers unwarily accept Mr. Havas' estimate that 200,000 steelworkers have lost their jobs due to labor-saving machinery, I want to state for the record that the Labor Department puts February 1959 employment in steel at approximately 593,000, as against an average of 599,000 for 1946–58, and a peak of 653,000 for 1953.

SIMON N. WHITNEY.

A Milestone of Progress

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. GEORGE. Mr. Speaker, an editorial appeared in the Kansas City Times—the morning Kansas City Star—on July 4, 1959, in which is set forth the need of Kansas and Missouri for flood protection and water conservation by means of the completion of reservoirs and flood-protection projects in the Kansas River basins.

Although the ceremony at Tuttle Creek on Saturday, July 4, was attended by over 10,000 residents of Kansas and Missouri and does mark a step in the right direction, it will be many, many years before the people of these two States can feel secure in their persons and in their businesses from the fear of devastation by floods and for the lack of sufficient water for industrial purposes. Let us shorten this period as much as possible.

Mr. Speaker, I include the editorial in my remarks:

TUTTLE CREEK MAKES A PLACE IN KANSAS HISTORY

For the State of Kansas and the lower Missouri Valley the Tuttle Creek Dam site is the field of a decisive battle. A little Gettysburg.

The closing of the dam today dramatizes the end of one era and the beginning of another. Today the weight of Kansas public opinion supports a strong program to stop floods and conserve the floodwaters for the use of man.

In another 20 years Kansas should have a system of dams and local protection against floods. If delivered as planned, this system will bring confidence to the industrial and other developments of the cities. Even the lower agricultural levees will be adequate for protection against the frequent smaller floods.

Water is one of the most important of resources. Many cities are handicapped by an uncertain supply. The vast water storage of Kansas will be recognized as a major resource to attract new industries. Cities can grow with confidence in their water supplies. Farmers who tie into the water supplies will have the answer to drought. Even in eastern Kansas, supplementary irrigation can bring stability to farming operations.

The big dams are headliners in an overall program to conserve the water and land resources with soil conservation and watershed development. One approach cannot succeed without the other.

In the Manhattan area, people who formerly opposed the Tuttle Creek Dam are now looking forward to a new recreation industry. Recreation is a byproduct of river control that can be a tremendous asset to the immediate area. In the next 20 years many other communities should have their part of the booming recreation industry.

Control of water and land resources means control of the fundamental sources of wealth in an area. It is to these sources that an area may look for its future economy.

Kansas City, Mo., has a big stake in the strengthened Kansas economy that should come with general river development. The city is closely tied to Kansas business and agriculture. Kansas City has a vital stake in the flood protection that will be offered by Kaw Valley dams. And throngs of Kansas Citians will take part in the recreation of the Tuttle Creek and the other reservoirs to come.

The historic significance of the Tuttle Creek Dam goes back to 1934. TVA was being launched as an ideological dream for one valley. The Federal Government then had no plan of its own for allout river control.

At that early stage of thinking the Greater Kansas City Flood Planning Committee went into action with Willard Breidenthal as chairman. It employed Frederick H. Fowler, a San Francisco hydraulic engineer, to make the prophetic study of the Kaw Basin. Fowler recommended the Tuttle Creek Dam along with the Milford and Perry Dams that are on the drawing boards today.

Tuttle Creek was involved in the earliest debates of Congress. In time it became the field of battle over the issue of the rights of landowners and residents versus the general public interest. The reservoir area was a beautiful community of rich bottom farms and nearly 1,000 farms and town homes where some families had lived for generations. It had its churches and cemeteries. Even the strongest advocates of river control felt the strong human appeal of the people of the Blue Valley. Yet they had also to consider the future of scores of thousands of people including generations yet unborn.

Now the way is cleared for the other essential dams to come. Today, 25 years after that first Kaw Valley survey, the Blue River will be turned into the basin behind the still uncompleted dam. The ceremony will properly acknowledge a great step in Kansas history.

North Dakota Water Users Group Urges Funds Be Restored for Garrison Investigations

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. SHORT. Mr. Speaker, when the Garrison Dam in North Dakota was authorized, my State of North Dakota agreed to give up rich and fertile farm and river bottom lands in order to provide storage for the Garrison and Oahe Reservoirs. These lands were taken off the tax rolls and surrendered with the clear understanding that North Dakota would be compensated with a million acres or more of irrigation. Now the investigational funds to continue preliminary work on this Garrison diversion project are in danger of being drastically cut through action of the Congress.

Mr. Speaker, the executive committee of the North Dakota Water Users Association has forwarded me a resolution on this subject. Since the resolution illustrates our case so well, I ask permission to include it with my remarks in the RECORD.

RESOLUTION OF THE NORTH DAKOTA WATER USERS ASSOCIATION URGING RESTORATION OF INVESTIGATIONAL MONEYS FOR BUREAU OF RECLAMATION FOR THE GARRISON DIVERSION UNIT OF NORTH DAKOTA FOR FISCAL YEAR 1960

Whereas the Pick-Sloan compromise for the Missouri Basin development provided for the irrigation of 1 million acres of North Dakota land in exchange for approximately half a million acres taken from production and the tax roles; and

Whereas this agreement was accepted in good faith by the State of North Dakota as reflected by action of three sessions of the State Legislature, as well as by affirmative action of voters and taxpayers; and

Whereas the Bureau of Reclamation, through their investigations, have discovered sufficient acreages and have engineering plans which provide for development of areas over a 70-year period; and

Whereas the Bureau of Reclamation is presently engaged in firming-up more detailed land classification, topographical mapping, and engineering for canal lateral and drainage layouts, cost estimates and further economic studies in order to refine the Project Plan Report completed in 1957 which indicates the economic feasibility by all rigid standards; and

Whereas North Dakota, through its legislature, enacted legislation providing for the Garrison Diversion Conservancy District which has been activated and is presently cooperating with farm operators and six organized irrigation districts for the purpose of completing repayment contracts on a partnership basis in order to assure an expeditious program if and when construction moneys are made available; and

Whereas, the U.S. House of Representatives' reduction of the recommended Bureau of the Budget estimate of $550,000 to $300,000 for the Garrison Diversion unit, will impair and seriously hinder the efficiency of scheduled work because of disruption of the Bureau of Reclamation's technical staff, and thus will bring added costs to the National Government because of added delays: Now, therefore, be it

Resolved by the North Dakota Water Users Association, a statewide organization founded for the purpose of assuring orderly and maximum development of all of North Dakota's water resources, That the U.S. Senate Committee on Appropriations restore the $250,000 reduced by the House of Representatives for the Garrison Diversion unit and urges that the Conference Committee on Public Works Appropriations for 1960 sustain the full amount because it is in the economic interest of not only North Dakota, but the United States; and be it further

Resolved, That copies of said resolution adopted by the North Dakota Water Users Association be transmitted to the U. S. Senators WILLIAM LANGER and MILTON. R. YOUNG

of North Dakota and Senator CARL HAYDEN, chairman of the U.S. Senate Committee on Appropriations, and to the U.S. Representatives QUENTIN N. BURDICK and DON L. SHORT of North Dakota and to the Hon. CLARENCE CANNON, U.S. Representative and chairman of the House Committee on Appropriations.

The above resolution was adopted by the executive committee of the North Dakota Water Users Association at Bismarck, N. Dak., on June 19, 1959.

L. C. MUELLER, *President.*

Washington Report

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I would like to include my newsletter to my constituents of July 2, 1959.

WASHINGTON REPORT

(By your Congressman JAMES B. UTT)

Yesterday began the new fiscal year for the U.S. Government. With the close of the last fiscal year on June 30, 1959, the deficit was just under $13 billion. This deficit produced repercussions on a world-wide scale comparable to what a sizable overdraft will do to your own bank account. Either you have to borrow money to cover it, or sell an asset, or face insolvency. Last week we raised the national debt limit to $295 billion, $10 billion of which is temporary. You may recall that when we raised the debt limit last year, as a temporary measure, I reported to you that the only thing temporary about it was that it would go up, and so it has. I voted against this increase, which might be considered irresponsible—that I did not want to pay our honest obligations; however, that is not the case.

After having fought against billions of dollars worth of needless appropriations, it would be highly inconsistent to vote for a debt increase, but more than that, I firmly believe that if the executive department could not get an increase in the debt limit, it would quickly improvise one of the solutions which I suggested in reference to covering your own overdraft, and that is to sell some of the assets, especially those which are frozen and are costing untold sums of money for storage.

We have $80 billion worth of surplus military equipment, some new, some obsolete, but nevertheless surplus to the needs of the military establishment. This surplus could be liquidated at about 10 cents on the dollar, or about $8 billion. We have $8 billion worth of strategic material stockpiles, half of which should be disposed of as surplus, according to the Office of Civil and Defense Mobilization. That would bring in $4 billion. We have a billion dollars worth of real estate which is surplus, and should be sold and placed on the local tax roll. Between $10 and $20 million worth of this land is in Orange County. We have $8 billion worth of farm surpluses. At least $2 or $3 billion of this should be moved into the market. In rent and in space, storage is costing us in excess of $2 billion a year. The total amount is about $15 billion—more than enough to have covered the deficit and the increase in the debt limit.

This course of action is not taken because of two reasons. The first is that it is easier to ask Congress for an increase in the debt limit than it is to push a realistic surplus disposal operation. The second and biggest obstacle is the possible economic dislocation of such an operation. The manufacturers of new equipment do not want to have billions of dollars worth of surplus items come on the market in competition. The mining interests oppose having $4 billion worth of strategic materials available to processors who, they believe, should purchase from the producer, even though the greatest portion of this stockpile has come by way of imports, in exchange for American dollars and American farm surpluses. The lag in the disposal of real estate results from expanding military establishments which hope that someday they will find a military use for this land. But when you are in financial difficulties, some drastic action is called for.

If I read the public reaction correctly, there is an overwhelming demand that Congress preserve a sound dollar, stop creating a welfare state, stop competing with free enterprise, assume fiscal responsibility, and exercise self-restraint against every desire of the social planners. Failure on the part of any Congressman to carry this mandate into effect, should cause his removal from office at the next election. We have succeeded in not only bankrupting the Nation, but in damaging the faith and credit of every State in the Union, by taking money from the taxpayers and offering to give a portion of it back to their State, providing the State will take more money from them to match the cost of some project which is not absolutely needed.

Many of these programs were accelerated last year because of the recession. Acceleration of any program on a panic basis leads to inefficiency and higher prices. The highway program is a prime example. As a result of this acceleration, the program is costing about 20 percent more than estimated, and a special fund set up for this project is now exhausted, and Congress has been requested to increase gasoline taxes 1½ cents to maintain the fund. The Governor of California and the highway commission are urging Congress to increase the Federal gasoline tax, because they say that the Federal Government is paying 90 percent of this interstate highway program. But they do not seem to realize that before the Federal Government pays 90 percent of the cost, it first takes 100 percent of the cost away from the people of California. So my recommendation to the Governor's emissaries was that if the State of California wanted to continue this program at its present level of activity, it would be cheaper for them to increase the State tax on gasoline and keep 100 percent of that increase in California, instead of sending it back here to have only 90 percent of its returned. But they just don't understand that logic.

The chickens are now coming home to roost in the form of high interest rates and tight money, which is so badly needed for economic expansion. The need of private industry for homes and plant expansion, coupled with the monetary needs of the States, cities, and counties, has driven interest rates, the price for the use of money, to an all-time high, and the Federal Government, in competing for its monetary needs, is forced to meet these competitive rates. Current interest rates on savings bonds are not attractive to the saving public. Interest rates on short-time Government issues have jumped 400 percent in a year's time, driving the low-rate bonds to an unprecedented low in order to maintain a yield comparable to current issues.

Congress will be forced this week to remove the interest ceiling on long-term Government bonds in order to make them attractive. The $13 billion deficit means that we must borrow $13 billion worth of new money besides refunding the issues which mature this year. If, instead of having to siphon off $13 billion of American savings, we would pay off $5 or $10 billion on the national debt, competition for these funds would be less, and interest rates would be greatly reduced.

Government spending in itself does not create prosperity. Our greatest comparative period of prosperity and expansion occurred between 1920 and 1928 at a time when we were reducing our national debt by one-third and spending very little Government money.

Credit Union Bill Supported

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. PATMAN. Mr. Speaker, among the many letters and telegrams I receive daily, concerning the great need for credit union legislation, these I am inserting at this time are typical:

WACO TEX., *June 25, 1959.*

HON. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR SIR: On behalf of the Waco Chapter of Credit Unions I send you best wishes and thanks on this the 25th anniversary of the Federal Credit Union Act. We sincerely appreciate your interest in the credit union movement which is evident by your introduction of H.R. 5777 and designation of June 26 as Credit Union Legislation Day.

Sincerely,

JOHN J. YOUNG, *President.*

DALLAS, TEX., *June 22, 1959.*

HON. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.:

I urge your committee to make favorable report on H.R. 5777. Our credit unions are very much in need of the proposed amendment to facilitate our growth and service to our members.

HARRY DAWSON.

BROOKLEY FEDERAL CREDIT UNION,
Brookley Air Force Base, Ala., June 24, 1959.

HON. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR SIR: In order to appropriately commemorate this 25th anniversary of the Federal Credit Union Act, we are directing the gratitude of our members to you and through you to the Congress of the United States for the enactment of this humanitarian law. What has been done and what you are continuing to do on behalf of credit unions will help to perpetuate the economic well-being of millions of American families.

The established pattern is being followed throughout the free world in teaching untold multitudes the art of self-help. This way, above all others, can assure the economic stability of those who otherwise might fall by the wayside.

The credit union, which we represent, has grown since 1948 to nearly 12,000 members with savings in excess of $4,500,000. During the ensuing years, over $24 million has been made available to our members for provi-

dent and productive purposes in 60,000 separate loans. We hope that the many voluntary workers who will succeed us will continue to exemplify the principle of "not for profit, not for charity, but for service."

We reflect, as we know you must, on the magnitude of the decision which Congress faced a quarter of a century ago in giving a grateful people the Federal Credit Union Act. Today, we can truly say, in all humility, that we really are our brother's keeper.

Respectfully yours,

JOSEPH T. SHIGLEY,
C. L. GIVENS,
JOHN T. GREEN,
OSCAR B. MYRICK,
J. D. WILLIAMSON.

Hearings were held on the bill, H.R. 5777, to which specific reference is made in the telegrams, before the Committee on Banking and Currency of the House on May 11, 12, and 13, 1959, and copies are available upon request. No report has yet been made on the bill.

The Republic of the Philippines Should Have the Friendly and Encouraging Understanding of Our Own Republic

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I would like to include a letter received by one of my constituents from Mr. Gil Garcia, vice president and general manager of the Visayan Electric Co. in Cebu City, Republic of the Philippines. This letter is further evidence that the false impression that many Americans have received by reason of articles, appearing in national magazines which were uncomplimentary to the Philippine Republic and its President, the Honorable Carlos Garcia, are not shared by the people of that Republic.

It is my hope that the Republic of the Philippines, our strong ally in the Far East, should have the friendly and encouraging understanding of our own Republic.

VISAYAN ELECTRIC CO., S.A.,
Cebu City, Philippines, April 27, 1959.

Mrs. THERESA R. LANDON,
Laguna Beach, Calif.

MY DEAR MRS. LANDON: As one who has done your bit to the Philippines, you might be interested to know that the Visayan Electric is now deep in major projects to meet the ever-increasing demand of electricity as a consequence of the general clamor of industrialization.

We are now installing a brand new 5,000 kilowatt Worthington-Combustion Engineering steam turbine generating set and are erecting a new powerhouse building to house this set. God willing, we expect to have this new unit in operation before the end of this year.

After this project we shall undertake the construction of a 13.8 kilovolt high tension line. Next on the tab after the high tension line is the construction of a four-story air-conditioned building for the company. In spite of the constantly recurring war scare and unsettled economic conditions throughout the world, we in the Visayan Electric are going ahead with our plans, as we are aware of our part in the overall progress of our country.

We know that there have been a series of negative publicity about the Philippines in the United States, but I assure you that the bad pictures portrayed are not supported by actual conditions here. It is true that as a new growing nation we are encountering difficulties, but these difficulties are momentary and not insurmountable. Although there is a high degree of unemployment, thank God there is no breadline.

The present administration, headed by our President Carlos P. Garcia, is doing its best, reports to the contrary notwithstanding, to achieve our goals for a prosperous and progressive Philippines. I fully believe that it is on the right track, although there are kinds to be smoothed out along the way.

I believe that, as one of the stanchest friends of the Philippines who has done her part for the welfare of the Filipino nation, you could help us a lot to counteract whatever bad impressions have been imprinted on the minds of the American people by false propagandists. I would say without fear of contradiction that the Philippines and the Filipinos are the best friends of Americans in this part of the world, although our public officials may show some indignation toward American policy in the Philippines. At best, this segment of our population disagrees only with the implementation of American policies here, but believe these disagreements could be ironed out if the problems are placed in their proper perspective.

Yours very sincerely,

GIL GARCIA.

Rules for Anti-Communists

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. McCORMACK. Mr. Speaker, while the excellent suggestions of his emminence, Richard Cardinal Cushing, archbishop of Boston, are particularly made to teenage students in combating communism, they are equally sound suggestions to all persons to follow who recognize the vicious intent and purpose of atheistic communism.

In my extension of remarks, I include the suggestions made by Cardinal Cushing:

RULES FOR ANTI-COMMUNISTS

(Following is a set of nine commandments suggested by Cardinal Cushing for persons, particularly teenage students, interested in fighting communism.)

If communism is the greatest threat today to our lives, our property and way of life, what can we do about it? What can you, a student in high school, do about communism?

In the first place, know something about what communism really is, for we cannot defeat communism unless we know what it is.

Secondly, study American history and especially study about the freedoms which are a part of our American way of life. Don't take liberties for granted. Recognize the fact that these precious freedoms are lacking in the countries controlled by communism.

Third, be very careful about calling anyone a Communist unless you are sure of your facts. Many people are careless about this and sometimes label everyone who disagrees with them as a Communist. This, of course, is wholly unfair, destroys reputations unjustly, and actually helps rather than hurts the Communist cause.

Fourth, encourage religious observance in your community. Attend the church of your choice. Religion is the weapon feared most by the Communists.

Fifth, be fair in your dealings with others and do all you can to see that justice is done at all times. Communist propaganda feeds upon the injustices occurring in non-Communist countries.

Sixth, be smart in your attitude toward communism and the Communists. Don't be fooled by their words. Remember that they will say anything, true or not, if it furthers Communist objectives. Never let your guard be put down, for as long as they adhere to Communist objectives, including world domination, the threat to us is ever present.

Seventh, if you should learn about any dangerous Communist activity, report it to the Federal Bureau of Investigation or to other law enforcement officers. Don't try to cope with it yourself.

Eighth, in choosing your life work, give serious consideration to the occupations that are important in giving you an opportunity to influence others, such as government, labor relations, education, and the creative end of newspapers, magazines, books, radio, motion pictures, and television—even though your income may not be as high as in some other fields. You will be amply rewarded by the realization that you are rendering vital service to your country. Communists try to place themselves in such key positions in order that they might exercise influence.

Finally, recognize and accept your deep responsibility as a citizen of the Nation that leads the free world. Be sure to take an active part in public affairs. When you are eligible to vote, always cast your ballot in every primary and election and vote for those you believe to be the best type of citizen. Work for such candidates. Run for office yourself. By making democracy strong, you will help to build the most effective bulwark against communism.

Communism presents the greatest challenge to the youth of today. I am confident that you, knowing the true meaning of communism, will meet the challenge.

But it is not enough just to be against communism—we must be for something. Let's be for America. All the way.

Have We a Labor Government Now?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. DORN of South Carolina. Mr. Speaker, every American should read the following patriotic and timely appeal to the American people by Senator GOLDWATER:

HAVE WE A LABOR GOVERNMENT NOW?

(Broadcast by Hon. BARRY M. GOLDWATER, U.S. Senator from Arizona, over Manion Forum Network, June 28, 1959)

DEAN MANION. We are all familiar with the famous statement that "power corrupts and absolute power corrupts absolutely."

Is the constitutional institution of American freedom now hopelessly corrupted by a concentration of power? With me at this microphone now is a great American who has earned the right to answer this important question by intelligent public service and successive elections to the U.S. Senate.

It is no longer necessary to introduce this man to an American audience. His candor, courage and statesmanship have made him the symbol of undeviating devotion to the conservation of our American heritage. To describe the menacing peril of unrestrained power, here is the Honorable BARRY GOLDWATER, U.S. Senator from Arizona.

Senator GOLDWATER. Thank you, Dean Manion. We hear a great deal these days of the dangers facing our country. Not a day passes without someone pointing to the perils that await at every turn in foreign affairs, in missile production or lack of it, in the race to space or to the poles, in every imaginable activity our Nation is engaged in.

And we could not have come this far as a prosperous republic if in the past we had not faced and met similar dangers. But to me the greatest danger we face as a Nation is not aggressive force from without, but irresponsible power from within.

Power that we as a Nation legally grant. Power that is unrestrained, irresponsible, unrelenting, and, most important, sanctioned by law.

This power is vested in three areas, government, business and labor, and is growing greater each day.

Let us examine the strongholds of this power. First there is government. Government has become so large today that nearly every move we make is met with Federal regulation.

Government after government in the history of this world has fallen because of the concentration of power in centralized government, and today, we are witnessing this growth in our own Nation's Capitol.

It can be successfully argued, in my own opinion, that big government spawns both big business and big labor, and that the three together constitute a real danger to our freedoms.

The second area of bigness is business. The usual explanation of the size of today's corporations is that through competitive struggle for survival, they have merged for technological reasons into massive combines.

But, can the immense size be explained alone in this way? Not at all. There are two factors causing it, but the underlying reason for both is governmental policy.

The wealth produced by capital is divided for supplemental wages, to pay the double tax of the State and Federal Government, and to provide a major portion of new capital formation. The Federal Government and most States levy such taxes on corporations doing business within their borders. Under these tax regualtions, corporations and businesses which should be allowed to put back money produced by their efforts are restrained from doing so by the effect of corporate taxes.

As the size of the business grows, so grows the size of the unions with which management must deal in the determination of wage rates and benefits to be received by employees. As the unions grow, the trend snowballs for industry-wide bargaining, and this is followed by a greater body of Federal regulations proscribing such bargaining between employers and union representatives.

Government regulations on employee relations impose compliance burdens on today's businessmen such that only the largest can afford the staffs of accountants, lawyers, and researchers required to keep abreast of procedures imposed on them by bureaucratic proclamation.

If the businessman attempts to follow the normal course of free enterprise, ignoring Government channels, criminal sanctions are soon imposed on him and his business is terminated. Thus, Government practice in the employee-relations field encourages large corporations to grow.

Now, for the third area—the one with which we are now intimately concerned. In contrast to business regulation, our Government has created in the trade union movement the power and privilege to compel union membership and to regiment employers by economic measures which are irresistible.

This power today has a far-reaching effect. Oddly enough, in this age of vast Government and proliferation of laws, we have, in the labor relations field, little Government and less law. We have, instead, a series of special privileges for abusive and destructive trade union conduct.

In the labor relations field, freedom has become a fugitive trapped, held by a superstate, while giant unions slug it out. They are slugging it out with big business in the most fearful struggle of our time.

The outcome of this struggle is in the hands of Congress and, more essentially, in the hands of every citizen. This conflict of raw power left unchecked in its present direction can only result in Government alone emerging as the sole survivor.

COMPLACENCY—THE ENEMY OF AMERICA

America is in danger. Not alone from the materiel or military threat of our enemies abroad, but from the complacency from within our boundaries.

This is a weakness which is reflected in the acceptance of the abuses of power and it is a weakness further demonstrated by our inability to face up to the real danger. The foreign threat is one which need not panic us so long as we avoid abandonment of our fundamental strength—the principle of freedom under law.

The danger lies in the excessive power of special privileges. All big unions, as they wield the club of economic pressures exploiting to the limit their privileges, have formed industrywide monopolies fraught with abuses and corruption so rampant that it portends certain destruction of the trade union movement, with the attendant handmaiden of disaster for our country. What has brought this about? The answer lies in the failure of our Government to control power and corruption.

During the course of debate on S. 1555, the Kennedy labor bill, I pointed out that, unless strengthened, the bill would make it perfectly permissible for a union to deny a member his right to freedom of speech by means of "reasonable rules and regulations."

Just 4 days after the bill passed the Senate this hypothetical example became a reality. Citing the section of their constitution which permits expulsion for "conduct unbecoming a member," the International Association of Machinists denied the appeal of three members who had exercised their constitutional right of free speech to support right-to-work laws.

Let me read from that decision the astounding reason the union gives in support of its position.

"While it is agreed that the right to freely express one's views is a privilege guaranteed by the U.S. Constitution, this does not mean that a member of our association is entitled to openly denounce the considered position of the labor movement and particularly his own organization, without the possibility of losing his rights to retain his standing as an IAM union member."

I draw your attention to this phenomenon because it is exactly here that I believe the bridge is being constructed between economic tyranny and political tyranny in this country. We are observing the transformation of economic compulsion into political compulsion.

We are probably strong enough to survive even the widespread corruption in union affairs which the McClellan committee hearings have disclosed. It is an evil thing and weaves threads through our social fabric of which none of us can be proud and which we ought to remove. But it is not, by itself, necessarily fatal to the country, damaging as it may be.

We can probably survive entrenched hoodlums, but can free political institutions survive the clever men whom we hear talk piously of their high ideals and lofty purposes at the same time that they go steadily and stealthily about the job of transforming compulsory unionism into compulsory political activity? I suggest these latter may be the truly evil, the truly dangerous men.

On this point there has been a strange and inexplicable silence on the part of the usually loquacious men who call themselves liberals. There has been a curious unwillingness on the part of some to concern themselves with civil rights of union members with the same relentless energy and determination they are accustomed to expend upon threats to the civil rights of other segments of the population.

Why is the union member the forgotten man? Why is this second-class citizenship for the union member held by liberals to be a negligible matter when applied to any other segment of the population it is held to be intolerable?

Where are the liberals who speak with such deep feeling and who are willing to undertake unlimited and immediate action to cure any diminution of that franchise in one part of the country but who are so strangely blind and deaf to this outrageous impairment of the franchise of union members which is especialy conspicuous in another part of the country? This I have called the civil rights problem of the North and I invite the earnest attention of the Nation to this problem.

The basic evil infesting the union movement is compulsory membership. Not one other segment of our society has the coercive power of compulsory unionism, transformed as it has been into a massive and irresponsible political power.

What we witnessed only recently in Congress during the development of the Kennedy labor bill ought to demonstrate to everyone how far-reaching this ruthless power does now reach.

SHAME ON CONGRESS

How humiliating it is for the Congress of the United States to have to conduct a sort of treaty-negotiation with a great internal political power almost as with a foreign power to find out what these union grandees would be willing to tolerate in the way of mild corrections. What level has this Congress reached when even a mild and inoffensive reform bill must be loaded with "sweeteners" to make it sufficiently attractive to the labor politicians so that they may be persuaded to permit its passage?

This overwhelming power, as I have said, is based on the transformation of compulsory unionism into compulsory political activity.

It is an appalling situation when Democrat union members can be required, as a condition of employment, to finance Republican candidates; when Republican union members can be required to finance Democrat candidates; or when any union member can be required to finance issues which he finds deeply repugnant.

When, for example, a profoundly religious Roman Catholic workman can be required by a Communist-dominated union leadership to finance the political designs of the Communist Party, on pain of losing his job.

I say this is the kind of issue that ought not to separate liberals and conservatives. On this issue we must all be Americans or there may soon be no America as we have known it. What we in Congress must awaken to is the fact that freedom is the target of concentrated power. There is no question but that trade unions have been scoring bulls' eyes for 30 years taking away freedom which belongs to you and me and our children.

How much more is there available for sacrificial offering? I submit that it may be too late. There is no question, however, that if we have any hope of retaining what little is left, we must deny the special privileges which allow the violence and monopolistic compulsion against union members.

We have reached a point again in our history where we once stood, when the question was asked of men, "Where do you stand, sir?"

Do we want a republic whose Constitution recognizes that freedom is ours because we are individuals and that freedom comes from God? Do we want a government unfettered by power? Do we want an economic system unfettered by abusive power? Do we want a labor movement with special privileges denied to the rest of our society, the use of which has produced the raw power disclosed before the McClellan committee?

The answer I say to my colleagues rests in the question: "Where do you stand, sir?" If we remain true to our oath of office, if we believe in the proclamations of freedom and liberty which we make from rostrums across the land, if we believe that power invested in any segment of our population is bad, then I suggest to those who hear my voice or who read my words that we can demonstrate this by recognizing the needed approach to labor reform, which is, attack the disease, not the symptoms.

If we fail at this crucial point in our history to measure up to our responsibilities, then history will judge us for what history will surely record us as—men who were timid when strength and courage were needed.

If, on the other hand, we want our freedom, we must work and sacrifice for it. There can be no compromise. Our Constitution is quite clear and we either stick by our basic principles or we don't have them.

There can be no compromise with those who would destroy us because time is on their side. There can be no compromise with courage, the courage to stand for principle with strength.

DEAN MANION. Thank you, Senator GOLDWATER. My friends, where do you stand on this question of special privileges for unrestrained power? Are you too timid, too tepid, or too tired to take a stand against the corruption of your liberties by absolute power?

Send this magnificent speech by Senator GOLDWATER to your own Congressman. Ask him: "Where do you stand, sir?" Insist upon an unequivocal answer, now.

Member Bank Reserve Requirements

SPEECH
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central reserve city."

Mr. COHELAN. Mr. Speaker, my freshman colleagues, the gentleman from Indiana [Mr. BARR] and the gentleman from Pennsylvania [Mr. MOORHEAD], members of the Banking and Currency Committee, are to be commended for their fine work in support of S. 1120, the bill to amend the National Bank Act and the Federal Reserve Act with respect to reserve requirements.

In voting for the final passage of this legislation, however, I was sorry that the committee had not seen fit to accept the amendment to strengthen the powers of the Federal Reserve System offered by another freshman member of the committee, the gentleman from Colorado [Mr. JOHNSON]. That amendment would have increased the Fed's powers to resist inflation by raising potential reserve requirements to 26 percent.

Believing in a strong and active Federal Reserve System in our economy, I would like to express the hope that the committee will continue to study the methods by which the Fed might be strengthened in its powers to combat inflation as well as in its powers to stimulate economic activity when necessary.

Resolution of the Municipal Council of the City of Newark

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. ADDONIZIO. Mr. Speaker, I am gratified to call to the attention of the membership the following resolution adopted by the municipal council of the city of Newark, at a regular meeting July 1, 1959, with respect to home rule for the District of Columbia. I am confident that most Americans agree with the council that the residents of the District of Columbia should no longer be denied the rights and benefits of local self-government. I urge my colleagues to give full support to the enactment of this legislation.

The resolution reads:

RESOLUTION OF THE CITY OF NEWARK, N.J., MEMORIALIZING CONGRESSMEN HUGH J. ADDONIZIO, PETER W. RODINO, AND GEORGE M. WALLHAUSER TO SUPPORT HOME RULE FOR THE DISTRICT OF COLUMBIA

Whereas local self-government is the bedrock of free government;

Whereas the rights and benefits of local self-government should be available to all American citizens;

Whereas the residents of the District of Columbia are denied the rights and benefits of local self-government;

Whereas the Congress of the United States has the authority to assure local self-government by granting home rule to the District of Columbia;

Whereas the principle of home rule has been endorsed by a substantial majority of the residents of the District of Columbia; and

Whereas the Board of Commissioners of the District of Columbia have unanimously endorsed proposals for granting home rule to their city: Now, therefore, be it

Resolved by the Municipal Council of the City of Newark, N.J.:

1. That the Congress be, and it is hereby urged to approve home rule legislation to assure local self-government to the residents of the District of Columbia; and

2. That the Members of the U.S. Congress from the 10th, 11th, and 12th Congressional Districts be and they are hereby memorialized to support home rule legislation for the residents of the District of Columbia and respectfully urge the Honorable HUGH J. ADDONIZIO, PETER W. RODINO, and GEORGE M. WALLHAUSER to communicate to their colleagues in the House of Representatives their individual endorsement of this resolution.

Adopted at a meeting of the Municipal Council of the City of Newark, N.J., July 1, 1959.

MICHAEL A. BONTEMPO,
President of the Council.

Certified to by me this 2d day of July 1959.

_____,
City Clerk.

Dalai Lama Reveals What Happened in Tibet—The Tragic Story of Other Attempt at Peaceful Coexistence With Communists

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star on the statement made at a press conference on June 20, 1959, by the Dalai Lama, of Tibet, at his place of asylum in India. Never has a more unprovoked and inexcusable act of barbarism been committed against an utterly peaceful people than Red China's rape of Tibet. Never has there been a more devastating indictment by the head of a people who hoped for and tried peaceful coexistence with Communists. What shocks one almost as much is that there still are people on this planet, not Tibetans but Americans, including some officials of the Christian church, supposedly dedicated to a religion of justice, mercy, and love, who advocate accepting the Red Chinese tyranny into civilized society thereby enormously increasing its prestige and influence and power to do the same thing to others who dare oppose its will and strive to preserve their freedom.

The editorial follows:

TERROR IN TIBET

The Dalai Lama, the young Buddhist godking of Tibet, has given voice to a singularly eloquent and damning indictment of what Red China has been doing to his country, the fabled "roof of the world." Speaking from his refuge in Mussoorie, India, he has accused Peiping of a reign of terror that falls little short of the crime of genocide—a conscious, deliberate, systematic effort to wipe out not merely the culture, independence, and reli-

gion of his people, but also the people themselves.

Thus, according to the Dalai Lama who is their spiritual and temporal leader, the Tibetans have been subjected to agony and affliction in mounting tempo ever since the Chinese Communists first invaded their land in 1950. That particular aggression was followed by an agreement under which Peiping pledged itself to let them govern their own internal affairs, and practice their peace-loving faith, without let or hindrance. However, as the exiled god-king has just declared, the Mao Tze-tung regime began violating the compact in the most flagrant manner almost as soon as it was signed.

Since then, over a period of 9 years, Peiping has followed a policy which the Dalai Lama now has openly condemned—for the first time in detail—as a program calculated to bring about the annihilation of his country and the Buddhist religion. To that end, the Communist drive has been unremitting and merciless. In the God-king's words, "forced labor and compulsory exactions, systematic persecutions of the people, plunder, and confiscation of property belonging to individuals and monasteries, and the execution of certain leading men in Tibet—these are the glorious achievements of Chinese rule in Tibet." More than that, there have been mass departations from the country and a replacing influx of millions of Chinese in a resettlement move obviously designed to obliterate Tibet's historical, ancient identity as a region distinct from China proper.

Is this just spiteful anti-Peiping propaganda? Far from it. In making his charges, the Dalai Lama has been at special pains to declare that he has done so in full awareness of their gravity because I know them to be true. And he has gone on to challenge the Chinese Reds to prove otherwise. As a matter of fact, he has called upon them, if they care to dispute his accusations, to agree to the establishment of an impartial international investigating commission to look into what he has said and to pass judgment on the validity of his condemnatory views.

Needless to say, the Chinese Communists will never assent to any such inquiry. In that respect, the Dalai Lama has put them on a spot of sorts. Although they may rail against him, and although they may take the Nehru government to task for granting him asylum on Indian soil, they will be exceedingly hard put to persuade the world at large that they are not guilty of a crime of the first magnitude in Tibet. The consequent impact on Asian opinion as a whole can hardly fail to be wholesome.

Poison in Your Water—No. 138

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Toledo (Ohio) Blade of March 29, 1959, entitled "Sewage Disposal Poses Big Problem for Genoa":

SEWAGE DISPOSAL POSES BIG PROBLEM FOR GENOA—POLLUTION CONTROL BOARD ISSUED FINAL RENEWAL OF PERMIT TO USE CREEK IN 1957

In 1946, the Ohio Pollution Control Board let it be known that it was not happy with Genoa because the village was allowing overflow from septic tanks to pollute Packer Creek.

Start making plans now for a sewage disposal plant to end the pollution, the board suggested.

Today, more than 12 year later, there not only is no sewage plant, there are no definite intentions to build one.

One of the results of the inaction is that the present council and Mayor Robert Hille have been ordered to appear before the board in Columbus April 16 to explain why.

Another is that the question has become a hot political issue.

ENTHUSIASM MILD

In 1946, village fathers were mildly enthusiastic about building a sewage treatment plant. Faced with a light treasury, they managed to borrow several thousand dollars from a Federal agency to have the plans made.

Finkbeiner, Pettis & Strout, Toledo, consulting engineers, did the job.

The plans were duly filed. They're still on file, but enthusiasm has vanished. Estimates were that the job would cost about $400,000.

Heeding the village's plea that it lacked the wherewithal to finance a job of such magnitude, the pollution board, more and more reluctantly as the years went by, renewed the village's permit to go on dumping septic tank overflow into Packer Creek.

As the village grew, so did the amount of sewage directed into the creek each day.

FINAL RENEWAL

In December 1957, the pollution board decided to put its collective foot down. This is the last time the permit will be renewed, the board said.

Through the years, Genoans had come to regard the annual permit renewal as something that would go on forever. The problem of a sewage disposal plant, if not faced, would likely disappear in due time, many, in effect, had decided.

But the village council took the pollution board's warning to heart. Early in 1958 council passed an ordinance imposing a sewer charge equal to water bills.

The idea was to build up a fund so that financing for the treatment plant would be easier to secure. The extra charge was to retire, in 30 years, $140,000 in mortgage revenue bonds. The remainder of the cost would presumably have come from Federal aid and special assessments on the benefited properties.

DEFEATED AT POLLS

Council's plan went over like a lead balloon. For one thing, at almost the same time the sewer charge was imposed, the water rates were boosted by changing the minimum rates from $6 for 7,000 gallons a quarter-year, to $2 for 2,000 gallons a month.

The inevitable committee was formed, public support for their viewpoint was gained, and petitions for a referendum on the council action were successfully circulated.

The impending referendum halted collection of the sewer impost. The referendum itself, held at the general elections last November, brought a resounding defeat of the council plan.

Council gave up, and since then hasn't tried to do much except persuade a reluctant populace that the village must, somehow, get a sewage treatment plant built, and that the longer the job is postponed the more it will cost.

Enter politics. Mayor Robert Hille, somewhat piqued by the way the referendum went, says he won't be a candidate for reelection this fall.

Only man to file so far for mayor is Oliver Tester, a member of the committee which spearheaded the drive for the referendum. According to Mr. Tester's announcement of his candidacy, he is strongly opposed to the thoughtless expenditure of hundreds of thousands of dollars of the citizens' money on a useless treatment plant.

Mr. Tester goes on to state that the answer to the problem is to have 100 percent efficient septic tanks to end the Packer Creek pollution problem.

After receiving the order to appear before the pollution board, council's first reaction was to plan a mass meeting of Genoa citizens, particularly those most against the treatment plant, to explain why one must be built.

IDEA COOLS OFF

That idea has cooled off, however, and at its last meeting council said it would invite members of the committee that obtained the referendum to go along on the trip to Columbus. It is not known, however, how many would accept the invitation.

Just what will happen after the confrontation in Columbus is hard to say, at this point. The board, however, has let it be known that if Genoa continues to balk at cleaning up the pollution of Packer Creek, it will step in and force construction of a treatment plant.

The cost of the job would then be assessed on every property owner in the village, possibly without Federal aid or mortgage revenue bonds to lighten the load somewhat.

Public Health Education

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. COHELAN. Mr. Speaker, the Seventh Congressional District of California which I represent is the home of the University of California School of Public Health, 1 of the 11 such schools providing public health training for specialists to staff agencies throughout the 48 States and in many other countries as well.

Extension of the Federal public health traineeship program as provided in H.R. 6325 authored by the gentleman from Alabama [Mr. ROBERTS] is all-important if the University of California School of Public Health is to continue to provide its share of the training of specialists so badly needed by public health agencies in their work on heart disease, cancer, mental illness, radiation and air pollution, and other programs. Dr. Charles E. Smith, dean of our school, reports that most of the students planning to enroll for the 1959 and 1960 school years are depending on Federal stipends to make their attendance possible.

Since the Federal public health traineeship program was started with the passage of the Health Amendments Act of 1956, the number of graduate students at the University of California School of Public Health has gone from 84 to 1954 and 1955 to 165 in the term just ended—an increase of almost 100 percent. It is beyond debate that this Federal program has encouraged more

public health personnel to obtain graduate training.

The support of this traineeship program on the Federal level is only equitable, because the University of California School of Public Health, like its ten other counterparts elsewhere in the United States, is not training just for local State needs, but for the Nation and the world. Of last year's 165 graduate students, 53 were from 28 other States and 22 were from 16 different foreign countries.

Mr. Speaker, in the larger view, H.R. 6325 takes care of only one phase of the problem of meeting the current needs and preparing for future public health programs. Traineeship grants are urgent, but, in truth, a much more comprehensive approach is necessary. Increased enrollment at our schools of public health means that facilities must be expanded, faculties enlarged, and research activities enriched.

The gentleman from Pennsylvania [Mr. RHODES] has introduced another bill, H.R. 6871, which would provide for the sustained, long-range investment in public health education which must soon be put into effect if we are to retrain the thousands of working public health specialists who do not have adequate knowledge of new methods and if we are to encourage new people into the field to fill the vacancies that now exist in almost every public health agency and will occur in even greater numbers in the next few years.

This bill, to which I have introduced a companion bill, H.R. 6872, was based on the recommendations of the 1959 national conference on public health training held here in Washington last July. It would not only extend the traineeship program, but also extend the grant-in-aid program created on a short-range basis by Public Law 85–544 to help meet the costs of expanding faculties and maintaining training programs. It would provide matching fund grants for construction of facilities, separate grants for training of public health nurses, our largest single professional component in health departments, and matching fund grants to States to help them meet public health training requirements.

Today our concern is with H.R. 6325, which I wholeheartedly support, not with the more comprehensive legislation I have mentioned. I do believe, however, that while we are looking at the field public health we should take time to recognize the scope of the problems we face and to realize that before too long we must initiate a long-range program equal in scale to those problems.

The West Never Learns

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times of June 11, 1959:

THE WEST NEVER LEARNS

Nothing is coming of the Geneva Conference except possibly an agreement to preserve West Berlin's arrangements. The West seems likely to make a few minor concessions to remain there.

THE WEARY QUESTION

So the weary question is asked, as it has been asked regularly for 13 years: Why do we confer with the Russians?

The stock answers are (a) that a conference is at least a sort of truce in the cold war and (b) that if the West talks often enough and long enough with the Russians a compromise with communism will be discovered.

The latter answer calls for the kind of patience postulated by the classic example of the operation of probability: If you give an ape a typewriter and plenty of paper and set him to pecking at the keys, he will eventually reproduce the works of Shakespeare.

As for the first stock answer, it has no truth in it. A conference can stimulate cold war by providing communism with an effective sounding board, as has been the case currently at Geneva, or it can provide a screen for Communist subversion, as was the case in the period of good feeling after the summit meeting of 1955 when the Red arms deal was made with Egypt and the Soviet Union emerged as a power in the Middle East.

Our fallacy is that in spite of all our experience, plus the explicit statements of the Communist prophets, we still believe we can negotiate stabilizing agreements with people who are our perpetual enemies. It is the very root of their doctrine that the world cannot be at peace until we are undone and the Communist revolution is complete.

REDS MAKE OWN RULES

The traditional diplomacy of the West sought a balance of power to keep the peace. The balance was never permanent, of course, because the factors of power change with time, but diplomacy was able to give the world peaceful periods. It could do this because it assumed that all the powers, regardless of the tensions among them, thought of war as a last resort and consequently were willing to adjust most of their differences through negotiations conducted in good faith. Statesmanship had rules.

But communism, a revolutionary movement, does not accept the rules of the system. No revolutionary movement ever did. Hitler's didn't; neither did the French revolutionary movement culminating in Napoleon. Because the revolutionaries, most particularly the Communists, reject the rules as a mere defensive device of the conventional enemy, they have an advantage over the conservative adherents to the traditional diplomatic system which is almost impossible to redress. The Communists refuse as a matter of principle to act in good faith, but the Americans, British, and French cannot retaliate by playing the part of confidence men.

Do the westerners really have to play at all? We are back to the original question but without the stock answers. Experience ought to tell us that we never should negotiate for an agreement with communism that we cannot enforce.

Premier Khrushchev's ultimatum on West Berlin united the western allies, which apparently surprised him. His bluff was called: The allies would fight to preserve their Berlin status. A conference restricted to the Berlin issue might have been summoned, the allies' status confirmed and the meeting adjourned. The alternative to agreement would have been war—perhaps. In other words, the agreement would have been enforceable by the allies.

WEST WILL PAY PRICE

As it turned out, the ministers at Geneva went instead through all the complicated steps of the diplomatic mating dance, knowing all the while that this was a barren wooing and giving the Communists a special opportunity to prop up the East German regime and reinforce the satellite system with skillful propaganda. And then the western ministers wavered on the main point—the only enforceable point. Our Secretary of State, Christian Herter, offered the concessions (to suppress anti-Communist propaganda and espionage originating in West Berlin) and so in the end the westerners shall probably be paying at least a token price to stay in Berlin, acknowledging, for Communist propoganda purposes, that they are there only because Moscow permits them to be.

Why, once more, do we do this? Because we steadfastly believe that the Communists are like ourselves, even though they have proclaimed that they are different and proved it by overreaching us for 13 years, from the seizure of the Eastern European countries to the Korean truce negotiations and from Korea to Geneva.

The Communists have declared perpetual war against the private enterprise system, any kind of war that suits the situation. To them a flag of truce means only the chance to shoot the man who carries it. And still our people rush to be flag-bearers. Senator FULBRIGHT, chairman of the Foreign Relations Committee, said on "Meet the Press" recently:

"I think it is worthwhile to go to a summit conference—unless they (the Russians) give evidence of lack of any good faith or any intention to discuss seriously our mutual differences, and I doubt if they have given that impression yet."

H.R. 11 and the Pricing of Canned Foods

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. PATMAN. Mr. Speaker, an editorial appearing in a recent issue of the Canning Trade advances some very practical arguments in favor of H.R. 11.

I am sure that all of the Members of the House are familiar with the revolutionary economic changes that have occurred in the food industry during the past several years and recognize that these changes have served to aggravate the difficulties facing the smaller food merchants struggling to remain in business. In the canning industry rampant price discrimination—the familiar tool of the monopolist—has been the principal affliction and the editorial, reprinted below, shows why H.R. 11 is needed to prevent further deterioration:

MEETING COMPETITION

If there is any one area of agreement within the canning industry, it would surely be found in a general recognition that the pricing of canned foods is the subject of a great deal of rumor. As everyone knows, a fancy isn't a fancy, nor is an extra standard an extra standard, nor a standard a standard. And even when the various factors of quality are officially in agreement, various buyers have their own ideas, creating either a real or convenient difference.

Also as everyone knows, the number of gimmicks connected with the sale of canned foods is limited only by the imagination of the buyer and the degree of anxiety (or necessity) for the sale. There are premiums, advertising allowances, label allowances, swell allowances, immediate shipment allowances, special display allowances, demonstration allowances, dented can allowances, torn label allowances, and so ad infinitum. Not too many weeks ago a U.S. district court ruled that it is legal to add the split-brokerage allowance to this mumbo jumbo.

For these reasons, canners have been fair game for unscrupulous quantity buyers and brokers, as long as there has been a canning industry, especially on a slow market.

In effect, then, the average canner (and many above average) seldom knows whether he is meeting competition, or as he strongly suspects, providing just one more handout to land an order.

The chief purpose of the Robinson-Patman Act was to make it illegal for a specific buyer to own, either through coercion or conspiracy with the seller, a block of goods at a price lower than that available to his competitor. Most reasonable men will agree that any buyer so favored continually might well establish a monopoly. It is self-evident that the Robinson-Patman law has failed to accomplish its purpose. The reasons are equally self-evident—apathetic enforcement, loopholes in the law, the natural bent of canners to court favor with large buyers despite below cost prices, resulting in wholesale violation of the law, especially the brokerage section, and last, but not least, the increasing public favor of the giant supermarket.

If, then, we accept the premise that monopoly is bad for business in general, or in a specific field, then it would mean that measures should be taken to put teeth into the Robinson-Patman law. S. 11 and its companion bill H.R. 11, were designed to do just that. It may be that there are some weaknesses in the amendment, or that S. 726, referred to in the National Canners Association statement appearing elsewhere in this issue, may be wholly or partially objectionable. If so, these should be corrected. But in taking a stand against this amendment and not suggesting substitute action in view of the obvious failure of Robinson-Patman as it is, the National Canners Association, the Wisconsin Marketing Committee, and the tristate legislative committee, put themselves squarely on the side of monopoly—and very definitely in the camp of one customer as opposed to another. In view of the record, the National Canners Association action is not surprising. The action of the local association committees, however, is most surprising indeed, and it seems hardly possible that any of these association committees speak for the membership as a whole.

Why It Is Important to the People of the Third District of Indiana That President Eisenhower Sign the Housing Bill

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. BRADEMAS. Mr. Speaker, the people of the Third Congressional District have a deep interest in seeing the Housing Act of 1959, which was passed by overwhelming margins in both the House and Senate, signed into law.

The bill is now on President Eisenhower's desk and it would be an act of utter irresponsibility and grave disservice to the citizens of Indiana and the Nation if he should veto it.

Here are some of the reasons the housing bill is so important to the people of the Third District:

IKE VETO COULD CAUSE SOUTH BEND FAMILIES TO LOSE HOMES

First. Nearly 350 South Bend families might lose their homes if President Eisenhower vetoes the bill.

These families, members of the Southmore mutual housing project, are threatened with foreclosure for falling behind in mortgage payments on their purchase of this project from the Federal Government. I therefore introduced an amendment to the housing bill to permit the modification of such contracts by the Government in order to give these families a chance to meet their payments, keep their homes, and discharge their debt to the Government.

I am proud to say that Congress included my amendment in the housing bill and so gave the people of Southmore real hope to keep their homes. It is therefore obvious that a presidential veto could mean terrible hardship for nearly 1,500 of our South Bend neighbors.

URBAN RENEWAL VITAL TO THIRD DISTRICT

Second. We are now witnessing in many third district cities and towns—South Bend, Mishawaka, Michigan City, La Porte, Kingsford Heights—the start of programs for the rebuilding and renewing of these communities.

The renewing of our American cities is without question one of the most important domestic challenges facing our Nation. It is in our cities that the great majority of our citizens live and work and where our children grow and play and learn. It is the cities that provide the vast bulk of the money required to keep our Nation strong. Anyone, therefore, who attempts to halt or cut back our vital program of urban renewal in our cities is doing real harm to our country.

I am proud to have been an active and militant supporter of the new Housing Act which contains urban renewal provisions of direct importance to the district I represent.

URBAN RENEWAL: SOUTH BEND

Over the past several years the need for a comprehensive rehabilitation of the city's central business district has become more and more pressing. Not only does the central business district provide a large percentage of the taxable value of the community but its offices, banks, and stores are at the heart of the city. To have a strong and growing community we must have a healthy central business area.

Twenty percent, or $180 million, of the urban renewal funds provided in the new Housing Act may be used for rebuilding areas that are not predominantly residential, areas such as South Bend's central business district. The city of South Bend and the South Bend Downtown Council can, if the bill becomes law, move ahead on this vital task. This same 20 percent provision will also be of great value in helping South Bend to acquire the land needed for a civic center for the community.

An Eisenhower veto of the housing bill would clearly be a serious blow to the citizens of South Bend.

URBAN RENEWAL: MISHAWAKA

Although Mishawaka has one urban renewal project well underway, the needs of that community have been fully studied and found to require additional urbal renewal activities if the city is to rid itself completely of substandard housing.

Three additional urban renewal projects are being held up due to lack of Federal urban renewal funds. With the approval of the Housing Act these projects can be undertaken and the substandard housing in Mishawaka eliminated. With the elimination of this substandard housing it will also be possible to make improvements in these housing areas to insure that they will be good areas in which to live and raise our children. These improvements will include badly needed parks and playgrounds as well as sewers and streets.

An Eisenhower veto would obviously be a serious blow to the citizens of Mishawaka.

URBAN RENEWAL: LA PORTE

La Porte is a community whose economic problems have kept the area on the critical unemployment list for over 50 straight months. The urban renewal program can, in addition to its direct objective of providing better living conditions, offer the local economy a much needed boost.

In the Maple Terrace area of La Porte some extremely poor housing has seriously jeopardized the value of the surrounding housing and resulted in very unsatisfactory housing conditions for a number of La Porte families.

In the first ward in La Porte a section of badly blighted housing is not only adversely affecting the remainder of the neighborhood but is preventing the expansion of adjacent industry that is so badly needed in La Porte.

Failure of the President to sign the Housing Act will mean that blighted housing conditions cannot be effectively eliminated and that significant industrial expansion will be blocked.

URBAN RENEWAL: KINGSFORD HEIGHTS

The closing last March by the Federal Government of the Kingsbury Ordnance Plant was a severe economic blow to the little community of Kingsford Heights. Another disastrous development was the fire which burned to the ground the community's only school. I have just introduced legislation which would give this community rent-free classroom space in a vacant KOP building until the school can be rebuilt.

In spite of its serious troubles, the people of Kingsford Heights have rallied and are undertaking a communitywide urban renewal program. This community has used every ounce of its limited resources in this program. Its suc-

cess depends upon approval by President Eisenhower of the Housing Act.

Failure to approve the act may deal such a harsh blow to Kingsford Heights that the town may never fully develop into the fine community it could with the aid of the provisions of this legislation.

URBAN RENEWAL: MICHIGAN CITY

With the vast industrial expansion expected in the Calumet area of northern Indiana, Michigan City leaders are working feverishly to rebuild and rehabilitate this community so that it can provide the many services and facilities which this industrial growth will require. The magnitude of this community rebuilding job is too much for Michigan City to handle alone. The Housing Act will provide the necessary aid that Michigan City needs to accomplish the task.

Park School area urban renewal project has already been given approval. But the "Patch" and other areas of the city must also be rebuilt if Michigan City is adequately to provide the economic and recreational opportunities essential for this part of our State to realize fully the vast potential of its industrial future.

A Presidential veto would clearly mean a severe setback for the people of Michigan City.

URBAN RENEWAL: PLYMOUTH, GOSHEN, NORTH LIBERTY, LAKEVILLE, AND NAPPANEE

These cities and towns are hard pressed by lack of adequate funds to provide some of the most important types of public facilities, such as sewers. The Indiana State Department of Health has nonetheless insisted that these communities construct sewage disposal systems. Such systems are essential because of the pollution of streams, rivers, and lakes in our district. All of these cities and towns are also forced with serious housing problems.

The new Housing Act will make it possible for these third district communities to count the sewer improvements which they must make as their contribution toward carrying out an urban renewal program. The act will permit such expenditures to be matched 2 for 1 by the Federal urban renewal program and so will enable the sewer and other badly needed public improvements to be realized.

The citizens of Plymouth, Goshen, North Libertry, Lakeville, and Nappanee have an important stake in seeing the housing bill become law.

FHA INSURANCE PROGRAM

Third. The new Housing Act reduces the minimum downpayment required when a family wants to buy a home. This new provision will not only make it easier for many citizens of the third district to have their own homes but will greatly aid the continued growth of the home-building industry which plays such a vital part in maintaining a high level of employment in our Nation.

Every American family that seeks to buy a home would suffer from a Presidential veto.

HOUSING FOR THE ELDERLY

Fourth. There is a rapidly growing need in America for decent housing for our constantly expanding aged and aging population. It is apparent that if our aged citizens are going to have decent housing a sound program, such as the one provided by the housing bill, is essential.

This is a program of Government loans to nonprofit groups to aid them in building decent homes within the economic means of many of our aged and aging citizens who are on meager pensions. It is a great step forward toward the solution of one of the truly serious domestic problems facing our Nation.

Here in our own district there are, particularly in St. Joseph and LaPorte Counties, citizens' groups devoting themselves to finding answers to this problem of housing the aging.

With this provision of the new Housing Act these nonprofit groups in our district can for the first time help provide our aged people with homes within their economic means.

If President Eisenhower vetoes the bill, our older citizens will have lost a great opportunity.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

Fifth. The Federal National Mortgage Association, which makes it possible for our local banks, building and loan associations and other lending institutions to make additional home loans so that more Americans can own their own homes, has been greatly strengthened by the new Housing Act. This provision will also help in maintaining a high level of home construction in our country.

The majority of Americans who borrow to buy their homes as well as the entire home-building industry will be in real trouble if President Eisenhower fails to sign the bill.

Mr. Speaker, at this point in the RECORD I should like to insert an excellent editorial entitled "Why Veto Housing?" from the Washington Post of June 25, 1959. The editorial follows:

WHY VETO HOUSING?

In the office of Budget Director Maurice Stans hangs a framed, one-word question which, he has said, expresses his notion of what his job is all about. The question is: "Why?" Before Mr. Stans sends off his threatened recommendation to President Eisenhower that he veto the omnibus housing bill, we hope he will take time to ask that question of himself. For why, indeed, should Mr. Eisenhower reject so modest a measure? Congress has come a very long way to meet him on the housing programs, authorizing much less than the mayors of the country's slum-ridden urban areas believe to be necessary and much less than both the House and Senate have shown they are prepared to vote. The bill provides no more than is required to keep existing programs going at a slow pace.

Mr. Stans concedes that the impact of the omnibus bill on next year's budget would be very small—about $70 million more than the $77 billion budget calls for. His concern is with future years. About this there is much misunderstanding. For urban renewal, the major spending program covered by the omnibus bill, the President asked for $1.4 billion for 6 years. Congress has voted $900 million for 2 years. But in neither case would the money actually be spent evenly over the number of years specified. Urban renewal funds are committed as long as 5 years in advance of expenditure, and the actual outlays from any year's commitments may be spread over several years. Thus the added impact of the congressional proposal is likely to be very slight indeed on any year's budget. And the $900 million provided would make no more than a dent in the total urban decay problem.

The President asked for no new public housing authorization. Congress voted to authorize a scant 45,000 units which would probably be spread over a long period if recent experience is any guide. The District of Columbia alone could use a fourth to a third of that authorization in the next 3 or 4 years if its approved plans for slum eradication in the near-Northwest and other areas go forward on schedule. Measured against the Nation's need for subsidized low-rent housing, the authorization is little more than a gesture.

The omnibus bill carries other features about which there is no argument, including $10 billion in new insuring authority for the Federal Housing Administration which the President favors. A veto would mean that separate legislation for the FHA would be needed. It is conceivable that, having gone so far to meet the President on housing programs generally, Congress would balk at being asked to provide the FHA authorization separately. The result could be a disastrous slowdown in home building which has been a large factor in the economic recovery.

If Mr. Stans can somehow satisfy himself that a veto is called for, we hope he will at least send along with his recommendation his response to that framed question, "Why?" For surely Mr. Eisenhower will wish to weigh most carefully the wisdom of calling a halt to the Nation's attack on urban decay.

Cross Country With the On-to-Oregon Cavalcade—VIII

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following story from the June 25, 1959, Drain (Oreg.) Enterprise. It contains the eighth part of the daily diary accounts of the On-to-Oregon Cavalcade being written by Rudy Roudebaugh, of Drain. This account covers the days of June 8 through June 19. The cross-country modern pioneers are well into their third month of travel.

The Oregonians have met many people en route. Senator GALE MCGEE, of Wyoming, visited the wagon train on June 12, along with Gov. J. J. Hickie of Wyoming.

The article follows:

WAGON TRAIN STARTS THIRD MONTH ON OREGON TRAILS; TWO PIONEERS LEAVE

(By Robert Rudy Roudebaugh)

June 8, 8:43: We are still together and rolling westward. Old Doc is feeling his oats this morning. He's spooked at everything he sees and hears. 10:01: Stopped to take the bedding and feed out of the big truck. 12:38: Stopped for lunch. The mules drank two buckets of water and half of their feed. We will be 19 days from any towns and no trees—it will be hot. 1:30: Starting out again after lunch. We are really out in the

sagebrush. 3:17: Stopped to camp on the Stanford ranch.

June 9, 6:10: Here we go. Two months ago we left Eugene for Independence, Mo. Jan got a new shoe on her left hind foot. The Indians came twice last night and raised cane. Our mules were tied to the wagon and they almost pulled our wagon over.

We are 21 miles from Casper way up in the sagebrush. About five carloads of Oregon people found us. It was like old homeweek. 6:37: Had to stop and pick a good sized rock out of Doc's shoe. 9:08: We're pulling the steepest grade yet. 11:20: Ready to make camp and we are still on Stanford's ranch. The wind is blowing.

June 10, 6:55: Ready to roll. Talk about cold, the wind goes right through you, but the sun is up bright so I hope it warms up. My wife, Ki, watched horses being shoed for the first time last night. 6:08: We are leaving camp. Janell slept out last night, but came into the wagon this morning. I guess she didn't get much sleep as it was so cold. All we can see is sagebrush. No cars, once in a while a cowboy. We can see the foothills of the Rockies.

We left the North Platte River at Casper for the last time. You drive for miles between ranches. This is our third day on this ranch. We are in the arrowhead and rattlesnake country. 7:19: Right on the the trail. 8:20: We're crossing an oil road. Janell slept for the first 2 hours and Ki the last 2 hours. We are coming to the Tom Sun ranch. It's half on the Sanford's ranch, Independence Rock, and that's where we're making camp. 11:04: I don't know if I mentioned this before, but we are getting up now at 4:30 and leaving at 6 because of the heat.

The wind blows every day and goes down at night. Feels like the wagons are going to blow away anytime.

June 11: We are going along the Sweetwater River on Tom Sun ranch. 6:59: Have to wait again for Roy. Ki is on cook shift again for 2 days. The sun is out bright today with no wind this morning. 7:04: We are on the oil going west about 4½ miles an hour. Going over Sweetwater River. 7:30: Rock Creek. 7:36: Pet Creek. 7:46: Pull off the oil onto a trail. I can see Split Rock dead ahead. 8:25: Cherry Creek. 10:24: Stop to feed and eat. Doc and Jan drank two pails of water and ate their grain. 1:00: We are stopping for the night on Bill Crane Ranch, which belongs to Bill Griep now. This ranch also is along Sweetwater River.

June 12, 6:01: Left camp at Bill Grieffen's ranch. A photographer from Lawrence, Kans., rode with me taking pictures out of the front and back of the wagon. 6:32: Passed by Split Rock. 7:51: Hit the oil road again. Ki is on cook shift today. 10:08: Stopped to feed mules and eat lunch. Both mules ate and drank real well: 10:56: On our way, can see Wind River Range all covered with snow. 11:23: Pulled out alongside of road to meet Senator GALE MCGEE, of Wyoming. He flew to meet us in a helicopter. Like Gov. J. J. Hickle, he was introduced and shook hands with everyone on the wagon train. I gave him some letters from the Drain mayor to give out. He wished us a happy trip to Oregon. 11:44: Westward ho again. 12:40: Arrived at camp on Beulah McIntosh Ranch. Ray Van Valeck, Jackson Hole, traveled this trail 60 years ago. When he traveled and met a wagon going the other way the first thing he'd ask them about was water and feed. Ivan Hoyer rode with me this afternoon and drove the mules. This was his first trip on a wagon. Elevation 6,100 feet.

June 13: All hooked up and waiting to go. Talk about mosquitos; they are big and thick, but thanks to Betty Anderson of Yoncalla, we have some repellant to take care of that. 1:04: We are on our way. It's a beautiful morning. We are traveling on the highway today. We were camped last night 1 mile from a place called Home on the Range. It's 2 years old and population 1,000. It grew overnight (uranium). They sure were nice to us. Free laundry and all our meals and opened the pool for the children. This Buelah McIntosh is really a person. She is 71 years old. She can ride and outshoot any man around here.

This place is lousy with jade. Gail Carnine found a piece of black jade weighing over a pound. Ki went and visited some people that were loaded with it. They told her they got $40 a pound for it. The ranches here are the size of counties in Kansas and Nebraska. 6.43: Crossing Grams Draw. 7:48: Passing H. D. Culver ranch. Janell and Ki are both asleep in back of the wagon. 8:07: The wind is coming up again today. At least it keeps the bugs away. 8:17: Ice Slough, only bridge I've seen with water running under it. 9:32: Ki has finally got up. 9:59: Stopped for lunch and feeding the livestock. Janell must have smelled lunch, she is crawling out of the wagon.

Windy River Range is still in front of us and it's snowcapped. It would make a beautiful picture. 10:32: Hooked up and ready to go. Guess somebody isn't ready. We only have 3 miles to go before we make camp. 10:49: We are on our way again. 11:40: This is Government property that we are on for the weekend, right on Sweetwater River. (It's a rodeo grounds.) Fine place to keep the mules.

June 15, 6:01: Hooked up and ready to go. The sun is out bright and no wind for a change. 6:09: We've taken off. We have about an hour's ride on the highway and then will be on the trail for the next 3 days. 6:14: We just crossed the Sweetwater River, which seems to have plenty of water. In this country water means a lot to them.

We sure had a nice weekend. The Hole in the Wall Club from Cody, Wyo., came and fed us a buffalo dinner and put on a square dance. Then had a bandit raid throughout camp screaming and shooting guns. Ki and Janell got under cover and the rest of us shot it out with them. 6:45: We are leaving the highway going southwest going around Windy River Range. 8:34: Ki had to get out to walk. 11:02: Stopped to water, feed, and eat. 12:11: On our way again. 1:10: We have come 20 miles now. We have been pulling some long hills. We have to stop and rest the horses about every 15 minutes. 1:48: We are on the top of the ridge. 2:08: Now in camp at Upper Diamond Springs. Made 22 miles today. Mrs. Lowell Blair of Sheridan had to leave the wagon train because of asthma.

June 16: We had rain last night, but the sun is out bright this morning. Only four cars in camp last night. 6:18: Leaving camp. Getting closer to Windy River Range. We are getting a pretty cold breeze from it. Elevation 7,200 feet. We should get on the South Pass by camping time today. 7:52: Forded across Strawberry Creek. 8:20: Stopped at a 1856 memorial of Mormons. In 1856, 13 Mormons froze to death one night, 2 next day. Before help came 77 had frozen to death out of 404. This place is Rock Creek. Still a little snow. 9:24: Just went through a ranch. In fact, right through the barnyard. The whole place was made of lodgepoles. In this part of the country they use lodgepoles for construction. 11:52: We have been going over nothing but rocky ground for the last hour and 45 minutes. We are on a rimrock ledge. We can see all over. It is a real sight. 12:16: We are stopped for the day above Sweetwater River. Elevation 7,700. South Pass City is 1 mile downhill. It is a ghost town now. Formerly a gold-mining town of about 15,000 population. They had an old museum, cafe, and bar and a few log cabins. They are having a dance for us tonight.

June 17, 5:51: All ready to go. 6:01: Heading southwest, smooth gravel road. The sun is shining bright and no wind. 6:42: This sure would have been a beautiful campsite here at Fish Creek. It beat the place we had to stay last night. The wind about blew us away. 7:06: We are now on top of the Continental Divide on South Pass—also beginning of Oregon Territory. 7:49: Sheryl Carnine and Janell just got up. Sheryl has been sleeping in our wagon since we have had good weather. 8:37: Crossed the Sweetwater River for the last time. 9:36: Crossed Pacific Creek. 9:56: Stopped for lunch, but decided to go into camp instead. Mike Speckt rode with us this morning. 11:24: We just passed the parting of the way. That's where the Oregon-bound wagons went their way and the rest went to California. It has a new monument put up in 1956. It was a sad day when they made that big break, knowing all the hardships they had and they probably would never see each other again. 11:39: The Fremont County Posse met us and escorted us into camp. They gave us lunch at 11:59. Made 25 miles today. There were two Indian tribes here today and they danced and danced. The men had to smoke the peace pipe with them. The historical society gave us each a piece of jade. The New York Life Insurance Co. gave us each a keychain with a piece of jade on it.

June 18: I have a pretty view of Windy River range from the front of my wagon. It is the highest point in Wyoming, 13,785 feet. 6:07: Turned southwest on Highway 28. 6:18: Leaving Sublette County, entering Sweetwater County. Out in the open today and very low sagebrush. 7:31: Janell and Sheryl got up. 9:25: Nine miles to Farson. Janell is driving and Ki is on cook shift. 10:55: Crossing Eden Canal. Farson is a new irrigation country which has developed in the last 10 years. Population, 400. 11:40: Stopped to make camp. We have a nice place to stay. We were sent a cake from Lebanon, Oreg., baked by Claude Durlam's Bakery and Mr. and Mrs. Luther Bennett drove out with it from Oregon.

June 19, 6:06: Leaving Farson. Heading west on 28. We have an east wind this morning. Kind of hazy out. Also chilly. 6:12: We are crossing the Big Sandy River. 6:22: Left the oiled road and on gravel. 11:52: Stopped for the day. We made 20 miles today. The Cavalry came in about 3 a.m. to stay the weekend with us. They came from Cheyenne. They are the Governor's First Guards. Janell, Ki, and I were making a movie. We are a couple that is dying of fever, and the wagon train comes along and helps us. It will be pretty good, I think. We have not been able to give many of the Drain letters away since we left Casper because we have been off the beaten path. Today we have been on the trail for 2 months.

June 20, 6:03: Starting out on our third month this morning, and all is well. The Cavalry stood at attention when we left camp. We really have made friends with them. This makes about three different visits they have been with us. In fact, they may show up with us in Oregon.

We can see our campsite for tonight—19 miles away (trees along the Green River). When you see a tree on this desert you feel like you are getting close to home. This is the Red Desert. It has very little vegetation. Almost as bad as the badlands. Janell is getting a big collection of rocks. She spends all her time hunting for them. Today she was riding on the tailgate of the Roseburg wagon with her friend Sheryl. 8:39: The moviemakers are here. Our wagon is one of the two they are using. This show is featuring the Carnine family of Camas Valley. 9:41: The wagon in front is having trouble. Lowell Blair has left the wagon train to join his wife in Sheridan.

Statement of Brig. Gen. Bonner Fellers

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. DORN of South Carolina. Mr. Speaker, I commend to the attention of the Congress the following excellent statement by Brig. Gen. Bonner Fellers:

STATEMENT OF BRIG. GEN. BONNER FELLERS, U.S. ARMY, RETIRED, NATIONAL DIRECTOR, CITIZENS FOREIGN AID COMMITTEE, BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON FOREIGN OPERATIONS, WEDNESDAY, JUNE 24, 1959

Mr. Chairman and members of the committee, for the privilege of appearing before you, I am grateful. My name is Bonner Fellers. I am a brigadier general, U.S. Army, retired. I have been graduated from various Army schools beginning with West Point and including the War College. For 2 years, 1940–42, I was the U.S. observer of combat with the British forces in the desert campaigns in Libya. From 1943 to 1946, I was on the staff of General of the Army Douglas MacArthur. My duties included chief of joint planning and military secretary to General MacArthur. Today I appear as the national director of the Citizens Foreign Aid Committee.

On March 16 of this year, our committee published a 32-page pamphlet, "Foreign Aid and You—A First Report." Some quarter of a million copies have been distributed across the Nation. With less than a dozen exceptions, the reaction of the American public has been overwhelming favorable.

The executive branch of our Government, however, has disputed practically every line of our report. The tone of the opposition is malicious; it has been set forth in an unauthenticated April 27, 1959, committee print, printed for the use of the Committee on Foreign Affairs, entitled "Report on the Mutual Security Program" by the Citizens Foreign Aid Committee and comments supplied by the Department of State, the Department of the Treasury, the Department of Defense, and the International Cooperation Administration.

Today I propose to present a few of the many fallacies in the unauthenticated comments by the executive branch.

FALLACY NO. 1: THE EXECUTIVE BRANCH SUPPORT OF A PERMANENT AMERICAN GARRISON FOR EUROPE

Our committee report held that our Government should announce it is not our policy permanently to garrison Europe and that our garrison in West Germany should gradually be withdrawn and replaced by European NATO troops.

To this proposal the executive branch, at three different places in its comments implied that our oversea bases and troops were necessary, among other things, to man advanced early warning facilities beyond the continental limits of the United States. "European NATO forces contribute very heavily to this concept," the executive branch argued.

The facts are:

A principal threat to the United States is from Soviet bombers and missiles flown over the polar cap and aimed at our military potential. The bases for these weapons lies in the Soviet Arctic. In the enemy's flight over the polar cap en route to attack us, NATO troops and installations are not even on the enemy route of attack. They could provide no warning and have no such assignment.

Our distant early warning systems against Red bombers are located in the Western Hemisphere. They extend from Labrador to Alaska. They do not require the American oversea troop deployment which is now in effect. The new warning systems against missiles, one at Thule, Greenland, and one at Clear, Alaska, are also in this hemisphere. None is in Europe or Asia.

Whatever may be the reasons for the executive branch desiring American garrisons in Europe, the American people have the right to expect that the basis for the reasons given be entirely factual.

FALLACY NO. 2: THE EXECUTIVE BRANCH SUPPORT OF FOREIGN MILITARY ASSISTANCE

The recent changes which have taken place in war require that one must take care not to permit his image of the next war to become a reflection of past wars.

Decision in the next major war will not be reached by conventional surface forces. It will come from the sky. Five or fifty or no American divisions in West Germany would make little difference militarily. Our five divisions now in Germany, or lack of them, could not influence the decision being reached in the sky.

In this age of air-space-nuclear war, in which weapons systems can destroy any target on earth, only two powers, the United States of America and the U.S.S.R., possess what one might call an independent military capability. Lesser powers and even Britain, France, Germany, and Japan do not have a modern independent military capability.

This means that should the Soviets attack the United States with bombers and intercontinental ballistic missiles (ICBM) flying over the polar cap, and from intermediate range ballistic missiles (IRBM) fired from submarines off our shores, our allies would be powerless to extend material assistance. They have not the military means to prevent Red air and space attacks against us. They have insufficient surface forces seriously to threaten the Red army. The NATO IRBM program has all but failed. Britain is emplacing four squadrons of IRBM. Italy has has agreed to accept a limited number of IRBM. Turkey is eager for the IRBM but has not the technically trained men to handle it. All other NATO powers have turned thumbs down.

Not only are our allies unable materially to assist in the defense of the United States, they are unable to protect themselves even with our contemplated military assistance program. It is therefore naive for the executive branch to claim that "the continuation of the military assistance program is vital."

The Congress is also being asked to extend military assistance to South American countries. But South American forces are neither equipped nor in a position to assist in the defense of the Western Hemisphere against air-space-nuclear attack. What the South American countries need is adequate internal police protection, which certainly they themselves can afford.

The same is true of the south Asian countries. Their greatest need is internal security. After more than 10 years of American foreign aid, surely these countries should be able to provide their own internal protection. They can never be strong enough to defend against a Communist air or ground attack. They have neither offensive desire nor capability. Our military assistance to these lesser powers should terminate now.

The European NATO powers, whose economy is flourishing, should be free to take such defensive measures as they deem necessary. However, there is one category of military assistance which we must not terminate. In areas which we are morally obligated to defend and which are directly threatened with Red aggression, we should—for the time being—continue military assistance. South Korea, Formosa, and West Berlin are examples.

The U.S. Strategic Air Command (SAC) is our principal defense. SAC extends protection also over the entire free world. It costs the United States many billions of dollars annually to maintain SAC. Surely, it is not asking too much of our allies to provide such local defense as they can afford.

FALLACY NO. 3: THE EXECUTIVE BRANCH CLAIMS THAT "THIS STATEMENT (THAT THE UNITED STATES CAN SURVIVE WITHOUT EUROPEAN AND ASIATIC ALLIES) IS CLEARLY BASED ON THE LONG DISCREDITED ISOLATIONIST CONCEPT OF FORTRESS AMERICA"

Our committee has indicated no inclination to repudiate treaties or to abandon our allies, or to permit the Soviets to take over the free world. We stand uncompromisingly for free-world defense with principal reliance on the air-space-nuclear striking power. SAC, today, is the only military force in the world which the Kremlin fears. With such totally destructive striking power at our disposal, the Soviet Union is unlikely to start a war. But if war came now, we could win quickly and decisively.

Today, the United States alone is providing the entire free world with the protection of the greatest known war deterrent—SAC, and so long as SAC is superior to Red strategic power, our deterrent is likely to continue effective.

With intercontinental bombers and intercontinental ballistic missiles in the hands of both the Soviets and the United States, the terrific striking power of these two colossi is only hours and minutes apart. Thus it is foolish to speak of isolation for the United States.

Modern technology has made isolation impossible. In the next war there will be no place to hide.

But if war should be thrust upon us, it is likely and it is militarily sound that the Reds will bypass Europe and strike directly against the United States and our overseas bases.

Unless attacked, our European allies might be inclined not to strike the Soviet Union but rather to be neutral. If not attacked European NATO powers could hold their weapons in reserve, just in case the Red attack against them might come later. Most certainly, to remain neutral and hold their fire would be a human reaction.

Should war come, it is to be hoped that our overseas bases would be available. However, the sound military planner knows these facts:

1. Overseas bases are more susceptible to ground sabotage than those in the Western Hemisphere.

2. The host country—when war is imminent—may, in the hope of survival, seek neutrality and thus deny us the use of its bases.

3. Bases most vulnerable to Soviet air and missile attack are those nearest the Soviet Union.

These two possibilities, neutrality and unavailability of bases, may leave us little choice other than to depend upon North American air and missile bases. Thus, the internationalists, whose passion is worldwide collective defense, may in the end, through force of necessity, be maneuvered into what they sarcastically call "the long discredited isolationist concept of Fortress America."

FALLACY NO. 4: THE EXECUTIVE BRANCH ARGUMENT THAT THE ARMING OF OTHER FREE NATIONS DOES NOT WEAKEN OUR OWN DEFENSE; IT GREATLY STRENGTHENS IT

The Red forces of the Soviet Union directly threaten the United States. There are three fearsome nuclear threats: from bomb-

ers flying over the Polar Cap, from ICBM fired over the Polar Cap, from IRBM fired from submarines.

Neither our allies nor our overseas troops have the capability of influencing these possible attacks. They can only be met by our forces, air power, missiles and the fleet. Only Americans can defend America.

Since World War II our military position in relation to that of the Soviet Union has changed so radically that a quick outline of events is indicated.

Our early postwar policy of containment of the Soviet Union was never a practical solution because of its almost interminable perimeter. However, until three or four years ago, with our strategic striking force, we possessed the ability to devastate the Soviet Union. The troops we sent overseas and the foreign aid we extended most certainly did not protect the countries concerned, yet our so-called investment in peace was not entirely thrown away because we had an effective war deterrent to protect it.

With this superior strategic striking force, we could safely participate in war and keep it local. Korea is the example.

Today, however, the Soviets have a strategic air force and a nuclear bomb stockpile which could inflict prompt and crippling damage anywhere on earth. In addition, the Soviets are building a missile force which in 2 or 3 years will be able to inflict instant and irreparable destruction against us and the free world before we could possibly retaliate with our long range bombers.

Therefore, it is wholly futile for us to extend surface aid to perimeter areas about the Soviet Union unless we have a superior strategic striking force in the United States. Unless we have such a force, it is obvious that the enemy could destroy the free world, even if our perimeter forces were to hold the line.

It is an awesome fact that within 2 or 3 years the Soviet strategic striking force will be equal and possibly superior to ours. Here are the facts, well known in Pentagon:

1. Three years ago the Soviets were producing intercontinental bombers—Bisons—at a faster rate than were we producing our B–52. At that time it appeared that by mid-1959 the Soviet's strategic bomber strength would have exceeded ours.

2. Today, however, Soviet Bison production has been slowed down so that our Strategic Air Force retains its supremacy over the Red Air Force.

3. Meanwhile, the Soviets have produced and tested the ICBM. Their facilities for production of this weapon, in comparison to our ICBM production program, are such that in 2 or 3 years the Soviets may enjoy an ICBM advantage over us in the ratio of 3 to 1.

Should this situation be allowed to eventuate, in 2 or 3 years the Soviets will have achieved ascendancy over us in strategic striking power. In this event, there is no successful strategy for us and our allies. A prerequisite to a successful strategy, both military and political, necessitates a superior American strategic striking force.

In less than 3 years, should we permit ourselves to be relegated to second place in strategic striking power, we and the free world will be at the mercy of the Kremlin dictators who are wholly without compassion. Unless we yielded to their demands, we and the free world would be open to attack and destruction.

It is obvious that the Soviets would attack us first rather than risk being struck by us while they were attacking other free world powers. During a strike against us our allies have no adequate means of coming to our rescue. They will be forced to seek neutrality or face destruction.

Each year the Soviet capability to destroy us grows because their strategic striking power is increasing faster than ours. Consequently, for our own defense and that of the free world, a vast major portion of our military resources must be put into building the best long range air and missile force in the world.

Without such a striking force, no matter how much military assistance we may extend to our allies, it will all be entirely futile.

Our strategic striking position in 2 or 3 years will be so precarious that we must start now materially to strengthen and augment our Strategic Air Command.

The question arises, Why have we not already started? The answer is—principally—we have not the funds.

Despite the fact that we have not the funds adequately to arm ourselves, the executive branch argues that "the arming of other nations does not weaken our own defense; on the contrary, it greatly strengthens it."

This statement is untrue. How can military assistance to free nations defend us against our only direct Red threat, an air-space-nuclear attack. This arming other free nations to strengthen our own defense has been preached so long and often that perhaps those who preach it have begun to believe.

Gen. Thomas S. Power, Commander of SAC, has protested the slim rations being allocated to his command. He has no operational ICBM. He warns that SAC is wearing out and we must start increased replacement now, but he has not the necessary funds. Yet you gentlemen of the Appropriations Committee are being urged not only to continue but to increase foreign military assistance.

At this point, I wish to inject another sinister situation into the defense picture. The report is authentic.

Recently our foremost intelligence experts have disclosed that in basic research having military application, the Soviets are making more rapid progress than is the United States. The more rapid Soviet progress results from their expenditures of unlimited money and effort on research within the Soviet Union. Our failure to make comparable or better progress is due to the fact that we are wasting our funds on various global projects rather than on basic military research within the United States which would eventually produce decisive weapons of the future.

If we and the free world are to survive, remedial action must be taken now to correct the following:

1. SAC, superior today, is wearing out. It needs more intercontinental bombers, more jet tankers, more dispersal areas, bomb proofs and a vastly stepped-up ICBM program. Funds are not available.

2. We are already in second place in basic research which has military application. Funds are not available to correct this lag.

This is no plea for more overall defense expenditures. Rather it is a plea for economy in defense. Remedial action can easily be effected by paring the budgets of our surface forces which are no longer decisive and by reducing foreign aid now by $2 billion. The savings thus made are more than sufficient to maintain American ascendancy in intercontinental bombers, missiles, and basic research.

Gentlemen of this committee, a good part of this most essential remedial action lies in your hands.

Thank you.

Resolution on TVA Bonding Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. BROOMFIELD. Mr. Speaker, I would like to call the attention of my colleagues in both the House and the Senate to a resolution recently adopted by the Michigan State Senate in opposition to H. R. 3460, the TVA bonding bill. This bill is due for early consideration on the floor of the Senate.

Following is the resolution:

SENATE RESOLUTION 71

A resolution relative to the Tennessee Valley Authority

Senators Steeh, Feenstra, Younger, Rozycki, Beadle, Christman, Fitzgerald, Lodge, Dehmel, Francis, Minnema, Prescott, Graebner, Stephens, and Hutchinson offered the following resolution:

Whereas the Tennessee Valley Authority, hereinafter referred to as TVA, was organized by act of Congress for the primary purpose of controling flood waters in the Tennessee Valley and the numerous streams tributaries thereof, and its incidental purpose was the generation of electric energy; and

Whereas TVA is now the largest thermal generating electric system in the world, with a generating capacity of approximately 10 million kilowatts and proposes to add substantial amounts to serve new territory, and with gross revenues during its fiscal period ending June 30, 1958, of $233,548,000; and

Whereas Congress has appropriated the aggregate sum of $1,200 million to TVA, of which approximately $100 million came from the State of Michigan through the payment of Federal taxes by citizens of this State; and

Whereas TVA, although engaged in a nongovernmental function, has not paid any interest upon the sums so appropriated by Congress, and its customers get the benefit of such subsidy; and

Whereas TVA has not made payments to the Federal Government to liquidate its indebtedness in accordance with the provisions of law; and

Whereas TVA in the generation of electric energy cannot be said to be engaged in governmental business, but rather in a nongovernmental business and in direct competition with private utilities, and as such should be compelled to pay the same taxes, be they Federal, State, or local, that any private business must pay; and

Whereas the said TVA is subsidized by the Federal Government, including the taxpayers of the State of Michigan, because it does not pay any Federal income taxes, and as an instrumentality of the U.S. Government it cannot be compelled to pay any State, local or any other Federal taxes, except those it may volunteer by negotiation or otherwise, to pay; and

Whereas these tax-supported subsidies enjoyed by TVA enables it to sell electric power at prices far below its actual cost and to sell such cheaply generated power at rates 30 to 50 percent below those which must be charged by private industry, and which when combined with the substantially lower labor rates prevalent in the same service area, gives to that area a tremendous competitive advantage which caused many industries to move to that subsidized area; and

Whereas TVA has caused to be introduced H.R. 3460 now before the U.S. Senate, the purpose of which would be to authorize TVA to issue revenue bonds for the purpose of further expanding its system in an amount not exceeding $750 million, the income from which will be exempt from any income tax and thereby affording the basis for further competition with private industry; and

Whereas the existence of the foregoing subsidies (freedom from income taxes, or interest, property taxes) was made apparent in a speech before the American Power Conference by TVA Chairman Herbert D. Vogel on March 21, 1956, at which time he said:

"A number of factors, aside from taxes, interest, and profit are favorable to lower power costs in the Tennessee Valley region, and it is upon those that I shall attempt to focus attention. Nevertheless, I cannot ignore the very real advantage accruing to any system which operates for minimum earning rather than normal profit and which is not required by law to pay interest on its obligations or income taxes to the Federal Government. In all fairness, it must be admitted that these result in consumer advantages not enjoyed by customers of private power companies. Any talk about establishing a measure for the cost of power without reference to these factors is, of course, absurd."; and

Whereas in recent years various civic and quasi-governmental bodies within the service area of TVA has visited cities in the State of Michigan and again this year with well-prepared advertising, solicited Michigan taxpayers to locate their business or industry within the service area of the TVA, advocating as an inducement the lower electric, but subsidized, power rates of the TVA, which places the citizens of this State at a distinct disadvantage; and

Whereas the press of this State has rendered a distinct public service and for which it should be complimented, when it published this grossly unfair and inequitable subsidization of TVA, upon the basis of which those resident in the TVA service area now solicit the employers of labor in Michigan to remove their business to that service area because of lower electric rates, lower labor rates and other lesser reasons, all of which would not otherwise have been called to the attention of the public or otherwise given the attention such preferential treatment deserves: Now, therefore, be it

Resolved by the senate, That its members record their objections to H.R. 3460 and recommend to the U.S. Senators elected by the people of this State, that they cast a negative vote against H.R. 3460, unless H.R. 3460 is amended to provide for the following:

1. TVA shall be compelled to charge such rates as the Federal Power Commission may determine adequate to permit of the repayment to the U.S. Treasury over a period of not more than 40 years of the aggregate of all sums appropriated, together with interest thereon, computed annually at a rate which will reflect the average interest cost to the Federal Government upon such borrowings by it in excess of 10 years; and

2. Any securities issued by TVA when authorized by Congress shall be subject to Federal income taxes; and

3. The assets of TVA shall be subject to tax by State and local units of government within which such assets might be located; and be it further

Resolved, That copies of this resolution be transmitted to each member of the Michigan delegation to the Congress of the United States.

FRED I. CHASE,
Secretary of the Senate.

Adopted by the senate, July 2, 1959.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, foHowing is my newsletter of July 4, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

Congress' legislative boxscore shows the House well along in the year's necessary work, while the Senate lags behind. True, many controversal issues remain, including depressed areas aid, Federal education aid, labor reform, minimum wage, unemployment compensation, and civil rights, these in addition to those bills not yet signed by the President though passed by House and Senate, such as the housing bill. Yet the basic work, the appropriation bills (except for foreign aid and military construction) have passed the House. The Senate has five appropriations to go (defense, foreign aid, military construction, public works, and supplemental). These, too, could be accelerated, if the Senate leadership chose to do so.

The real question is, how many of the controversal issues will be taken up this year or allowed to go over until the 2d session of the 2-year 86th Congress, remembering that 1960 is a presidential year and several Senators are trying to build records for campaigning. A most significant development of this Congress has been the effectiveness of the President's threat of a veto tied to the fiscal responsibility of a balanced budget in stopping the big spending liberals right in their tracks. The mood of the citizens is causing the spenders to think twice before insisting on deficit spending as a cure for every pain. Congress could well be in session through Labor Day, or later, while the leadership tries to create and develop some campaign issues.

The Korean war corporate and excise tax extension came back to the House for a vote after the House and Senate conferees met, and two Senate amendments were adopted. The Senate added amendments that would (1) cut the transportation tax in half, and (2) repeal the Federal tax on local telephone service, both tax cuts to take effect July 1960. Well, here were two very popular tax cuts which everyone would like to remove. But look at the facts. First, both these tax cuts were not related in any way to the Korean tax extension but were added by the Senate. The Constitution specifically states that all tax matters must originate in the House. What would you do on such a vote? Many constituents have urged these tax cuts, yet they come to us posing this problem of constitutionality. What's the right course, and is it the same as the political course? Further considerations included: (1) It hardly seems praiseworthy to propose tax cuts when (a) we are already $1 billion in the hole this year, and (b) programs passed this year carry $2.5 billion more spending next year when these tax cuts would take effect. It simply shows Congress is not yet disciplining itself to living within a balanced budget and Congress will not do so, I predict, unless we have a constitutional amendment forcing us to do so, or unless revenues soar faster than expected (so we couldn't have spent that, too).

The labor bill controversy continues unabated with daily semantics and committee performances replacing, but not burying, the earlier exposures of the McClellan Committee of racketeering, abuse of power, violence, corruption and graft—at the expense of the public and sometimes the union members themselves. Consider these related items: (1) A union worker's bill of rights—guaranteeing to the worker free speech and assembly, the right to sue, freedom from arbitrary dues and assessments, and safeguards against disciplinary action—was voted down by the Senate, but we all know the workers deserve these protections; (2) union power has come from Federal laws, (not collective bargaining); (3) a real struggle is taking place between union leaders and union members; (4) the racketeering exposures before the McClellan committee brought a flood of mail from rank and file union members asking for legislation correcting labor leader abuses of power; (5) racketeer picketing and secondary boycotts can destroy our economy, as can price control by union action; (6) employer and industry collusion with labor unions is frequent and detrimental, for example, to the public in price control, to the union member, whenever the national organization takes away his local bargaining rights through pattern or industry-wide bargaining.

So I introduced H.R. 8003 to offset the present immunity the labor unions enjoy from antitrust law. Providing injunctive relief, rather than criminal penalty, this bill, if adopted, would bring relief from the two distinct ways union monopoly manifests itself: (1) Restrictive trade practices such as price fixing, restrictions on use of new processes, exclusive of products from the market, etc. Example: A milk drivers' union can establish fixed price list for milk and force local dairies to conform, under penalty of drivers' strike, thus fixing prices; same price-fixing forbidden employers under antitrust laws; (2) enforcement of wage demands through industry-wide and pattern bargaining practices. Example: Local unions may enforce demands by traditional economic weapons of bargaining and striking. That's all right, but nationwide or areawide racketeer picketing, and secondary boycotts, regardless of the economic harm to the public, become an unlawful restraint of trade, which this bill would prohibit. In a nutshell this bill would simply subject unions to the same ground rules already applicable to business enterprises.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Independence Day Address by Hon. Ernest Gruening, of Alaska

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. SCOTT. Mr. President, on July 4 I had the honor of presenting to the city of Philadelphia, at Independence Hall, the flag bearing for the first time our 49th star. It has been 37 years since we have celebrated such a momentous occasion.

Philadelphia welcomed as its principal speaker of the day the distinguished senior Senator from Alaska, Mr. ERNEST GRUENING.

I ask unanimous consent to have printed in the Appendix of the RECORD the full text of Senator GRUENING's Independence Day address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INDEPENDENCE DAY ADDRESS BY SENATOR ERNEST GRUENING, OF ALASKA, AT INDEPENDENCE HALL, PHILADELPHIA, PA., ON JULY 4, 1959

It is a rare privilege that you have accorded me in asking me to address you on this occasion, or, perhaps, to use the English language more precisely, a unique privilege.

For this is no ordinary Fourth of July.

This is an Independence Day ceremony which, in several important respects, is unprecedented—and therefore, unique.

We are celebrating the admission to the Union of the largest State in American history.

We are celebrating the admission of an area larger than it ever before admitted to the Union in any one year—an area one-fifth as large as the older 48 States.

We are celebrating the admission to the Union of a State that extends American dominion and full citizenship, and all concomitant blessings that American citizenship implies, to America's farthest west and America's farthest north.

Thus, we are celebrating the extension, for the first time in history, of the Union north into the Arctic and west into the Eastern Hemisphere. This is new terrain for the family of States.

We are celebrating the admission to the Union, for the first time, of a noncontiguous area—this is the first time that we have taken into the family of States territory which did not touch the rectangular block that hitherto has constituted the Union.

We are celebrating the admission of a new State after 46 years without such evidence of growth and expansion. Thirteen years was previously the longest interval between the admission of States.

These geographical and historical data imply a great deal more than their mere recital reveals. Behind these physical facts lie far more important symbolic and spiritual connotations. These are, first, that the United States is not static, not limited, not complete; but, on the contrary, is dynamic, growing, and on the march.

How significant is this?

It is true that throughout our history the voices of doubt and pessimism about the future of our Republic have been raised.

It would surprise many of you to know that the prophets of gloom and doom were heard almost as soon as our Nation was founded. History has repeatedly proven them completely mistaken.

It the last 2 years, alarm has been expressed—especially since the Russian achievements in outer space—that the United States had reached its peak of power and influence. In not a few places was the fear voiced that despite our great material achievements, our position of eminence in the world, our vast resources, our proved potentials and capabilities, our pioneering and leadership in many fields, all these had reached a climax and an apex from which recession would before long begin.

Comparisons have been made with ancient Rome, which, while apparently at the zenith of its imperial power and glory, was being insidiously corroded within by luxury and Sybaritic living, and was shortly to succumb to the onslaught of the cruder and tougher barbarians. Parallels have been latterly drawn to forecast that similarly, our luxurious, high standards of American living, and a consequent softness which this way of life presumably predicates, will cause us ere long to succumb to the ruthless aggressiveness of the hordes, mobilized by the governments in Moscow and Peiping—hordes unused to the refinements of Western civilization.

While it is well never to underrate one's opponents—and it is clear that at the present time the enemies of our freedom and of the whole free world lie in the rulerships of the totalitarian Communist police states—I boldly assert my conviction that the event that we are particularly celebrating today furnishes a substantial refutation of the apprehension that Uncle Sam is shortly to begin to dodder and to enter dotage.

Within the short space of 1 year, the United States has admitted the 49th and 50th States—Alaska and Hawaii. And while technically, Hawaii is not yet in the Union, and while officially, the new Old Glory we are unfurling here today signalizes the admission only of the 49th State—Alaska—we would be remiss in not hailing this double achievement.

For while Alaska's admission extends the frontiers of democracy to America's farthest North and farthest West, Hawaii's admission extends them to America's farthest South.

While Alaska's admission extends America into the Arctic, Hawaii's admission extends it into the tropics.

The Union's boundaries a year ago extended between approximately the 67th meridian and 125th meridian of longitude west and the parallels of approximately 25 degrees north latitude and 49 degrees north latitude. Now, they extend between approximately 67 degrees west longitude and 173 degrees east longitude and the parallels of approximately 19 degrees north to 73 degrees north latitude.

But the geographical extension is not the significant aspect of these achievements. The totalitarian police states have likewise enlarged their dominion. Within the lifetime of many living, we have seen the rulers of the Kremlin extend their brutal tyranny over a dozen formerly free and independent nations. Within a few weeks, we have seen the masters of Peiping invade and conquer the formerly free land of Tibet.

In contrast, the United States has to its new States extended that most basic of American principles—the principle of government by consent of the governed. What a contrast between Uncle Sam's treatment of his former dependencies—which is what Alaska and Hawaii, under Territorial status, have been—and the Russian treatment of Hungary and the Chinese treatment of Tibet.

There is a special significance in our two extensions. Alaska was formerly Russian-America; and but for the wisdom and vision of William H. Seward, Secretary of State in President Lincoln's and President Johnson's Cabinets, Alaska might still be groaning under the Kremlin's heel.

We can stand today on the shores of the Alaskan mainland and look across the Bering Strait and see the headlands of Siberia. Only 54 miles separate these two areas; but what a world of contrast in the lives of their peoples.

In the Bering Sea are two islands, only 2½ miles apart—the Diomedes. The international dateline passes between them. Little Diomede is American; Big Diomede is Russian. A couple of decades ago, these two islands were sparsely inhabited by Eskimos. They visited freely, paddling across the narrow Strait between them in the summertime in kayaks or oomiaks—the two varieties of native skinboats—or crossing over on the ice bridge which furnished a passageway between them for 8 months of the year. When the Iron Curtain descended upon Russia, the Soviet authorities evacuated their Eskimos, uprooted them from where they had lived, and removed them to the mainland of Siberia. The Eskimos of Little Diomede, on the other hand, were proud to enroll themselves as volunteers in the Alaska Territorial Guard during World War II, and eager thereafter to serve their Territory, and now State and Nation, as members of the Alaska National Guard. History and geography furnish here, on the northwestern edge of our continent, the great contrast between the two systems, theirs and ours.

In Hawaii, our 50th State, you will find a meeting of East and West. There, united in the common ideology that is America's proudest heritage—the heritage of individual liberty, of freedom of speech, press, assembly, and worship, that are guaranteed us by the Bill of Rights—is the finest example of ethnic democracy to be found not only under the American flag, but anywhere on earth. There, the races of East and West have mingled. To the Polynesian inhabitants whom the early explorers found there at the very end of the 18th century came the New England missionaries, and uniting with the aboriginal inhabitants, created a culture that is beautifully diverse in its outer aspects, but completely saturated with the principles of democracy.

To these islands came people from the Orient—from China, from Japan, from Korea, from the Philippines—who, as citizens of the 50th State, will constitute a bridge between East and West, contrary to Rudyard Kipling's pronouncement that East and West will never meet. They have met here, they

will continue to meet here, under the flag which we are raising today, and which, a year from today, will display its 50th star.

Now, the inclusion of the 49th and 50th stars today, and a year from today, demonstrate the most striking and unique fact about the American flag. It is the only flag which grows with the growth of the Nation. While its basic design remains unchanged, it does change just sufficiently in one recurring detail to record the amazing growth from a thin fringe of colonies along the Atlantic seaboard to the mighty Nation that the United States has become.

Indeed, each additional star represents a verse in the American epic, and it is appropriate, on this occasion, when a new star has been added, to emphasize that point and bring out the close relationship between the American flag and the Union whose emblem it is.

As we all know, our flag received its design 182 years ago from the Continental Congress. The Congress properly decided that the thirteen Colonies which had banded together to form our Nation should be represented both by the alternating red and white stripes and by the 13 stars in the Canton or Union of the Flag. For a time, it was assumed that each new State would be recorded by an additional star and additional stripe, and when our first two States were admitted—Vermont and Kentucky, in 1791 and 1792, respectively—our flag had 15 stars and 15 stripes.

But Congress soon realized that an additional star in the blue firmament provided adequate recognition for a new State; that likewise adding a new stripe for each State would not only entail needless duplication, but would, in time, diminish the beauty of design of the flag by overburdening it with stripes. Likewise, this duplication would destroy the great historic symbolism inherent in the memory of the Original Thirteen Colonies and the Original Thirteen States. Therefore, 141 years ago, the Congress returned to its original formula, which persists to this day—namely, 13 stripes forever, and an additional star for each new State.

Thirty-seven stars have been added to the original 13. But that does not mean that our flagmakers have had to make 37 different flags and 37 times scrap those on hand. A sufficient number of States came in at one time so that changes had to be made, or will have to be made, only about 27 times instead of 37. No historical museum could collect more than 27 different American flags because they do not exist.

In the nearly three-quarters of a century between the formation of the Union and the Civil War, not a few States came in in pairs. The dates of their admission did not coincide exactly, but their joint entry into statehood was prearranged, and by design.

Each star that has been added to our flag represents a stirring chapter in our history. each new star signalized a step in the progress of mankind. Each star incarnates a portion of the hopes, the struggles, the trials and errors, the quest for goals, and the achievements that together constitute the American saga.

It is, I believe, the greatest epic of all time. It is the greatest epic because it stories the untrammelled efforts of freemen—freer than any of their predecessors in the pageant of history—to work out their own destiny.

So we must not think of our flag only as an emblem. We must not think of it merely as a symbol, though of course it is very much a symbol—a symbol of everything that our American faith embodies. But we should think of it also as a symposium of great adventures—adventures of mind and heart and body—a recording of past performance, proudly raised on high for each coming generation to look up to, ever a summons to present obligation and a guide to future conduct.

We cannot identify any one of the 13 stripes with any one of the Original Thirteen States. We might have done so—or might do so—if someone wished arbitrarily to relate each stripe from the top of the flag down to each State in the chronological order of its adherence to the Union. That would assign to Delaware, our oldest State, the topmost stripe. It would award to Pennsylvania the second stripe from the top. Rhode Island's would be the stripe at the lower edge of the flag since it was the 13th State to sign up.

It was wholly appropriate that Delaware, the first State to enter the Union, should adopt as its motto, "Liberty and Independence." Perhaps this is the time and place to advert to the fact that Pennsylvania which decided to enter the Union 5 days after Delaware, amplified Delaware's ringing words "Liberty and Independence" by preceding them with the word "virtue," so that as you all know, the Keystone State's motto is: "Virtue, Liberty and Independence." Possibly the 5-day interval between Delaware's signing of the Constitution on December 7, 1787, and Pennsylvania's adherence on December 12, led Benjamin Franklin and his colleagues in the Pennsylvania delegation to reflect that they already had liberty and independence and needed to prescribe virtue additionally to safeguard and amplify the blessings of their new-found freedom. It might be worth mentioning that the motto of the third State to ratify, 6 days after Pennsylvania—New Jersey—was "Liberty and Prosperity." Thus was perhaps illustrated the rapidity of progress in our national infancy—all in the course of 11 days—from the newly achieved "Liberty and Independence" hailed by Delaware, to the addition of "virtue" by Pennsylvania, and the substitution by New Jersey for Pennsylvania's somewhat austere prescription of "virtue," the less arduous and perhaps more alluring goal of "prosperity."

Incidentally, those three first States—Delaware, your own State of Pennsylvania, and New Jersey—all contiguous to each other, were the only States to join the Union in 1787. Not until after the New Year, 1788, had begun, did the others follow. Here in the very heart of the new-born Republic, midway between New Hampshire to the north and Georgia, to the south, were the pioneer States, the first three to pledge their allegiance to the Constitution and flag of the United States.

I wonder that no one has thought to form an inner club, an exclusive order within some of the sons and daughters of yesteryear, entitling it: "The Joiners of 1787." Something analogous to its occurred a century later in Alaska. There, in what Alaskans fondly call the last frontier, "pioneering," a beloved word, dates from the days of '98 romantically eternalized in the verse of Robert W. Service and the short stories of Jack London. 'Ninety-eight was the year of the great gold rush that followed the discovery of gold in the Klondike. No candidate for public office in Alaska fails to claim—if he can truthfully do so—that he was a '98 pioneer. But several years ago, a charming lady, a candidate for Alaska's Territorial House of Representatives, proclaimed in her political advertisements that she was an '87 pioneer. She had been carried across the Chilkoot Pass in that year as a babe in arms, 11 years before the Klondike. She did not want to be mistaken for any of the Johnny-come-latelys of '98. She was elected.

It would perhaps be painting the lily to pursue further the theme of the rapid progressiveness of the sentiments in the subsequently enrolling States mottoes, but it may be worth noting that Georgia, the fourth State, which came in on Januarry 2, 1788, apparently considered "Liberty and Independence" now achieved, no longer timely, and instead looked to the future with the motto: "Wisdom, Justice, Moderation." May "The Empire State of the South" achieve them. They are desirable goals for any State.

If it is not customary to associate any one of the 13 stripes in our flag with any of the original 13 States, it is even more impossible to attach any one of the 49 stars to a given State. Yet we might well view the addition of each star to our flag as much more than a minor and automatic change on a piece of bunting. Rather, we should think of what lay behind that star, what preceded the admission of the new State that star represents, hail it as we would a great new star in the heavens, and reflect on the cosmic forces that brought it into being.

Who can relive the story of Vermont's gallant struggle for self-determination which culminated in its entering the Union as the 14th State—the first additional star in the flag—without sensing that the Green Mountain boys were renacting on the home ground our own epoch-making revolution? From the outbreak of the War of Independence, Vermont was master of its destiny and determined to remain so. In those 4 years, between 1787 and 1791, Vermont had not had Territorial status. It had steadfastly maintained its independence against the claims of adequate New Hampshire and of powerful New York, which Vermonters were prepared to resist, if need be, by arms. Likewise, Vermont rejected the tendered blandishment of union with Canada. It would join our Union, but only as an equal, as a sovereign State.

And now, early in our history, we come to the first of those interesting arrangements in which sectional balancing played a great part. For while Vermont was resisting the claims of two already established States, pioneers settled across the Appalachians in land belonging to Virginia, were trying similarly to free themselves from the grasp of Old Dominion, then by far the most populous—and by that token the most powerful—of all the 13 States. There had been not fewer than 10 conventions of representatives from Virginia and from the embryonic State of Kentucky in a vain effort to reach a solution. Finally, in 1791, under the leadership of Thomas Jefferson, a provision which satisfied conflicting claims and regional rivalry was achieved for the admission of both States, Vermont and Kentucky. This solution was reflected in a bit of doggerel which originated in a Pennsylvania newspaper and was widely reprinted in the press of that period:

"Kentucky to the Union given,
Vermont will make the balance even;
Still Pennsylvania holds the scales
And neither South nor North prevails."

Thus, those first two new stars in the flag—the 14th and 15th—marked not only the advent of two States, but, with the admission of Kentucky, the beginning of the westward march that has so profoundly shaped the American character and contributed such unique quality to our American life.

The next three States—Tennessee in 1796, Ohio in 1803, and Louisiana in 1812—were admitted separately, but widely varying and unprecedented conditions accompanied the admission of each. The frontiersmen occupying the region south of Kentucky, and belonging to North Carolina, as I have pointed out, impatient at the delay in granting them admission to the Union, first set up a State of their own and called it Franklin, honoring your greatest Pennsylvanian. But receiving no invitation to join the Union from the first three Congresses, they assumed the initiative, drafted a constitution for the future State of Tennessee, elected two Senators, and sent them here to knock at the door of Congress for admission. They were successful. In a few months, in 1796, Tennessee became the third new State.

With Ohio, represented by the 17th star, the frontier advanced across the Alleghenies north as well as south, ushering in the birth of that great American region known—perhaps not too exactly—as the Middle West. In Ohio, also, Virginia acquired a rival mother of presidents.

Before the next State, Louisiana, added the 18th star to our flag, President Jefferson's Louisiana Purchase had doubled the extent of American territory, and extended its western border to the Rockies.

Now there was a return to sectional balancing into which the issue of free versus slave States had crept, with the admission in 1816 of Indiana and in 1817 of Mississippi, represented by the 19th and 20th stars.

The same pattern was followed shortly thereafter by the admission of Illinois in 1818 and Alabama in 1819, our 21st and 22d stars.

By now, the slavery issue in relation to the admission of new States had become more acute and led to the Missouri Compromise—an important milestone in our history, dealing with problems happily no longer existing. By it, Maine was admitted as a free State in 1820, our 23d star, and Missouri, our 24th star, in 1821 as a slave State but with certain limitations, while thereafter all future States west of the Mississippi River and north of 36°30′ were pledged to freedom.

Thereafter the free versus slave State issue would, for a time, dominate every new State's admission. Arkansas, a slave State, came in in 1836, Michigan, its offset, a free State, in 1837—our 25th and 26th stars—and following the same pattern, Florida in 1845 and Iowa in 1846, our 27th and 29th stars. For in between, Texas, in 1845, under unprecedented and dramatic circumstances, following its victorious war of independence, had come into the Union, bringing its own Lone Star with it, and, surprisingly, not insisting that when added to our flag that star should be bigger than all the rest, but reserving the right to divide itself into five States. Alaskans have been waiting breathlessly to see whether Texas will do it.

By this time, the irrepressible conflict was looming larger and the balancing in the admission of northern and southern States ceased. Texas was the last slave State admitted. Wisconsin placed the 30th star in the flag in 1848.

California, having loosened its bonds from Mexico, set up its own republic, was briefly under U.S. military rule, and scorning even a temporary condition of territorialism, was admitted to the Union in 1850. Its star—the 31st—marked the extension of American dominion to the Pacific.

Minnesota came next in 1858, followed by Oregon in 1859 and Kansas in 1861, respectively the 32d, 33d, and 34th stars in the flag.

The next two States were war babies. They were the direct consequences of the Civil War. When Virginia seceded in 1861, the State's 40 western counties voted to remain loyal to the Union, rejected the action taken at Richmond, and set up an independent State with the capital at Wheeling. W. Va., as these secessionists from secession called it, which was admitted to the Union in 1863. Probably no State was born under more stirring circumstances than was this neighbors of your to the south and west. Its motto—Montani Semper Liberi (Mountaineers Always Free) both renews the aspiration for freedom voiced in the days of our War for Independence and reveals that West Virginia has the highest average altitude of any State east of the Rockies.

Nevada was brought into the Union in 1864 by President Lincoln to help him secure ratification of the 13th amendment to the Constitution which abolished slavery. Perhaps we might, with poetic license, call these two—the 35th and 36th stars—"Shooting Stars." They came into the Union amid the booming of cannon on the farflung battlefields, and as a direct consequence of that bloody family quarrel.

Nebraska followed in 1867, and Colorado in 1876. Dakota Territory was divided into two States in 1889, and in the same year Montana and Washington came into the Union. Idaho and Wyoming followed the next years, 1890. Six States in 2 years. Utah was added in 1896; Oklahoma in 1907, and the last two States, up to this time—New Mexico and Arizona—in 1912, brought the field of blue to yesterday's galaxy of 48 stars.

Now, a few concluding words about our 49th and 50th States and stars.

William H. Seward, who was really the author of Alaska's entry into the United States, had a great vision of extending the American idea all over this continent. It was not mere territorial acquisition that concerned him. Into the Treaty of Cession he wrote:

"The inhabitants of the ceded territory shall be admitted to the enjoyment of all the rights, advantages, and immunities of citizens of the United States."

Decades later, we Alaskans held up this statement before the Congress as a solemn pledge and promise. We argued—and, I am convinced, logically—that only by statehood could the inhabitants of Alaska be admitted to the enjoyment of all the rights, advantages, and immunities of citizens of the United States. Actually, as a Territory, Alaska suffered an indifference, a neglect, and downright discrimination by the Federal Government which led to an increasing determination on the part of these frontiersmen of Alaska to achieve the full equality of statehood.

The first Alaska statehood bill was introduced in 1916 by James Wickersham, one of our early delegates, for, as a Territory, Alaska could be represented in the Congress by only a voteless Delegate in the House of Representatives. Of course, the bill did not even get out of committee. In the early 1940's, statehood bills were again introduced in the House by the then Delegate, Anthony J. Dimond, and in the Senate by Senator William Langer, of North Dakota, and Senator Pat McCarran, of Nevada. These bills likewise did not get out of committee. In 1945, I had the opportunity to present to the Alaska Territorial Legislature a recommendation for a bill providing for a referendum in the coming election to determine officially the wishes of the people of Alaska concerning statehood. The legislation was adopted, and at the 1946 election, the people of Alaska voted that they wanted statehood. That was the beginning of our present drive. President Truman enthusiastically endorsed statehood—the first President to do so—recommending, in his first state of the Union message in 1946, enabling legislation to the Congress, even before the vote of the people of Alaska had been recorded. Thereafter, our voteless Delegate in the House introduced a statehood bill in every session of Congress. It was passed by the House in one session, but failed on action in the Senate. Meanwhile, we were all working to mobilize public sentiment, which soon ran way ahead of congressional action.

In 1955, the Alaska Legislature, impatient at the delays, decided on bold action. It passed an act providing for a constitutional convention which would draft a constitution for the State of Alaska, and appropriated $300,000 for that purpose, scorning the advice of the timid and prudent that if Alaska waited until Congress acted, the Federal Government would pay the cost of this convention. A speedy election for delegates followed, and they were elected on a nonpartisan basis. Fifty-five delegates—the same historic number that met here in Philadelphia in 1787 to draft the Constitution of the United States—met at the University of Alaska near Fairbanks in 1955, and drafted a constitution which political scientists declare to be at least the equal of any existing State charter. The people ratified it at the next election. They went further. At this same election they approved an ordinance which authorized the people of Alaska to nominate and elect two U.S. Senators and a Representative and send them to Washington to work for statehood. In doing this, we were following an ancient, but generally forgotten, precedent. In 1796, the people living west of the Appalachians and south of Kentucky, which then belonged to the State of North Carolina, were becoming impatient because the first three Congresses did not admit their area to statehood. They drew up a constitution and elected two Senators, and sent them to the National Capital—which was then Philadelphia—to work for statehood. They were successful. We therefore called our procedure the Alaska-Tennessee plan, after its originators, the pioneer mountaineers of Tennessee. A similar procedure was followed by Michigan, by Iowa, by California, by Minnesota, by Oregon, and by Kansas. Similarly, three of us were elected by Alaskans. We went to Washington and were successful in persuading a majority of the Members of both Houses of Congress to pass a statehood bill in the 85th Congress.

And once the ice had been broken, figuratively speaking, it was not difficult to bring in the last of the incorporated Territories—our sister in the Pacific, Hawaii. In all fairness, it should be said that Hawaii was ready for statehood long before Alaska—it had met the basic tests earlier and should have been admitted before Alaska. But Alaskans were happy and proud to play an active part in bringing in the 50th State. We worked just as hard to bring in Hawaii as we had to bring in Alaska.

But I will leave the telling of Hawaii's gallant struggle to whoever succeeds me on this occasion a year hence.

However, you will see, from what I have said, that there is a great story behind the placement of each new star in our flag. Each star is a condensation of that story. Each, while different, is a saga of aspiration and effort, of sacrifice and struggle—all primarily for one basic purpose—the application of that principle proclaimed in the Declaration of Independence that governments derive their just powers from the consent of the governed. It was proclaimed as an unalienable right in this city in the Declaration of Independence. It guided our forefathers in the founding of the Republic. It has guided all of us to national greatness.

As I pointed out earlier, in one respect our flag is unique. While it is one of the oldest national emblems on earth—older than any other in the New World and out-aged by very few in the old—it is the only flag which, while unaltered in basic design, yet changes progressively. It is the only flag which is not static. It records the birth of our Nation; it codifies the Nation's growth from infancy to maturity.

So, I would say to any of those who, in moods of depression or doubt, fear that our great civilization is in danger of decline, atrophy or decay, they can find in the flag not merely the inspiration, but the visible and tangible proof that America, the land which we love, and the idea that we cherish, is secure. As the 49 stars are unfurled in the breeze, we can lift our eyes and our hearts in the confident knowledge that the best is yet to come.

Old Maestro Looks for Alaska Nickname

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Old Maestro Looks for Alaska Nickname," which appeared in the April 14 issue of the Anchorage Daily Times, Anchorage, Alaska.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Anchorage Daily Times, April 14, 1959]

OLD MAESTRO LOOKS FOR ALASKA NICKNAME

Barnee Breeskin, the popular maestro who presided for a decade in the blue room of the Shoreham Hotel, at Washington, D.C., has suggested a nickname for the new State of Alaska.

He says Australia is known throughout the world as "down under." He thinks Alaska should be the converse and become known as "up over."

Barnee, now a public relations man in the Nation's Capital, came up with that idea after returning from a trip to Latin America in behalf of Pan American World Airways. He made a survey of the airline's hotels and the services they render.

At first hearing, the nickname "Up Over" sounds strange. It is not the sort of name that clicks immediately.

But it does have certain attractions that should be considered. "Up" conjures up the prevailing conception of Alaska as up north, up high on the map, up near the top of the globe.

"Over" brings to mind the fact that Alaska is over the top of the globe instead of on the side the way one ordinarily looks at it. It also ties in with the new global air routes that go over the North Pole, over the Arctic ice pack, over the top of the world to the continent of Europe.

It lacks glamour, no doubt, but that did not prevent Australia's "down under" from catching on. Down under has become popular reference to that part of the world.

As far as Alaskans are concerned, the world seems to be in and out. Anything inside Alaska is in and anything outside is out. Any member of the Alaska fraternity understands the words when used in this connotation.

"Where are you going?"

"Out."

If you meet an Alaskan outside and ask when he is going in, he knows what you are talking about without explanation.

But in the language of the world, in and out has not clicked. Too many people who are outside don't realize they are out at all.

You can meet any worldy traveler and refer to "down under." He knows what you are talking about. Maybe the day could come when the destination "up over" has the same worldwide recognition as a specific reference to Alaska.

It will take some hard pushing by Alaskans to get the phrase accepted if it is going to be accepted.

While Barnee was visiting Latin America and thinking about this Alaska nickname, Alaskans have been more concerned with a name for the old 48 States than they have for their own.

Outside can no longer be stateside because inside is also stateside. The old 48 is common. The smaller 48 is heard frequently. The South or southern 48 is also used.

One intriguing reference to the other States is Little America. It was coined, as far as we know, by our own Muktuk Marston. He says it's Little America because it is composed of the smaller States of the Union.

Admission of Hawaii will bring new name problems. Hawaii is due south of Alaska. Should we call is South America? What becomes of the other South America? It must be either Souther America, Far South America, or even Southeast America because it is east as well as south.

We will leave all this to Barnee, along with the problem of what happens to the Pacific Northwest now that Alaska is the true Pacific Northwest. Are Washington and Oregon to be known as the Middle West, and California the Southwest?

Then what becomes of the old Middle West and Southwest? From the Alaska vantage point, the Middle West is now the Near East, and the Altantic coast is the Far East. And the old Southwest must be the Near Southeast.

Barnee was a booster for Alaska way back in the days when this great State was nothing but a Territory. He took verses written by Alaskans, set them to music and played them as a welcome for Alaskans when they visited the Blue Room for dinner and entertainment.

It is grand to know that Barnee, upon returning to the Far East from his trip into Southern America, is still thinking of "up over."

The Garrison Diversion Project

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. YOUNG of North Dakota. Mr. President, many great water projects have been completed or have been under construction in the Missouri Basin during the past 15 years. This is a part of the Pick-Sloan plan, which envisioned great development for this fabulous area including irrigation, navigation, flood protective works, water for municipalities, and low cost electrical power.

Until recently all the interests of the Missouri Basin were united in the belief that there was an ample water supply for all of these multiple purposes under the Pick-Sloan plan. Some opposition has been developing in recent weeks to indicate that some downstream groups are beginning to lose interest in the needs of the upstream States since the huge reservoirs inundating hundreds of thousands of acres of good farm land and providing flood protection for these downstream States, are nearing completion.

Mr. President, the Minot Daily News of Minot, N. Dak., under date of Friday, July 3, 1959, contains an editorial on this subject which I think makes a lot of sense. It is entitled "A Matter of Keeping Faith."

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Minot (N. Dak.) Daily News, July 3, 1959]

A MATTER OF KEEPING FAITH

This is a big country. In most of its problems as they come to light in popular debate there is much more than meets the eye. How wrong sometimes are the faraway attempts to apply a general principle to the merits of a particular case.

We should not be too harsh with the Washington Post and Times Herald for failure to understand the historical justification of the Garrison diversion project. Editorially these newspapers have lumped this North Dakota project with a number of others, criticizing reclamation projects in general. The ground of the criticism is the thought that it is inconsistent for the Nation to be building new projects to increase productivity at a time when payments are being offered to keep other croplands idle.

The fact not appreciated is that the proposed Garrison diversion in North Dakota is part of a program which already has taken nearly 500,000 acres of North Dakota land out of production. In other words, North Dakota sacrificed that much good bottom land and prime grazing land to permit the Garrison Dam to be constructed on the Missouri. The diversion project takes the form of a recompense for lands already removed from the production of agricultural surpluses. It will be unjust if the Federal Government, having offered Garrison diversion in exchange for other lands condemned or purchased, fails to carry out its part of the bargain.

This land was removed from North Dakota tax rolls, mind you, depriving the State and counties and school districts of a source of revenue. We feel quite certain no one has pointed out this fact to the Post and Times Herald. On the promise that there would be irrigation development to replace this loss of public and private resources, North Dakotans went to bat to help obtain for the Corps of Engineers and the Bureau of Reclamation a congressional agreement for a Garrison reservoir pool level of 1,850-foot elevation. That required the acquisition of a considerable amount of additional land above the 1,830-foot level which would not have been required otherwise. Certainly the Post and Times Herald do not suppose there would have been support for taking this additional land out of production, had it not been for assurance of stabilizing the economy of other acreages through irrigation.

When the Post and Times Herald suggest that there is nothing to stop North Dakota from undertaking its own irrigation project, it is clear there is no appreciation of the feeling here that, in reality, North Dakota has already made its investment. And the investment in lands taken out of production is the kind of investment for which the Post and Times Herald are asking.

And in addition to the half million acres of reservoir land, consideration must be given to the fact irrigation in North Dakota will remove thousands of wheat acres to other crops, some of which might be sugar beets now supplied from Cuba.

As we said, we are not disposed to feel bitter toward the Post and Times Herald for the view expressed in the editorial. It was, in the main, a temperate expression of a general viewpoint which has to be taken into account these days. It did not single out the North Dakota project as one which is especially vulnerable. But at the same time it missed an opportunity to show that the North Dakota project can be, and is, justified on the very grounds on which the general

criticism was leveled. Sensing that the Post and Times Herald meant to be fair, we would like to see their editors take a second look at the facts of this project.

Larger Oregon State Park at Historic Fort Stevens Proposed

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. NEUBERGER. Mr. President, my home State of Oregon has one of the best and largest State-managed park systems in the United States. This is a reflection of the interest which all Oregonians have in preserving the great natural beauty of the area in which they live. Despite the development of many State parks, proposals continue for adding to the existing system. One such suggestion was unveiled recently in an able editorial published in the Albany Democrat-Herald.

The proposal urges State purchase of surplus Federal land at Fort Stevens. This idea certainly merits consideration, because such a move would greatly improve an already established State park area, Fort Stevens State Park, at the mouth of the Columbia River. An informative article in the July 1959 issue of Ford Times, by an Oregon newspaperman, Mr. Ben Maxwell, of Salem, describes the beauty and special attractions of Fort Stevens State Park. The scenic features described by Mr. Maxwell are illustrated in the magazine by some outstanding paintings by Mr. Ernest Richardson, a gifted Oregon artist. I ask unanimous consent to have printed in the Appendix of the RECORD with my remarks, the editorial from the Albany Democrat-Herald, entitled "Take Another Look," and the Ford Times article by Mr. Ben Maxwell, entitled "The Park at Fort Stevens."

There being no objection, the editorial and the article were ordered to be printed in the RECORD, as follows:

[From the Albany (Oreg.) Democrat-Herald]

TAKE ANOTHER LOOK

Notice has been given that the General Services Administration is offering for sale another portion of the Fort Stevens Reservation at the mouth of the Columbia River.

It is to be hoped that the Oregon State Parks Division of the Oregon State Highway Department may see fit to add this newly advertised area to the property it has so excellently developed on the southern portion of the reservation, which it acquired from the Government some years ago.

The present State-owned area lies along a gradually sloping beach on which the big sailing vessel, the *Peter Iredale*, was wrecked during the early 1900's. Remnants of the corroding steel hull and masts are still prominent on the beach and have lured thousands of curious visitors. This beach, also, is popular with razor clam diggers. The park surrounds sightly, sand bottomed Coffenberry Lake, which beckons swimmers, boatsmen, and fishermen, and which is dotted with tiny tree-bearing islands.

This park offers commodious picnicking facilities, parking lots, and overnight accommodations and has become one of the two most popular State parks in Oregon.

We have seen no description of the additional Fort Stevens property now to be put up for sale but it presumably includes what is known as Swash Lake, to the north of Coffenberry Lake, also abutting on the 20-mile long Clatsop Beach.

If this is true the area should by all means be reserved for public use. In fact, the entire Fort Stevens Reservation should have been left intact and in public hands when the fort was abandoned by the Army. If its obsolete guns, which were scrapped had been left in place, centennial visitors would have the more reason to linger in Oregon and visit the coast. Fortifications such as these are rare now in the United States, and if the ancient fort had been preserved and publicized it could have been rendered a great public asset. The area formerly occupied is deteriorating rapidly and has become an eyesore. Its once proud batteries are disintegating and accommodating weeds, its buildings dingy and falling apart. All because no adequate public agency intervened when this most attractive portion of the reservation was put on the block. The city of Hammond tried. It did acquire the property but the little hamlet found it could not maintain the area properly so let it pass into private hands, save one building which is being used as a school.

Retention of Fort Stevens by the government would have been justified by its historic significance alone. It is near the end of the Lewis and Clark trail, near Fort Clatsop, now being restored, and it includes ruins of a fort built during the Civil War to guard the Columbia River against invasion by the confederates. True, it never had to fire a shot but it was ready to do so, just the same.

Also it includes the only spot on the Pacific coast ever bombarded by an enemy.

Soon after the Japanese attacked Pearl Harbor a Japanese submarine surfaced off Battery Russell, safely out of range of its antiquated 6-inch disappearing rifles, and peppered the beach with shells. The attack caused no damage but provoked no reply for the commanding officer decided that to return the fire would have been futile and would only have exposed the battery's position, which the submarine gunners apparently could not precisely locate.

We think that if Congress should decide to establish a national park on the Oregon coast it should investigate the Fort Stevens area before spending tax money on property around Florence. The Government and State already own much of the Fort Stevens Reservation and probably could recover that which was unwisely sold for but a few thousand dollars.

Furthermore, it is not likely a Fort Stevens National Park movement would meet local resistance. In contrast, a sizable portion of the Florence area population is violently objecting to inclusion of privately owned property in the proposed Florence National Park. On the other hand, we know that many residents of the lower Columbia district, including Hammond itself, feel about Fort Stevens as we do. We suggest they write to their Congressmen their approval as the people of Florence are writing their protests.

[From the Ford Times, July 1959]

THE PARK AT FORT STEVENS

(By Ben Maxwell)

If you would like to visit an abandoned fort, or see the rusty hulk of an old limejuicer, or dig razor clams, or swim in Coffinberry Lake, then let Fort Stevens State Park at the mouth of Oregon's Columbia River be your goal. The park and associated areas are reached by about 125 miles of pleasant westward driving from Portland over lower Columbia River Highway U.S. 30 through historic Astoria. And along the way you will see numerous picturesque fishing villages and lumber towns like Rainier, Mayger, Wauna, and Clifton.

Fort Stevens was named for Isaac Ingalls Stevens, early territorial governor of Washington and a Civil War general who was killed in action. The fort was established on the Oregon side of the Columbia River late in the Civil War for the purpose of keeping out Confederate privateers, though no attempt to enter the river or to destroy commerce at its mouth was ever made. About 1900 the fort was modernized as a big gun bastion. Then for years it served as a pleasant summer encampment area for National Guard and Reserve units. After World War II, part of Fort Stevens was declared surplus and sold to the city of Hammond, but other areas remain as classified Government property.

The section of Fort Stevens that was sold contains rows of old, spacious structures, now privately owned and mostly vacant, wearing a drab complexion of camouflage applied in war time and now peeling. Occasional guardsmen, returning for a nostalgic look, usually leave somewhat disenchanted by the marks of deterioration at Oregon's only surviving fort.

Fort Stevens is said to have been the only part of continental United States attacked during World War II, when a Japanese submarine standing offshore lobbed a few shells harmlessly into the area. Battery Russell, a now dismantled section of the Fort Stevens area, overlooks the Pacific and was, until a few years ago, a placement for a 12-inch disappearing gun. This massive battery with underground rooms and corridors is now the property of the Oregon Game Commission. As such it is open to public inspection. From Battery Russell there is a splendid view of the Nacific northward to the Columbia River and its lengthy jetty.

In 1955 the Oregon Highway Parks Department acquired 788 nearby acres and named their acquisition Fort Stevens Park. Within this park are three sylvan lakes for swimming and boating: Coffinberry Lake, Crab Apple Lake, and the smallest, Creep and Crawl Lake. Located here are overnight camping sites (there is a modest charge) with fireplace cooking facilities, dry wood, and showers with hot and cold water.

Fort Stevens Park is also popular among picnickers. On one July Fourth, no less than 9,500 registrations were recorded. Those who swim in the lakes are protected against boat intrusion; those who prefer surf bathing can find it at the nearby beach.

Digging tasty razor clams is another local attraction. There is a restriction on the number of clams you may dig in a single day, but when tides are right, Clatsop Beach from Gearhart to the Columbia jetty is dense with clam diggers working against time and tide to get their quota.

The wreck of the *Peter Iredale*, one of many British windjammers that came to the Columbia River for grain and lumber in the early 1900's, occurred during a raging gale in 1906. A rusted, forward section of the old limejuicer, with steel masts lying where they fell, remains a popular and seemingly eternal landmark in the Fort Stevens area.

Tribute to Harry and Gretchen Billings

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. MURRAY. Mr. President, the third annual convention of the Montana State AFL–CIO, upon motion of Presi-

dent James S. Umber, earlier this month unanimously approved a resolution commending Harry and Gretchen Billings, coeditors of the Peoples Voice, published in Helena, for receiving the Sidney Hillman award this year.

The resolution points out that Mr. and Mrs. Billings have for years stood in the vanguard of labor's battles in Montana.

Labor is not the only cause for which they have fought valiantly. They are leaders in the fight for conservation and full development of our natural resources, for better education, for the family farmer, and against injustice wherever they have found it, whether or not the side they espoused was the popular side.

Mr. President, I share with the Montana State AFL-CIO and many other Montanans a deep pride in the accomplishments of Harry and Gretchen Billings. I ask unanimous consent to have printed in the Appendix of the RECORD the resolution to which I have referred.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Members of the convention: We, of the Montana labor movement have much to be proud of, not the least of which is an honor which this convention would be remiss in allowing to go unnoticed and unheraled.

This year, in honor of a great and noble leader of labor, an award was gained by two wonderful members of the Montana labor movement.

Because this honor is one of great significance nationally, and because it comes to us here in Montana, I ask this convention's unanimous consent to approve the following resolution of commendation:

"RESOLUTION

"Whereas Gretchen Billings and Harry Billings have for years stood firmly in the vanguard of labor's battles in Montana; and have, without hesitation spoken out in the People's Voice in favor of the fundamental principles of the democratic trade union movement; and

"Whereas the excellence of their work has achieved national recognition in the award to them this year of the Sidney Hillman award, an award given in honor of one of American labor's greatest statesmen; and

"Whereas Gretchen and Harry Billings were two of six people in the United States to be so honored this year, bringing to them and to Montana great national honor; and

"Whereas we of the Montana labor movement are proud that two of our members should be so honored: Therefore, be it

"*Resolved*, That this convention go on record as adding our commendation and sending our congratulations to Gretchen Billings and Harry Billings and the People's Voice for winning the Sidney Hillman award; and are proud with you."

St. Lawrence Seaway: Gateway to the Future

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 7, 1959

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway has sparked one of the greatest efforts by the people in the Midwest to benefit from such a project in the history of the country.

Along Wisconsin's shorelines, for example, our 14 ports and harbors are carrying on constructive programs of development and progress. These ports will not only serve surrounding communities, but will accommodate expanding volumes of traffic to and from the Heartland of North America.

To Wisconsin and the Midwest, the completed seaway marks a new economic era.

The task ahead of us includes the encouragement of more and more traffic to utilize the St. Lawrence Seaway. The less expensive trade routes to the ports of the world through our Midwestern lakeshore cities will, I believe, serve more and more as a magnet to trade and commerce "tagged" for other lands around the globe.

As things look now, our Wisconsin ports, for example, may well serve as convenient transfer points for trade and commerce emanating perhaps a thousand miles west of Wisconsin and including more than 15 States, as well as Provinces in Canada.

For the products of farms and factories, our Wisconsin gateways to overseas have connections with 12 railroads, operating a total of almost 39,000 miles of right-of-way that fan out to the west.

A well-engineered and maintained State arterial highway system, too, connects Wisconsin's port cities with a network of truck routes that will efficiently serve the upper Midwest.

The 2,100-mile arterial system of most-used highways includes 482 miles on the National Interstate and Defense Highway System. Wisconsin's County trunk highway system, also, is one of the best in the Nation, nearly all hard surfaced for dependable, year-round service to farms and factories.

Wisconsin also has 71 public airports throughout the State. The number is expected to reach 100 by 1965. These airlines provide excellent travel and connections for businessmen, putting them in easy reach of customers, suppliers, and financial institutions. In addition, air cargo service assures fast shipment of valuable and perishable items and repair parts for industrial machinery.

Recently I was privileged to review a splendid editorial by Editor Matt Werner, of the Sheboygan Press, Sheboygan, Wis., entitled "St. Lawrence Seaway: Gateway to the Future."

The editorial contains a splendid appraisal of the significance of the seaway, both in terms of national and local community interest.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY: GATEWAY TO THE FUTURE

The heart of this continent is being opened to seagoing ships as the St. Lawrence Seaway, gateway to the world, becomes fully operative. The formal dedication came today when Queen Elizabeth and President Eisenhower participated in the joint United States-Canadian exercises at St. Lambert. But by now the ships have been using the full length of the waterway for more than 2 months.

The St. Lawrence Seaway is the answer to an ancient dream dating back to the revolutionary days. Its construction has been studied and planned since the turn of the century.

Seaway capacity has been estimated at about 50 million tons a year by the U.S. Government. This will include some 12 million tons of grain outbound and 10½ million tons of iron ore inbound. Canadian estimates are considerably higher.

Hard to exaggerate would be the impact of the seaway on the national economy. Midwest imports and exports are bound to be stimulated. Distributors of foreign steel already have opened a score of offices in Chicago. Cheaper transportation will cut the cost of a foreign automobile in the Midwest some $70.

Foreign beers, wines, and liquors will be available at lower prices. Other imports expected to be favored include Italian marble, woodpulp, pottery, rubber, coffee, and many others now higher priced in the Midwest than on the coasts.

Farm products, in turn, will be better able to compete in foreign markets. So will U.S. made trucks, heavy machinery, steel pipe, chemicals.

At the same time, rail freight rates to the Midwest will go down. Whether east coast ports will suffer is debatable. The seaway will be frozen for 4 months—at least until a way is found to keep it navigable through the winter.

Up until now, discussion about harbor improvements on Lake Michigan and Lake Superior have been centered on the major ports of Milwaukee, Chicago, and Duluth-Superior.

Other port cities such as Sheboygan and Manitowoc have been advised to go slow in heavy investments in harbor facilities. Some argue that this means the seaway will be just another name in the history books as far as these cities are concerned.

If such an attitude had prevailed a hundred years ago, the West would never have been developed. It's much too early to scratch Sheboygan and other small lake ports off the map as far as the seaway is concerned. As the Midwest grows, the need for more facilities will develop.

In discussions concerning the seaway, Sheboygan is continually compared to Milwaukee and Chicago. The comparison is unrealistic since Sheboygan has never entertained the thought of becoming another Milwaukee.

The hard fact is that the seaway cannot help but benefit Sheboygan.

We are living in an age where transportation—whether it be on land, sea or air—is the lifeblood of our existence.

New firms which import and export will naturally be drawn toward the Great Lakes. There have already been some reports of firms now located in crowded coastal cities moving inland and relocating along the Great Lakes.

There has been no rush of industries to Wisconsin but the seaway wasn't conceived and built in a day either.

Sheboygan has many assets worth evaluating when a plant site is to be chosen, including an abundant supply of fresh water. Water, indirectly is still that all-important natural aid in getting wheels to turn, motors to hum, factories to produce and commercial enterprises to breathe with vibrant success.

Other assets are a huge electric power plant, and availability of abundant supplies of natural gas, oil and coal. It has an extensive suburban area suitable for any conceivable development. Sheboygan has a

good supply of skilled labor and is located in a State rated highest in employer-employee realtionship. There are scores of beautiful churches, the finest equipped public and parochial schools, lovely parks and large bathing beaches.

Sheboygan ranks about third in the State, too, in the number of industrial plants. Another point favoring the community is the Sheboygan County Municipal Airport now under development.

The city can hardly miss being benefited in the future by the enormous amount of shipping that will pass through the seaway.

Investing in Medical Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. PROXMIRE. Mr. President, in an editorial in yesterday's edition, the New York Times points to the progress of the National Fund for Medical Education.

The fund has been set up to organize private support, primarily from American business, for the Nation's medical schools. There are few educational problems more vital or perplexing than the training of more physicians in this country. America has a very serious shortage of doctors and a tragic number of vacancies on the faculties of medical schools.

The fund is still small for the size of the job it has to do. But it is growing and the donors have increased impressively in number.

I ask unanimous consent that the Times' editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD, as follows:

INVESTING IN MEDICAL SCHOOLS

The 1958 report of the National Fund for Medical Education shows a widening area of cooperation by contributors. The fund was organized 10 years ago—under the sponsorship of President Eisenhower of Columbia and other university presidents, the American Medical Association, and the American Association of Medical Colleges—to mobilize private financial support for the Nation's 82 accredited medical schools. It has made impressive headway, especially in the enlistment of leading corporations in its cause.

Each year its roster of companies has grown. The total amount it received last year exceeded $3 million, of which about $2 million came mostly from business concerns, and $1 million from a matching grant of the Ford Foundation. Out of this pool a uniform unrestricted grant was made to each of the medical schools, supplemented by $60 for each undergraduate student, making a total of $2.9 million.

Last year the fund began to give special purpose grants to selected schools to help finance promising new programs of teaching and a new plan was worked out for financial support of basic medical research.

The shortage of physicians now amounts to "a very real and present emergency," as Surgeon General Burney has described it. We need 4,000 more new doctors a year than are now being turned out by the medical schools, where there are more than 600 vacancies in fulltime faculty posts.

The number and standing of the companies which contribute to the fund show an encouraging recognition of the stake which business has in turning out good doctors and of the fund's usefulness as a mechanism to help in doing it. But the medical school emergency calls for still wider support.

Cash Dissipated by Civil Defense

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. YOUNG of Ohio. Mr. President, a recent column by Sidney Andorn which was published in the Cleveland News on June 29, 1959, is worthy of careful study.

While paying tribute to the thousands of patriotic Americans who have volunteered their time and services for civil defense, it offers a clear commentary of the waste of the taxpayers' money in Ohio and the Nation on the utterly useless and vague program of the Office of Civil and Defense Mobilization.

I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Cleveland News, June 29, 1959]

CD STAND FOR CASH DISSIPATED?

(By Sidney Andorn)

Since civil defense is notable for the fine work turned in by thousands of volunteer individuals and organizations who don't get paid for it, why should civil defense be costing us taxpayers millions of dollars a year?

Civil Defense Recognition Day here was celebrated last Monday.

City Hall ceremonies gave certificates of commendation to doctors and nurses associations, to the utilities, the Red Cross, newspapers, broadcasters, police and fire departments, and industries.

Certainly the certificates didn't cost the city $106,000.

NONE OF THEM IS PAID

Cleveland's contribution to civil defense here this year is $106,000.

Cuyahoga County's contribution to civil defense here this year is $77,000.

Civil defense in passing out certificates of honor paid tribute to its 3,000 auxiliary police and its 300 rescue-service workers.

These are countywide volunteers. They work for no pay.

Their certificates didn't cost $77,000.

So you have a right to ask where does the money go?

BIG DOUGH FOR WHAT?

You have a right to ask where does the State and Federal civil defense money go?

State of Ohio's civil defense appropriation this year is $342,520.

Congress for this year's civil defense appriated $45,285,000.

Not a penny of this goes to the volunteer rescue-service workers who did such a yeoman job during the recent disastrous flash flood here, nor to the auxiliary police for their fine services directing traffic.

WARTIME IS DIFFERENT

Flood rescues, directing traffic are feasible peacetime efforts of civil defense.

They become almost impossible under an avalanche of fallout from a nuclear-bomb barrage in wartime, with roads glutted by panic-piloted cars fleeing atomic extermination.

It's for such wartime protection we pay our money to civil defense.

Maybe this is why there is such stalling and double talk when a reporter tries to find out from the headmen of county and State civil defense how much money they've been given for 1959.

Use of Lodgepole Pine Species for Production of Insulating Board in State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. NEUBERGER. Mr. President, one of the significant developments in the State of Oregon during recent years has been the establishment in Klamath Falls of a $12.5 million plant to use so-called scrub species of timber for the production of insulating board.

Some of us were active in persuading the U.S. Forest Service to put up, for competitive bidding, the lodgepole pine trees in the Fremont National Forest which are the source of supply for the Johns-Manville plant near Klamath Falls.

On July 1, the plant was formally dedicated by A. R. Fisher, president of the Johns-Manville Corp., and by Gov. Mark Hatfield, of Oregon. Because similar undertakings providing payrolls and wealth for the Pacific Northwest may hopefully be in prospect for the future, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregonian of July 1, 1959, written by Mr. John L. Denny, business editor of the Oregonian, describing the formal opening of this huge undertaking which will process lodgepole pine into insulating material, and an editorial on the same theme from the Oregonian of July 2.

There being no objection, the article and the editorial were ordered to be printed in the RECORD, as follows:

[From the Oregonian, Portland, Oreg., July 1, 1959]

JOHNS-MANVILE PLANT DEDICATED AT KLAMATH FALLS—INSULATING BOARD MADE FROM PINE AT INSTALLATION

(By John L. Denny)

KLAMATH FALLS.—Johns-Manville Corp. Tuesday dedicated its new $12½ million insulating board plant 19 miles north of here, signalling a $2 million increase in the State's industrial payroll.

Of more significance to the economy, however, is the creation of a brandnew

source of wealth for the State. This is the first manufacturing plant to utilize lodgepole pine on a major commercial scale, converting to useful and marketable products a scrub tree formerly considered to be of no economic importance.

OREGON PINE SUPERIOR

The insulating board products made from the lodgepole pine are superior to those made out of southern pine at the firm's Mississippi plant, according to A. R. Fisher, board chairman and president of Johns-Manville.

iFsher, who participated in official opening ceremonies along with Gov. Mark Hatfield and other notables from the city, State, and Federal agencies, also had kind words for Oregon's business climate, rating it next to availability of raw materials as his company's reason for locating the plant here. While sidestepping a direct answer to a question on the State's tax structure, Fisher said:

"No place have we felt more welcome than we are here. We have not found a better overall business climate anywhere."

The plant gets its raw material from the Forest Service under a long-term cutting agreement. Fisher said that under certain conditions the company might be interested in acquiring land and tree farming lodgepole pine, something no one has ever done anywhere. But this may be a long time in the future. The Fremont National Forest is said to have lodgepole pine for a perpetual supply for six plants the size of this one.

PLANT'S USE DELAYED

The plant actually was completed early last year, but operated on slow bell during its shakedown period due to the effects of the recession and the slump in building. Now it is operating three shifts daily on a 5-day week. Fisher said it probably will go on a full 7-day week within a year. This will add about 50 more men to the present employment of around 300.

W. H. Graham, manager of the new plant, said the contract loggers supplying it with lodgepole pine are producing about three cords of wood per man-day, compared with one cord per man-day in the firm's pine operations in the Southern States.

Located on the Williamson River, the plant consists of six groups of buildings with 285,000 square feet of floor space. Products are sent throughout the West, going as far east as the Dakotas and St. Paul, and the plant was designed for future expansion as the market grows.

LODGEPOLE LOGS CRUSHED

Insulating board is produced by grinding the debarked lodgepole pine logs, then forming the tough wood fibers into sheets by wet processing, pressure, and heat. The large amount of water required is supplied by two 750-gallon-per-minute deep wells. Effluent is screened, dumped into a settling basin, and thence into the Williamson River.

The Klamath Falls plant is the eighth to be completed by Johns-Manville in the past 2 years. It makes a total of 33 plants in which the company produces more than 500 different product lines, including building materials, pipe, insulations, and allied industrial products.

[From the Oregonian, Portland, Oreg., July 2, 1959]

WEST'S INTERDEPENDENCE

In Klamath Falls they talk a lot about the State of Jefferson, which includes a large part of the southern Oregon and northern California and which is described as more of a state of mind than a physical entity.

The State of Jefferson, has roots in history In the early 1850's, residents of southern Oregon and northern California seriously agitated for formation of a separate territory. Partly this was based on the desire of some residents of the area, who had migrated from Southern States, to form a slave State and secede from the Union.

The present tongue-in-cheek State is a resurrection of rebellions of 1935 and 1941, when lack of good highways and a feeling of being neglected by the distant metropolitan areas of the legal States brought about mock-serious but pointed agitation for formation of a separate State. The Jefferson revived this year in Klamath Falls, its self-proclaimed capital, is designed more to advertise the advantages of the area for industrial and business development than to voice grievances against the authorities in Salem and Sacramento.

A folder telling of these many advantages was distributed to visitors from as far away as New York who attended the dedication this week of the $12½-million lodgepole pine insulating board plant near Klamath Falls of the Johns-Manville Corp. Undoubtedly, the State of Jefferson is sound promotion, calling attention to a large area which is bound together by geography and similarity of resources, where growth has been rapid but where there is room for much more development.

One can quarrel with only one statement in the well-written promotion piece. "In many ways it (the Jefferson area) is a world unto itself—self-sufficient, with enough water, fish and wildlife, farm and orchard land, mineral resources, and gumption, to exist on its own," says the folder.

The fact that one of America's largest corporations has built a huge plant to convert the former weed tree, lodgepole pine, into modern building materials is in itself a refutation of any such claim to self-sufficiency. Success of the plant, which employs some 250 workers and gives the Klamath economy a substantial boost, depends on the whole West, not just the "State of Jefferson."

Products will be sold as far east as the Dakotas and New Mexico, with the thickly populated cities of California forming the most lucrative single market. Thus, Jefferson is dependent on a dozen real States in this instance and in innumerable others involving sale of its timber, agriculture, and other products.

Actually, all of us are dependent for our livelihoods on virtually everyone else. Portland's prosperity hinges on the well-being of a large part of the Pacific Northwest, including the "State of Jefferson," and prosperity in the metropolitan area is reflected in other communities of a wide region. The Johns-Manville plant will not only help Klamath Falls and southern Oregon. It will benefit the whole State and adjacent sections of California and Washington, just as do all new payrolls, wherever the paymaster's office may be situated. This concept is accepted generally nowadays, and one is sure that Jeffersonians really feel that way, too.

The Mutual Security Program

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 7, 1959

Mr. DODD. Mr. President, Mrs. Joseph N. Ulman, Jr., of Woodbridge, Conn., has written to me asking that I have inserted in the RECORD a letter to the New York Times by Ruth S. Phillips, president of the League of Women Voters.

Mrs. Phillips' letter is worthy of wide attention, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PLANNING ECONOMIC AID—AMERICAN LEADERSHIP IN DEVELOPING MULTINATIONAL PROGRAM ENVISAGED

To the EDITOR OF THE NEW YORK TIMES:

The mutual security program this year has become one of the most controversial issues in our foreign policy. If we do not consolidate our forces, the program will suffer from the current differences in support between those who stress foreign military aid and those who stress economic aid.

It was significant that "Meet the Press" recently interviewed Vannevar Bush on the mutual security program, thus helping to focus public attention on the issue during the present period of reassessment of the program.

Your editorial of May 26 "Time and Foreign Aid," quite rightly, we believe, adds one pertinent reason for the program which Dr. Bush failed to mention in his convincing and able answers to the questions asked. We agree with you that "what we need to do is to make persons and societies strong in their own right" and this "* * * lays the ground for progress in human betterment."

NOT EMERGENCY MEASURE

We maintain that mutual security economic aid and technical cooperation programs should not be used merely as incidental tools in the so-called "ruble war" or as props to our military security. We believe economic aid must be conceived in long-range terms, not as an emergency, year-to-year, stop-gap operation geared to the fortunes of the Cold War.

The economic and social problems which the developing countries must solve to achieve stability and prosperity are problems that can be met only by long-range, comprehensive planning and by disciplined effort.

During the past 2 years the League of Women Voters has supported the Development Loan Fund as a sound means of providing economic aid through long-term loans. We now believe the resources of the fund should be strengthened rather than limited and, therefore, in the biennial meeting of our national council this month, we endorsed the principles set forth in the proposed Fulbright amendments to the mutual security program for 1960.

LONG-RANGE GOALS

The amendments will emphasize the constructive, positive goals of economic development without ignoring the necessary purpose of military security; will expand economic aid and allow for greater flexibility in the program; will improve the effectiveness of aid by making possible long-range planning over a period of up to 5 years.

We know full well that the Development Loan Fund is not the whole answer to the needs of the developing countries of the world community. We see the task of helping to build viable economies and enduring democratic institutions in these countries as one which calls for the combined efforts of all nations.

Why not then, at the proposed summit conference, initiate a coordinated, worldwide program of economic development? The leadership of the United States in working to develop a multinational economic aid plan would certainly find backing from Great Britain and the other Colombo Plan members and from Italy, France and West Germany—all of whom have expressed similar views.

RUTH S. PHILLIPS
Mrs. Robert J. Phillips,
President, League of Women Voters.
WASHINGTON, *May 26, 1959.*

Equal Justice in South Carolina for White and Negro Rapists

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Equal Justice in South Carolina for White, Negro Rapists," published in the Anderson (S.C.) Daily Independent of July 4, 1959.

I have noted that very little has been written about these cases in the large Northern newspapers. The Northern daily press, as usual, headlines any minor racial unrest in the South, but plays down racial problems in the North.

In most instances the large Northern papers infer that justice is unequal in the South. As this editorial points out, justice is equal in South Carolina for whites and Negroes.

I join with the Anderson Daily Independent in its editorial comment on the subject and in its appeal to place the national spotlight on the Beaufort cases cited in the editorial, which points up that justice is equal for all in my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Anderson Daily Independent, July 4, 1959]

EQUAL JUSTICE IN SOUTH CAROLINA FOR WHITE, NEGRO RAPISTS

On Thursday in General Sessions Court in Beaufort County venerable Judge J. Henry Johnson sentenced two men to die in the South Carolina electric chair.

First to face the judge was a white marine, age 24, convicted by an all-white jury of raping a 47-year-old Negro woman. The jury which heard the facts did not recommend mercy. The death sentence was mandatory.

Two hours later a 19-year-old Negro who broke into a home and attempted to rape a young white housewife also was sentenced to die in the State's electric chair. He was convicted by a jury of six white persons and six Negroes. Mercy was not recommended.

The two were sentenced on the same day in the same court in the same county, to pay the death penalty for rape. And they are scheduled to die the same day—August 14.

If Fred G. Davis, the white marine, dies in the electric chair, he will be the first white man in U.S. court history to be executed for the rape of a Negro.

J. E. McTeer, sheriff of Beaufort County 33 years, testified Davis told him he sometimes had "an overpowering sex urge and got pleasure out of using force with women." The testimony of other witnesses for the State must have been fully convincing to the all-white jury.

Judge Johnson, commenting on the verdicts, said the two cases "should establish beyond all doubt that any person, regardless of race, color, or creed, can get justice in South Carolina."

The judge is right. The Beaufort cases should establish the fact. But will they?

The question now is how many fairminded Americans will have opportunity to learn what happened in the Beaufort courtroom.

How will the anti-South press and radio and TV commentators react to this clearcut example of justice in South Carolina?

However precedent shattering, the verdicts are not likely to receive more than nominal and grudging attention from press, pulpit, and periodicals brainwashed by alien philosophies and NAACP propaganda. But how they would have howled if the white man had been acquitted regardless of the circumstances.

We join other South Carolinians in challenging the integrationist bleeding-hearts to put the spotlight on the Beaufort cases with the same intensity employed to magnify the South's relatively few interracial incidents into unjustified proportions.

Put the national spotlight on the Beaufort cases.

July 4, 1826: The Day Two Titans Died

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. NEUBERGER. Mr. President, one of the finest commemorative articles I ever have read about our American Independence Day was published on the editorial page of the Oregonian, of Portland, for July 4, 1959. The author of the article is Dr. Kenneth L. Holmes, assistant professor of history at Linfield College, which is located at McMinnville, Oreg. Dr. Holmes cites the intertwining of the illustrious careers of Thomas Jefferson and John Adams, both of whom died within a few hours of each other on July 4, 1826.

I doubt if any young American can read this moving article by Kenneth L. Holmes without feeling a renewed sense of thrill and pride in his country.

I ask unanimous consent, Mr. President, that this article, entitled "July 4, 1826: The Day Two Titans Died," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregonian, Portland, Oreg., July 4, 1959]

JULY 4, 1826: THE DAY TWO TITANS DIED

(By Kenneth L. Holmes)

All Americans have heard about July 4, 1776, possibly the most important day in our history. Many, however, have not heard that 50 years later, on July 4, 1826, there occurred the second most exciting Independence Day of all.

The drama developed in two localities: Virginia and Massachusetts.

In Virginia, at his home at Monticello, lived a man who had been one of the signers—nay, one of the very framers—of the Declaration of Independence, Thomas Jefferson. He was 83 years old.

In Massachusetts, at the family home in Quincy, lived another of the signers of the Declaration, political archenemy of Jefferson for many years, John Adams, who had reached the age of 91.

During the last 14 years of their lives they had carried on a correspondence as they forgot the bitterness that had antagonized them during the heyday of their political careers. And how bitter it had been! Why, when Jefferson succeeded him as President on March 4, 1801, Adams slipped away in a coach so that he would not have to attend the inauguration. A mutual friend, Dr. Benjamin Rush, another veteran of 1776, persuaded them to start a correspondence in January 1812. As Clifford Smyth wrote of the remarkable series of letters, "No shadow of political bitterness darkened their correspondence. Each writer vied with the other in frank, good-humored expressions of opinion, and in simple tributes of enduring affection."

Just before the Fourth in 1826 each of them was invited to journey to Washington to take part in the festivities. Both of them declined for reasons of health.

Adams wrote suggesting a toast for the occasion: "I give you independence forever."

Jefferson wrote a remarkable letter expressing his appreciation for the invitation, and in the letter rang out the high ideals of 1776 once more:

"I should, indeed, with peculiar delight, have met and exchanged there congratulations personally with the small band, the remnant of that host of worthies, who joined with us on that day, in the bold and doubtful election we were to make for our country, between submission or the sword; and to have enjoyed with them the consolatory fact, that our fellow citizens, after half a century of experience and prosperity, continue to approve the choice we made. May it be to the world what I believe it will be (to some parts sooner, to others later, but finally to all), the signal of arousing men to burst the chains under which * * * ignorance and superstition have persuaded them to bind themselves, and to assume the blessings and security of self-government.

"That form which we have substituted, restores the free right to the unbounded exercise of reason and freedom of opinion. All eyes are opened, or opening to the rights of man. All of the light of science has already laid open to every view the palpable truth, that the mass of mankind has not been born with saddles on their backs, nor a favored few booted and spurred, ready to ride them legitimately, by the grace of God. These are grounds of hope for others. For ourselves, let the annual return of this day forever refresh our recollections of these rights, and an undiminished devotion to them."

So these two "giants of the earth" did not go to Washington for the 50th anniversary of the signing of the Declaration of Independence; they stayed at home.

Ah, but here is the drama of it:

Jefferson knew he was seriously ill when he wrote the letter on June 24. He became progressively weaker in the days that followed and began to have periods of unconsciousness on July 2. On the third he was in a stupor most of the day. Just before midnight on the third he awoke for a short period and whispered, "This is the Fourth?" His doctor answered, "It soon will be." Jefferson whispered further, "Ah, just as I wished." Just after noon on the Fourth of July he died.

Over in the family home in Quincy, John Adams was sitting weakly in his chair on the morning of the same day. He was fading rapidly. He seemed to hear the sounds of the celebration of the Fourth distantly through the windows. Of a sudden he whispered clearly, "Thomas Jefferson still lives." An hour after Jefferson's death Adams had gone to his reward.

James Truslow Adams tells us that when the Nation learned of the extraordinary coincidence, it was received with hushed awe, as though a mystreious portent. Death had struck simultaneously at the two most shining marks in the land, and as the past sym-

bolically went down to the grave, an era was dramatically closed.

If on this Independence Day, 1959, we sense a kind of mystery about that July 4th in 1826 when two titans of '76 died, it is only natural. And somehow the words come crowding into our minds from the Declaration itself, "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

Kenoshans Strike Pure Gold

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. PROXMIRE. Mr. President, Sunday's New York Times featured a superlative story in its business section on the boom in Kenosha, Wis., sparked by the smashing success of Rambler automobiles.

Too often the consequences of business success are only spelled out in the cold statistics of a profit and loss statement or of the affluence it has brought to foresighted stockholders who had the courage to back their vision with cash.

The thrill of the Kenosha story is the happiness and satisfaction it has brought a whole community. Not only is management justifiably proud of their proven ability. Working men too are walking on clouds—proud of the central part of their skill plays in producing the best car in the business. Merchants and storeclerks too recognize the advantage of working and living in a community that has struck pure industrial gold.

Appreciation in Kenosha is deeper and broader because this community has suffered serious depression repeatedly in the past. There is a firm, strong undertone of determination that the community will do all it can to cooperate to help maintain the growing gains of the golden Rambler.

I ask unanimous consent that the article by Austin Wehrwein, who was formerly a Pulitzer prize-winning reporter on the Milwaukee Journal, and now writes for the New York Times, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the Appendix of the RECORD as follows:

[From the New York Times, July 5, 1959]

RAMBLER SPARKS BOOM IN KENOSHA

(By Austin C. Wehrwein)

KENOSHA, WIS., July 4.—This middle-size Wisconsin lake port city is riding the crest of a small—or, as they insist here, the compact—car craze.

The only unhappy voices are those of some merchants who complain tongue-in-cheek, hand-on-the-cash register:

"The auto workers don't get enough time off to spend their money."

To help the workers solve this problem the stores stay open now on Mondays as well as on Friday night. But time is indeed scarcer than money.

THREE SHIFTS COMMON

The American Motors Corp., the city's largest employer and the cause of it all, is running assembly lines 6 days a week, double shift. Other departments go round the clock to keep production lines supplied, so that 65 percent of the work force is in three-shift, 6-day-a-week departments.

But it's not all work. The Tyson brothers, Robert and Eugene, are doing a thriving business at their sporting goods store in all lines, from bar bells to boats.

"It's surprising," Eugene Tyson said, "how many men walk in here in working clothes and buy golf clubs."

A union official said: "Everybody seems happy."

American Motors is making 1,635 Rambler cars a day, a record high. Its present schedule calls for a model-year output of 376,087 or 210,704 more than in the first schedule setup a year ago.

This compared with a low of 250 a day in June 1954, and 73,393 in all of 1954.

Employment in the last 12 months has risen by 5,000 jobs to more than 12,000, also a new high—higher than in World War II. The company recently invested $5 million to increase capacity.

Only a year ago, Kenosha was still classed as a place with "critical" unemployment, with 7½ percent of its working force out of work.

Today the unemployment compensation office is deserted, and other businesses find it almost impossible to get extra help. Even maids are scarce.

The 1950 Federal census found 54,800 people in Kenosha. The population is now estimated at 62,000, not counting heavy growth in environs.

The influx of new people has created a housing shortage, too. But the city's new "Rambler prosperity" has created fresh optimism.

"We're thinking bigger," Mayor Eugene R. Hammond said. "We're planning for the future on the basis that we're going to grow. We're moving away from conservative type of thinking."

George Epstein, owner of Bell Clothing, a leading store, summed it up this way:

"A few years ago there was fear that American Motors was dying. But they have gone from the bottom of the bottom to the top of the top. It's wonderful to be on a winning team."

BUSINESS UP 20 TO 30 PERCENT

Mr. Epstein said that business was up 20 to 30 percent from year-ago levels, and added: "People are buying in a light-hearted vein."

In line with this, the Tyson brothers noted a marked increase in quality bicycle sales. Parents, it seemed, were doing something for their children, too. Two other signs of "Rambler prosperity": more foreign sports cars and a booming market for power lawn mowers.

Spot interviews with men and women on the line and with the officers of United Auto Workers Local 72 indicated there were a fierce pride in the product.

"We are definitely trying to get as much production as possible," Leo Downing, local 72 president said, "We're going to make the big three (Ford Motor Co., General Motors Corp., Chrysler Corp.) compete. We're going to make them hustle."

The union, at its own expense, has set up a committee to urge the UAW, State, and local governmental units to buy American Motors' cars.

And it tells its members: "You earn your bread and butter here—buy the product."

"Any car produced off the end of the production line could be our own—the cars we make could be our own," George Nordstrom, local 72 vice president, declared. Heads nodded in agreement around the conference table at union headquarters.

With all the fervor of a sales manager, the union men said that the American Motors' cars were the best on the market.

In a separate interview, a former local president, Jack Beni, declared that the morale in the plant was at its highest point.

To beef up its payroll the company didn't go far afield to recruit help. And its careful screening of applicants has, according to the mayor, enabled the city to absorb the thousands of workers arriving here without any increase in crime or other social problems.

Most of the new people come from Wisconsin, some commuting long distances.

There is a romantic sidelight resulting from the employment of smalltown lads from northern Wisconsin. They get lonesome for their girls, and on the old principle that absence makes the heart grow fonder, have sharply increased the engagement and wedding ring business at local jewelry stores.

MOST FROM WISCONSIN

While the bulk of the new people come from Wisconsin, some 400 have migrated from the Michigan auto centers. Jack R. Bell, 29, a native of West Virginia, used to work in the Flint Buick plant. After being out of work for 6 months in 1957, for 9 months last year, and 4 months this year, he came here and found work in the body plant. His take-home pay is $109 a week.

Michael Morris, 22, worked in a Detroit filling station after he got out of the Marines. Then when it went out of business, he was out of a job a year. Now he makes nearly $100 a week take-home pay.

A woman production line worker, Mrs. Florence Koessl, the mother of five children and whose husband is a fireman, said the family's extra cash above savings was going into a new garage. Lyle Krahn, a 29-year-old inspector, who was laid off in 1953 and 1954, but who now has take-home pay of $112 a week, said he had confidence in the company's future and was building a home.

A 10-PERCENT RISE

William Thurn, president of the First National Bank, also reported savings deposits up—about 10 percent above last year's.

R. F. Kingsley, editor and publisher of the Kenosha Evening News and president of the Kenosha Savings & Loan Association, reported a better than threefold increase in applications for home loans.

Milton Wittenberg, secretary of the chamber of commerce, noted that in May 1958, Kenosha had 24,000 wage and salaried workers. This May there were 31,000.

Factory production payrolls in May 1958 covered 14,300 jobs, a figure that rose in a year to 20,200.

He reported smaller but similar gains in wholesale and retail and transportation jobs.

A Bill To Amend the Subversive Activities Control Act of 1950 So as To Authorize the Secretary of Defense To Provide for a Security Program With Respect to Defense Contractors and Their Employees

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. WALTER. Mr. Speaker, I am today introducing a bill to amend the

Subversive Activities Control Act of 1950 so as to authorize the Secretary of Defense to provide for a security program with respect to defense contractors and their employees.

On June 29, 1959, in the case of William L. Greene versus Neil M. McElroy, in another divided opinion, the Supreme Court held invalid virtually the entire industrial security program of the Defense Department on the ground that it is not clear that the President or the Congress "within their constitutional powers specifically have decided that the imposed procedures are necessary and warranted and have authorized their use."

The effect of my bill, Mr. Speaker, is specifically to overcome this decision so that the Department of Defense may have congressional authority to safeguard our industrial establishments, without disclosing information injurious to our national security.

Speech of Senator Hubert H. Humphrey in Kenosha, Wis., on June 14 at a Testimonial Dinner for the Honorable Walter Molinaro, Speaker of the Wisconsin Assembly

---

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. FLYNN. Mr. Speaker, I was privileged to return to my home district on the 14th of June to attend in the city of Kenosha, Wis., a testimonial dinner in honor of Speaker of the Assembly of the Wisconsin Legislature, George Molinaro. George Molinaro is an old and dear friend of mine and was my good friend and counselor in the days when I served in the State senate at Madison, Wis. The ability and leadership of George Molinaro has been recognized by his Democratic colleagues for when the Democrats took over the Wisconsin Assembly for the first time in 24 years, they immediately elected him as speaker of that body. The home community of George Molinaro turned out en masse. There was business and labor, farmer and friend; they all joined hands, over 900 strong, to wish him well and to congratulate him on his fine record of achievement. It was my privilege to say a few words to express my deep feelings and in recognition of the fine and outstanding record which George has carved for himself in the history of Wisconsin politics, and as a leader of Wisconsin citizens and as a man who has stood on all issues for that which is right and proper for the people whom he represents.

At this dinner, the enthusiastic crowd was addressed by one of the outstanding Democrats of our day. I speak of the Honorable HUBERT H. HUMPHREY who is serving in the U.S. Senate as the senior Senator from the neighboring State of Minnesota. I believe, as do so many in the Midwest, that Senator HUMPHREY is a man of principle, a man who will stand up for a platform and for a program, and who will fight even though the odds are against him. He is a man of deep sympathy and understanding who knows the problems of the little people. He has deep feeling for their complex problems and for the complex society in which we live. He believes that government should be administered so as to lighten their load and burden both taxwise and otherwise. Also while fighting their battles he recognizes the needs of business and industry and knows the necessity of having a set of laws that will permit industry to operate at a profit. He is truly conscious of all segments of our society as well as all of the problems that we face, and his record is one of constant battles to improve our present day living conditions for all classes of people in the Nation. I was deeply impressed by the speech which he gave, and although I have not endorsed or personally come out in favor of any candidate for the Democratic presidential nomination, I do feel that Senator HUMPHREY would, if chosen, be an extremely good candidate and one of whom the party could be proud. I, of course, recognize that the Democratic Party has several other candidates, each of whom would do a creditable job and would make both the party and the Nation proud of the program and the platform which they would run upon. I would like, however, to extend in the RECORD the speech which was delivered by Senator HUMPHREY in Kenosha, Wis., on the evening of June 14 at the testimonial dinner for George Molinaro, speaker of the Assembly of the State of Wisconsin. The speech follows:

OUR NATIONAL GOALS

(Remarks of Senator HUBERT H. HUMPHREY at testimonial dinner for Speaker Molinaro, Kenosha, Wis., June 14)

It is natural for me to feel at home here in Wisconsin, for this is home territory for me.

Minnesotans and Wisconsinites are used to talking to each other as neighbors talk over a back fence—and the fence between our two States really might as well not exist, judging from the friendly reception the people of Wisconsin have given me during these past 2 days. I have really been treated like one of the home folks.

One thing that has given me a feeling of being at home in Wisconsin is what's been happening in the Democratic Party in this State. In this respect, I am happy to say, the Wisconsin story and the Minnesota story are very much alike.

Fifteen years ago, both of our States were dominated by Republicans. They held both Senate seats, and virtually all of the congressional seats. They controlled the governorship and both houses of the State legislature.

Well, things have changed for the Democratic Party in Minnesota and in Wisconsin.

In Minnesota, we now control both Senate seats. Instead of having one or two Democratic Congressmen, we now have four. We hold the governorship, and one house of the State legislature.

Yes, things have changed in Minnesota—but no more than they have in Wisconsin.

You have written a record here that Democrats the Nation over can envy and be proud of.

You have a Democratic Senator for the first time in 21 years—a courageous and able Senator you can be mighty proud of—BILL PROXMIRE.

From being totally blacked out of representation in Congress in 1946, you have won 5 of the 10 congressional seats—including this First Congressional District now happily and effectively represented by an outstanding new Congressman, GERRY FLYNN.

You control the governorship for the first time in 25 years, and I'm proud to share the platform with the man who broke that Republican jinx, your great Governor and my good friend, Gaylord Nelson.

But the symbol—and perhaps, too, the secret—of your success may be found in the story of the man you and I honor tonight, the speaker of the Wisconsin Assembly, George Molinaro.

For when George Molinaro first became an assemblyman in 1946, the State legislature was a mighty lonely place for Democrats. In fact, there were only 11 other Democrats to keep him company in the house.

I wonder if George Molinaro—or any of the other 11 Democrats who sat with him in those bleak days of 1947 ever dreamed that a little more than a decade later, the Democrats would actually control the house, and that your neighbor, George Molinaro, would hold the powerful and respected post of Speaker of the Wisconsin Assembly. How many of you here tonight thought that could happen in such a short time?

When a man can, by hard work and sheer merit, work his way up from a Kenosha constable to one of the highest posts in the State, the party that gave that man the chance to rise is not only a vigorous party, it is a great party.

And so when I salute you, Mr. Speaker Molinaro, I salute every Democrat in Wisconsin, from the precinct worker, committeeman, party officer right on up to Senator PROXMIRE and Governor Nelson and his associates in State government.

You in Wisconsin, like your Minnesota neighbors, know the ingredients of political success: Hard work—not just around election time, but 12 months a year; dedication to liberal, progressive principles and programs, and not just at election time, but all the time; and a willingness to welcome new faces and to give every person that precious chance to rise to the top and fulfill the responsibilities of political leadership.

Fortunately, the Wisconsin story and the Minnesota story are being written in State after State across the Nation. Since 1953, we've won State house after State house. We've won senate seats and house seats that had been occupied for years by Republican mossbacks.

But, our victory—the people's victory—will not be complete until we win the White House.

And if other States can develop the kind of Democratic leadership that Wisconsin has, I have little doubt that there will be a Democrat in the White House in January, 1961.

But let's not get complacent and overconfident and think we can just coast in on the tide.

The Democrats swept the country in the 1958 election with promises of action—yes, liberal and progressive action—for 1959.

The people who elected the Democrats are getting restive and they are looking to us for action. We in Congress have an obligation to carry out the mandate of the 1958 election.

The Republicans would like to see this Congress fall on its face and they have the money and the press to publicize its shortcomings. But we Democrats have a two-to-

one majority and there can be no alibis if we fail. And we're going to stay on our job in Washington just as long as necessary to live up to our 1958 promises; we must and we will carry out our progressive and constructive Democratic program.

For the Democrats to win in 1960 there must be a powerful and liberal image of the Democratic Party in the mind and heart of every American voter.

I suggest, as a model for that image, the image the Democratic Party enjoyed when it was led by that great humanitarian 20th century American, Franklin Delano Roosevelt.

There is a lesson for our party, in this year 1959, in the last words ever written by Franklin Roosevelt. They were addressed to the San Francisco Conference of the United Nations, which he did not live to attend.

In those last words, he admonished the world, "We must move forward with strong and active faith."

These last written words of Roosevelt were not words of complacency or contentment with the past. They were a call to action. They summoned us—and the world—to move forward.

To Franklin Roosevelt, moving forward did not mean reliance on the momentum of forces already in being. He said that we must be strong and active. He knew that there was no strength in waiting for events to take their course. He demonstrated that events must be shaped. He knew that neither domestic nor international problems could be solved by sporadic and desparate reactions to crisis. He demonstrated that leadership means positive action, that leadership means setting goals and always striving to meet them.

Let us, too, set our goals and always strive toward them.

In the years ahead, three great goals confront America: the winning of an honorable and lasting peace; the fulfillment of our economic potential; and the attainment of full dignity and liberty for every American.

The winning of the peace means this:

It means unfailing pursuit of the goal of universal disarmament, so that men can devote their energies and resources to constructive purposes, to bettering a lot of their fellow men.

But until we attain that goal, the pursuit of peace means an invincible shield of defense—not only to deter those who would make war, but to negotiate disarmament from strength, and not from weakness.

And finally, the pursuit of truly lasting peace means a long, hard struggle to improve the lot of the oppressed, the poor, the hungry, the sick, and the illiterate.

For the Communists and enemies of freedom will never cease their appeals to these people; and unless we wish to yield the world to their domination, we cannot relax our efforts to help those who are less fortunate than we.

These totalitarian states, first Russia and now in increasing measure China, recognize no ideal but power. Yet they know where they are headed, and they have the blueprints for attaining their goals. Year by year, the masters of the enslaved people are driving them relentlessly forward, in the most gigantic program of military and economic development the world has ever seen.

Our shortcomings, unlike those of the totalitarians, are not in ultimate purposes. But we have not yet equalled them in the steadfastness of our purposes; nor in our willingness to dedicate our full resources to the attainment of our goals.

Too many of our actions are improvised and disconnected, instead of being purposeful and long ranged. Too often we blunt the effect of fine words with meager deeds. And too often we blur the effect of fine deeds with foolish words.

The challenge of the Soviets is total. Their dedication is total.

We cannot answer this challenge of the totalitarians merely by declaring that they are evil doers and do not have the power to accomplish their asserted goals. We can answer it only by superior deeds.

Now, the second great goal before America is the fulfillment of our real economic potential here at home.

In pursuing this goal, we must look upon our economic system as something bigger than the dollar sign, and something warmer than the brick walls of our factories.

We sek not only to build machines, but also to improve men; not only to provide work opportunity, but also to provide leisure for self-development; not only to achieve security, but also to stimulate initiative and daring; not only to be efficient, but also to do justice.

But in order to move forward with strong and active faith toward this goal, we must remove one primary obstacle—a Republican administration which is satisfied with stagnation.

The Republicans take great pride in telling us that the economy is bigger than ever—as if this solved everything.

But when the Republican press agents tell us that we are now higher than ever before, we want to know who is higher, and how much higher. The better than 3 million unemployed are not better off than ever before. The farmer is hardly enjoying prosperity. The homeowner is hardly being helped by higher and higher interest rates. The small businessman has not reached his millenium.

The truth is that since this Republican administration took office, the American economy has fallen far short of its potential.

From 1953 through the end of 1958, we have lost more than 10 million man-years of job opportunity through unemployment.

The income of the average American family has been penalized to the tune of almost $3,000 in real buying power.

Net farm income has been about $31 billion less than it should have been, and wages and salary income almost $100 billion too low.

Private business investment opportunity has been almost $40 billion too low.

The excessive idleness of plant and manpower from 1953 through 1958 caused us to lose more than $150 billion in total national production.

As a result, even high tax rates have yielded to all levels of government about $25 to $30 billion less revenues than full prosperity would have yielded. These deficits in public revenues have meant deficits in national security and international economic cooperation. They have meant immense deficits in education and health services, housing and resource development, social security improvement and income protection to the unemployed.

None of these things has happened by accident. Every basic economic policy of the Republican administration—the tight money policy, the high-interest rates, the regressive tax policy, the pennywise and pound foolish economy programs, the giveaway of our resources—all of these have resulted in substituting economic slow-down for full economic growth.

These Republican policies have not meant boom and bust in the old fashioned sense. The protective Democratic legislation of the New Deal and the Fair Deal has saved us from this. But they have meant recession half the time and stunted growth all the time.

Where do we go from here; and first of all, where can we go?

If we fully marshal our economic potential, we can in the next 5 years lift our $460 billion economy to much better than a $600 billion economy.

We can increase the average annual income of American families, measured in real buying power, by about $2,000.

We can liquidate most of the private poverty, which still bears down upon millions of our people.

We can have prosperous farmers as well as prosperous industry; small business can thrive alongside the corporate giants. In short, we can lift those at the bottom without penalizing those at the top.

We can combine the American system of different rewards for different abilities and efforts with the American system of equal opportunity for all and social justice.

And on the productive foundation of this private economic progress we can check the impoverishment of our vital public services, and put an end to the neglect of our greatest national and worldwide priorities of need.

We can, in a word, fulfill our economic potential and realize our dream of abundance.

The third great goal before America is the attainment of full dignity and liberty for every man, woman, and child within our borders.

We have made a start toward equality of opportunity for employment.

We have made a start toward integrating our public schools.

We have made a start toward integrating our public facilities of all kinds.

We have made a start toward preventing discrimination in housing.

We have made a start toward assuring the right of every citizen to vote.

Yes, we have made a start in each of these areas. But there is more—much more—to be done.

And we are determined that from these small beginnings we shall one day build a land of tolerance that knows no bigotry.

The road toward understanding and tolerance, toward equality and justice may be a rough one. But we must travel that road and travel it surely if we are to survive in a world two-thirds colored. And we must travel that road and travel it courageously—not only because it is necessary for our survival—but because it is right.

My friends, if we move forward to cross and conquer these three new frontiers, many of us may live to see the greatest era of accomplishment in the history of man.

During a large part of the 19th century, the Old World enjoyed a wide measure of peace and prosperity, scientific development, and practical reform. The outstanding characteristic of this period was faith in the future of man, expressed by a poet laureate of England who spoke of the gleam of the untraveled world ahead.

At this midpoint in the 20th century, mankind is again moving into an untraveled world. New problems, new danger, new uncertainties, confront us. But the New World into which we are moving is also gleaming with high promise. The free peoples of the world are infinitely stronger than they were in the 19th century. We have gained in knowledge of the physical world, in science and technology and communication. Above all, we have come to appreciate the links which bind all free peoples together. We have found the instruments of cooperation which may forge these loose links into an unbreakable chain of strength.

So let us lead from strength. Instead of thinking that every great task is beyond our means, let us measure the greatness of our capacity.

Instead of filling the air with fear, let us fill men's hearts with hope.

Instead of being overwhelmed by the dangers of the world, let us be inspired by the challenge to surmount these dangers.

Instead of worrying about the future, let us labor to create it.

Again in the words of the poet, as the great world spins forever through the ringing grooves of change, we can bring an increasing purpose into the lives of freemen, if only we do not close our minds to new problems, if only the thoughts of men are widened with the processes of suns.

I know that after reading this fine speech you will agree with me that the vision and breadth of the Senator well qualifies him to lead this Nation in the event the Democratic Party should select him as their presidential nominee.

A Suggested Temporary and Partial Solution to the Problems Raised by the Supreme Court's Recent Decision Approving State Taxation of Income Derived Exclusively From Interstate Commerce

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. WALTER. Mr. Speaker, the businessman who sells his product in States other than the one in which his establishment is located must anticipate greatly increased exposure to State taxes as a result of a recent opinion of the Supreme Court—*Northwestern States Portland Cement Co.* v. *Minnesota* and *Williams* v. *Stockham Valves & Fittings, Inc.*, 358 U.S. 450—in two related cases, one involving Minnesota and one involving Georgia taxes.

BACKGROUND OF PROBLEM

Prior to February 24 of this year, it had been generally assumed that if a business had no factory, warehouse, or inventory in a State but solicited business in that State, the sales made were in interstate commerce and therefore protected from State taxation by the commerce clause of the Federal Constitution.

THE NEW DECISIONS

On February 24, 1959, the Supreme Court rendered a decision in two cases involving State taxation of income derived exclusively from interstate commerce—dissenting Justices Whittaker, Frankfurter, and Stewart. In both cases, the taxpaying corporations had restricted their activities to those previously considered nontaxable. Their manufacturing operations and inventory were entirely outside the taxing States and all orders from purchasers in such States were required to be transmitted to the home office for acceptance. Basically, the only activities within the taxing State were the maintenance of a sales office and the solicitation of orders. The specific holding of the Court was that a State has jurisdiction to levy an income tax on a corporation organized under the laws of another State when the taxpayer's only activities were soliciting orders in the taxing State and shipping goods to customers therein. The Court did, however, impose two qualifications. The income taxed must be fairly apportioned to the activities in the taxing State and the corporation must have some minimum connection, or as the Court put it, "nexus" with the State.

IMPLICATIONS OF THE DECISIONS

If all States were prepared to restrict their taxes to those corporations having an established sales office within their borders, the problem of the burden on firms doing an interstate business could be held to manageable proportions. However, the full implications of the taxing powers granted to the States by the new Supreme Court decisions have yet to be explored. In two other recent cases—*Brown-Forman Distillers Corporation* v. *Collector*, 359 U.S. 28; *International Shoe Company* v. *Fontenot*, 359 U.S. 984—the Supreme Court refused to review decisions of a State court upholding a State tax on a corporation which merely solicited orders and shipped goods into the taxing State. In neither case did the corporation have an office of any kind there. No one knows why the Supreme Court refused to review the decisions or what action it would have taken if it had considered these cases on their merits. However, until further light is shed on this area by subsequent decisions, the only safe assumption is that by merely sending salesmen into a State, a corporation subjects itself to such State's taxes. In fact, since February 24, three States—Utah, Idaho, and Tennessee—have amended their taxing statutes to take full advantage of the most liberal interpretation of the Supreme Court's decisions. Any continuation of this trend will have the result that many small- and medium-sized businesses, which now pay taxes only in those States where they have plants, warehouses or offices staffed by employees authorized to accept orders, will be required to file returns and pay taxes in every State in which they solicit orders and ship goods.

THE SUGGESTED SOLUTION

To alleviate this problem in a way which will represent a fair compromise between the revenue requirements of the States and the need to obviate the imposition of an unfair burden on medium and small interstate businesses, it has been proposed that Congress enact legislation restricting State tax jurisdiction to situations where the corporation has a permanent establishment in the form of a plant, warehouse, stock of goods or office in the taxing State. Such a minimum activities type of bill has definite precedent in prior congressional legislation since it follows the exact pattern of the restrictions imposed by Congress on the taxing power of the District of Columbia.

A further advantage of this solution is that it would not involve the necessity of urging Congress to reverse the recent Supreme Court decisions in Northwestern States and Stockham Valves, inasmuch as under the facts of those decisions, the taxpayer had an office in the taxing State. All such legislation would do would be to prevent State tax jurisdiction from extending beyond the specific situations already ruled on by the Supreme Court.

This type of legislation would restrict State jurisdiction to tax only in those situations where potential revenue is the least and foreseeable difficulties in collection are the greatest. Thus, it is to be anticipated that State opposition will be reduced to a minimum. In fact, there is reason to believe that, when State administrators appreciate the difficulties of enforcing taxes against foreign corporations which have no permanent establishment within their States, they may well be willing to accept such legislation, even though they would not have felt themselves free to suggest it in the first place. At the same time, the medium- and small-sized businesses operating across State lines will be relieved of the heaviest portion of the burdens imposed by the new decisions.

The proposed legislation would in effect hold the taxing power of the several States to the exact situation passed on by the Court only until Congress has a chance to examine into the whole question and enact permanent corrective legislation.

Letter of President Carlos Garcia, of the Philippines

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a letter written by President Carlos Garcia of the Philippines, as addressed to Mr. Max Abelman, known as Brooklyn's ambassador of good will, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MALACANANG PALACE,
February 12, 1959.

Mr. MAX ABELMAN,
Brooklyn, N.Y.

DEAR MR. ABELMAN: I have just received your letter of February 4. It was a pleasure to read its contents and the various interesting enclosures you forwarded. From the things said about you and considering your friendly gestures towards this country, you are certainly living up to your reputation as Brooklyn's ambassador of good will.

May I also say that I appreciate your sympathetic views on the present state of relations between the Philippines and the United States. You will remember that your good friend, our Ambassador Carlos P. Romulo, recently brought up omnibus claims for the consideration of the U.S. Congress. I am glad that you are trying to help in Washington by communicating with friends there who are in a position to give favorable support to the Philippine stand.

Let us hope that everything will turn out for the best. Meanwhile I extend sincerest thanks and cordial regards.

Truly yours,

CARLOS P. GARCIA.

Are Wage Increases Inflationary?

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article entitled "Are Wage Increases Inflationary" by Stanley H. Ruttenberg, research director for the AFL–CIO:

ARE WAGE INCREASES INFLATIONARY?

(By Stanley H. Ruttenberg)

For too long, the Eisenhower administration has been using fear of inflation to block normal economic growth. Recent price levels mark almost a year of stability. Even the price changes of the preceding 10 years have been lower, on an annual average, than those of the distant past, when inflation received much less popular attention.

In March 1959, the much publicized yardstick of inflation, the Consumer Price Index, stood at 123.7. This is precisely where it was in June 1958, and only 0.4 percent above March 1958. The Wholesale Price Index has 'so shown stability. In March 1959, it stood at 119.6, which was 0.1 percent below the same month's index in 1958. Further investigation shows that price changes in the previous 10 years compare very favorably with previous decades. The "compound rate" of increase per year was 1.25 percent for wholesale prices and 1.75 percent for consumer prices. During the last 60 years, the average has been 2.3 percent in these two indexes combined. As Prof. Alvin Hansen stated in a recent letter to the New York Times: "Indeed, the record during the years 1948-58 (which, however, included a war of considerable dimensions) discloses a per annum price increase not much more than half as large as that of the entire 60-year period. This is by no means an irresponsible record."

Immediately before the past year's price stability, between March 1956 to March 1958, price levels moved up 7.4 percent. But for the first time since the end of World War II, with production below capacity, unemployment at a rate averaging 4 percent, and a shortage of demand that helped cause a recession, economists could not depend on the classic explanation of inflation—too much demand chasing too short a supply. Earlier sharp rises in the price level, both in the 1948–58 period and immediately before it, had been caused by demand-inspired inflation. The two periods after World War II which had the greatest price increases were 1946–48 and 1950–51. In both cases, war-related demand sent prices skyrocketing. Immediately after World War II, prices shot up in response to the unleashing of pent-up demand at a time when civilian production could not absorb it. During the Korean period, the same forward push came from anticipated shortages, speculation, "scare-buying." These war-related pressures accounted for 74 percent of the total increase in the Consumer Price Index after World War II.

But the most recent wave of price increases between 1956 and 1958 seemed to stem from a shortage of demand. Even during the worst period of the 1957–58 slump, prices continued to rise. This confusing economic phenomenon was responsible for the term "wage inflation"—a pat but insufficient explanation. Indeed, failure to recognize the difference between current price pressures and sharp war-related rises has resulted in the administration's devoting all its energies to combating what can only be called a "non-existent inflation."

What were the price pressures at this point in the decade between 1948 and 1958? Wages rose throughout the decade and except for 3 years prices were relatively stable. In fact, the pressures responsible for the greatest changes in the price index between 1956 and 1958 were those least related to wages. The Consumer Price Index, of course, is a reflection of various sectors of the price structure, each of which responds to specific economic influences peculiar to its makeup. Examination reveals that almost two-thirds of the total index rise of 7.4 percent in the period 1956–58 came from the components known as food and services.

Food price increases accounted for 45 percent of the rise, with perishable foods alone accounting for one-third of it. Economists agree that drought in the Southwest in 1956–57, accelerated the beef-cattle cycle (usually of a 2-year duration), leading to a shortage of beef and higher prices. A freeze in the South in 1957–58 also led to shortages of perishable foods and higher prices. As for the other food price increases, wages in agriculture—among the most depressed in the Nation—can hardly be held accountable. Nor can the costs of packaging, processing, and distribution account for the price increases. For they were largely caused by varying supply and demand and improvements in quality.

Services, the next sector of major influence, accounted for 20 precent of the overall 7.4 percent rise in the index. This catch-all category includes such varied items as finance, insurance, professional fees, shoe repair, education, auto maintenance, and insurance charges. The sharpest increase was in finance and insurance charges, which jumped 17 percent—multiplying costs for all items in the economy. Wages in these areas are notoriously low. Price pressures came from increased demand due to population growth and improved living conditions, and from the effects of tight money on the population.

What happened in the unionized industrial sector which has been blamed for all inflation in national ads? What about the collective bargaining increases that have been dubbed by the President and others as inflationary? Obviously, these accounted for far less than a third of the 7.4 percent 1956–58 rise in the index.

Yet there has been a growing tendency to equate a 10-percent wage rise with a 10-percent increase in costs. Such an equation is unreasonable: Despite constantly increasing wages between 1953 and 1958, unit payroll costs in manufacturing were lower in early 1958 than in 1953—the index was down to 109.7 from 111.3. But wholesale industrial prices were much higher—up from 114 to 125.6. The lack of relationship can be seen even more clearly from the fact that wages increased between 1957 and 1958, unit payroll costs went down and wholesale prices did not change at all—they did not go down in response to a drop in the payroll index from 112.2 to 109.7.

If wages were not the cost pressure, what was responsible for price increases from 1953–58? Precise figures are not available, but the evidence is clear: Research and development outlays by private industry rose over 300 percent in this period; depreciation charges of nonfinancial corporations jumped 52 percent; interest payments by nonfinancial corporations went up 45 percent; the number of professional employees increased by 27 percent; advertising outlays rose enormously. In all cases, the bulk of the increases occurred after 1955.

On top of these massive expenditures, industries have naturally sought to maintain or enlarge high profit margins. In key industries where there is little or no price competition—such as steel, auto, aluminum, oil refining—giant corporations have been able to set prices for strategic manufactured goods with little relationship to costs. Administered prices have had an enormous effect on the hard-goods sector and have also influenced other sectors of the price structure.

It is a mistake to consider wage increases a major price pressure in these industries. Congressional studies have shown, for example, that United States Steel can still make profits when operating at only 40 percent of capacity. Its break-even point is so low that in 1958 when it operated at 59.2 percent of capacity (the lowest since 1938), net profits were the fourth highest in its history. Net profits as a percentage of employment costs have exceeded 20 percent in 1955, 1956, 1957, and even in the recission year 1958. Though steel wages are the highest in history, payroll costs in 1958 were the lowest since 1954. Excessively high profits, based on low break-even points, are being made by United States Steel and other corporations in administered price industries at the expense of the American consumer.

The most important challenge facing the American economy is economic growth. Price stability and economic growth must be considered together. Prices tend to rise more in periods of slackened economic growth than during times of high-growth rates. To put it another way, a greater degree of price stability may be produced by a higher rather than a lower rate of growth.

From 1948 to 1953 (omitting the 1950–51 Korean inflation), for example, the average annual rise in the consumer price index amounted to only 0.8 percent, and the wholesale price index changes showed a decline averaging minue 1.3 percent. Economic growth, as measured by the average changes in gross national product, was relatively high—rising by an average of 4.1 percent. Contrast this period of low price rises and higher growth rates with the period between 1953 and 1958, when the average annual consumer and wholesale price changes were considerably greater—1.5 percent and 1.6 percent respectively. The average growth rate, at 1.3 percent per year, on the other hand, was one-third that of 1948–53.

It should be clear then, that price movements are complex processes. No one factor in the price structure can alone be deemed responsible for inflation—neither wages, food, administered prices nor services.

What can be done to control inflation? The post-World War II and Korean demand pressure suggest the necessity for comprehensive standby legislative authority for economic stabilization controls in emergency, inflationary situations. Such authority—lacking at the beginning of the Korean inflation and too short lived for the World War II period—might well have curbed a good part of postwar price pressures.

The impact of food prices in 1956–58 suggests the need for a new approach to agricultural programs—perhaps an income-support instead of a price-support system for farmers. Similarly, knowledge of the facts about service costs might help relieve the inflationary pressures they create. Study of medical care might lead to reduction of this price pressure through acceptance of current proposals along the lines of cooperative plans or group practices. Greater understanding of the effects of tight money on interest rates would shed additional light on ways to reduce financing costs. High automobile repair costs and their effects on insurance rates need further examination. Other specific areas should also be studied. For example, housing costs have increased in recent years, but plans for improving efficiency of construction and reducing rental costs have not been carefully and fully considered.

The complexities of industrial price pressures suggest the need for closer examination of the makeup of unit costs and distribution costs in an effort to reduce prices. Public attention ought also to be focused on the cost-price-profit-investment policies of major corporations in the administered price industries.

The American consumers, the people most concerned, should be provided with information about the complex causes of price changes. Some method, possibly a government consumers' agency, should be devised to provide information and to develop understanding of such problems as quality of goods and interest costs. Perhaps a Federal program of research and education for consumers could accomplish much of this necessary task.

Abolish Farm Subsidies: The People Say

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. HOSMER. Mr. Speaker, in order to convince my colleagues that people really do want the farm surplus mess brought to an end, and really do want farm subsidies stopped, I have from time to time placed in this RECORD extracts from letters from various parts of the country commenting on my four-point program to accomplish that objective. These letters come from both rural and urban areas.

Briefly, the program calls for immediate cessation of all farm subsidies, estimated this year alone to cost $6 billion, and the fire-sale disposition of Government-held surpluses amounting to around $9 billion and costing $1 billion a year to store. The proceeds of the sale would be used to relocate small, marginal farmers, to reduce the national debt, and to reduce taxes.

Here are additional extracts from letters approving this program:

We want to join the taxpayers' revolt against farm subsidies. We were farmers for years and are interested in your four-point program.

Your position on the agricultural situation is courageous and, I believe, so sound that it must ultimately win a majority support.

I have talked to hundreds of people about the farm subsidy program and almost to a man their thinking coincides with yours. It is my opinion the American voters have about reached the end of the rope as far as the present scandalous mess is concerned.

Please stick to your guns on the taxpayers' revolt on the farm subsidies.

This letter is to give support to your four-point program to end the farm mess.

I have just read in the local press of your proposed four-point program to end the farm mess and it seems to me that what you are proposing makes sense. It may be radical surgery but the patient is beyond palliative measures.

Am absolutely opposed to farm subsidies and go along with you 100 percent on the fire-sale idea for unloading the surpluses—let's do it and not have any more.

Agree wholeheartedly with your stand on the farm mess.

Allow me to congratulate you on the stand you are taking on this farm mess. Farming is a business and it's high time the farmer was allowed to run it without any Government help or other interference. The average farmer will not have any trouble making a success if he diversifies and runs his farm in a businesslike manner.

The farmers never had it so good. The fire sale is an excellent idea. Let the law of supply and demand control production of farm products.

I am anxious to hear more about your farm bill and am absolutely with you 100 percent when you propose to stop all farm subsidies. I think the farmers have had it soft for too long.

My congratulations upon your proposed solution of the farm mess. I have felt for a long time that something of this kind should be done, but have despaired that the politicians in Congress ever would consent to it.

Your farm program sounds sensible to me.

Your farm program as outlined sounds as if it will be a great step forward in eliminating government controls—which I believe is good.

Want to express approval of your farm plan.

Congratulations for effecting a plan to remedy the unfortunate farm mess. If this plan is effective and feasible in its details you have more support than ever.

Good luck to you for your plan for the fire sale getting rid of the farm mess.

I agree the farm mess should be stopped. My brother in Iowa (a farmer) does not approve of it—never did.

Toward a Statement of National Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. HUMPHREY. Mr. President, recently at the 41st annual meeting of the National Lutheran Council, the council adopted a statement of national policy which I feel should have a broader audience. It is a wise and statesmanlike declaration.

I ask unanimous consent that this statement "Toward a Statement of National Policy" be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TOWARD A STATEMENT OF NATIONAL POLICY

The following statement is offered for our fellow Americans to consider and test in the light of the lessons of history and of their own insights and convictions, with the prayer that ultimately the power of such ideals will seize us and all men, leading us to experience the things that make for peace.

"Recognizing the inequities which exist among peoples of the world in such respects as education, social and political freedom, economic levels, and access to natural resources;

"Realizing the natural tendency of men and nations to set themselves and their self-interests above the common good of men everywhere;

"Knowing the complexity of the problem of developing an adequate national policy in the face of the power struggle in today's world, where the absence of major armed conflict is largely dependent upon precarious balances of power;

"Convinced, nevertheless, that humanly speaking the only ultimately effective power toward world peace is to be found in obedience to divine law expressing itself in love and justice; and

"Believing that our Nation under God is an integral part of a world community of nations;

"Therefore we submit to our fellow Americans the following propositions for thoughtful study in the belief that they are in harmony with God's law expressed in love and justice and embody policies essential to the national interest:

"That our Nation's interests, responsibilities, and welfare are not only interrelated but also inextricably intertwined and interdependent with those of her sister nations throughout the world.

"That our Nation's policies, domestic as well as foreign, should be designed to further purposes consistent with the well-being of the whole family of peoples and nations. In the long view her true national interest is best served by advancing the international interest, the common well-being of the whole community of nations.

"That our Nation's course of action should be determined not arbitrarily, not in isolation, nor in reliance primarily on economic or military power, but in recognition of her obligations toward others and in harmony with universal standards of law and justice.

"That our Nation's conduct and policy should strive to develop in partnership with other nations increasingly adequate structures of international organization and law to achieve justice, order, peace, and disarmament.

"That our Nation's posture in military and economic affairs should be designed to support an international equilibrium which is dynamic rather than static involving not only powerful nations but also national groupings or agencies within or outside of the framework of the United Nations designed to develop political, economic or military coordination until such time as agencies or international law and justice are sufficiently established to preserve world peace and order.

"That our Nation's efforts to maintain her standard of living, involving such matters as immigration, trade, tax, and fiscal policies, as well as her treatment of racial, cultural, and economic minorities within her own borders, should manifest a sense of moral responsibility consistent with her recognition of man's individual dignity and worth and also of his membership in the one human family.

"That our Nation's 'life, liberty, and pursuit of happiness' depend in important measure upon her willingness to share mutually and responsibly with other nations in developing the latent resources and potentialities with which these nations are endowed. Both governmental and voluntary channels need to be used to insure for the peoples of the world opportunities for lives that are personally satisfying, socially enriching, economically productive, and responsibly independent."

Morton Explores Reasons for Growth of Inflation

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following article by Sterling Morton, which appeared in the Chicago Sun-Times of June 22, under the heading "Morton Explores Reasons for Growth of Inflation":

MORTON EXPLORES REASONS FOR GROWTH OF INFLATION

(Out of a vast store of business experience, spanning more than 50 years, Sterling Morton, chairman of the board, Morton Salt Co., writes of the contemporary economic scene. This is the 10th in a series.)

(By Sterling Morton)

To talk about inflation is sheer waste of time. For inflation is a result and when once in progress, as now in our country, the fundamental causes must be removed or disaster follows.

If you suddenly "inflate" personally, (develop some abnormal swelling) your doctor doesn't treat the swelling, he looks for its cause. That, he treats.

What are the causes of the disease now rotting the purchasing value of our savings, our insurance, our old-age pensions? Why are endowments of our churches, non-tax-supported educational facilities, voluntary hospitals, and a host of other worthy institutions shrinking each year in purchasing power?

"Because the dollar buys less," you say. Why? What has cheapened that dollar whose soundness was once proverbial? We must seek the basic causes of the disease so we can insist that those we elect to manage our public affairs, from the school districts to Washington, apply the needed remedies—or else.

In my opinion, our present growing inflation results mainly from:

1. The 16th (income tax) amendment, which opened Golcondas of revenue to the politicians.

2. Departure from sound money, freely convertible into gold.

3. Bribing groups of voters: farmers, miners, low-income families through subsidized housing; veterans, old people, etc., etc., with Federal tax money. The major political parties vie in such bribery.

4. The sprawling, arrogant Federal bureaucracy—now over 2½ million of them.

5. Absence of real control over military expenditures, letting interservice competition run wild.

6. Federal bribery of State and local governments by "matching funds" for projects the voters otherwise probably would not authorize.

7. Extravagance of State and local governments, school boards, etc.

8. Wage increases not justified by increased productivity but forced by monopolistic, tax-free unions.

9. Enormous increase in the share of national income eaten up by taxes.

10. And, most important, no widespread public realization that such fiscal irresponsibility endangers the very life of our Nation.

The mere statement of these causes suggests the remedies needed.

But, let's go a bit further:

Always remember that the Congress and the executive are independent branches of our Federal Government. Basically, the executive cannot force the Congress to appropriate money and, conversely, the Congress cannot force the executive to spend appropriations, except for the national debt charges.

The citizen can censure extravagant spending by Washington, its agencies or by any local governmental body. He can throw the spendthrifts out. Every 2 years he, collectively, could retire a Congressman who wastes tax money.

At longer intervals, he could veto a President or a Senator. He has the power to pass judgment on his legislative and executive representatives in the State house, the county building, the city hall. Governmental extravagance can be curbed only by the citizen.

I am old enough and cynical enough to know that, with few exceptions, elected officials, whether executive or legislative, will promise economy but not practice it—unless and until reckless spenders meet defeat. The survivors would then change their tune.

We know the follies of foreign aid. I've seen it in action. Some of its personnel are sincere, some projects are sound, yet, I am convinced that our well-intentioned gifts and "loans" (and the administrators we send over) make us more enemies than friends and have alienated former friends. Even more serious, we have lost the respect we formerly held everywhere.

Foreign aid is a small part of the spending, while "defense" is a very large part. Here, the layman must rely on the experts—within limits. Clemenceau said, "War is too important to be left to the generals." Only recently some Defense Department heads said they were oversupplied with armaments. Fancy that.

In recent years, the cost of the Federal Government's civilian activities has grown stupendously. Here, the President could effect enormous economies overnight. He might forbid his executive departments to replace any employees leaving, he could stop the enormous buildings now going up in Washington and elsewhere to house these hordes of taxeaters, he could pull home the many missions now poking into everybody's business overseas.

He could declare it public policy that murder is murder, assault is assault, and mayhem is mayhem, whether committed by an ordinary thug or a union one. Should he simultaneously announce his determination to make dollars again freely convertible into gold, the effect would be electric.

Such an example would affect government at other levels. Washington, while the leader, is not solely to blame for high taxes. Illinois, like other States, has been doing its part. Its collections doubled in 10 years—from $303 million in 1948 to $778 million in 1958. The rise in levies by other taxing bodies is comparable.

Who pays all these taxes? You, and nobody else. Your landlord collects real estate taxes from you, a corporation collects its so-called income taxes from its customers, and the contractor who builds your house adds on union dues and benefits. Taxes enter into the cost of everything you buy.

Taxes are paid by persons—and only by persons.

You pay for new highways, both at the toll booth and at the gas pump. You pay for harbor improvements, airports, public housing, the gorgeous new offices in Washington and elsewhere, the palaces of the labor chiefs. It all comes out of the customer, the consumer, and that is you.

There ain't no free lunch.

It may be that you like what's going on, want all these things done and are willing to pay for them. But, the price will be heavy. The first fruits of inflation are always sweet. The union member thinks he can keep ahead of the procession, the farmer perhaps likes subsidies better than free markets, the reliefer prefers the dole to work, the spendthrift politician finds it easy to buy election.

But, all history teaches that the primrose path of inflation leads to dictatorship, if not conquest and enslavement.

Heed, then, the words of wise Tom Jefferson: "We must make our choice between economy and liberty or profusion and servitude," and stop this headlong rush toward national suicide.

Immigration Bill To Facilitate Reuniting of Families

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. DANIELS. Mr. Speaker, I would like to explain my reasons for supporting H.R. 5896.

This bill contains a number of amendments to the Immigration and Nationality Act which I support wholeheartedly. Under the bill, for example, the unmarried sons and daughters of U.S. citizens are moved up from the fourth to the second preference category. The spouses and minor children of fourth preference immigrants are included within that preference group and the number of fourth preference visas are increased from 25 to 50 percent of those unused under the first three preference categories.

These, and other amendments contained in the bill, will improve the system of visa distribution by assuring increased reunification of the close family relatives of citzens and permanent resident aliens.

One feature of the bill, however, I find somewhat disappointing. I refer to section 4, which grants nonquota status to certain second, third, and fourth preference aliens. I introduced a bill earlier this year, H.R. 5536, which I believe would really solve the problem that is dealt with only in part by section 4.

My bill would amend section 12 of Public Law 85–316 under which some 29,000 immigrants on the first three preference waiting lists of oversubscribed quota areas were allowed to immigrate to the United States by May of this year.

The effect of my bill would be to allow all aliens within the four preference categories, whose immigration petitions were approved before July 1 of this year, to enter the United States as nonquota immigrants, provided they meet general entrance requirements. This is the simplest and most direct—and therefore in the long run the easiest and most sensible—method of handling the problem of oversubscribed quotas.

The bill under consideration is good as far as it goes. But in my opinion it does not go far enough. It would grant nonquota status only to those aliens in the second, third and fourth preference categories—that is the close relative groups—who had applied for an immi-

grant visa prior to December 24, 1952, the effective date of the McCarran-Walter Act.

The difference between this provision and my bill is that this section does nothing for those aliens who have applied for entry into the United States as permanent residents during the last 6½ years.

The distinction made between aliens registering before and after December 24, 1952, is purely arbitrary. It lacks a good substantial reason. Certainly, by excluding those who registered since that date, we are merely postponing part of a problem which should be handled in its entirety.

The difficulties and hardships resulting from oversubscribed quotas would, of course, be best remedied by doing something about the ultimate source of most of our immigration problems—the national origins quota system. The British quota of 65,361 is never more than half used, while Italy with its quota of 5,666 has a waiting list of 165,000 people who have petitioned to enter the United States. Greece, which has close to 100,000 of its natives petitioning to immigrate into this country, is granted the pitifully small number of 308 immigrant visas a year under the national origins formula.

We are not really going to solve our immigrant visa distribution problem permanently until we have the courage and show the strength necessary to replace the national origins system with one more in line with the needs of this country and of the potential future citizens who wish to take up permanent residence here. In the meantime, I support H.R. 5896—with some reluctance—on the theory that half a loaf is better than none.

Sudeten Germans Extend Best Wishes to United States on Our Independence Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Dr. Walter Becher, secretary general, Sudeten German Council, member of the Bavarian Landtag, on the occasion of this Nation's Independence Day:

SUDETEN GERMAN COUNCIL,
SUDETENDEUTSCHER RAT E. V.,
München, den June 30, 1959.

Hon. DANIEL J. FLOOD,
U.S. Representative,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FLOOD: On the occasion of July 4, the American National Independence Day, please accept the best wishes of the Sudeten German people.

I myself and my political friends over here in Germany are very grateful for and admire the firm stand which the United States have taken in the conferences in Geneva. The firm stand of the United States of America is the hope also of all other nations, both free and enslaved.

Against the offensive ideology of world communism and slavery, only the United States at the helm of the free world can—and, we pray, will soon—put an offensive ideology of world freedom, including diplomatic, journalistic, political, and economic measures, a warless liberation policy. This is what not only the threatened Berliners, the enslaved Soviet Germans, not only the enslaved peoples of Europe and Asia, but all freedom-loving peoples think of and hope for on July 4, the American Independence Day.

Your Nation having a great past has a still greater future ahead. I most sincerely send to you, on your national day, our heartfelt congratulations and best wishes for your great people as well as for you personally.

With best personal regards.

Yours very sincerely,
Dr. WALTER BECHER,
Member of the Bavarian Landtag,
Secretary General.

City of Tomorrow

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Col. S. H. Bingham as it appeared in This Week magazine of June 21, 1959.

Colonel Bingham, former head of New York's Board of Transportation, is consultant to the cities of Caracas, São Paulo, New Orleans, Montreal, and Stockholm.

The article suggests some fine ideas that could improve all of our metropolitan communities and particularly the District of Columbia and its environs:

HERE'S YOUR CITY OF TOMORROW—BIG, EXCITING FEATURES, BUT WE CAN'T WAIT TOO LONG

(By Col. S. H. Bingham as told to Myrick Land)

CARACAS, VENEZUELA.—I have spent the last 40 years adapting horse-and-buggy cities to the automobile age. And wherever I've gone, I've entertained a dream.

My dream is of a futuristic city built specifically for high-speed cars, jets, and rockets.

On these pages, an artist has pictured this trafficfree, noisefree, weatherproofed city of tomorrow. Some of the features may strike you as strange, but actually they are not. Most of them already are in use some place, and designs for the others are on the drawing boards. If a major new city were built today, every one of them could be included.

Here are a few of the features which would free this metropolis of many of the irritations which make life difficult in our old-fashioned cities:

Magic parking: The heart of this city will be completely free of private automobiles. A man who lives in the suburbs will get out of his radar-controlled automobile at the edge of the city core. The car will be pushed into a boxlike container and stored automatically in its allotted spot in a huge garage. Some garages will be built underground, like the one under Union Square in San Francisco.

Speedy commutation: The commuter will walk directly into a waiting monorail train which will be air conditioned, noiseless, and brightly lighted. He'll settle down, glance at the headlines in his morning paper, and be whizzed to work in a matter of minutes.

The monorail can travel above ground, but will probably dive underground for most of the ride through the core of the city. As riders on monorail lines in Dallas, in Cologne, Germany, and other places have learned, the monorail is free of the vibration, grime, and discomfort which make present-day commuting an unpleasant chore for many suburbanites. Beginning this month, hundreds of thousands of Americans will have a chance to try this dramatic new type of travel at Disneyland, Calif. And visitors to Seattle's "Century 21 Exposition" next year will travel to the exposition grounds by monorail.

Weatherproofed cities: The city which the monorail commuter reaches could be entirely weatherproofed against rain, snow, sleet, ice, biting winds, and the midday sun. An ideal temperature could also be maintained the year round.

I doubt if we want to go quite that far. Weather control rather than weatherproofing will probably be enough for the residential areas of the city. Homes will no longer need expensive individual heating systems or air conditioners, since cooled or warmed air will be piped in from a huge central air-conditioning unit, just as gas and steam are now. And there will be a number of other improvements, such as radiant-heated sidewalks which will melt snow as soon as it falls.

Complete weatherproofing will probably be reserved for the center area of a city. This is the section where bad weather is always a costly nuisance—and often dangerous. The artist has shown the kind of dome designed by Buckminster Fuller to close out snow, sleet, rain—even cold wind. Although this type of dome has never been used to enclose a section of a city, it has served to protect railroad marshaling yards and other similar areas from bad weather.

Freedom from traffic: Except for the monorail, the core of the city will be free of almost all traffic. Cities will belong to people again—not to automobiles, trucks, buses, streetcars, and trains. Ambulances, fire trucks, and sanitation vehicles will travel through a special network of underground passages.

Sao Paulo, Brazil, has proved that it is possible to bar traffic from a shopping area in the heart of a city during daylight hours without causing intolerable inconvenience. But in planning a new city—or reclaiming the heart of an old one—we should not settle for a small island of quiet and safety. We should have a large traffic-free, fume-free, noise-free shopping and leisure center.

Speedwalks and carveyors: Once the monorail brings you into the city of tomorrow, you will have a choice of a carveyor for rides in the core area, and the speedwalk for your window-shopping tours. Both are shown in the drawing. The glass-topped carveyor moves slowly but endlessly along major routes. The speedwalk—which has already been installed on a very small scale in Jersey City and Houston—is a moving sidewalk which will be as common tomorrow as escalators today.

Speedtubes: Small parcels, mail and food will be rushed through ducts and pneumatic

tubes from one part of the city to another, substantially reducing the number of truck deliveries. This kind of speedtube service—long used in Paris—could prevent traffic tie-ups which present-day cities face.

Automatic sky control: A monorail line will run from the airport to the heart of the city. This will put an end to the long delay air travelers now face in fighting heavy traffic from the airport into the city. Such details are checking papers (for passengers arriving from other countries) and delivering baggage could be handled en route, or at a central air-passenger terminal in the heart of the city.

The new airport wold also have an automatic control system. This foolproof device would take over direction of incoming planes while they were still some distance away and bring them in without any chance of accidents caused by pilot failure. It would also end the stacking up of planes above an airport, which is sometimes dangerous.

How soon will we begin to introduce some of these imaginative features in our present-day cities? We can't wait too long. The need for them is emphasized in the recent book "Cities in the Motor Age," by Wilfred Owen. Mr. Owen gives this grim reminder of what can happen unless we plan ahead:

"By 1975 we can expect another 50 million people to be living in metropolitan areas. Twenty million more workers may be added to the morning rush. More people, more jobs, higher incomes, and more leisure time will furnish the ingredients for still greater urban chaos. More than a hundred million vehicles will be jockeying for position."

But we don't have to surrender to urban chaos. By introducing some of the practical new ideas I have described, we can make tomorrow's bigger cities safer, quieter, and far more pleasant than any city in the world today.

SHAPES OF THE FUTURE?

Domes that can cover whole cities, or trains that run on one rail, may seem revolutionary to you, but they've actually been in existence a long time. Everything mentioned in Colonel Bingham's article, in fact, is either in existence now or could easily be constructed.

The monorail was first put into operation in Germany and Ireland before the turn of the century. Models now planned will travel 60 miles per hour and faster.

The Geodesic Dome first designed by Buckminster Fuller in the 1930's, drew incredulous gasps. But the Marines have adopted it for portable shelters, and it's come into wide commercial use. Biggest so far: a 384-foot cover for the railroad roundhouse in Baton Rouge.

Carveyors, although not in operation now, would be built on the same principle as kiddie trains in zoos. Speedwalks, however, have been put into successful operation in Houston and Jersey City.

In Our Image

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 7, 1959

Mr. HUMPHREY. Mr. President, one of the real problems of our times and one which demands our most careful thought and attention is that of juvenile delinquency.

One of the finest articles dealing with this subject which I have read appeared in the June 19, 1959, issue of the Commonweal magazine, entitled "In Our Image." It is written by Dr. Gordon C. Zahn, who is a member of the sociology department at Loyola University in Chicago, Ill.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

IN OUR IMAGE

(By Gordon C. Zahn)

Juvenile delinquency is not a new phenomenon. In the "old days" (c. 1910 and World War I), "Teutonia Indians" and "Bloody Sixty-six" stirred much the same chill of terror now evoked by "Cobras," "Silver Arrows," and the other colorful names chosen by the marauding gangs of today. Then, as now, national-origin loyalties and prejudices combined with common area of residence to unite individual toughs into a predatory force—though the "territory" was then more an area of identification than a realm subject to the absolute sovereignty of a street gang.

But the similarities soon fade away before the differences between the gangs of then and now. The misdeeds of the older delinquents, as they are remembered, at least, seemed to consist of such offenses as crashing private parties for the purpose of carrying off whatever edibles might be found. Acts of physical violence generally involved clashes with those who tried to interfere with or resist these forays. This is not to say, of course, that they never engaged in more serious offenses, but at least they were not known for them. The escapades our elders recall would be regarded today as innocent pranks when compared to the terror that rules the streets of a modern metropolis.

The gang delinquents of our day boast of arsenals that include broken bottles, tire irons, knives, guns, dynamite, and acid. They are better organized and far more numerous. Their delinquencies are marked by greater daring and a studied disregard of all limits of malevolence and viciousness. Instead of being occasional and unexpected, their activities have come to be regarded as commonplace, even routine, occurrences. All generations have their share of sadists and compulsive killers, but organized beatings and killings "just for kicks," as described, for instance, by Harrison Salisbury in "The Shook-up Generation" (Harper, $3.95) seem to indicate a new trend. This is especially compelling when considered in the light of the most horrifying fact of all—the steady decline in the age levels at which these offenses are committed.

Journalists, novelists, psychologists, and sociologists have all concerned themselves with the shook-up generation, its problems, and its frightening behavior, in the hope of discovering the reason and a cure for juvenile delinquency. For the most part, the journalists and the novelists have had the greater impact. Salisbury, Benjamin Fine, and their many colleagues can draw upon the full sensationalism of the problem in all its lurid dimensions to shock the public into awareness. Their more literary brothers probe into the inner depths of Nick Romano, Tomboy, and the Amboy Dukes to play upon the sensitivities and sympathies of the understanding reader. Both approaches, however, rest upon the oversimplification of a complex problem; and it is no surprise to find the explanation (and the solution) expressed in equally oversimplified form—whether it stresses family responsibility and laxity, the hereditary determinism of a "bad seed," or the environmental determinism that assures the reader that the delinquent lurks behind any door in any slum neighborhood.

One would like to be able to say that the social scientist has done much better, but, generally speaking, he has not. True, we have a wealth of carefully detailed and large-scale research programs furnishing clear evidence of the multidimensional character of the delinquency problem, but as these seldom reach the general public, most people hear and accept the more superficial explanations. And even if the scientific studies were known, it is unlikely that they would be effective; for the more careful the method and the broader the scope of such investigation, the less likely it is to produce conclusions that lend themselves to general explanations and applications. The net result is that while social scientists have been able to free themselves from the easy attraction of deterministic explanations, the layman becomes ever more impatient with the growing complexity of their findings and ever more willing to turn to the daily newspaper or the latest paperback for the real, down-to-earth facts and answers.

This is not to say that the social scientist has contributed nothing. He has helped to establish some degree of validity, however limited, to most of the "commonsense" explanations. There are now studies which give clear statistical support to the harmful influence of a bad physical environment, to the destructive impact of a broken home; and detailed case history analysis has confirmed the role played by the individual's own physiological and psychological malformations or maladjustments. To the extent that all the "total" explanations are given scientific support, however, all of them necessarily suffer some deflation and modification.

These findings represent important gains, of course, but they offer small consolation when we compare them with the rate of increase in the incidence and malevolence of the phenomenon itself. The evil is fast outdistancing our poor efforts to isolate its causes, much less cure or even control it.

Perhaps this is because we are looking for the wrong kind of cause—or looking in the wrong places. The study of the delinquent, juvenile or adult, is usually set in the framework of a deviation from the accepted social norms; he is seen as a rebel, with or without a cause, who, alone or in the company of other like-minded rebels, scorns and seeks to overthrow the dominant values of society. Occasionally one encounters an exception—Albert K. Cohen's 1955 study, Delinquent Boys: The Culture of the Gang, being one outstanding example—which approaches the delinquency problem as one not of deviation in itself but, rather, of conformity to a deviant value system held by some group more immediately crucial to the delinquent than the more abstract and distant society. This is an important shift of focus; neither the individual nor even the gang but, instead, the subculture of the neighborhood or community becomes the culprit.

This should not be confused with the old-style environmental determinism which viewed delinquency as the direct product of material deprivation, slum housing, recreational deficiencies, etc. These things are important, of course, but they are now important in that they contribute to a cultural setting in which distinctive patterns of social interaction emerge, producing an equally distinctive system of values. Such a system of values can linger on long after the tenement gives way to the public housing towers and their carefully planned playground program and facilities. It is in the molding force of such subcultures that one may find the true leads to an understanding of the problem of the delinquent and his behavior.

Though this approach does emphasize the conformity aspect of delinquency, it still holds to the basic deviation formula, merely shifting the onus of the delinquency from the deviant individual to the deviant neighborhood subculture. As such it would apply to the Teutonia Indians of the 1910's as truly as it does to the Egyptian Kings of the 1950's. We are still left with the problem of the critical differences between them. To understand these an even more drastic approach may be in order, one which departs from the basic deviation concept as it is customarily employed.

No one would suggest that the behavior patterns we call delinquency are not in a very real sense a departure from the general norms (at least, as the general norms are overtly expressed; Kinsey's disturbing discoveries of the widespread incidence of sexual delinquencies on the part of the general population are relevant here). However, even though the fact of deviation is accepted, one may still challenge the direction usually ascribed to that deviation. In short, I am suggesting that much of our present delinquency problem—and certainly its most significant characteristics—represents not a rejection of flaunting of our contemporary social values, but rather an overacceptance of these values leading to a distortion in the form of carrying them to their logical extreme of application.

The key to the whole problem lies in the quality and not the quantity of delinquent behavior. The prevailing characteristics of such behavior seem to incorporate, first, an utter disregard of the intrinsic worth of human life and rights; second, an almost completely hedonistic orientation at the price of abandoning or denying all moral self-restraint; and, third, a slavish acceptance of peer group evaluations as the final test of one's own importance and meaning to himself.

It should not be too difficult to see that these characteristics are really exaggerations of behavior guides that rule much of our normal and respectable ways of life. The joy-riding young demons on a hundred-mile-an-hour spree are not too far removed from the reputable exurbanite heedlessly pushing his chariot of death to its maximum speed—or, for that matter, from the even more reputable manufacturer who was well aware that his product's greater size and increased speed potential would be measured by new record highs in highway murder. The alcohol-drug-and-sex orgy of the teenage gang finds striking parallels at a more restrained level in the mores and tastes of enlightened sophisticated society and are certainly a direct response—perhaps more honest, however crude—to the battery of sex-and-fun stimuli to which everyone is subjected by the advertiser, the sensation press, and the prominent figures of all the entertainment worlds. Finally, the importance of proving oneself to his fellows, even though proof that one is not chicken may involve some act of delinquency, mirrors grotesquely the unending striving for status and acceptance, regardless of the price, that sets and maintains the pace in the rat race of the organization man.

If this is the shook-up generation, that terms applies to all of us, not only to the teenage thug with the zip gun and the leather jacket. Whence our right to criticize his disregard for human life, we who have seen the bodies burned to ashes at Buchenwald and Hiroshima, we who are willing to accept the fact that we are preparing to use ("only as a last resort," of course) new and inhumanly murderous weapons that are on target if they fall within 50 miles of their military objective? How can we who have renounced our own sense of ultimate personal moral responsibility challenge the conformity of the youth who rides the social current into the jungle of the street gang? It is no accident that the most vicious gangs model their organization, their alliances, and their rumbles after the patterns set for them by their elders, even their supposedly responsible elders who engage in the game of international power politics.

Of course, not all of us carry our social values to such logical extremes of violence, and it is here that specific personal or social handicaps and influences become relevant in that they operate as selective factors. Most of us, juveniles and adults, do develop a measure of self-restraint and maturity that makes it possible for us to draw lines and call a halt this side of delinquency and crime. Not so the delinquent. Limited intellectual endowment or retarded intellectual development, poor home and neighborhood environments, economic and recreational deprivations—all these serve to make him more susceptible to the pervasive amorality or outright immorality of the general culture, just as inferior physical endowment and development or a state of physical weakness makes some individuals more readily susceptible than others to infection when all are equally exposed to a raging epidemic.

Salisbury comes close to this conclusion by declaring in his book that "surely it is in our value system that the germ of the trouble lies hidden." Even more to this point are the words of Dr. Albert Schweitzer: "Increasingly, there is lost the consciousness that every man is an object of concern for us just because he is a man; civilization and morals are shaken and the advance to fully developed inhumanity is only a question of time."

Is this the factor that has been lacking to confound all our efforts to explain and solve the problem of the delinquent—the patterned inhumanity of society itself, arising from the loss of the sense of individual human dignity and moral responsibility? If yes, it is futile for us to turn to such proposals as a "return to the woodshed" penology or the more elaborate but equally sterile blueprints of the social engineer. The real solution becomes terribly simple, just as it is terribly hard. Man must again become an object of concern for us "just because he is a man" and not because he is a potential customer or competitor, fellow national or enemy, or even the anonymous "other" who has it in his power to help or hinder us in our efforts to find a comfortable niche in an admittedly uncomfortable world.

The terror that stalks our streets has been fashioned in our image; not an image buried in the night depths of subconscious fears and evil urges, but an image blazoned forth in headlines, on billboards, everywhere we turn. Until we correct our value system (the one we live by, not the one we proclaim), until we destroy the deadly germ from which the poison growth of delinquency has sprung, it is a hopeless challenge that we face.

Red China From the Inside—A Dismal Story

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following factual report in U.S. News & World Report on conditions inside Red China, by Louis Wiznitzer, correspondent for a leading newspaper of Rio de Janeiro, Brazil. While no one man's observations during a relatively short trip to a police-state land whose language he does not speak can be comprehensive or final, the actual things seen cannot be denied. More and more of the terrible truth about the alleged miraculous developments in Communist China gradually leaks out. Mr. Wiznitzers' main impressions are that about 95 percent of China is still primitive, a land of bowing peasants, donkey-powered water wheels, soldiers without guns, factories without assembly lines—a depressing, overrated country, at least 30 years away from real power. The interview follows:

[From U.S. News & World Report, June 15, 1959]

"I SAW RED CHINA FROM THE INSIDE"—WHAT'S REALLY GOING ON: FULL REPORT BY WESTERN NEWSMAN

Question. Mr. Wiznitzer, how long were you in China?

Answer. Seven weeks; it was 50 days exactly, in March and April of this year.

Question. How were you able to get an entry permit?

Answer. Actually, you see, I applied to the Communist Chinese consulate when I was in Berne, Switzerland, last September. After several delays I was accepted. This is largely due, I think, to the fact that the Communists are making such a big play for Latin America at this time in their political propaganda.

Queston. Did you get to see a good deal of China in the time you were there?

Answer. I believe so. I traveled to Shanghai, Peiping, Lanchow—which is very far off, near Sinkiang—Sian, Loyang, Chengchow, Wuhan, and to Canton.

Question. Had you ever been there before?

Answer. No.

Question. What surprised you most?

Answer. I was surprised by a great number of things—to begin with, the fantastic hate campaign that is going on. Hate against the West, hate against the United States in particular. The country is covered with thousands, millions of posters where the United States is being hanged or kicked or shown as a snake, an octopus, a rat. This goes on over the radio, the press. It is a 24-hour nationwide hate campaign of a size that I don't believe ever has existed—not even in Nazi Germany.

Question. Is the campaign effective? Is it catching hold among the people?

Answer. Absolutely, completely.

Question. What is your overall impression of China under the Reds?

Answer. I reached two conclusions about China. One is that too much emphasis is laid on the industrial power of China, which is practically nonexistent and won't exist for another 30 years. China is no world power, and China has very little industry.

But, on the other hand, the Chinese people are under the Government's control. To a great extent, they are satisfied with conditions in China today. Communist propaganda is very efficient, and the hate campaign is penetrating very deep. The people have nobody to tell them different. Of course, a few thousand people have traveled, but they are just nothing—they don't count.

Question. Would China be a dangerous enemy in case of war?

Answer. No. China without Russia is no adversary. When we speak of China as a world power, we don't know what we're saying. China is no world power, except for limited wars—wars like Korea, where China can send in a few million men and sacrifice a few million men easily. But, in a world

war, China's power is nonexistent now and for maybe another three or four decades.

Question. Why?

Answer. Well, on one hand, they have Manchuria. The industry in Manchuria, we know, has been built by the Japanese and the Russians, and its functions—there is no doubt about that. But the new factories and mills of China, the ones that the Russians have built for them in Paotow, in Lanchow, in Loyang and in Wuhan, which they are very proud of—these very huge plants are not producing at all.

I visited them all. I was at the oil refinery in Lanchow—Soviet built—at the oil well equipment plant in Lanchow, at the tractor No. 1 factory in Loyang, at the mining-machinery plant in Loyang, at the heavy machine tool plant in Wuhan and at the steel and iron plant in Wuhan.

Question. Are those all new industries?

Answer. Those are all new industries. These are the industries that the regime is concentrating upon because it wants to decentralize, because they want to have their industries, they say, not near the sea where the imperialists had built, but inside China and as far west as possible.

Question. What are these installations like?

Answer. The visit to a plant or factory was always divided in two parts. First, there was the interview, not with a technician, not with an engineer, but with the party man.

Question. A political man?

Answer. A political man, and I would ask him questions about the plant. He would give me the official answers. Then came the visit, which showed me things completely different from his answers.

Question. Did they realize that?

Answer. No, they are very naive. I believe that, altogether, industry is a new thing for the Chinese, and they think that a man who is not an expert, who is just a newspaperman, doesn't understand industry at all. They don't realize that any westerner has industry in his blood and that he knows what an assembly line is like, and he knows when there is no assembly line. I don't know many details about industry, but when I see a huge crane move back and forth carrying nothing and only making a big noise and its cables hanging for 15 minutes, I know that nothing is going on.

I will give you another example, the oil refinery in Lanchow. It's a very big, very huge refinery that the Russians have built there, and it's not finished yet, but part of it is finished. It has about six cracking towers. One of the five or six was functioning. One was busy, the others were deserted.

Question. They were not working?

Answer. Only one was working, apparently. So we went in there and we went to the automatic-control board. This has these gages, about 12 of them, where you see what the production is. The hands were all showing zero, except one. On one of the gages the needle was off zero, so I asked the guide, "How come all the others are showing zero?" And he said, "Oh, that doesn't mean anything. They are to be repaired."

At the time I really didn't know what that meant. I thought that was possible, but, as soon as I was back in Peiping, foreigners explained to me that when these gages show zero it just means that there is no production.

Question. Was this plant typical of what you saw?

Answer. There is this oil-well-equipment plant in Lanchow which I mentioned. It will produce not only equipment for oil wells but for the chemical industry. I was told that they have 12 engineers out of which 4 are Russian. The Chinese have all been trained in Russia. This plant is not finished yet—one-third is under construction. They have 4,000 workers. They claim they have one, two or three shifts engaged in production, but I saw no production—no production whatsoever going on.

Question. Were they shut down completely?

Answer. No, no. They are busy. They are busy in that very strange manner—people going about and hammering or nailing or doing things on the floor or running one machine to learn how it operates, or doing something with it. But there is no production at all.

Question. Did you see a Russian engineer?

Answer. No. I never saw any engineers in those plants. I saw small teams of four or five people working on one small machine or hammering together or melting iron. They have this big building, and they are going about learning what it's all about, trying to get used to it. No A-to-Z production, no assembly line.

Question. Did you find the same thing in other factories?

Answer. Yes. In Shanghai, I visited an ammonium bicarbonate plant, which was supposed to be making chemical fertilizer——

Question. A new plant?

Answer. It's a new plant. It was completed May 1, last year. Now, before going there, they were reluctant to show it to me. But I insisted; I said that this is the kind of thing we don't have in Brazil and I wanted to see it. So they took me along—two chemical engineers and a guide—and warned me that the plant had been stopped for 24 hours for repairs. And, indeed, I found not one worker. There was not one single person there. It was like a ghost town.

One Chinese chemical engineer showed on paper what kind of ammonium bicarbonate the Americans made and what kind the Chinese made. There was a difference somewhere in the formula, and, according to him, the Chinese ammonium bicarbonate was much more efficient. He gave me the figure of how much more rice it would produce on a plot of land, compared to the American. The only thing is—they weren't producing any ammonium bicarbonate at all.

Question. How many people would that plant employ normally?

Answer. I would say about 30 or 40 people. Not only was there not one man working when I was there, but there was no coke—that much I know. You see, if the plant had been working yesterday or a week ago, there would be some traces of coke, because that's what they need. But the whole plant actually hadn't been working for months. I later checked with some Western businessmen and technicians who live in Shanghai. They told me that what happened at this plant was typical of a great part of the Chinese industry—it was working sporadically.

In other words, even the textile industry, even fountain pen factories would work 2 or 3 weeks and then they would stop for a month or two, and then they would start again, all according to the amount of raw material coming in, the amount of fuel, or maybe problems of transportation. This is happening in even the small factories. They suddenly rush work for 2, 3, 4 weeks and then stop again.

Question. What's the big problem in factories?

Answer. Well, if we speak of these large factories, there are four main problems, really.

The biggest problem of them all, I believe, is: no skilled labor. In all these factories, these eight superplants of which I spoke, I found that the only busy areas were the small workshops that are equipped with Chinese machines—small or medium-sized machines. They had hundreds, yes, thousands of very young people—15-, 16-year-old boys and girls—who were learning the trade. The rest of these factories were practically empty or not busy. You see, these factories are used as schools. In other words, they don't have enough skilled labor—far from enough skilled labor. The skilled labor they have is up in Manchuria, and they are now beginning to train a new generation of workers to operate these plants.

Second, no transportation. China has no transportation at all as we know it. As you travel through China—north, west, south, east, to as far as Sinkiang—you never see a truck on the road. You never see a tractor on the landscape. They do produce a few thousand small trucks, but they don't know where to use them first. This is a continent, this is a place larger than Europe, and a few thousand of these small-size trucks that they bring out—they don't know where to send them first.

For instance, at the steel and iron plant at Wuhan, all the transportation is on men's backs. This is one of the maddest contrasts I have ever seen in my life—an iron and steel plant, and thousands of men carrying things on their backs. You don't see a truck in there.

Then, of course, there is a shortage of raw material and a shortage of power. These are the four factors that explain the low production of this modern industry.

Question. You saw no tractors in the fields—what about the tractor plant you mentioned?

Answer. Yes, the tractor No. 1 plant in Loyang.

Question. Where is that?

Answer. Loyang is along the railroad from Shanghai to Sinkiang. Now, they told me that construction of this tractor plant was started in 1955 and finished in 1959. It was supposed to employ 22,000 workers, on two shifts. The construction cost 200 million yuan, or $50 million at the unofficial rate of exchange. They said it produces a 54-horsepower tractor, called the Red East. They claimed they have already produced 200 of them. And they also claim to produce a 40-horsepower tractor. They say they have 20 Soviet engineers there and 30 Chinese engineers.

Now, as to what I actually saw.

I saw one-third of the factory was empty, completely empty. One-third was half equipped, and one-third was fully equipped. But nothing was going on there, except handworking, and there was no production, in the Western sense of the word. Thirty percent, I would say, of the machines were Soviet, 70 percent were Chinese.

All the very huge machines, the huge cranes, all the very big machines are Soviet, and some of the medium machines were, too. All the small and some of the medium were Chinese. In many rooms there was heavy Soviet equipment not unpacked or not working. And there was no assembly line.

Question. No assembly line?

Answer. Well, this is typical of the Chinese—a naive projection of all knowledge of industry. On one hand, they told me that they had already produced 200 tractors in September. On the other hand, they said, "Well, we don't have an assembly line yet. Some of the equipment for the assembly line is still missing." This, of course, is a contradiction in terms.

The only activity that I could really see was training in the small workshops. People were sort of busy with hammers. They were trying to bend iron. In the middle of all these machines, they had places to bend iron. Thinks like that you don't see in a modern factory.

Question. Did you find the same thing in other factories?

Answer. In the same town—Loyang—there is a mining-machinery factory. They started to build it in 1956. It's completely finished

now. It employs 7,000 workers, and they work two shifts. I was told production started in December 1958. The cost of construction would have been 6 million yuan, or $1.5 million. It has eight brick buildings and looks like a factory in any other country. They employ 40 engineers—15 Soviet engineers and 25 Chinese engineers. Now this factory, I was told, produces machinery for coal and copper mines and so forth. Eighty percent of the equipment was Chinese. Twenty percent, roughly, was Soviet equipment. Again, the very big equipment was Russian.

This factory is divided in two lines: a heating, processing workshop that leads to a foundry, and a cooling, processing workshop that leads to an assembly line. But there, again, I didn't see an assembly line.

I found the same thing everywhere, roughly speaking. One-third of the buildings either were not constructed yet or completely unequipped, one-third vaguely equipped, and one-third fully equipped. And this one-third had no assembly-line production—it relied on handworking.

So eventually from a factory they would get one mining machine or one motor or there would be one heavy tool or two lathes that were handmade. They work on machines for a couple of weeks, to train themselves how to use them, and then they either keep them as models or to show visitors, or they send them to a factory where they can be used.

Question. And then the workers go back to their hand methods?

Answer. That's right. So far, in all these plants, it's handwork, and I imagine it takes them 2, 3, or 4 weeks to make one mining machine or to make one small tractor or one lathe. That is the kind of production they are getting now.

Question. So they might get one tractor every month?

Answer. Yes; that's right. At the tractor factory I asked to see one tractor, and they were not able to show me one. At the very end of the visit, after 3 hours, they said that there was one tractor, but it was circulating around the factory and they didn't know where it was. I finally saw it. We happened to bump into it—at this huge tractor No. 1 plant in China I saw one small tractor.

Question. Then are the Chinese just as dependent as ever upon the Russians for mining machinery, tractors, and other basic equipment?

Answer. Absolutely, completely.

Let's go, for instnace, to the heavy-machine-tool plant in Wuhan. It was started in 1956 and it was finished in August 1958. The cost of construction was 100 million yuan, or maybe $25 million.

Well, the production that they planned here is 1,000 lathes per year, and they employ 6,000 workers. They were mostly trained there. They have 2,000 technicians—but by "technicians" they just mean skilled labor.

Question. Somebody who can use a hammer?

Answer. Who can use a hammer or has a little more knowledge than an ordinary, illiterate worker. They also claim 150 engineers, out of which 7 were Russian engineers. Production, they claim, started last year. The guide was very violent about the West and kept talking about America and how he hated America and he didn't want American machines and China didn't need British or American machines.

I saw three or four lathes of different sizes lying about there—there was no assembly line. One wasn't put together yet. It was obviously handmade for the purpose of training. The lathes that they are planning to make are a planer, 40 yards long and weighing 500 tons, and also a 9-yard vertical lathe, to be produced this year. They also plan to produce a 12-yard-high gear-cutting machine.

There was much assistance from the Soviets in designing and constructing the factory. There were a few machines from Germany and Czechoslovakia as well, and some of the small machines were made in the factory. The kind of activity that was going on there was hammering and tinkering, that kind of thing, and huge cranes moving without carrying anything which was obviously to impress me.

This is a point that I would like to stress, because it's very important and it's hard for westerners to understand it. We get the Chinese figures on production. We take off 25, 30 percent, sometimes 50 percent. But we can't believe that sometimes one must take off 99 percent. There are certain things that one has to know about the Chinese people that are completely inconceivable for westerners, but are completely normal for the Chinese.

Question. Such as?

Answer. Well, the Chinese do everything—they have always done everything—to save face, to show off. The Chinese will operate a section of a factory at whatever expense for 2 hours to show it to a visitor. This is the kind of thing that is too much out of proportion for anybody from a Western country, because it's not worth it to waste that effort—that raw material and eventually the money—to impress visitors. Well, the Chinese will not retreat from that. They will do anything from moving big cranes for nothing, or telling you things that they believe you don't understand, to actually operating a whole section of a whole workshop for a couple of hours, or set up what they did at the "Car No. 1" factory in Peiping.

Question. Is China making cars?

Answer. The Chinese do not as yet make any passenger cars. They have a "Car No. 1" factory in Peiping, where they produce those small trucks. In one of the rooms there they display a few hand-manufactured cars, small passenger cars, of which they say, "These are the cars that are being produced in the Car No. 1 plant." A Western man—even the most distrusting Western man—will not take the whole thing down completely to zero. Actually production like this has to be taken down to zero of the official claim.

Question. Is Wuhan supposed to be their big, new steel plant?

Answer. Yes Construction started in 1957 and will be finished eventually in 1961. It's still very much under construction. It will employ 100,000 workers. It's very big. It's really very big even now. Very little of it has been constructed yet, but the whole area is something like a very huge iron and steel industry anywhere else—in outward looks, anyway.

Question. Does it compare with any in the West?

Answer. Well, it's like the German plant in Essen in appearance. But there are 10 small furnaces which are completely irrelevant. There are three large furnaces—one is an iron furnace and two coke furnaces. They plan to construct 26 big ones. They have 300 engineers, of whom 11 are Soviet engineers. They claim iron production now is 1,2 million tons a year, and coke 1.5 million tons a year.

Question. Were you able to check their actual production?

Answer. Yes. I was able to check because I met in Pieping, and then again after leaving China, two steel experts from a Swedish factory that is delivering material to China. They were able to figure out very expertly what the real story was—these people can't be fooled, because they can figure out to a few hundred tons whether it's this or that.

The plant will be automated. The steel plant is only under construction. There is no steel furnace yet in Wuhan. It will come from Russia. Its capacity will be 500 tons of steel per day. The blast furnace now working produces 2,400 tons of iron per day, or not quite 900,000 tons a year. It has automatic charging—this is true, I saw that—regulation of temperature and pressure. There are trains coming in and out to take coke and iron.

Question. Does it operate the same as the plant in Essen?

Answer. No. It looked more primitive. The way the men worked at the place where the iron comes out actually—where the oven opens and this iron runs out—looked much more primitive than what I saw in Germany. The plant is filled with mud and little men carrying stones and earth and going all up and down hills, and building roads, and beginning to put up new buildings.

And it's at a very early stage. When we speak of the "iron and steel plant of Wuhan," we're speaking of something in the distant future.

Question. Could you check production figures in other plants?

Answer. The Swedish experts visited the Shanghai steel plant No. 2, where the Chinese claim a production of a million tons per year.

The Swedes came to the conclusion that they were producing 200,000 tons per year.

Question. Just one fifth—

Answer. And that, if the factory was really working to its full capacity, it could produce 350,000 tons, which is a third of what the Chinese claim was.

Question. Is this an older plant?

Answer. This is an older plant. At the Canton steel plant, where the Chinese claim a production of 500,000 tons a year, the Swedish experts said that this plant was only starting now and that there were no figures for this production. It was very, very low. It was about maybe 50,000. In other words, a tenth of the Chinese claim.

The Peiping steel plant is not producing at all. The Swedes were told that at this time it was to be repaired. These are three older plants that the Chinese claim are functioning.

In the Anshan district, in Manchuria, the industry does have 10 furnaces, of which 7 are automatic. That's the one we know works. The 10th furnace was actually constructed in China. Anshan produces 1,500 tons of steel a day—this according to the same Swedish experts.

Question. Did you come across any instances where percentage gains were used to confuse actual production?

Answer. Yes, very often. In the Hsinhau (New China) News Agency Bulletin—the bulletin they publish every day—they will always say that factory such and such or plant so and so has increased production by 20 percent, or 40 percent. And later on, as I checked with Western experts who had been there or knew something about it, the production there was so small that an increase of 20 percent meant 20 percent over nothing at all.

What the Chinese really aim at now, the more important thing in China, is this mobilization, general mobilization. And it's not so much the material result as the mental mobilization. They try to organize the whole country—not with weapons, because they don't have all those weapons, but in a military fashion. Workers are industrial soldiers, and the peasants are the militia. There are the health soldiers, and the university soldiers. Everybody is a soldier, and everything is organized. They insist on more effort, more work—which is more important, in a way, than the results, than the tons of output.

They speak of a water-conservancy army moving across the country. They speak of a railroad-track army and of an industrial army. The peasants form a militia and, in the streets of the major cities, you see the workers go to work beating rhythms on their broomsticks or on their instruments.

They don't have weapons, but they are all marching in military fashion and they are told they're soldiers. They are reminded that the West threatens them and that there is an American aggression in Formosa. This goes on 24 hours a day. There are loudspeakers in every train compartment and there are posters on every wall. China lives in a fever, in a tense, warlike atmosphere today.

Question. So, could Mao Tse-tung order 600 million Chinese to war and get them to obey?

Answer. He would get the support of the Chinese. Why? What matters mostly are the young people. Since childhood, they have been told every minute of the day and everywhere they go to hate the West. That is true in the villages, too.

Everywhere you see posters and inscriptions repeating the same slogans against the West. They hear the slogans over the radio, they hear them when they do gymnastics—you know, in China, they do gymnastics every morning in the streets. Anyway, even the gymnastics are interrupted every 15 minutes by slogans: "More effort into production." "Remember the American bacteriological war," and so on. And these people have no reason to doubt it.

Question. Is there forced labor?

Answer. I wanted to speak to law students in the University of Peiping, and I was told that they were away on productive labor. And this I checked later all over China. The students are away in the country for farm work between 2 and 4 months a year.

Question. What do the students do?

Answer. Farm work. When they are in the university, they have to do 1 day a week of productive work, which means either cleaning up the place or building a new house or all kinds of practical handwork that you can do—anything from cleaning, from kitchen work, to building a new building. The teachers do it, too, unless they are old. Old teachers are spared, but all the young and middle-aged teachers have to go to the country, have to do the same things.

These students are volunteers, but in a way very odd to us. The authorities don't go and tell them, "You shall go, you have to go." They line them up by hundreds of thousands, and they take them one by one and give them a choice. But the choice is so simplified that it is no longer a choice.

They tell them, "Do you want to help build up your country, or do you not want to help build up your country?" So the first one will say, "Yes, I want to." "All right, you go." And then the second one, and so on. And I know it's very hard for number 44 in the middle of all these others, to say, "I don't want to help build up my country," or begin to argue. He would not be sent to jail, but to a center of reeducation.

Questions. Are the Chinese wiping out illiteracy?

Answer. Yes. I would say that China has made much progress in certain areas. It has made progress against illiteracy. There is still illiteracy in China, but much less. They have a huge campaign of: Everyone must know how to write and read, and the children must teach their parents.

They have made progress in health. They have wiped out some of the traditional Chinese plagues like cholera, bubonic plague, yellow fever, smallpox. They have made colossal progress and they lay great emphasis on cleanliness.

The Chinese have become almost too clean. Again there are contradictions here because they spit as in no other country in the world; they spit all the time, but they are very eager for cleanliness. They have made progress in clothing and in food.

Question. Did you find any class differences in China?

Answer. I was always shocked in China by the arrogance of the elite and of the young people toward the old people. The [Communist] party people are tremendously arrogant toward the other people.

And the country of equality—China considers itself a country of equality—is a country where classes are sharply divided into different elites. For instance, all over China—all over the factories, on all the walls—you see a new division of the Chinese workers into sputnik worker, jet workers, car workers, horse workers, ox workers, and snail workers, according to how much they produce.

In other words, the one who is a sputnik worker will be called a hero and a national this and a national that. The one who is a snail worker will be an object of contempt. Even a factory will be called an ox factory, and it will have these posters saying, "The equivalent factory in Shanghai is a sputnik factory—why aren't you?"

Question. Is this causing and dissatisfaction?

Answer. We think too much of the Chinese people's dissatisfaction, their readiness to rebel, and so on. My impression is that the great majority of the Chinese people are content, and not ready to rebel. They have come up from misery to a very low standard of living.

Question. Were you able to find out much about the communes?

Answer. You hear a lot about their communes, where they were going to bring a lot of farms and people together, so they work, eat, and share modern equipment together. So we keep talking about these communes, and we don't know what we're talking about.

The fact is that there are few modern communes in China. There are about 100 or 150 communes, but, if the implements haven't changed, if the methods of working haven't changed, if the lodging hasn't changed, a change in name doesn't mean much.

If a village is very poor, whether this poverty is private or communal doesn't make much difference. In any case, if you put all these communes together, you would get something about the size of Maryland.

Question. Have they changed things very much?

Answer. The great west of China, as I saw it from my train window traveling from Canton to Peiping, from Peiping to Lanchow—trips of 48 hours—is nothing but hundreds, thousands of small, primitive villages. It's the old China that hasn't changed: Bamboo huts. Clay houses. Peasants bowing to the ground, working with their hands. Donkeys turning the wheels to get water out of the well, as in Egypt, as in India, as in Latin America. Ninety-five percent of China is the same as it was 10 years ago, or 50 years ago.

Question. Overall, what struck you as Red China's big weakness?

Answer. This, which I say now, is the very fundamental thing: The Chinese are illogical. Intelligent, yes, but not logical.

The Chinese think experimentally. Now Red China's leaders are applying Marxist dialectics, one of the most sophisticated results of Western logic. They are planning like mad. You get 5-year plans, 10-year plans, 50-year plans. Everything has a plan. Very well. But then you have to get 50,000 or 500,000 people to carry out this plan, and along the way they will leave out a few things and the whole plan goes to pieces. Like the backyard blast furnaces.

Question. What about those backyard steel furnaces?

Answer. The answer is very simple—I think your magazine has given it. They are all junk.

I read the story in your magazine (issue of Jan. 30, 1959) before going to China and, frankly, I didn't believe. But the story was right. Those backyard furnaces are junk. I saw thousands of them as I was traveling. But I never saw smoke coming out of one of them. Never did I see any production going on.

Question. Did you hear any talk about this backyard-steel campaign while you were in China?

Answer. Oh, yes; this is very amazing. They still say in their propaganda, even to us, that "this new commune will have its own iron production" and so on and so on. But these inconsistencies are very normal in China.

Question. Did you get any reasons for the breakdown of the backyard-furnace campaign?

Answer. Yes. The reason is very simple. They have found that it is not enough to have furnaces. You need raw materials, and they have found that you need transportation. They have no transportation, they have no raw materials. In other words, they can't operate.

Question. Was any iron actually being delivered from backyard furnaces to the steel mills?

Answer. Last year, I understand, I spoke in Peiping to many westerners; there was a fantastic iron drive that went on for 2 months. Everybody was in the streets, in the gardens, in the public squares, gathering scrap or making iron. But 90 percent of this iron had to be either completely abandoned or sent to Anshan to be refined. And, meanwhile, the crops had suffered. I wouldn't make too much of that, because there is no great shortage of food in China. Still, food production did suffer from this madness.

Question. What about Communist claims of developing an oil industry?

Answer. They claim that they have oil in Yümen and in Karamai, in Szechwan and in Tsaidam, and that all or most of this oil will go or is going into the oil refinery in Lanchow.

The oil that they have found in these four places that I have named—it is just in the stage of research. They may have had evidence of oil existing in these places.

Question. Have they actually drilled?

Answer. They haven't drilled. There is no oil coming out of these places yet.

Question. Does China depend on Russia for its oil?

Answer. On Russia, and Rumania, I'm told. The most significant evidence I had of that was at the station of Lanchow, where I saw a Soviet train of 50 flatcars unloading oil.

Now this was at the time of the Tibetan crisis, although I didn't know this until 2 weeks later; the Government was not permitting anything to be said about Tibet then. But Lanchow is about 100 miles from Sining, the place where the road to Lhasa begins, and most probably this explains the presence of the Soviet train unloading oil to replace stocks at that time.

Question. Has China found any new sources of iron, of coal, of other raw materials?

Answer. They have great claims. They say that they have 1.5 billion tons of coal in the ground, that their iron reserves come to 100,000 million tons, and their phosphorus reserves to 30,000 million tons.

But then, of course, they say that they have 600,000 geologists all over China today, which is a joke. They just mean that anybody who goes around the country looking for anything is a geologist. But they are training geologists at the universities very much. They are concentrating very much on geology and on finding their resources.

Question. Can they produce engineers, technicians, and scientists to compare with those of the West?

Answer. I think not. They are in too great a hurry now. They are more anxious to produce engineers and technicians who can be set to work immediately, who have a minimum knowledge, than engineers with knowledge equivalent to ours in the West or even to Russia.

Question. What about advanced study?

Answer. They discourage advanced study. They send youngsters off to work as soon as they know something—a minimum. I don't think they want to do this particularly. I mean, they know that this is not the best way, but they are faced with a problem. They have a fantastic shortage of technicians and engineers, and the first thing, as far as they are concerned, is production and getting them busy now.

Question. But you say it's hurting them in production—

Answer. Yes. Misquoting Shakespeare, I would say there is madness in their method. I think this is very important. The Chinese method of constructing the country is completely inconsistent.

For instance, there are these new superplants on a scale you find in the Soviet Union and the United States. At the same time, the rest of the Chinese industry is still laying its foundations. It is very primitive.

This is typical of the Chinese method. They don't construct their industry, they don't build their industry organically, logically, layer by layer, from the smallest to the larger until they come to have an oil refinery or a gasoline-equipment plant, which are part of the more sophisticated complex of industry. They begin by building the roof. They cannot operate this roof, there is nothing to support it. They cannot operate these factories, but they have them.

Question. What about transport? Do the railroads run on time?

Answer. The railroads run on time between Canton and Peiping—Peiping, Shanghai, Canton. They run very slow, but they run on time. To the far west—to Lanchow—they run about 3 hours late, but that might have been seasonal or some kind of accident.

I would have to check, but I don't think I would be very wrong if I would say they run about 30 miles an hour.

Another thing is their civil air transport. It is very interesting, because they have quite a network, they go almost everywhere. But every time you want to take a palne—or very often, anyway—the flight is postponed for 1 day or 2, sometimes 3 days. They tell you that the weather is bad. Actually it rained somewhere or there was a cloud. They are fantastically cautious. They fly very low, very slow, and only if the weather is perfectly beautiful.

This is not only my experience. Almost any foreigner I met in Peiping goes by train because at least he's certain to get where he wants. If he takes a plane and the weather is not too good somewhere, the plane will land immediately and he will spend 2 days in some small town in China waiting for the weather to get better. What they call "bad" weather has nothing to do with what we call it.

Question. What about their roads? Are they paved?

Answer. Only around the big cities. They are building a modern paved road outside Lanchow. They are concentrating great efforts on Lanchow. This is supposed to be someday the center of the new China. There is no running water in Lanchow, hardly any food. But they have an oil refinery, they have an oil-well-equipment plant, and they have all these people working on roads and bridges and so on.

Question. All of this is done by hand?

Answer. Yes. All over China, as you travel, that's actually the thing you see most. If I had to remember one image of China, I would remember the image of 50 Chinese people in a row carrying things on their backs, going uphill or downhill, along rivers, inside factories—always the same picture of Chinese people——

Question. What do they carry?

Answer. Rocks, land, clay—what they carry you don't even know. What they're doing it for is too much to figure out.

Question. Men and women?

Answer. Men and women and children. Sometimes you see carts—you know, oxdrawn carts—and so on. But most of the time it's huge, endless lines of Chinese people carrying things on their backs. You see them doing it along rivers and you wonder why. Along bare mountains, on the roads, they're carrying land from one place to another place.

Question. Do you ever see an automobile or bus on the roads?

Answer. No. In the towns and cities you do, but on the roads you can go day after day without seeing a truck, an automobile, or anything. There aren't any. You see camels and bicycles and people dragging carts. I would say that 90 percent of the transportation is on man's back.

Question. Have they made a great push out to the west, as they claimed they were going to do?

Answer. They are pushing the Lanchow railroad. They are quite ahead with that. They have already passed the border of Sinkiang and they want to connect with Alma-Ata in Russia.

I saw a few trains—flatcars—loaded with young people, packed together like animals. They were being sent out to Sinkiang. It was a pretty ugly sight.

Question. Are any of the new industries you saw located by rail sidings?

Answer. The only place where I saw railroad sidings was at the Wuhan steel plant.

Question. The others would have to depend on highway transport?

Answer. Yes, and it just was nonexistent.

Question. Did you get any idea of their exports?

Answer. In Shanghai they have an institute—Export Exhibition Hall—where they have samples of everything that China can export today—from rice to oranges to machines, even radio tubes. They have catalogs and prices. But a western businessman in Shanghai said that most of this cannot be exported because they're not producing it.

I also spoke to some British businessmen who told me that 2 years ago they wanted to make a deal with China to import 5,000 cans of tinned food from China into England. The Chinese insisted that they would be interested only if it were 50,000 cans. The Englishmen didn't want to take 50,000, they wanted only 5,000. The Chinese insisted, and finally the British accepted and they signed a 50,000-can contract. Two years have gone by, and they have got 2,000 cans so far.

Question. What is your impression of the military strength of the Chinese?

Answer. You see soldiers everywhere—millions of them—but not with weapons. They work in the country or in factories—they work like everyone else in the street. They are workers, only they have military uniforms. But there is no evidence of military strength. I never saw trains with equipment or tanks or cannon, and I really traveled very much and very far out. Of course, it's hard to guess the strategic and the military secrets, but you don't get the impression of a strong military establishment at all. You get the impression of a vast country that has no industry, no transportation—a country that is just beginning to crawl. But it's pouring out so much propaganda—we are discounting it 50 percent and we still credit them with much more than they have.

Question. How does Red China's strength compare with India's?

Answer. China, because of its totalitarian methods and its propaganda, may impress the world with greater results than India has shown, or lead us to believe that China is stronger. I don't think this is so.

Question. Over all, how do you feel about China after being there?

Answer. I went into China with great drive and interest. After 2 or 3 weeks I fell into a state of great depression and eventually anxiety.

Question. Why is that?

Answer. The working circumstances are terrible. One never knows what interview one will or will not have, what trip will be authorized or not, whether one's stay permit will be prolonged or not. You have the feeling you're being watched all the time—it's a weird atmosphere. When one hears, on top of that, of the Westerners who are actually in jail without a sentence having been passed on them, one begins to wonder and fear. You ask why they haven't been sentenced, and you're told, "They haven't confessed enough."

I was told by Western people in Peiping that practically all the foreign correspondents from France, Canada, Australia, England, and so on have gone through the same psychological evolution that I did. Pretty soon your drive is lost, you feel the atmosphere of distrust and hate all around you, and all you want to do is leave China and forget about it.

Fading Americanism Makes True Citizen Feel Like Exile

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. LOSER. Mr. Speaker, I have just read a most thought-provoking sermon delivered by Dr. Walter R. Courtenay, minister of the First Presbyterian Church of Nashville, Tenn. This sermon appeared in the Nashville (Tenn.) Banner under date of July 6, 1959.

It was delivered by this most eminent minister on Sunday following the Fourth of July.

Dr. Courtenay calls on all true Americans, who are firm in their faith in God and dedicated to liberty and justice, to rededicate their lives to the principles of our Founding Fathers.

He likewise reviews with unerring accuracy some of the overtones of history so obvious to all who take the time to review them.

I believe this erudite discourse by one of the Nation's scholarly ministers of the gospel will be most interesting to the Members of Congress. I, therefore, under the unanimous-consent rule insert it in the Appendix of the CONGRESSIONAL RECORD. It follows:

FADING AMERICANISM MAKES TRUE CITIZEN FEEL LIKE EXILE—CALLS FOR REDEDICATION TO FOUNDING PRINCIPLES

(By Dr. Walter R. Courtenay)

Yesterday America observed her 183d birthday. Looked at in terms of man's life expectancy, it is a great age. Looked at in

terms of nations it is brief. Looked at in terms of human history it is nothing.

I awoke yesterday at 5:50 a.m. and thought immediately of the day into which I was entering—July 4, 1959. My mind went back to those disturbed and disturbing days of 1776, when English colonies, pushed by a foolish king, a stupid Parliament, and an aristocracy that sought to make Britishers-away-from-home pay for a war in which they had neither interest nor participation, rebelled and demanded separation and free government.

The recommendation for the convening of a General Congress was made by Franklin in July, 1773. The Congress met in September 1774, sought only to find ways and means of recovering the just rights and liberties of the colonists, and the restoration of union and harmony with Great Britain. The Second Continental Congress met in May 1775, a month after the battles of Lexington and Concord. The Revolutionary War was being waged with a growing sense of imperativeness. When the Congress met again in the summer of 1776 it did so in an atmosphere of final purpose and steeled resoluteness. On June 7, Richard Henry Lee of Virginia moved that "these united colonies are and of right ought to be free and independent States." On June 11, a committee was appointed to prepare a Declaration of Independence. The members of that committee were Mr. Jefferson, Mr. Adams, Mr. Franklin, Mr. Sherman, and Mr. Livingston.

JEFFERSON CHOSEN

The man chosen by the committee to write the Declaration was Thomas Jefferson, a young man of 33 from Virginia. He was a tall, attractive, red-headed man, gifted in law, farming, philosophy, and science. He was chosen because he had a happy talent for composition, as well as being a man of sound judgment and tested patriotism.

Jefferson's draft was reported to Congress on June 28. It was laid on the table until July 1. On that day it was debated. On July 2, Congress voted independence, but did not act on Mr. Jefferson's Declaration. On July 3, his Declaration was again considered, and was finally passed on July 4, 1776. The signatures were not affixed to the document until many weeks later. In this great document Jefferson did not strive to create something original, something self-made, but rather tried to gather into marching sentences what Members of the Congress had been saying for 2 years. Jefferson gathered into memorable form the best of the hopes of his generation.

The average age of the signers was 44. Samuel Adams was 53, John Hancock, 39; Richard Henry Lee, 44; Benjamin Harrison, 36; John Adams, 40; Jefferson, 33; Livingston, 29; Roger Sherman, 55; Benjamin Franklin, 70.

Those who espoused revolution and independence were educated men with significant estates. They stood to gain liberty, but they also stood to lose everything they had, including their lives. The Members of Congress in 1776 and those who signed the Declaration threw everything they had into the cause of liberty and justice for all, although there was a strong difference of opinion among them as to the meaning of the words: "we the people."

As my mind touched the events of 1776, I thought of how Americans would observe July 4. Here is the record: The churches were not filled yesterday with grateful citizens expressing appreciation to God for the Founding Fathers and those others who have labored and died to keep us free and prosperous. Few paused to acknowledge God from whom all blessings flow. No sermons were delivered with challenging remembrances and pointed prophecies. Few in Nashville hung out the Stars and Stripes or spoke with one another about past blessings or increased dedication. Throughout the land it was a getaway time, a holiday time, a have-fun time, a do-as-you-please time.

July 4, the birthday of this great Nation, has come to mean nothing but another holiday. Who pauses to weigh its meaning? Who takes down a history book to hear the stirring words of John Adams in 1765 as he called upon clergymen, lawyers, educators, business leaders and citizens to "dare to read, think, speak and write. Let every order and degree among the people rouse their attention and animate their resolution. Let them all become attentive to the grounds and principles of government, ecclesiastical and civil." Adams ended his address with these words, "The prospect now before us in America, ought in the same manner to engage the attention of every man of learning, to matters of power and of right, that we may be neither led nor driven blindfolded to irretrievable destruction."

Who in these self-centered, get-all-you-can days takes time to refresh his mind with what men said and did 183 years ago? How many Americans care what happens next as long as their present pleasures and income are not disturbed? How many Christians, appointed of God to determine for the Nation the principles of justice and right, study the problems of our day and look at them with eyes free from prejudicial squints and jaundiced discoloration?

We have reached a time in America when the flag is a piece of colored cloth, but is no longer a sight that brings tears to the eyes of the patriot. And we of the South have too long associated the Stars and Stripes with Union armies rather than the Union. Southerners who fought and won the battles that clinched independence at Cowpens, Kings Mountain and New Orleans, ought to display the American flag with more pride and gratitude than any other people in our land.

We live in a day when we have made open patriotism socially offensive. We have now attained the age when each Congressman, each Senator, each presidential candidate, and each political party spends more time playing to private audiences than he does the general welfare of this Nation. Only when personal or sectional welfare coincides with national welfare do men step forward to espouse the larger causes of our land. Where personal or sectional or party benefits conflict with the overall well-being of our Nation, how many Representatives are willing to jeopardize local and party standing by taking strong stands against the selfishness that calls itself public welfare, good business, smart politics, freedom of labor, sectional progress, or the general good? A white label pasted on a dirty bottle filled with poison does nothing to cleanse the bottle nor make innocent its contents. There ought to be fewer differences among those who represent our people in Washington. There ought to be more similarities in the realm of wisdom and greatness. Our major issues there ought not to be the name calling, the knot tying, the feet dragging, and the weird party jockeying that now characterizes every piece of legislation that comes before the Congress. We are afflicted with what Madison called "the mischief of factions." What is good for America is not always good for the Republican Party or the Democratic Party, and what is good for either party is not always best for our Nation as a whole.

Here I pause to observe that what is good for the world is not always good for America, and what is good for America is not always good for the world. What is good for business is not always good for labor. What is good for labor is not always good for business. There is a golden mean which men of integrity find and follow.

What we need today is an increase in Americans who love America, who appreciate the things that have made her great, who work constantly to keep her not only strong, but sincere, God-entangled, justice-dedicated, rich in righteousness and pointed in sacred, generous purpose.

I feel about America as I do the Christian church: She has grown and succeeded in spite of us. We have done enough, beginning with Hamilton and Jefferson, to have destroyed her a hundred times.

Our cost of Government and its various programs is today too great. Our concern for economic commonsense, financial sanity, and overall productivity is not great enough. Too few Americans understand what inflation does to the strength of a nation or what the flow of gold out of America does to our world prestige and leadership. Not enough Americans are exercised about the increased dangers rising from our slow drift toward socialism or the threat of labor-leader control over one of our major political parties. Right now we are like a man caught in quicksand whose struggles drive him deeper into the very situation from which he seeks release. Many times our leaders seem more like little boys playing at cops and robbers rather than mature men endeavoring to measure up to the awful responsibilities and demands of governments in a world that is striving to adjust rapidly from a classical to a scientific view of life, from the earth age to the space age, from a nationalistic to a whole-world concept, from war with men and planes to war with missiles, from peace with peace, to peace with cold-war fears. Fiddling while Rome burned was costly in Nero's day. Today it is national, yea, international suicide. If the United States of America is weakened by her own unseeing leaders or by her all-seeing enemies; if America, the shepherd, is wounded or killed, the flock of free peoples will not only be shepherdless, but lost. The fate of the free peoples of the earth, in fact, the fate of all the peoples of the earth, is in our hands.

Does not that fact startle and sober you? Dare you live out this day and the day after as if all were well? Dare your interest be no larger than self-interest, and your patriotism no stronger than your loyalty to a party?

I speak of these things on this day after July 4, 1959, because the land of the free and the home of the brave is producing more and more Americans who feel that they have lost or are losing the land they love. Increasingly they feel like exiles in these United States. No longer do they feel on every side the old fervor for the American way of life with its Constitution and its free enterprise economy. Seldom are they stirred to sacrificial giving and living by leaders who, seeing the signs of the times, move men to dedicate their all to such invisible but real objectives as justice, liberty, fair play, morality, faith in God, faith in duty, and the peace of the earth. More and more we become absorbed in the rough and tumble game of winner take all, and because our eyes are on our hoped-for winnings instead of on God and duty, our understanding of America decreases, our loyalties grow weaker, our national and world objectives less distinct, and our fervor for God and country loses the heat that once made it a flaming torch of hope for the entire world.

Samuel Goldwyn, premier Hollywood producer, has said that when he came to America from England, an immigrant boy at the age of 12, he literally kissed the welcoming earth of the land to which he had come. He goes on to say that he has never ceased to give thanks that there exists on this troubled globe one country where freedom and opportunity are denied to no man.

Do we feel that way about America?

Oh, I know that patriotism has its dangers. Men under its banner have lied and cheated.

In the name of patriotism they have given power to their pride and their prejudices. Patriotism has produced the demagog as well as the statesman, the traitor as well as the hero. Under its banner men in high places have become self-centered and selfish, greedy and vengeful. But patriotism has also produced in men their purest love, their greatest sacrifice, their loveliest dreams, and their holiest dedication to God. I cannot go so far as to say that the Nation is everything and the citizen nothing. Nor would I care to say that the citizen is everything and the Nation nothing. But this I know: Unless the citizens of this land concentrate on the well-being of the Nation as a whole, and unless this Nation concentrates on the well-being of our people, there cannot long remain harmony within our borders or peace beyond them. I cannot help but feel that the welfare of this Nation as a whole is more important than my welfare, as dearly as I love my place.

I wish sometimes that we could all suffer from amnesia, the loss of memory. There is something to be said for a situation where one must face his future without consciousness of the past. Then we would be compelled to think new thoughts, to plan in new ways, to face up to the needs of the times with less hesitation. And who can measure the good to be achieved if Germans, Frenchmen, Englishmen, Italians, Russians, and Americans should suddenly become amnesic, the past blotted out, so that we would all have to begin where we are, getting acquainted without the penalties of hurt memories, and working together without the hangovers of old hatreds and suspicions.

Only one thing might be more beneficial: That all nations would so understand God and His will for mankind, that they would love where they have hated, trust where they have doubted, work together for peace where they have armed each other for war.

Ah, but you say we live in a world where cold war is hot, and sin is a way of life and no mere dogma of the church. I agree. But what is the cure for both? More deadly missiles? Bigger wars? Higher and higher budgets for defense, until we spend more on feeding warheads than we do ourselves?

At stake in this year of 1959 is humanity itself, nothing less. Until men fear their strength, seeing in new war the death, not of individuals but whole cities, states and nations, we must remain strong, but with our physical strength there must come, and that right soon, increased respect for the moral laws of God and the duties He has assigned to those who call Him Lord. In a world like that which surrounds us all, military power is only a small part of the final answer. As Washington himself has observed, "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports."

A Christian is not merely one who loves his country and is willing to serve her faithfully and fully. Many storm troopers and Mussolinites did that. Many in Russia so live today.

A Christian is first of all one who loves God as he knows God in Jesus Christ, and who also loves his fellowmen. A Christian, because he honors, loves and serves Almighty God, seeks to live with goodwill toward all neighbors and all nations.

Love of country is a virtue in a Christian, but only when his country is mindful of the will of God, and seeks to be stronger spiritually than she is militarily.

In this age of missiles we must not forget that we still do business with the God of stars and of all space.

Ere this birthday season of our Nation ends and we return to the mundane tasks of Monday, may I plead with you to ponder seriously the forces, principles and events that has blessed America and the world, and to look with clear eyes upon the demands of our times, dedicating yourselves to God first, to making America Christian second, and to building peace in the world third. Or as a great American has expressed it:

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and his orphans, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Too many Americans are beginning to feel like exiles in America. Too many do not seem to care what is really happening within and beyond our frontiers. Too few are taking their places in the frontlines where men who love liberty strive to hold at bay the Communistic push.

May more of us so love God, our Nation, and the peace of the world, that we move forward into frontline positions.

May God bless America, and may she be worthy of God's blessings.

H. R. 5896

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. RODINO. Mr. Speaker, I would like to address myself for a few moments to the provisions of H.R. 5896. There is much in this bill which is commendable. It reasserts the principle that the reuniting of families should be one of the cornerstones of our immigration policy. To a limited extent, this bill, among other things, does exactly that. The married sons or daughters over 21 years of citizens of the United States are moved from the fourth to the second preference. Married sons or daughters over 21 years of age of lawfully residing aliens are placed in the third preference category. As a result of these changes and others, immigration visas available for the use of fourth preference immigrants are raised from 25 percent to 50 percent. Equally far-reaching is the provision of this bill which will give nonquota status to those prospective immigrants whose names appear on the consular waiting list before the date of December 24, 1952.

This bill, while a progressive step, by the very limitation of the date imposed tends to defeat one of the most significant purposes of this bill, viz, the reuniting of families. We took similar action in the 85th Congress under Public Law 85–316, but there the Congress concerned itself only with the first three preferences and made eligible only those who had been reached prior to 1957. The fourth preference clause was given no consideration therein at all. Hence, we find that in two successive Congresses we have taken a piecemeal approach to solving the heart-breaking problem of families separated by the operation of our immigration laws. To me, it appears wholly logical that if we attack this problem that we attack it whole; that we bring a solution to it that is total, and not step by step. That if the law is to be revised, that it be revised cleanly and precisely without the ragged edges which remain as irritants and prods to our conscience. The cut-off date of 1952, to my mind, fails to meet the problem. Had we used the year 1955, following the expiration of the Refugee Relief Act, or more logically still, the year 1959, we could have disposed of this problem in its entirety.

Separated families bring divided hearts and divided homes. Does not logic, therefore, dictate that if we seek the solution, as unquestionably this bill does, that we bring a solution that is totally compatible with our problems? Though this bill represents a job only partially completed it does help to relieve a distressing situation.

I look forward with hope to the day when we will tackle this problem of reunification of families in a more direct and total fashion.

Grading of Meat, H.R. 1043

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 1043, to provide for the grading of meat and for informing the consumer of such grade.

On June 19, 1959, it was my privilege to appear before the Livestock and Feed Grain Subcommittee of the House Agriculture Committee in support of my bill.

The following is a transcript of that testimony:

STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Thank you, Mr. Chairman. It is a pleasure to have the opportunity to appear before your distinguished committee. I do hope that you will look with favor on my bill, H.R. 1043.

The introduction of the bill is prompted by the fact that we have much advertising and sale of meat, in the retail stores particularly, with the purchasers being misled as to what kind of meat or the grade or quality of meat they are buying, and I would not be at all surprised if to a certain extent, some of the advertising was deliberately misleading.

I picked these advertisements out of Thursday's Washington papers, but the advertising throughout the country is practically the same, particularly chain store advertising.

Yesterday's Post carries an ad of the Giant Food Store chain. This is what I call good and proper advertising. They set forth their own trade name, "Giant Topnotch." Then they take the trouble to explain in the advertisement what it is and what it means, and then set forth what Government grading means. They set forth USDA, U.S. Department of Agriculture, Prime, Choice, and explaining the differences. Then when you read this advertisement you know just what they are offering you. When you go into their store the food is plainly marked and you get what you expect to get.

I shall leave these advertisements with you.

On the other hand, in the Evening Star of last night is the advertisement of a nationwide chain, A. & P., and this advertisement is typical of their advertising from one end of the country to the other, and it has been going on for many years. I have almost the identical advertisement in my file which bears the date January 1959. They advertise "super right quality, top grade. Super right quality, none priced higher." That is typical of their advertisements.

What in the world is "super right quality"? What is "top grade quality"? You and I look at this desk and say this is top grade. A furniture man would look at it and say it is second or third grade. You and I would go into a store and look at a piece of meat and say, "That looks awfully good. It must be top grade." But the man behind the counter knows it is probably "good" or maybe only "commercial." He can pass it off as "choice" or "prime."

Another advertisement, also from Thursday's Washington Post. The chainstore advertises their chickens, "table right, grade A fryer." I wonder what they are selling. It may be the lowest grade of chicken, but it is being passed off as grade A because he says it is grade A. You may differ with him, but the average housewife does not know the difference until after she has cooked it and tried eating it. Looking at it they cannot tell.

Another typical advertisement is from the Washington Post of yesterday. This chain advertises their meat as "Lancaster brand." You might be put on notice that it is a private brand and find out what it is. Again, looking at it, there is no way of telling what you are buying. From the price, 89 cents per pound compared to the price of the "choice" advertised in another company's ad, you might think you were getting choice, but I would bet if we walked into the two stores and bought a pound of each, one would be choice grade and the other would be an inferior grade.

My bill seeks to remedy that. While I know we cannot legislate ethics and cannot legislate honesty, at least we can regulate it to the extent that everybody will know that an item which is Government inspected will carry a grade label under a standard set by the Department, and then that the product will be labeled accordingly and everybody will know just what they are getting when they make a purchase.

I do not contend that the bill is perfect by any means. When you get into the details you probably will find you can improve it. It was prepared for me by legislative bill drafters. I think it is at least an approach to the problem and I hope the committee will look upon it with favor.

Mr. POAGE. Mr. MULTER, this bill provides compulsory Federal grading on all meat and meat products, is that right?

Mr. MULTER. That is correct, sir.

Mr. POAGE. Of course it requires that the evidence of that grade go with the meat or meat product until it is sold at retail.

Mr. MULTER. That is right, sir.

Mr. POAGE. Does it prohibit the use of private brands along with that?

Mr. MULTER. Oh, no.

Mr. POAGE. You can call it "Lancaster Special" as long as it has the Government grading?

Mr. MULTER. As long as it has the Government grade, whatever it may be.

Mr. POAGE. In the last few months there has been a flare-up of criticism in a number of the livestock producing organizations protesting against the whole Federal grading process. I have not personally felt that they were entirely well advised, but the objection comes from what they feel to be unreasonable and arbitrary grading. I think it goes primarily to lamb. The sheep people are especially incensed at what the Federal Government has done in the way of grading. They feel that the Federal grades do not reflect consumer wishes at all, and of necessity they have to feed their lambs out till they are nothing but tallow.

Last night I had a couple of lamb chops and I did not get any more lamb out of them than the end of this gavel. Yet they were great long lamb chops. They were nothing but fat and bone, and I thought they were as sorry as any I had ever eaten. Yet they were supposed to be choice lamb, and were by Federal grading, because the Federal grading looks too much to the amount of fat, I think.

Our beef people have felt, probably not so strongly on the matter as the sheep people have, but they have felt that there has been too much emphasis on fat, too much emphasis on marbeling of meat. The public wanted that a generation ago, but the Federal grading system keeps about a generation behind public needs.

For that reason the committee is being faced with demands to repeal all Federal meat grading. I do not think it stems primarily from any desire to let these various stores establish their own system, because I think the producer has a stake in having a sound system which appraises the relative value of his product with the relative value of somebody else's. I think it good for both producer and consumer to have some standards whereby we can know what we are selling and what we are buying.

I do call your attention to the fact that right at this time there is a considerable wave of resentment against the Federal grading system, and it is primarily because producers feel it is not realistic, that it does not represent the actual quality of the meat.

You do not touch upon the Federal grading system itself?

Mr. MULTER. No. I leave it to the Department to set the standards.

Mr. POAGE. Of course, they have that power right now.

Mr. MULTER. They have the right to set the standards. This goes a little further and permits the licensing of inspectors. I think it is rather carefully drawn so at a place where there is no inspector you do not create a hardship on the man who is raising the stock and trying to process it for the market. I do think that once it is ready for the consumer market it ought to be marked, and somebody ought to set the standards and they should come within those standards.

Naturally there will be a high and a low. You are not dealing with a product to which you can put a micrometer and say this is it. There will have to be a minimum and maximum within each grade. I think that should be adhered to and the labeling should be enforced. I think you would not need anybody but the housewife to do the enforcing for you, because if the law required it to be graded and the housewife knew it, if the purchaser at retail knew it had to be graded, they would look for the grade and if it was not there they just would not buy it. The retail outlet would very soon know they had to grade the meat properly or the customer would not buy it.

Mr. POAGE. Of course, we thought when we established the present grading system that that would police it and the public would demand those grades. The public has not demanded them, as far as I can see. The housewife has that opportunity today and she does not exercise it, as far as I can see, because the housewife in Brooklyn right now has the same opportunity she would have under this bill to ask what the Federal grade is on a piece of meat. She does not ask in so many cases. Of course, there are cases where she does, but in too many cases she does not demand it, and the result is that Federal grading is not anything like complete at the present time.

Then that raises the question of what it would cost if we do require grading on all of this meat. Much meat, especially in your State is not now subject to Federal grading. Obviously, you must have the Federal Government pay for all the grading when you require it. How much would it run?

Mr. MULTER. I could not say.

Mr. POAGE. It runs about $19 million now, does it not, Mr. Short?

Mr. SHORT. We have been talking about wheat so much lately, Mr. Chairman, I have gotten off the subject of meat, which is probably something I should know more about. I believe it is something like that, Mr. Chairman.

Excuse me, sir, for being late, and may I inquire, sir, what your interest is in this? This whole matter of meat grading, of course, falls into a maze of different arguments.

Mr. POAGE. Mr. MULTER's proposal is to require that all meat sold through retail outlets carry a Federal grade marked on the retail portions of the meat, that the grading be done, of course, by the Federal Government, through Federal inspectors who are federally paid, and that nobody should be allowed to sell meat which did not carry a Federal grade. They can use their own trade names, but they still would have to carry the Federal grade.

Mr. SHORT. How much attention the housewife pays to it is a very debatable question in my mind. I am interested as a cattleman when I come back here a long way from the producing areas and hear housewives continually say you can get much better beef at one store than you can at another of the big chains, when we all know that the big chains carry essentially, for practical purposes, the same identical grades of beef. They have all practically standardized on U.S. Choice. Within that grade they have the right to select their beef, which maybe can fall into the category of high Choice or low Choice, or something like that, but when the housewife goes to the market thinking that she is guided in her choice by the Government grade, it certainly eliminates to a considerable degree any responsibility that the processor or the retail market has in being able to have some characteristic about their particular trade grade of beef that they have as an argument to induce the housewife to buy their brand rather than someone else's.

There is probably an overall benefit in a Federal grading system, but there are certainly many other aspects of this business of grades. The first thing you have to recognize in this matter of grading is that I do not think any two animals raised yet were identical so far as grade is concerned. There have been some very interesting things developed in recent years as far as the difference in palatability, tenderness, marbeling, and all sorts of things, of livestock which from the outward appearance or even the carcass appearance happens to fall into the same grade.

Mrs. MAY. Mr. Chairman, just for clarification on this, addressing myself to anyone, what is the present status of grading by USDA at the overall Federal level where there are some meats at the retail level which are stamped and others are not?

Mr. MULTER. Mr. Chairman, correct me if I am wrong. It is my impression that there is no requirement that the meat be labeled as to grade when it reaches the retail level.

Mrs. MAY. It is up to the retailer to advertise Government inspected meat himself, is that right?

Mr. SHORT. The carcasses are stamped.

Mr. MULTER. The carcasses, yes; but very few retail places receive the whole carcass

and then carve it up in the store for retail sale. Places like A. & P. will receive the carcasses into their main warehouse, where it is cut up into small sizes and even wrapped, and then delivered to the various stores for sale to the customer. I think very few, if any, of the chains do any of the cutting of the meat for the customers in the store. Most of it is all done in the warehouse.

The small butcher shop receives a half carcass or quarter of a carcass and carves it up for the trade as they buy it.

Mrs. MAY. So the Government actually stamps only the carcass, and then it disappears between there and the retail, unless there are State laws. Am I not correct on this?

Mr. POAGE. That would be a State stamp and not Federal.

Mr. MULTER. I know of no State which requires inspection and stamping for the retail trade. I believe our boards of health, State, and city, in New York, rely on the Federal grading.

Mr. SHORT. The grade stamp is visually evident on the carcass. It is put on with a roller from top to bottom. In the cutting of the various cuts of meat, particularly roasts lots of times, unless they resort to excessive trimming, that grade stamp is still visible on the retail cut of meat. If the housewife understands this business of grading, she will start looking for that, but I doubt very many of them do.

Mr. POAGE. Is it not right, Mr. SHORT, that there is no requirement that it be there? The meat may very well be cut so there is no Federal stamp on the particular cut you buy. I would assume that three-fourths of the cuts which are sold have no Federal stamp on them.

Mr. MULTER. That is quite right.

Mr. SHORT. Particularly now, when they resort to so much trimming and packaging and that sort of thing.

Mr. MULTER. These advertisements are from yesterday's newspapers in Washington, but they are typical of what is going on across the country in every community where there are chain stores. You will find these full-page ads week in and week out. As I indicated before, here is what I call good advertising, fair and proper. It sets forth as a substantial part of the ad the definition of the U.S. grades and indicates that their particular brand "Topnotch," is the choice grade as defined by the U.S. Department of Agriculture.

Turning to these other ads of competitive chains, one uses its own brand, "Lancaster Brand," with no definition of what it may be. Another says "Grade A Fryer," and a third one says "Super Right Quality." "Super Right Quality" is just one of those colossal phrases developed by the motion picture industry. It has no grading value, but it fools the housewife.

Mr. SHORT. It does not fool her very long. If she is fooled once she isn't apt to be fooled again.

Mr. MULTER. I suppose you may be right, that if she is fooled one time, she probably will not go back to the store again.

Mr. SHORT. My contention is that most people continue to buy meat on the basis of their satisfaction with what they bought the first time. I do not think the fact that a store advertises that the grade they are offering under their brand name falls into the category of a certain Government grade is necessarily an assurance to the housewife that that is true. If she is not satisfied with the quality of the product she buys, she will not go back there very often, it seems to me, if she gets better quality product at some other store.

Mr. MULTER. Unfortunately, too many of these big chain operators operate on the old Barnum theory that there are always enough of the public around to be fooled to keep you going.

Mrs. MAY. Is there a penalty at the retail level if the retail store, A. & P. or something, would advertise U.S. stamped, federally inspected, Grade A Choice, which really is Good?

Mr. POAGE. It is certainly fraudulent advertising.

Mr. SHORT. I would say they would be subject to somebody hauling them into court for misrepresentation if someone could prove that was true.

Mr. MULTER. I think there probably would be a civil cause of action, but there is no penal statute on the subject, there is no penalty, and nobody will waste the time and money to hire a lawyer and sue over a few pounds of meat.

Mr. POAGE. Yes; there are, Mr. MULTER. A. & P. certainly will spend a good deal of money to see that Safeway tells the truth.

Mr. MULTER. You mean between the competitive stores. Then Safeway ought to get busy and sue A. & P.

Mr. POAGE. A. & P. has not misrepresented anything.

Mrs. MAY. Under the law.

Mr. MULTER. Under existing law, I think you are right. They have a right under existing law to say this is our definition of "Super Right." This is what we call "Super Right." It may be the lowest grade of meat, but they call it "Super Right."

Mr. POAGE. But if they said it was "Prime" when it was "Good," then it would be misrepresentation.

Mr. MULTER. Some of the advertisements I have seen have the word "Pride" in small letters. Looking at it quickly you would think this is "Prime." They have told the truth, it is their "Pride." You probably would not eat it, but it is their "Pride."

I will leave these advertisements with you for your committee file, Mr. Chairman, if you want them.

Mr. POAGE. Yes; we would like to have them.

Do you feel you would like to call other witnesses on this? Frankly, this meeting this morning is not necessarily to dispose of legislation, but we wanted to be able to sound our docket and see where we stand on it.

Mr. MULTER. I have no desire to call any other witnesses, Mr. Chairman. I might say I have no interest in any abattoir, and chainstores, or any of the other retail stores. I was prompted to introduce the bill merely as public service to protect the retail purchasers and consumers and mainly, of course, the housewife.

Mr. BREEDING. May I ask a question, Mr. Chairman?

What does your bill provide?

Mr. MULTER. The bill would require that all meat offered for sale at retail, after having been graded in accordance with standards set by the U.S. Department of Agriculture, must be labeled to show the grade.

Mr. BREEDING. All meats—chicken, roasts, and everything must carry the grade?

Mr. MULTER. Yes. Frankly, I do not know the poultry industry well enough to know whether it is practical to apply it to the poultry industry. The bill drafters who prepared this for me applied it to both poultry and meat. If it is impractical to apply it to poultry, that can be changed.

Mr. POAGE. You recall we are just beginning Federal inspection of poultry. It started just in the last few months.

Mr. MULTER. That is right.

Mr. POAGE. We do not have the well-organized Federal inspection of poultry that we have of other meats.

Mr. MULTER. That is the reason I suggest it may not be practical at this time as to poultry.

Mr. BREEDING. This bill would prohibit this kind of advertising?

Mr. MULTER. That is right. If it is a Prime cut or Choice cut, they would say so. If they want just to advertise meat, let them advertise meat, but don't let them advertise "super grade" or "grade A" or "super quality" when it does not meet Grade A standards.

Mr. POAGE. Mr. MULTER, you would allow them to advertise any private brand they want to call it, would you not?

Mr. MULTER. Of course.

Mr. POAGE. But they would have to give the Federal grade as well.

Mr. MULTER. They would have to do the same as this chain Giant does. They could have "giant topnotch" but explain that "giant topnotch" is USDA choice grade. In addition to that, they can carry that trade name if they like. My bill would not prohibit it. But they would have to say it is choice, prime, commercial, or whatever it may be.

Mr. POAGE. I think it important to let them carry their private trade name.

Mr. MULTER. By all means.

Mrs. MAY. Mr. MULTER, you say in here that this is compulsory Federal grading of all meat and meat products. How would we define "meat products"? Would that include tins and potted meats, Spam, meat spreads, and that sort of thing? Would that be all-inclusive, so the labels on these jars and cans would have to carry the Federal grade?

Mr. MULTER. I hope this does not go to that.

Mrs. MAY. It says "any article of food intended for human use which is derived or prepared in whole or in part from any edible portion of the carcass of cattle, sheep, swine, poultry, or goats"—I suppose it could even go into dog food—"if such edible portion so used is a considerable and definite portion of the furnished food products." There may be cereal mixed in with some of the meats. Again, it might be an administrative question on labeling.

Mr. MULTER. It was not intended to apply to the processed foods. It may be that you can cover the processed foods, the canned foods, the bolognas, and things of that kind.

Mr. POAGE. I doubt that you ought to go beyond fresh meat.

Mr. MULTER. This is intended to cover fresh meats or fresh frozen meats, where the meat itself was being sold, not having been processed into the bolognas or into canned goods or even into cooked goods.

Mrs. MAY. It might have to be spelled out.

Mr. MULTER. I am sure it would have to be.

Mr. SHORT. All those products are, for the protection of the consuming public, subject to Federal inspection for health.

Mr. MULTER. When it gets to processing, you do have, I think, in almost every State and municipality today, health laws which cover the situation.

Mr. POAGE. Federal meat inspection is compulsory and universal. The grading is not.

Mr. MULTER. I think it would be completely impractical to try to require the putting of Choice or Prime or something on a canned product or a precooked product.

Mrs. MAY. Yes.

Mr. SHORT. One other question. I notice in a couple of sections you refer to meat shipped or delivered for shipment in interstate or foreign commerce. Is it the intent of this bill that this shall apply only to meat which goes into interstate commerce?

Mr. POAGE. It could not apply to anything else, Mr. SHORT. You cannot apply Federal law to simply intrastate movement.

Mr. SHORT. As a lot of people do not realize a terrific amount of the beef in New York

City is slaughtered right there. This law would not apply to that.

Mr. MULTER. The cattle are brought in from outside.

Mr. SHORT. They are not subject to inspection until after slaughter.

Mr. MULTER. This would require that kind of meat to be graded. I think the act would apply to that. If the animal has been brought in from outside the State, I think the slaughtered animal is required to be inspected. Am I not right in that, Mr. Chairman?

Mr. POAGE. I should say, ask the Judiciary Committee or ask the Attorney General. I do not think anybody knows how broad this question of interstate commerce goes.

Mr. MULTER. Interstate commerce laws will apply in certain instances to a man who is hired and working locally in a building in the city of New York but, because other employers is the building are engaged in interstate commerce, he comes under that law.

Mr. POAGE. I never believed it, but the courts have so held.

Mr. MULTER. The next day we get a decision which indicates when he made his purchase that day in a store in the same building, he was not in interstate commerce.

Mr. POAGE. We are very much obligated to you, Mr. MULTER. The committee will of course consider the bill later on. We wanted this morning to have a chance to find out what was before us. We do appreciate your appearance.

Mr. MULTER. Thank you for the opportunity of being here.

Mr. POAGE. Thank you so much.

Publisher Esther Klein of Philadelphia Jewish Times Writes Trenchant Column Endorsing Congresswoman Granahan's Drive To Rid Mails of Obscene Material

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. TOLL. Mr. Speaker, the Jewish Times, published in Philadelphia by Mrs. Esther Klein, features in each issue a hard-hitting column written by the publisher which takes up vital issues of the day and discusses them in a clear and forthright manner. It is always interesting to read and it is frequently provocative enough to stimulate community action. That, to me, is the test of a commentator's effectiveness, and it is a test which Mrs. Klein certainly meets and surmounts.

In a recent issue of the Jewish Times, Mrs. Klein, in her column "The Publisher Speaks," discussed the campaign of our colleague in the House of Representatives, the Honorable KATHRYN E. GRANAHAN, of Philadelphia, to devise tighter laws for coping with the flood of filth, pornography and obscenities now being delivered by mail, particularly to children victimized by a brutal big business which is without morals or scruples.

Congresswoman GRANAHAN has undertaken this important task as chairman of the Subcommittee on Postal Operations of the House Committee on Post Office and Civil Service. She has been doing an outstanding job in this assignment, and has won the praise of civic, educational, parent, community, and religious groups throughout the country for her efforts and for the investigation which her subcommittee has been conducting. I am pleased that the subcommittee is to visit Philadelphia and hold hearings there on this problem later this week.

I believe it is appropriate, therefore, to share with the Members of Congress interested in this important problem the excellent column which appeared on this subject in the Jewish Times, under the heading "The Publisher Speaks," by Esther Klein, as follows:

THE PUBLISHER SPEAKS
(By Esther Klein)

"The gentlewoman from Pennsylvania is recognized for 60 minutes."

Thus the Speaker of the House in Washington granted Philadelphia's Congresswoman the opportunity to speak for an hour before that august body on one of this country's growing problems. She made an impassioned plea for direct and immediate legislative action to combat the vast half billion dollar industry thriving on pornography and obscenity through the use of the U.S. mail.

As chairman of the Postal Operations Committee, Mrs. KATHRYN GRANAHAN, has been untiring in exposing this vicious industry that has expanded all over the country. Her stirring recital of the dire effect of the distribution of this smut material on the youth of the country moved the hardened Congressmen at a recent session.

It was at the initial hearing in April of this year that the Postmaster General testified that a half billion dollars is realized annually in mail order obscenity and pornography. J. Edgar Hoover, of the FBI, emphasized that these vicious dealers are aiming their material at teenagers, not only in the slum and rundown areas, but in every suburb.

This lewd material is directed at the youngsters who attend churches and synagogues, as well as those lacking parental and religious havens. Increasing widespread use of the mails to send obscene matter is proving alarming to teachers, religious leaders and social workers. One of these nationally known educators indicated that there is a direct relationship between the increase of smut available to our youth and the increase in juvenile delinquency.

"Women of this country are irate and offer their support to all concerned in fighting the dealers in filth and smut," according to one of the national club presidents quoted by Mrs. GRANAHAN in her statement to the Congressmen. "They will use all their power to help prevent the demoralization of youngsters which results when they are subjected to obscene trash at the impressionable age."

Mothers and fathers can be equally helpful in combatting this scourge. Just because they live in a good neighborhood, have a fine home, and send their children to the synagogue for services and classes, the parents can't assume immunity from this filthy material that comes in the mail. Children as young as 8 and 10 years old have been the recipients of samples of filthy literature. The names of these children as well as the older brothers and sisters are obtained when they write for stamps, airplane models, and other desirable items. This mailing list becomes highly desirable for the dealers in smut, who are vicious in their attempts to awaken the teenagers' cusiosity.

Parents can cooperate to stamp out these cruel dealers. If such an advertisement comes in the mail or is sold by a dealer near the school, contact should be made immediately with the local postmaster. Save the material and the envelope for the postal authorities. Immediate action may result in prompt arrest and curbing of this objectionable mailing.

Boys and girls picked up for minor crimes and even very serious crimes have admitted the adverse influence of the obscene literature, a contributing cause of these crimes. But if there was any further doubt in the minds of Philadelphians, it was emphasized distressingly by the youth who strangled the 3-year-old Becky Holt. He admitted reading smut advertisments sent to him through the mail. A fine home in a fine neighborhood and a parochial school of high standards couldn't combat lewd, indecent, and vile pictures that came through the Federal mail.

"Community support must be mobilized behind our efforts to safeguard the youth of our land from the dealers of smut and filth," declared the Philadelphia Congresswoman in her concluding remarks. "At the present time our subcommittee is in the process of preparing a report which will include a suggested program of action to be followed at the National, State, and local levels."

Let us as parents and earnest citizens forward our approval for the legislation being considered to protect our youth. The seriousness of this problem demands our immediate attention.

Retired Jerome Postmaster Hartshorn Recalls Varied Life in United States and Alaska

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, July 7, 1959

Mr. CHURCH. Mr. President, at this season, when interest in the new 49-star flag makes us acutely conscious of the history, resources, and vast potential of the great new State of Alaska, I wish to bring to the attention of the Senate a feature story from the June 20 issue of the Twin Falls (Idaho) Times-News. It deals with the life and good times of my good friend, A. H. (Bert) Hartshorn. Bert, who is a retired postmaster, but still keeps close track of his farming operations in Idaho's Magic Valley, will celebrate his 90th birthday on December 3. A good part of Idaho and Alaska will celebrate it with him, for he is a living symbol of the pioneer tradition which has shaped the development of Idaho, Alaska, and the Pacific Northwest. I ask unanimous consent that the feature story to which I have referred may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAGIC VALLEY PORTRAIT—RETIRED JEROME POSTMASTER HARTSHORN RECALLS VARIED LIFE IN UNITED STATES AND ALASKA

JEROME, June 20.—Railroadman, blacksmith, boatman, powerplant supervisor, laundryman, farmer, and postmaster—all

these are occupations that A. H. Hartshorn, Jerome, has had during his long and eventful life in both the United States and the Yukon Territory during the gold rush.

Hartshorn first came to Jerome in 1919, fresh from the Yukon Territory, where he had spent the previous 20 years. He farmed near Jerome for several years and in 1935 he became postmaster of Jerome.

RETIRED IN 1950

Hartshorn was postmaster from 1935 until his retirement in 1950. Ever since he moved to Jerome and Idaho, he has been active in the Democratic Party.

Hartshorn was born in Dundee, Mich., on December 3, 1869. He completed nine grades of public school there and then went to work for his father, who operated a sawmill in southern Michigan.

In 1889, Hartshorn and his new bride came West. They moved to Olympia, Wash. He worked in various towns in Washington doing construction work for several years. Eventually he started working for the Northern Pacific Railroad, but was laid off after the 1894 strike.

BECAME BLACKSMITH

Hartshorn searched about for something to do and eventually purchased a blacksmith shop and worked days, nights, and Sundays shoeing packhorses in an effort to make a living.

In 1898 the gold rush to the Klondike began and the lure of the northland caught Hartshorn's fancy. He rented his blacksmith shop and struck out for Skagway, Alaska. After packing equipment overland to the headwaters of the Yukon River, he discovered the ice would not allow him to travel on the river for another 2 or 3 months.

Hartshorn was annoyed by the delay, but he made the best of the time on his hands. He managed to pick up a forge and anvil, manufacture some charcoal and he set up business as a blacksmith. He shoed horses for the many pack outfits that passed through the country.

STARTED RESTAURANT

He bought a small, one-room log restaurant building and operated both the restaurant and blacksmith businesses. He cooked meals for the packers and while they ate he would go outside and shoe their horses.

After a short time Hartshorn heard about a new gold discovery in the Atlin district of British Columbia. He took off for the discovery, leaving a horse half-shod in his blacksmith shop. After walking many miles and rowing over 30 miles on Tooshi Lake he arrived at the discovery. He finally sold the claim he had there and returned to his restaurant and blacksmith business on the trail to Dawson.

SAVED $600

He says the business was good. He fed the trail drivers on "run-bacon and beans and coffee." And in a few months he had saved $600.

Hartshorn recalls one amusing anecdote that happened on his trail-side restaurant and shop.

One night he heard a lot of laughter coming from the bunk-house. He investigated and found that the men were telling stories about good things to eat. "Too long on bacon and beans and they were hungry for something different," he says.

One man told how in his hometown he and his brother-in-law used to bait fishhooks and snag chickens from the railroadman that lived next door.

CHICKEN MYSTERY SOLVED

Hartshorn listened for awhile and then asked if the fellow's brother-in-law was named Spiker. The man replied that it was and asked how he knew this. Hartshorn laughed and told the men that he was the railroadman who had lost the chickens.

Hortshorn notes that instead of following the stampede he mined his own kind of gold mine in that very area. It seemed the trail was literally lined with dead pack horses that had died on the trail.

He explains the packers wouldn't feed the horses expensive grain they needed to keep them alive, so they died on the trail of undernourishment and overwork.

Hartshorn discovered he could operate a thriving blacksmith business by traveling along the trail and pulling the shoes off the dead horses, reshaping them and reselling them to the pack outfits. He estimates there were about 5,000 dead horses along the trail.

After wintering in Washington State, Hartshorn returned to Alaska. He discovered that the packhorse companies had built their own blacksmith shops and that his days of blacksmithing, as a profitable enterprise, were over.

Hartshorn then drifted down to Bennett Lake and found the lake covered with all kinds and shapes of steamboats. With his experience as a railroadman and with steam engines he had no trouble getting a job with one of the boat companies. He worked for the company until 1902, when he lost his job because he didn't have a Canadian license. The following winter he operated the White Pass lighting plant at Whitehorse.

The next spring he bought the Skagway steam lighting plant. He moved the plant to the Atlin mining camp and opened a laundry and sold electric power. He was enjoying a thriving business when the building housing the plant and laundry burned to the ground.

FIRE BROKE HIM

Hartshorn had no insurance and found himself broke. The next morning after the fire he applied for a job as the night operator of the local powerplant. He got the job and started a long career with northwoods powerplants.

He operated a powerplant near Dawson until 1911. Then he was transferred to a new plant that was being installed on the north fork of the Klondike River. He helped install the plant.

Hartshorn worked at the plant until 1919 and eventually became superintendent. Tiring of that kind of life, he resigned and came to Jerome and bought a farm.

TELLS ABOUT FARMING

"During my first year in Jerome I bought a fine team of horses, a good wagon, and farm machinery, and hopped to it like a kid. I raised some good crops. The second year I put in 12 acres of beets and got 20 tons to the acre.

"But the more we raised, the more we lost, so I started raising hogs. I built a smokehouse and processed about 16 hogs a year."

He had a thriving business selling cured pork and he notes he should have stayed with the meatpacking business.

In 1925 he bought a second-hand store and began repairing stoves and furniture.

Hartshorn became interested in politics and in 1926 he was elected chairman of the Jerome County Democratic Central Committee. Hartshorne is proud of the role Jerome County played in electing C. Ben Ross to the post of Governor in 1930.

In 1935 a group of Hartshorn's friends persuaded him to apply for the position of Jerome postmaster. He took the civil service test, made the highest score and took over the post in April of 1935. Since he retired in 1950 all he does is fight weeds on his farm near Jerome.

During his years as an active member of the Democratic Party, Hartshorn has been a champion of Federal power projects. He believes large Federal power projects, and the vast amount of power they would offer to industry, is the stimulus needed to make the Northwest the greatest industrial area in the world.

PENS MANY IDEAS

A prolific letterwriter, Hartshorn has penned his ideas on this, and other subjects affecting the economy of the Northwest and the farmers, to many politicians and newspapers in the Nation. He is a frequent contributor to the Public Forum in the Sunday Times-News.

Sure of his party's principles and the future of the Democratic Party, Hartshorn says the Democrats will win the presidential election in 1960 with ease.

Asked who he believed the candidate would be, he says it is now between Adlai Stevenson and John Kennedy.

"Personally, I'd like to see Kennedy," he says. "We need young men."

Besides looking forward to the 1960 election, Hartshorn is eagerly awaiting his 90th birthday anniversary on December 3. He has already started planning his party and has even started sending out invitations to old friends in such far-away places as Dawson.

"I'm going to have a really big party," he declares.

Report by Dr. Robert Jay Morrison

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a newspaper article from the Harrisburg, Pa., newspaper, the Patriot. It is an account of Dr. Robert Jay Morrison's observations while in Russia which many will agree with me are very interesting since it is, as you might say, a first-hand account.

Dr. Morrison is one of the pioneers in the development and use of contact lenses and has lectured in various parts of the world by invitation because of his work in that field. He just returned to his home community of Harrisburg, Pa., where he is an optometrist, and I just thought his interesting report on his most recent trip abroad is very enlightening, not only as it relates to his field of specialization, but his other comments as well.

Mr. Speaker, the newspaper article follows:

[From the Patriot, Harrisburg, Pa., July 1959]

CITY OPTOMETRIST SAYS SOVIET LAGS BEHIND U.S. CULTURE

(By Jerry Fitzpatrick)

Russia is a land where the people go wild about black market American jazz and flock to museums and ballet. But the country is backward compared to the American standards of living.

These are the opinions of Dr. Robert Jay Morrison, city optometrist, who recently returned from a lecture tour of 11 countries in Eastern and Western Europe. He visited an additional five.

"Russians seemed so pleased with their advancement," Dr. Morrison said. "They still are not anywhere near us. They must have been really backward a short time ago. We're used to having things much better."

BANS JAZZ PLAYING

The Russian Government forbids jazz and is attempting to raise the country's cultural

level by exposing the masses only to the best in literature, ballet, and other arts.

The reaction, Dr. Morrison said, has been both ways—the people want both their culture and jazz.

Also missing from the Russian scene are gum and ball point pens. Youngsters swapped small pin emblems of Russia with Dr. Morrison to get these items.

"Religion is government, and creation is chemistry, in Russia," Dr. Morrison observed. "The young people do not understand religion, and my guides were puzzled about it."

FEW CHURCHES

He said that out of the original couple of thousand churches serving Moscow's 8 million people, there are now only 13 Orthodox churches and one Jewish synagogue. Only old people visit these.

Dr. Morrison, one of the pioneers in the development and use of contact lenses, originally had been invited to Russia to lecture. An announcement, appearing in professional journals, quickly led to engagements in 10 other countries.

"The Russians were extremely interested," Dr. Morrison related. "They plan to supply contact lenses for the masses by setting up laboratories in each of the six republics. Lenses now are made only in Moscow."

He believes American methods for eye examination and manufacture of lenses are superior.

Dr. Morrison achieved international recognition for his theory that contact lenses will prevent myopia (nearsightedness) from growing worse in small children. He has fitted national statesmen, movie stars, and one woman who traveled from Australia especially for the lenses.

Dr. Morrison spent 6 weeks in Europe traveling alone. He remained 8 days in Russia. He already has given a number of talks here on his experiences.

Warning From an Expert

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. McCORMACK. Mr. Speaker, one of the outstanding scientists of the world and a great American is Hon. Thomas E. Murray, former member of the Atomic Energy Commission, and now consultant to the Joint Committee on Atomic Energy. There is no one who has a more profound knowledge of the sinister and evil intentions and purposes of international communism than Mr. Murray.

On Sunday last he appeared on a TV program "Meet the Press."

I enclose in my extension of remarks a splendid editorial appearing in the New York Daily News of July 7, 1959, entitled "Warning From an Expert," and a continuing part of the editorial relating to remarks made by Dr. James B. Conant on the "College News Conference" TV program:

WARNING FROM AN EXPERT

As consultant to Congress joint atomic energy committee, Thomas E. Murray appeared on the TV program "Meet the Press" Sunday evening with an important warning to Americans.

Mr. Murray believes the Kremlin will kick up further limited wars, such as Korea, while fearing to start the all-out nuclear war which the United States is well prepared to fight.

Therefore, says Murray we should stockpile tens of thousands of small nuclear weapons for these probable limited wars. That makes sense to us.

It also reminds us that the Geneva talks about banning nuclear weapons tests are still going on. There is considerable danger that the United States may buy British Prime Minister Harold Macmillan's plan for a specified yearly number of inspections (say three or four) to "enforce" a permanent ban on all of such tests.

That would be no enforcement; and dropping all tests would hand Moscow a tremendous cold war victory. How about our people at Geneva simply standing pat on President Eisenhower's plan, to abandon fallout-producing nuclear tests in the earth's atmosphere, but go on with tests underground and in outer space? And for our own safety, how about resuming underground and outer-space tests in a hurry regardless of Red objections? The Russians are on the ball for war or peace; witness their alleged recovery of two dogs and a rabbit alive from their latest rocket.

Speaking of Kremlin-spurred limited wars, James B. Conant more or less backed up the Murray prediction Sunday, when he remarked on the "College News Conference" TV program that he expects Khrushchev to go to the jagged edge of war over West Berlin, and then pull back.

ANOTHER CRISIS IN FORMOSA AREA?

Certainly the Commies are making limited-war gestures in the Formosa area. Chiang Kai-shek's Chinese Nationalist Government reports an attack Sunday near the Matsu Islands by 12 new Soviet-made Chinese Red Mig-19 jet fighters on 4 U.S.-made Nationalist *Sabrejets*, with 5 Red and no Nationalist planes shot down.

So it may be that Moscow and Peiping are steaming up another Formosa rangdoo, to jibe with the resumption next week of the foreign ministers' conference at Geneva. This looks emphatically like a time for the Strategic Air Command and the 7th (Far Pacific) Fleet to be on extra alert.

John Paul Jones

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. JACKSON. Mr. Speaker, the motion picture industry is recognized throughout the world as a powerful medium for propaganda. But it is much more than that. When properly used, the motion picture screen can be an instrument for understanding, for the dissemination of truth and for a more effective presentation of history that can be achieved through the printed words of the most brilliant historians.

Recently, I had occasion to be forcefully reminded of this fact when I attended a special showing of the motion picture, "John Paul Jones." For that reason, I sincerely believe that significant attention should be paid to it.

Here, through the medium of motion picture entertainment—and the picture is good entertainment—millions of people all over the world will be made conscious of the part played by the man who is generally regarded as the father of the U.S. Navy in America's struggle for the freedom we now enjoy. It will serve to remind them that this great country of ours, now blessed with wealth and power and the respect of free nations, did not gain this position without a struggle. It will relive for them and, especially for all Americans, the anxious moments of this country's founding days. As such, it should bring about a better understanding between nations.

In "John Paul Jones," actor Robert Stack portrays him as history described him—a dour, determined Scot who, having adopted the United States as his country, sacrificed his health and, eventually his life, in fighting for it.

He opposed not only the outside enemies of this country, but the politicians within who failed to foresee its future as he did. It is a character which will not soon be forgotten by the peoples of the free world when they see the film and it may arouse the admiration and excite the interest of intelligent young filmgoers who have become tired of sin, sex, and horror.

There is much to inspire in the film. This is particularly evident in the words of George Washington in the film when, during the scenes at Valley Forge, with America's military fortunes at their lowest ebb, he discourages Jones from resigning his commission in the Continental Navy of the United States. The words were penned by John Farrow, who wrote the scenario from which he directed the picture, but they are as worthy of consideration today as they were two centuries ago. Says Washington:

There will be no United States unless all of us remain united and bound by that vision of liberty and freedom from tyranny which we have dedicated ourselves to make fact. The cowards, the malcontents, the traitors to our cause, will inevitably be thinned from our ranks but the bright beacon of justice will keep the survivors united. The goal will be attained and a permanent design will be set for the new generation of freemen that I am sure will live by the high ideals we have set in this blessed land. The United States will exist as long as we have faith.

And, in speaking of faith, I would like to pay tribute to Samuel Bronston, the man whose faith brought the story of John Paul Jones to the screen.

European born, he conceived the idea of making the picture 12 years ago when he was studying American history in order to receive his citizenship papers. He discovered that various motion picture studios had considered making such a picture but in each instance had abandoned the project because they considered it too costly. But he was determined to make the picture because he felt it was a subject that should be made.

Discouragement after discouragement followed. He exhausted his personal fortune but he would not give up. Eventually, his sincerity attracted the support of a circle of bankers and patriotic American businessmen. Most of them

had never invested in motion pictures before and between them they made it possible for the picture to be filmed on its proper scale.

I think the fact that Mr. Bronston's 12-year-long dream has at last assumed reality is visual proof to all the world that America is still the land of opportunity for those who, like John Paul Jones, have courage and determination and faith.

Therefore, I consider it a privilege to render this acknowledgment to the picture "John Paul Jones," and to the man who made it possible.

The Recent Graduation From Duquesne University, Pittsburgh, Pa., of Mrs. David C. Kinkead, Clearfield, Pa., Unfolds a Human Interest Story Made Possible by Sheer Hard Work and Firm Determination To Reach a Goal in Life

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. VAN ZANDT. Mr. Speaker, at a time when the United States is reeling under the charge of having an abnormal divorce rate and of being a nation with a high percentage of broken homes, it is refreshing to read of the outstanding achievement of Mrs. David C. Kinkead, Clearfield, Pa., a devoted wife and mother of four children, in obtaining a degree in nursing and public health from Duquesne University, Pittsburgh, Pa. The courageous and resourceful Clearfield mother accomplished her cherished ambition as a member of this year's graduating class of 600 students while she was also occupied with the duties of a wife and mother of four children ranging in age from 3 to 19 years.

In expressing my sincere congratulations to Mrs. Kinkead on reaching her coveted goal, I wish to include in my remarks at this point the following article from the June 13, 1959, issue of the Clearfield (Pa.) Progress written by Jane Dietzel, staff writer, which recounts in an interesting manner the feat accomplished by Mrs. Kinkead through confidence and perseverance and with a big assist from her husband and four children whose love and devotion played an important part in her successful effort to attain her objective.

[From the Clearfield (Pa.) Progress, June 13, 1959]

COLLEGE DEGREE COMES AT LAST FOR BUSY CLEARFIELD HOMEMAKER

(By Jane Dietzel)

There are several ways to achieve a college degree, the most usual one being that of entering college directly from high school and attending the prescribed number of classes for 4 years.

Or one can do as Mrs. David C. Kinkead of Clearfield did—take a degree while rearing a family of four children, helping one's husband build a new home and following a career in nursing at the Clearfield Hospital all at the same time.

Mrs. Kinkead was one of 600 students graduated from Duquesne University June 7, receiving a bachelor of science degree with a major in nursing and a minor in public health.

She was probable the only one of the 600 to have a husband and four children—ranging in age from almost 3 to 19—in her cheering section.

It was undoubtedly a proud day for Mrs. Kinkead and her family, although the lasting impression that remains from an interview with her is of calm modesty and capable matter-of-factness. "I don't recommend what I did, for every woman. Yes, if they live in a university town or close to one, but not unless they are willing to work very hard and always remember one is doing it for the family, not for oneself."

The family she speaks of are her husband, Dave, a brakeman for the New York Central Railroad; 19-year-old Jack, a freshman student at St. Francis College; a second son, Charles, also called Dave by practically everyone, who will be a senior next year at Clearfield High School; Joan, an upcoming fourth grader at St. Francis Elementary School and Allan, who will be three in October.

College for Mrs. Kinkead was made possible, not only through her own efforts and determination, but with the wholehearted assistance and cooperation from the family. "For many years, I worked during the day and my husband worked at night so there was always one of us at home with the children. Only recently—while I was attending Duquesne full time—we had to get a babysitter to care for Allan 3 days during the week."

The older children helped care for the younger ones, and as is always the case in a busy household, have become adept at many house and yard chores. Praise for the Kinkead family life is a two-way matter in their Elm Avenue neighborhood. "We have such wonderful neighbors," Mrs. Kinkead says, "they think nothing of taking over and helping if, for instance, the babysitter is late or can't come at the last minute, or if anything goes wrong."

"You should just see how they manage," says a neighbor, "Dave can do about anything and the boys and Joan take care of the baby as if it were the most natural thing in the world. And Jane (Mrs. Kinkead) is always so serene and capable in a nonfussy way."

Born Ellen Jane McKissick, the daughter of Mr. and Mrs. John C. McKissick of Penfield, Mrs. Kinkead came to Clearfield following graduation from the Huston Township High School to enter the Clearfield Hospital School of Nursing. She was graduated from the school in 1936 and did general duty there for a while following graduation. Her first step toward further training came in 1939 when she took a course in ward management at Philadelphia.

Marriage, the first two children, and a sojourn of living in Jersey Shore, in California, then back to her native Penfield for a short time interrupted her career, but she didn't give it up entirely, working from time to time on both private and general duty when needed.

In 1950 the Kinkeads began to build their home on Elm Avenue, doing much of the work themselves. Mrs. Kinkead's career resumed in earnest and she began her college work at about this time. She took undergraduate courses at Pennsylvania State University and University of Pittsburgh (one at the latter shortly before Allan was born) during the summer and in night classes. Finally, it was time to go on campus and she chose Duquesne for the final three semesters because of its bachelor's degree in nursing and nursing education. Not all universities offer the course.

She came home every weekend while at Duquesne, and admits the schedule wasn't easy. Life on campus was different for her than for most students—"Everyone was very friendly, but they categorized me instantly—I was just a little different, a little older, not quite one of the girls." She was able to concentrate on her work, perhaps more than the average undergraduate, because she had little social life and outside diversions. There was no time for that if the pace of school all week and home for the weekend was to be kept up.

Different she might have been, in her mind at least, but Mrs. Kinkead was selected for the recognition in "Who's Who Among Students in American Universities and Colleges" an annual directory of distinguished students chosen on the basis of their scholarship, leadership, general citizenship, and promise of future usefulness. Very few students make the scholastic "Who's Who."

"Do you plan to continue your education?" I asked Mrs. Kinkead near the end of an interview in her office at the Clearfield Hospital where she serves as instructress of the fundamentals of nursing. Yes, she replied, she expected someday to take her master's if she can select a university where she may attend summer school and have the family with her.

There is no doubt in my mind that she will do it.

NATO: The Near Miracle

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in Army-Navy-Air Force Register and Defense Times of July 4.

This is the final article in a series of 14 devoted to NATO, by John Wiant.

By the fact that the article is a summation of the present situation of the United States and her allies in Europe at the present time, it is of interest to all of us.

It is not only interesting, it is encouraging. We often hear NATO criticized and disparaged, but it is well to remember "that a 10-year period has been marked with amazing success. Not one handful of NATO territory nor one of its people has fallen under the thumb of Communist domination."

NATO: THE NEAR MIRACLE

This review of the preceding 13 articles on the North Atlantic Treaty Organization is also a review of the first 10 years of the NATO alliance.

That 10-year period has been marked with amazing success. Not one handful of NATO territory nor one of its people has fallen under the thumb of Communist domination.

First time: For the first time in recorded history, a defensive alliance has been formed by a large number of nations—representing nearly half a billion freedom-loving people of varied political affiliations, religious creeds, and basic ways of life—and resisted the infiltration and aggressive tendencies of a powerful nation bent upon world domination.

The concept of such a broad alliance in peacetime is idealistic—its fulfillment is almost a miracle.

The material accomplishments of NATO are a tremendous demonstration of the backing of words with a realistic financial investment. The 15 nations have contributed nearly $3 billion for the development of military facilities required in various geographic localities, regardless of the nationality of the soil—the only requirement being necessity.

Small complex: From a small complex of only 15 airfields in 1949, NATO common infrastructure funds have developed a network of 150 modern bases supplied through more than 5,000 miles of pipelines.

The common funds have developed a communications system that includes about 15,000 miles of telephone land lines, 9,000 miles of radio relay circuits and 2,000 miles of submarine cables.

Development of a modern communications system based on the "Forward Scatter" theory is proceeding rapidly. This theory utilizes a signal bounce technique and will enable military commanders to establish communications networks within seconds. A modern early warning radar system is on the way to completion out of common funds and will soon form a continuous protection network along the entire Iron Curtain.

Common weapons: In another area, international cooperation has developed common weapons for NATO forces. The lightweight strike reconnaissance fighter now being produced by Fiat in Italy is an example. The plane will be used by several NATO nations and an experimental international squadron slated to include pilots and crewmen from France, Germany, Greece, Italy, and Turkey is being formed and will soon start tactical tests.

A similar program has been started to develop a new maritime patrol aircraft and a design has already been selected.

Broadens base: This sharing of development and production helps broaden the European production base and reduces the degree of allied dependence on any one nation. It also insures a greater degree of standardization and is a big economic boost to the various nations.

Another field of international cooperation is represented by the establishment of the NATO Science Committee which is aimed at strengthening research into pure science on a cooperative basis plus development of defense research programs.

The near miracle 10 years of the NATO Alliance has not been without rough sailing, however. The British-French action at Suez was strongly opposed by the United States. Great Britain and Iceland still are disputing the legal limits of national waters for fishing rights. Greece, Turkey, and Britain have had a long and difficult dispute over the Cyprus question.

Close ties: Yet, each time such a controversy is solved, it reveals strong purpose and close ties among the allies. Above this, however, it clearly demonstrates that even though there may be family disagreements, the will to resist communism is still the most prevalent factor in the minds of free people.

The very existence of NATO is a step toward reducing the misunderstanding which might arise. The North Atlantic Council meets regularly for consultations on international matters and the governments consult on a top level basis regularly.

In the military field, international cooperation is developing wide areas of understanding never before believed possible. At SHAPE near Paris, the officers and men of 14 nations work together day in and day out developing the plans that keep alive NATO's deterrent power.

Live together: Not only do the various nationalities work together but they are developing an intimate understanding of their allies through social relationships and close association. In the suburbs of Paris a housing area has been built to house the families of the international staff and more than 400 families from the various nations live together.

Members of the international staff study languages at SHAPE. Both French and English are recognized as official tongues and all members of the staff are proficient in one and usually in both. Those members of the international family desiring to learn any of the NATO national languages can attend the SHAPE school.

An international staff school—the NATO Defense College—was founded in Paris in 1951 and has graduated 700 officers to staff and command posts in NATO forces as well as to staff positions in national forces and government ministries throughout the NATO area.

Students at the NATO Defense College come from the military establishments of all of the countries—a few civilians also have attended. In addition to basic military subjects, the NATO Defense College instruction includes a 5-month course devoted to the study of the broad concepts of the NATO alliance.

Positive action: In the actual military establishment of the NATO scheme, positive action is being taken to develop international cooperation. The Air Forces of all member nations participate in a continuous exercise aimed at developing operational capability of bases to handle aircraft of types not normally handled at the field. All six Air Forces of the Allied Air Forces Central Europe Command dispatch planes on missions to fields in other countries during which the crews perform normal combat operations and arrive at the foreign fields unannounced. The training benefits of the program have been lauded by members of all of the participating nations.

In a more realistic training mission, NATO forces have taken steps to counter the impressive Soviet submarine threat—the greatest underseas fleet ever assembled by a nation. The two Supreme Allied Commanders, Atlantic and Europe, made a detailed study of the problem and afterward established, in Italy, an antisubmarine warfare center. This center concentrates international efforts on a technical study of the Communist submarine potential and tactics, techniques, and technical means for combating the menace.

There is increasing attention in the NATO family of nations for a nuclear concept insofar as the military force is concerned. The members are generally agreed that the size of the land army buffeting the Iron Curtain can be trimmed but these cuts cannot be made until the day when the forces of all nations are armed with the most modern of weapons. At present, there is every evidence that the manpower standing guard duty in Europe today can be reduced by at least 50 percent.

Near miracle: Regardless of the composition of the shield defending freedom, however, there is no doubt that it will continue to exist. The first 10 years at NATO represent a near miracle—the nations allied under the banner of NATO are determined that this near miracle will become a real miracle, one that guarantees freedom for every man, woman, and child that wants it.

Finally, before it is completely possible to reach a conclusion on the effectiveness of the North Atlantic Treaty Organization, some thought must be given to the composition of the Communist military machine threatening the freedom of mankind.

Soviet Army: The Soviet Army has 2.5 million men in its 175 active duty divisions. In as short a time as a month, it may well be possible that this division total could be swelled to 400.

European satellites of the Russians are capable of fielding another 60 divisions.

The Soviet Air Force has an estimated 20,000 planes with the vast majority being jet powered fighters and light bombers. The heavy bombers are still primarily propeller driven but advances are being noted in the field of long range jet craft similar to the B–52 and the medium range B–47's. The satellites add another 3,000 planes—at least half of which are jets—to the Communist total.

The Soviet fleet has a recorded total of 30 modern fast cruisers plus more than 100 destroyers in the 1,800 to 3,500 ton class. They have at least 500 large submarines plus a countless number of smaller patrol subs.

Missiles: Missile capability is not completely known but there is every reason to believe that the Soviets can equal present Western efforts.

This is the machine threatening the freedom of NATO—it is the might that freedom must meet if it is to survive. And the nations allied under the banner of NATO are determined that they will, regardless of cost, retain the freedoms that represent human dignity.

Happy Anniversary, Federal Savings & Loan Insurance Corp.

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. WALLHAUSER. Mr. Speaker, it is a pleasure for me to present a resolution of the board of directors of the Crestmont Savings & Loan Association of my home community, Maplewood, N.J., which expresses its congratulations on the outstanding record of the Federal Savings & Loan Insurance Corp., which is celebrating its 25th anniversary of good service:

A RESOLUTION OF THE BOARD OF DIRECTORS, CRESTMONT SAVINGS AND LOAN ASSOCIATION, MAPLEWOOD, N.J.

JUNE 23, 1959.

Whereas the Federal Savings & Loan Insurance Corp. is presently celebrating its 25th anniversary; and

Whereas no person in an institution insured by the Federal Savings & Loan Insurance Corp. has suffered any loss during the 25 years of its existence; and

Whereas its regulations have been such that institutions have conducted their affairs in a conservative and a safe manner; that during the past 3 years no losses have been suffered that would require help from the insurance corporation: Now be it

Resolved, That we, the board of directors and officers of Crestmont Savings & Loan Association of Maplewood, N.J., do congratulate the Federal Savings & Loan Insurance Corp., its management and its staff on their splendid record and accomplishment; and be it futher

Resolved, That a copy of this resolution be sent to the Federal Home Loan Bank Board in Washington and a copy to those interested in the activities of the Federal Savings & Loan Insurance Corp.

LOREN F. GARDINER,
President.

ARTHUR R. TAYLOR,
Secretary.

Uniform Postal Requirements Relating to Disclosure of Average Number of Copies of Certain Publications

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. DULSKI. Mr. Speaker, on July 6, 1959, H.R. 6830 passed the House. H.R. 6830 restates and clarifies the requirements of existing law with respect to the content of sworn statements which must be submitted to the Post Office Department by publishers having a second-class permit. The only substantive change in existing law is the extension to magazine publishers of the requirements now applicable to most newspapers, that the sworn statement include the average number of copies of each issue sold or distributed to paid subscribers. This paragraph continues in effect the present authority of the Postmaster General, upon appropriate notice, to deny second-class entry to any publisher who does not comply with these important requirements. It also continues in effect the exemption from the reporting requirements which since 1933 has been extended to religious, fraternal, scientific, and similar publications.

The bill continues in effect existing law which requires that all advertising matter in publications entered as second-class mail be plainly marked "advertisement" and prescribes a penalty up to $500 for failure to observe this requirement.

In summary, therefore, the bill makes only one substantive change in postal policies and practices which have been in effect since 1933 under existing law. This is the extension to magazines of the requirement heretofore applied only to newspapers, to disclose the average number of copies of each issue of such publication sold or distributed to paid subscribers during the preceding 12 months. It should be pointed out that the provisions of this bill, except for this one change, are identical to the provisions relating to publishers' sworn statements and to the marking of advertising matter and the penalty for failure to observe this requirement as contained in the postal codification bill, H.R. 2339, recently passed by the House.

Post Office Department officials, who supported the bill, testified that the requirement for the disclosure of circulation information will aid the Department substantially in the performance of its functions and will impose no undue hardship or burden on the publishers. They also indicated that there would be no increase in cost as a result of this legislation, but that it could have the effect in a minor way of producing additional revenue.

Tribute to Hon. James A. Purcell

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. ALLEN. Mr. Speaker, in the current issue of Trade Practice Annual, special tribute is paid to the Honorable James A. Purcell who will soon retire from his past as hearing examiner with the Federal Trade Commission. Judge Purcell, as the article points out, has presided in hundreds of FTC cases during his tenure of office, and achieved the outstanding record of never having been reversed by the Commission or the courts.

Under leave to extend my remarks in the RECORD, I include the article, entitled "Purcell Leaving FTC and Much Good Work—Pioneered in Costing":

PURCELL LEAVING FTC AND MUCH GOOD WORK—PIONEERED IN COSTING—HEARING EXAMINER RULED IN MANY IMPORTANT CASES—NO REVERSES IN 20 YEARS—SET PATTERN FOR SOUND COSTING ENTIRELY "ON HIS OWN"

Soon to leave the FTC for the more lucrative practice of law, in which he is unusually well versed, is Hon. James A. Purcell, hearing examiner and member of the Commission's staff since 1941, with general practice experience of 20-odd years prior to that time.

NO REVERSALS IN 20 YEARS

Judge Purcell has presided in hundreds of FTC cases during his tenure of office and has never been reversed by the Commission or the courts. His cases include Progress Clothing (153 Fed. (2) 103); Anchor Serum (1955–3–1, 6); Morton Salt (334 U.S. 37, 61); International Cellucotton (1951–11–6); Manhattan Brush (1957–8–3); Scientific Living (1953–11–6); and many others. In the Carter's Little Liver Pills case his unusually thorough analysis and report on scientific evidence was reproduced by the Commission and 1,000 copies sent to medical schools, libraries, and hospitals throughout the United States.

PIONEERED SOUND COSTING

Probably the most important and far-seeing ruling of Judge Purcell was made in the Morton Salt case, D4319, in the matter of cost justification under the section 2(a) proviso of the Clayton R–P Act (which requires price differences as between sales of like goods to competitive buyers to be no more than cost differences of manufacture, sale, or delivery).

With no precedents for guidance, he rejected cost estimates based on cost of invoicing as a major factor measure when he found from the exhibits that the same charges on 34 invoices of $90.20 involved sales in one case of $31,282.26 and only $17,170.74 in another. He also rejected estimates which did not include certain necessary selling factors, and were based on the selection of respondents' Port Huron plant as typical of the distribution costs of other plants.

NO PLACE FOR GUESSWORK

"In conclusion," Judge Purcell said, "the attempted showing of justification should be based upon a factual foundation, rather than upon estimates, hypotheses, or mere guesses as to the apportionment or allocation of costs of distribution, to say nothing of the many arbitrarily included items of distribution, the correctness of applicability and the verity of which, as shown on the various exhibits, are seriously contested by counsel for the Commission."

Some years later and after many protests of the Bulletin and Mr. Warmack, the Purcell objections were acknowledged by all to be valid. (See 1954 Annual 11 and citations.)

PUTS JUSTICE ABOVE TECHNICALITIES

Judge Purcell's fair approach is reflected in a recent ruling permitting the delayed filing of proposed findings. He said in part:

"It would be manifestly unfair, because of a technical failure to meet a deadline to deprive any party of the opportunity to cite and urge upon a hearing officer the law governing the case as he conceives it to be, and it is no less a serious deprivation to the hearing officer that he is denied the opportunity to be appraised of and to consider the respective contentions of competent and learned counsel."

As Captain Purcell, he served in France, and has since taken an active part in veteran and social organizations.

Jesse Taylor: Unusual American

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. GATHINGS. Mr. Speaker, the Blytheville (Ark.) Courier News on July 1, 1959, paid a justly deserved tribute on the passing of Hon. Jesse Taylor, who had served his Nation and community with outstanding distinction.

A résumé of Jesse Taylor's lifetime of service include:

Enlistment at age 18 in World War I—was given a battlefield commission in France.

A founder of Dud Cason Post of the American Legion.

A partner in law firm of Harrison, Smith & Taylor, associating himself with two distinguished attorneys, Judge Zal B. Harrison and Judge Leon Smith. Later, he was associated with the late Judge V. G. Holland, and, more recently, a member of the firm of Taylor & Sudbury, having joined with Judge Graham Sudbury in 1953.

President Blytheville Bar Association.

Chairman of Mississippi County Democratic Central Committee continuously for 25 years.

Chairman of the county board of election commissioners.

Member of Mississippi County Fair Association.

Member of city hospital board.

Commissioner of Walker Municipal Park.

Charter member and a president of Blytheville Lions Club.

Adviser to city in locating of industrial plants.

A founder of the Little League Baseball League.

Special justice, Arkansas Supreme Court.

The editorial follows:

JESSE TAYLOR: UNUSUAL AMERICAN

This city, county, State, and, indeed, Nation, lost one of its fine citizens Tuesday night when death came to Jesse Taylor, Blytheville attorney.

Though active in politics and civic and church affairs for more than a quarter century, Jesse Taylor not only didn't seek publicity, he avoided it. At the same time no newspaperman could have had a more cooperative official with whom to work.

But Jesse Taylor's efforts, as chairman of the county election commission, for example, were purely labors of love—works inspired by his devotion to a system of government which he had quickly volunteered to defend some 40 years ago in a war which everyone hoped would be the final one.

Jesse Taylor's guiding hand touched so many parts of his community—as do other lawyers, he provided free legal service to the Chamber of Commerce when it was necessary to deal with industrial leases and contracts; he pondered problems of education; he worked to see that Blytheville had a full, vigorous athletic program, he dedicated himself to carry out fundamental truth of a democracy; that voting must be unfettered and the ballot secret; he felt that God's goodness to man demanded in return service to his Master; he believed that above all honesty was not only the best, but the only policy.

This is the sort of man we lost. This is the kind of person we must replace, for in the Jesse Taylors—the people of principle—resides the strength of the democracy.

Congressman John W. McCormack: Nation's No. 1 Democrat

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of Jim Patton, president of the National Farmers' Union, concerning Congressman McCORMACK's popularity and great prestige as one of the greatest Democratic leaders of all times.

The statement follows:

WASHINGTON.—There is no question about the fact that Massachusetts is the No. 1 State in the Nation when it comes to men of distinction and accomplishments in politics.

With prestige on the State and national level, value to the Democratic Party, and achievements attained for the good of the Commonwealth of Massachusetts and the Nation used a gage to rate political personalities, Congressman JOHN W. McCORMACK, House majority leader, can be correctly termed "the Nation's No. 1 Democrat."

An example of Congressman McCORMACK's popularity and great prestige was in evidence here today following a conference at the Democratic National Committee relative to agriculture legislation.

Jim Patton, Denver, Colo., president of the National Farmers' Union (membership 750,000), expressed the farmers' opinion of Congressman McCORMACK.

He said "for the past several years Congressman McCORMACK has been extremely helpful to the farmers of the Nation. They consider him as 'one of the greatest Democratic leaders of all times.'

"The people of Massachusetts and the Nation have every right to be justifiably proud of his record of achievements which have considerably aided to make the Democratic Party the party of the majority of people in the Nation."

Patton, who has just returned from a trip through 45 of our 49 States, reported that the Democratic trend is getting deeper and deeper. He is firm of the opinion that the Democratic nominee for President will win by a landslide vote and carry 40 of the 49 States.

The Day We Celebrate

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 7, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent Memorial Day address, entitled "The Day We Celebrate" by Capt. Francis A. Adams, U.S. Army, retired.

The address was delivered at services held at the Civic Center, Stuart, Fla., under the auspices of the Harold Johns Post, the American Legion, on May 31 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEMORIAL DAY, 1959: THE DAY WE CELEBRATE

(Address by Capt. Francis A. Adams, U.S. Army, M.I. retired)

There are only a few red-letter days, in our calendar, Memorial Day is one of them. To gain this high distinction has taken years of devotion, by patriotic men and women, who have never faltered in paying respect to the honored dead who have fought our wars and won the love, respect, and devotion of our Nation.

It was 91 years ago that the first Memorial Day was observed. This was in 1868 when the national commander of the, then young, Grand Army of the Republic issued a general order. This proclamation by Gen. John A. Logan set the pattern that has been kept faithfully ever since. In the passage of 91 years much has happened in the world to change the order of things, for countries and peoples. Nor has the United States of America escaped the sharp impact of an era of change.

When hostilities came to an end in April 1865, a Nation that had been divided through Civil War reaffirmed peace and indissolvable union. That pledge has been kept. The day we celebrate has a strong hold upon the hearts of all America. It is the day when the living give, to our honored dead. We give homage to all who served in the Armed Forces under the Stars and Stripes. Formal services are held throughout the United States of America and its Territories and outposts. Veterans of all wars are participants and their families and friends join in the memorial service. Today we have veterans of the Spanish-American War, 1898–1902, who have faithfully kept the pledge of remembrance on every Memorial Day since 1899. We have veterans of World War I, 1917–18, who have participated unfalteringly in Memorial Day services.

Coming closer to the present, we have veterans of World War II, 1941–45, who have taken pride in associating themselves with those who cherish Memorial Day. What a power there is in the united expression of all servicemen. It gives notice to the world that Americans are one when it comes to protecting our flag and what it symbolizes. One of the most important functions of our national emblem is its use as a symbol in formal occasions.

At half staff it signifies bereavement. Draped upon a coffin it bestows the respect of a nation upon the departed. A small flag on the grave speaks in solemn silence the active thought of the living for some comrade departed. All of this is associated with Memorial Day. Is it any wonder that time does not stale nor custom dim our fulfillment of services on this occasion.

There is something deep, intimate, and affectionate about turning our thoughts to those who have answered the last rollcall. This day is shared by all. Children are told by their parents that members of their family are among those being honored. Adults realize a sense of pride in taking part in a ceremony that is spontaneous and sincere. There is nothing perfunctory in the services held today. We are here of our own free will. What we say and do is the expression of free men and women. That is why Memorial Day continues to be the time when Americans express heartfelt devotions to its defenders. Our Republic is invincible so long as its people keep faith with those who have given their lives to preserve it. Long live the United States of America.

As part of our Memorial Day service it has become our custom to march to the water's edge and cast a floral tribute to those who have perished at sea in defense of our country. During the past half century, men of the Navy, Marines, Air Force, Coast Guards, and Army have found watery graves in the Atlantic and Pacific and Indian Oceans. Their last resting place cannot be located, but a grateful nation can express its devotion to their memory by the poetic gesture of casting a floral wreath upon the tide.

Besides these ceremonies it seems fitting that in this year, 1959, we, in America, should send words of greeting to those unfortunate servicemen who are being held captive in North Korea, Communist China, and in the land behind the Iron Curtain of Communist Russia. Let us send them a message of encouragement. Let us petition Congress on their behalf. Let us appeal to the United Nations to act in their behalf.

Let us, above all else, pray to God for their deliverance.

What's Behind the Farm Problem?

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. HOEVEN. Mr. Speaker, Mr. Alvin F. Bull, managing editor of Wallace's Farmer and Iowa Homestead, one of the leading farm magazines in America, has written a series of articles relating to the farm problem. These articles are factual and objective and afford much food for serious thought. The first of the articles appeared in the June 6, 1959,

issue of Wallace's Farmer and Iowa Homestead and is entitled "What's Behind the Farm Problem?" The article is as follows:

WHAT'S BEHIND THE FARM PROBLEM?

(By Al Bull)

(This is the first of a series of articles. We hope they'll help you better understand the facts behind our farm problem.—EDITOR.)

Agriculture is facing a tough problem. On this, nearly all farmers and farm organizations agree.

The Agricultural Adjustment Center at Iowa State College is examining the farm problem in detail. You'll be hearing more about this work.

The farm problem was neatly packaged into few words by Karl Fox, agricultural economist at Iowa State College:

"In recent years, farm income has not increased nearly as fast as nonfarm income. In fact, farm income has lost about 10 years of growth."

Most folks are still together at this point. but not everyone agrees on how we got into this fix or on what should be done about it.

In simple terms, here's what has been happening:

EXCESS PRODUCTIVE CAPACITY

Farmers are turning out more goods than we can sell at satisfactory prices on the open market.

Though excess capacity has been building up for some time, it took a real jump during World War II. Farmers geared for extra production. Once resources, particularly land and capital, were committed to farming, individual farmers couldn't afford to leave them idle.

Research, from both experiment stations and commercial companies, poured out new technology at an explosive rate. Nitrogen fertilizer, hybrid crop varieties, and stilbestrol are examples. The result was more production from resources already in agriculture.

Generally, the first farmer adopting a new practice made some extra profit. Then others had to follow or lose out. As soon as enough made use of the new technique to bring a noticeable increase in production, prices dropped. All the benefit then passed to the consumer in the form of lower prices, or fewer price increases during general inflation.

This new technology has been increasing farm output at least as fast as the Nation's population grows. It promises to continue this pace for years to come.

So our ability to produce will stay in excess of need. A number of economists have estimated the excess at 5 to 10 percent.

LOW PRICES

An increase in agricultural production drops prices to a point where total income is less than it was from the smaller original output.

This is what economists call inelastic demand. But don't let the fancy term scare you. The idea is simple enough. This is partly what got the big hog crop of 1955 into price trouble.

Inelastic demand can work the other way, too. A cut in production raises prices enough to increase total income in spite of the smaller output.

Coupling this inelastic demand with excess productive capacity accounts for low prices. Consumers get most of the benefit, in lower prices, higher quality diet, or more built-in services with their food.

ADJUSTING TO CHANGE

Going back to inelastic demand, the solution to agriculture's problem looks obvious—just reduce supply.

But to do this, some resources (land, labor, capital) must be left idle—or transferred to other uses. This is what industry does.

Steel companies are operating at less than three-fourths capacity. Auto makers could produce at least a million more cars in 1959. Yet both are having a profitable year.

These industries, controlled by few individuals, can prevent excess capacity from being a serious liability. Management can fit supply and demand together at a price more or less satisfactory to the industry.

Feed grains and livestock are another story. Production and marketing decisions are controlled by millions of small operators, each thinking mostly of his own immediate interest.

Often the wisest move for an individual is opposite to the interest of the industry as a whole. For example, you may be better off expanding your hog production at the same time that total hog output should be cut back.

None of this alters the fact that resources must be pulled out of agriculture to shrink the supply and raise prices.

Let's look briefly at each of the major resources (labor, capital, and land).

Labor: At one time, about 90 percent of the Nation's population was needed on the farm to feed the other 10 percent. Now one man on the farm feeds 23 others.

Thus, a huge amount of one resource, labor, has left agriculture. Two main factors encouraged the move—good job opportunities in town and a price squeeze on the farm. Both factors have been active during the last 15 to 20 years, and people have left agriculture at an astounding rate.

Decreased manpower won't solve the problem alone, however. Even if it would, such a solution is neither socially nor politically acceptable to most of us.

Capital: Total output can be reduced by drawing capital out of agriculture. But this is difficult to do. Few of us are willing to stop using fertilizer or modern equipment.

Switching to bigger and faster equipment costs money—adds to the capital in your business.

It's pretty hard to convince a man not to expand his operation when it has a good chance to pay off. Especially so when most of us have little information about investing our profits outside the farm operation.

Land: Land is probably the easiest resource to remove from agriculture to balance supply and demand at a satisfactory price level.

The soil bank was a step in this direction. But so far, the bite is too small to get the job done alone.

Overproduction, with a surplus that's difficult to eat, give away, or turn to nonfood uses, is not likely to yield to reasonable reductions in a single resource. But a combination approach might provide the answer.

Urban Orphans

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. WALLHAUSER. Mr. Speaker, while there are conflicting viewpoints as to the need for programs to assist areas of various economies in these United States, there should not be any disagreement with the opinion that the cancerous conditions existing in some of our larger cities should be corrected. If they are not, a serious blight on our Nations will remain uncorrected and will lead to serious consequences. The citizens who have had to live under these conditions could well spread the philosophy of complaint and dissatisfaction that is usually associated with the underprivileged.

The editorial in the Newark (N.J.) Sunday News of July 5, 1959, very clearly expresses the concern of many of us.

[Newark (N.J.) Sunday News, July 5, 1959]

URBAN ORPHANS

Cities dominate national life almost everywhere except in the United States. Here there is a theory, centuries old, that everything rural is admirable and everything urban is to be suspected.

Billions in taxpayers' money have been poured into supporting thousands of farmers who can never make their farms pay. They are being kept on the land by Federal handouts because in the national folklore theirs is supposed to be the ideal way of life—and besides they have the votes.

But although most of the Nation's millions are concentrated in urban areas, until recent decades not a Federal dime was available to help solve urban problems. Even now funds for slum clearance are appropriated grudgingly.

Mayors of large cities insist that rail, highway, and other transportation problems, air and water pollution and urban decentralization and blight can no longer be dealt with at the local or even the regional level.

Under pressure from the U.S. Conference of Mayors and the American Municipal Association, Congress is considering bills which would establish a Federal commission to study urban problems. Ultimately they hope there will be a permanent Federal agency.

At recent Washington hearings, at which the views of Mr. Wagner of New York and other mayors were presented, all the emphasis was on the coordination of municipal research under Federal auspices. But implicit in the testimony was the hope that ultimately there will be more substantial direct Federal aid for urban renewal, improvement of local transit systems and other things cities would like to have.

As to where the money is coming from, the mayors and their councilmen, looking hard at the billions that go to the farmers, are thinking how nice it would be if they could divert a few of them to city folks.

Will Keep America Free

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. VAN ZANDT. Mr. Speaker, the following article which appeared in the June 25, 1959, issue of the National Tribune expresses the gratification and pleasure of the Department of Defense in signing of a labor-management pact by the Pan American World Airways. The article titled "Will Keep America Free" follows:

WILL KEEP AMERICA FREE

A highly placed spokesman of the Department of Defense expressed the gratification and pleasure early this week at the announcement of the signing of a pact between Pan American World Airways and four unions that provide services to the airlines.

The agreement, which the Defense spokesman described as a very definite and forward

step in labor management relations in defense interests, provides assurances that cargo and personnel essential to national defense will be transported even though union members may have withdrawn from commercial airline service due to labor disputes.

The latest unions to sign the agreements are: The International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America covering service supply clerks and lead supply clerks, the Brotherhood of Railway and Steamship Clerks AFL–CIO, covering clerical and related employees; the United Plant Guard Workers of America; the Transport Workers Union of America, AFL–CIO, Air Transport Division, covering mechanics, flight service personnel and port stewards.

Previously similar agreements had been made by Pan American with:

The Air Line Pilots Association, the Flight Engineers International Association, the Air Line Dispatchers Association.

The agreements provide for the following:

1. Even though the unions should withdraw from commercial airline service because of labor disputes, they will continue at their respective jobs to insure the airlift of cargo and personnel essential to national defense.

2. A company official will certify in writing that the flight concerned will be exclusively for these purposes.

3. The agreements will not be altered or terminated without at least 2 years' written notice by either the company or the unions.

4. The agreements with the seven unions have been incorporated into their regular collective bargaining agreements.

The significance of the agreements lies in the fact that the Government can be assured that traffic essential to the Department of Defense will continue to move despite labor disputes involving any of the unions directly concerned with Pan American's flight operations.

(This newspaper feels that both Pan American and the labor unions concerned in this agreement deserve commendation for putting their country's defense above their own personal desires and as long as this type of teamwork exists America will always be free.)

Poll Indicates Thinking on Current Issues

EXTENSION OF REMARKS
OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. BRAY. Mr. Speaker, for the past several weeks I have solicited the opinions of my Seventh District constituents on a few of the significant issues of today. The summary of this poll is, I believe, of interest to my colleagues.

SUMMARY OF POLL RESULTS

The No. 1 domestic interest of Americans today is the problem of inflation. This vitally affects not only the persons living on retirement pensions or insurance proceeds, but it affects every family. It penalizes the thrifty and robs the poor. There may be some families who are profiting from inflation, but I have not had anyone express such an opinion to me.

I know that many of my colleagues have found inflation to be the predominant interest of their people. The national Sunday supplement, This Week, asked its readers to write about the goals this Nation should seek. The overwhelming concern was inflation.

Yet, people are not certain what steps should be taken to control inflation. Forty-three percent of the replies I received indicated that price, wage, and credit controls could do an effective job of regulation, although many said they did not want to see them restored. Seventeen percent believe Federal Reserve monetary policies can combat the price spiral, and 12 percent expressed confidence in continued high Federal taxes.

Almost 7 out of 10 agreed that the Federal Government could fight inflation by living within its own budget. Sixty-nine percent said that the budget of the Federal Government should be balanced and deficit financing avoided.

My voters show an overwhelming determination to stay put in Berlin. Ninety-five out of a hundred said the decision to stand firm in Berlin was wise. The marginal comments on this question may be summarized thus: If we give in to the Communists in Berlin, it will be the beginning of a continual retreat. We must show them we will not be intimidated.

The great majority also recognized the high cost of a defense establishment to back up our determination in Berlin and elsewhere in the world. Sixty-four percent expressed approval of the $40.9 billion defense appropriation request, trusting the best judgment of the President and our military and civilian leaders. Twenty-three percent believe these funds could be reduced, mostly by the elimination of waste and duplication. Nine percent would support an increased request, with the suggestion that the extra money be spent primarily for rocket and missile development.

There is a widespread belief that our foreign aid expenditures should be cut. Seventy-two percent of the questionnaires asked for a reduction, with many commenting that it should be eliminated. Twenty-two percent approved of the budget request, and 3 percent believe it should be increased.

SCHOOL AID STILL CONTROVERSIAL

I attempted to draw out in more detail the thinking of the people on the subject of Federal school aid. The program which has been discussed this year has proposed Federal funds for school building construction and for teachers' salaries. Fifty-four percent of the replies I received would refrain from giving any further forms of school support beyond the National Defense Education Act and other established programs such as vocational education and the school lunch program. Some suggested that the programs already in effect be reduced or eliminated.

Thirty-five percent of the respondents would allow direct aid for construction expenses, and 19 percent favored teachers' salaries assistance. The additional comments which I received indicate there is still a sharp division of opinion on this subject.

With the ever-increasing attention to the goal of retirement, I asked my constituents what the ideal age for retirement is. Forty-six percent believe retirement programs should be aimed at age 65; 12 percent suggested age 62; and 39 percent said age 60. There was much agreement that retirement is an individual matter, and the programs should be optional and flexible. Some voters wrote that they are still working and enjoying it, although several years beyond age 65. On the other hand, some commented that mandatory retirement would provide more jobs for younger workers to fill.

POLL PERFORMS VALUABLE FUNCTION

I realize that these questions do not exhaust the many problems which we face as individuals and as a Nation. They are indicative of public sentiment on several important matters, and perhaps will be useful guidelines. I am sure that this sampling has done much to encourage Seventh District voters to seriously think and discuss these matters, and, as many admitted to me, come to the realization that for many of our governmental problems there are no quick, easy solutions.

The many favorable comments I have received on this poll convince me that it has been eminently worthwhile. It is another means to know the will of the people that I represent, in addition to the thousands of letters, telegrams, and telephone calls I receive and the many personal contacts I have, including my customary tour of each of the post offices in the 11 counties of the Seventh District.

Here are the questions and the replies:

1. A rising cost of living, caused by inflation, is a great menace to our continued national progress. Which methods, of those indicated below, do you believe are most effective in stabilizing the purchasing power of the dollar (check one or more):

(a) Price, wage, and credit controls, 43 percent.

(b) Federal Reserve monetary policies, 17 percent.

(c) Balanced budget of the Federal Government, 69 percent.

(d) Continued high Federal taxes, 12 percent.

No opinion, 1 percent.

2. Do you believe the decision of the United States to stand firm in Berlin despite efforts of the Communists to force us out of the city is wise:

(a) Yes, 95 percent.

(b) No, 3 percent.

No opinion, 2 percent.

3. National security is still the largest expenditure in our Federal budget. For the next fiscal year the President has requested $40.9 billion for defense expenditures plus $3.9 billion for foreign aid. In your opinion, defense expenditures should be (a) reduced, 23 percent; (b) as requested, 64 percent; (c) increased, 9 percent; no opinion, 4 percent. Foreign-aid expenditures should be (a) reduced, 72 percent; (b) as requested, 22 percent; (c) increased, 3 percent; no opinion, 3 percent.

4. The National Defense Education Act, approved in 1958, established Federal help for teacher training, science and language educational programs, and student loans and fellowships. Other Federal programs which assist schools include the school lunch program and the Federal impact area program.

Do you believe the Federal Goverment should:

(a) Give direct aid for construction expenses, 35 percent.

(b) Give direct aid for teachers' salaries, 19 percent.

(c) Refrain from giving other forms of school support, 54 percent.

No opinion, 4 percent.

5. The trend of recent years has been to allow persons more leisure time in advanced age and through Government and private plans to assure them adequate income on which to live in retirement. Leaving aside those with special physical disabilities, do you believe retirement programs should be planned for voluntary retirement at age:

(a) Sixty-five, 46 percent.

(b) Sixty-two, 12 percent.

(c) Sixty, 39 percent.

No opinion, 4 percent.

New England Export Club Urges End to Oil Import Quotas

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks, I include a letter recently sent to President Eisenhower by the New England Export Club, Inc., urging the President to terminate the oil import quota system at the earliest possible date.

Mr. Speaker, those of us who have watched the unhealthy effects of the oil import quotas on our national economy and our international standing will certainly endorse the sentiments expressed in this letter:

NEW ENGLAND EXPORT CLUB, INC.,
Boston, Mass., June 29, 1959.

President DWIGHT D. EISENHOWER,
Washington, D.C.

DEAR MR. PRESIDENT: The New England Export Club, by unanimous vote of its board of directors, again emphasizes its strong traditional oppositon to voluntary or mandatory oil import quotas. The New England Export Club is composed of 300 businessmen, the leaders in importing and exporting of this area, together with their associates in banking, insurance, and shipping.

The need for economic leadership from our country is highlighted by the dramatic moves now taking place in Western Europe, and being discussed in the Western Hemisphere. This is the time for the United States to go forward with liberalization, not backward into protectionism. The United States must retain its leadership and prestige in the international trading community.

The argument of national security seems strange on two counts. The restricted oil imports come from friendly neighbors, who are part of our defense alliances. Furthermore, why rush to exhaust our limited known oil reserves?

We in New England, in view of our geographical location, are particularly dependent on imports of residual fuel oils; and are sensitive to any arbitrary interference with the imports which would restrict the supply of low cost imported residual fuel oils, which are essential for the economical operation of our industries.

We hope, Mr. President, that you will find it possible in the early future to terminate the oil import quota system.

Respectfully yours,

GOVERNMENT LIAISON COMMITTEE,
JOSEPH SABA,
LAWRENCE A. ROBINSON,
IRVING JAY FAIN, *Chairman.*

Annual Freedom Celebration, Mount Vernon, N.Y.

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. DOOLEY. Mr. Speaker, St. Paul's Church in Eastchester, Mount Vernon, N.Y., nationally known as the Shrine of Basic Freedom, because of its profound effect on the tenets held dear to the people of the Original Thirteen Colonies, was the scene on July 4 last of a gathering of citizens who cherish deeply our freedom and our liberties.

Three Presidents of the United States previously spoke from the rostrum at St. Paul's. The bell in the tower of the church there is the sister bell to the Liberty Bell in Philadelphia. It has tolled 13 times for many years on each Independence Day in honor of the Thirteen Original States.

The original St. Paul's Church goes back to the latter half of the 17th century and antedates the Revolution by over 100 years. In its graveyard lie the remains of soldiers from all our wars and also a group of 100 Hessians who gave their lives fighting for England against the Colonies in the War for Independence.

It was my privilege, Mr. Speaker, to address the Fourth of July gathering there, and to bring to the people assembled a message of greeting from President Eisenhower. Chairman Dr. James W. Thornton, and town historian, Dr. Alfred M. Franko, as well as all present, were grateful for the President's recognition of the historic significance of the occasion.

Following are the President's remarks and my own address:

THE WHITE HOUSE,
Washington, June 25, 1959.

The Honorable EDWIN B. DOOLEY,
House of Representatives,
Washington, D.C.

DEAR ED: Please give my greetings to the citizens of Mount Vernon gathered at their annual freedom celebration on July 4th.

It is fitting that this event take place at the site of St. Paul's Church, which I understand is called "the Shrine of Basic Freedom." The freedom of religious belief is a fundamental part of our national heritage; in our Bill of Rights it is guaranteed before all others.

In this spirit, I am sure that Independence Day in Mount Vernon will be nobly celebrated.

With warm regard.

Sincerely,

DWIGHT D. EISENHOWER.

REMARKS OF THE HONORABLE EDWIN B. DOOLEY AT THE ANNUAL FREEDOM CELEBRATION, MOUNT VERNON, N.Y., JULY 4, 1959

As your elected representative in the Congress of the United States. I am deeply conscious of the privilege of addressing you here today, on a subject which is richly intertwined with the history of your great city—namely, freedom.

Freedom means many things to many people. But to those of us who have been fortunate enough to enjoy the liberties of this blessed land. I think freedom means to us about what it meant to ill-fated Ann Hutchinson of historic memory, and to Peter Zenger of heroic courage.

Both were willing to face death rather than endure religious or political injustice. Boldly, they stood before the tides of ill-conceived measures which would have swept away their God-given rights.

Ever since the dawn of history, men in positions of authority have often sought to coerce the weak. Only respect for law such as we find crystallized in the Constitution of the United States, and in the Magna Carta, stands between political freedom and despotism.

Ignore those sacred documents and we set back history 1,000 years. Ignore those sacred documents, and we open the doors to a flood of political evils such as no honest man ever envisioned.

When we reflect on the almost incredibly astute foresight of our forefathers, we cannot help but be grateful. They incorporated in the first 10 amendments to the Constitution the very basic tenets on which our freedom rests.

Listen to them:

"ARTICLE I. Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

"ART. II. A well regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

"ART. III. No soldier shall, in time of peace be quartered in any house, without the consent of the owner. * * *

"ART. IV. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated. * * *.

"ART. V. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury. * * *

"ART. VI. In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed. * * *

"ART. VII. In suits at common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved. * * *

"ART. VIII. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

"ART. IX. The enumeration in the Constitution, or certain rights, shall not be construed to deny or disparage others retained by the people.

"ART. X. The power not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

There, my friends, is a bible of freedom. Let us forever preserve it if we are to maintain freedom.

In the Congress some 120 years ago, a great statesman, John Quincy Adams, who knew the real meaning of freedom, enunciated his views on the significance of public trust.

Freedom can be retained only when there is honor in high places.

John Quincy Adams was a versatile man. Few men before or since have held so many positions of high station as he did. Senator; Ambassador to Russia, Prussia, Portugal, and France; motivator of the Treaty of Ghent; President of the United States; and lastly, a U.S. Representative. John Quincy Adams had a profoundly devoted sense of duty to his country.

One day, seated in the House of Representatives where he served faithfully for 18 years, he took time out to pen a prayer, which sums up in my mind the highest precepts of any man in a position of public responsibility. So long as men serve their country as he did, freedom will flourish.

He said:

"Almighty Father, look with mercy down
And grant me virtue to perform my part,
The patriot's fervor and the statesman's art,
In thought, word, deed, preserve me from thy frown.
Direct my path to ways of bright renown,
Guide my frail bark by truth's unerring chart,
Inspire my soul and purify my heart,
And with success my steadfast purpose crown.
My country's weal, be that my polar star.
Justice, the rock of ages, is thy law
And when thy summons comes to cross the bar
Be this my plea, thy gracious smile to draw
That all my ways to justice were inclined
My only aims, the blessings of mankind."

Call the roll of statesmen who fulfilled their destiny, who cherished freedom, who served their country, nobly, and unselfishly, and regardless of party ties you will find they lived up to John Quincy Adams' concept of public responsibility.

A proper evaluation of the moral and political obligations of a public official is a prerequisite to the maintenance of those freedoms we and our forebears cherish.

On this day—commemorated across the vast expanses of our country, teeming as it is with opulence and prosperity—we pause reverently to thank our forebears for the freedoms they assured us in their God-given wisdom, and at the same time we pause to reflect on the course which our country has taken, since those men of stature and patriotism whom we know, passed from this mortal scene.

It has been said, and said sagely, that the pragmatic axioms of the past are not a reliable index to guide future actions. Never was a fact so evident as that is today.

Without in any sense diminishing the stature of the father of our country, whose memory is enshrined in every good citizen's heart, it must be said nevertheless that the admonition he gave us against foreign alliances was made at a time, before days were telescoped into hours—before space was annihilated by supersonic speeds, and before nations were so interdependent on one another.

The course of our country, its material wealth, its idealistic concepts, and its immutable ties to the free way of life, delineate in bold lines its historic destiny. By all the tenets given us by God, through our Judeo-Christian heritage, and by all man-made patterns of life, as evidenced by our common and statutory law, we are irrevocably committed to accept the Biblical phrase, "I am my brother's keeper."

Therein lies all the justification needed for our global generosity—for our constant effort to feed the world's hungry; to give inspiration and moral and physical aid to the distressed multitudes of the Asia-African bloc who are rising in belated revolt against the unmoral imprisonment and abuse they have endured through the centuries. If we believe in freedom as we proclaim so steadfastly, then we believe that the people of Nyasaland, of Ghana, and of other areas of the world have the same God-given right to preserve their destiny, unhampered by the imperialistic whims of other nations and other men.

We believe that Vietnam has a right to repel the invasions of the Communists, that each nation and each people in fact has an innate right, a tacit right if you will, to fashion its own freedom and its own destiny.

But today with the world teetering recklessly on the brink of self-annihilation, with mankind's ingenuity focused on the problem of how to devise the most destructive instrument of mass slaughter attainable, it is necessary, yes, even urgent, that we reexamine our attitude toward our allies and our attitudes toward freedom, with the aim of trying to rescue reason from chaos, and of preserving what we can of our free way of life and the precious heritage which was handed down to us from our forebears.

First, I think that in appraising our position we must express thanks to our Almighty Father for the infinite variety of blessings he has showered upon this land and on our generation.

He gave our forefathers a source of natural wealth virtually unprecedented in human history. Sturdy and courageous people that they were, they could not have survived had it not been for the boundless forests, the rivers teaming with fish, the rich soil, and the proper climate.

Europe and other lands from which our ancestors came had long since exhausted their resources. And from the bounty inherent in the new land our forebears built the great cities, the industries, the educational institutions, the norms and the culture which are ours today.

Now we face the supreme test of whether those things which are ours, this freedom which is ours, can be preserved for ourselves and our children's children.

When we reflect on the fact that a fleet of enemy submarines halted momentarily off our coast has the power to virtually obliterate all of us, and our culture, we realize that we have reached a critical stage from the standpoint of our chronological history—a turning point in our destiny.

We have reached a time when more than ever before we must be willing to make sacrifices for our country that Americans were never called upon to make before.

I am not referring to the imminence of sudden extinction which the present strategy of warfare makes possible, but rather to the need for sacrifice of material things in order that our Government can have the resources to carry on.

The burden of our defense program is oppressive, but so long as the Communists continue to threaten, so long as Khrushchev makes a mockery of international diplomacy, and a toy of protocol, we must of necessity keep our sinews of preparedness sturdy and resilient. All of this costs money and our taxes are our chief source of revenue. We must be willing to pay our fair share if we are to survive.

We must too sacrifice certain illusions, the illusion for example that we can stand alone in this tumultuous and somewhat fearsome world.

We must of necessity forge stronger the links which bind us to friendly peoples of distant lands, not out of humanitarian impulses alone but out of enlightened selfishness so that we may weather any storm that may eventually buffet us.

We must sacrifice funds if need be for the development of our young people's minds, and for the just remuneration of those who teach them, in order that they will be fittingly equipped to meet the problems which they will be called upon to face. Fluency in language, adaptability to science, flexibility of mind and loyalty to country are the virtues our young people must acquire if they are to adjust to the swiftly changing patterns of the world.

As one prominent aspirant for high office put it, he who sells freedom cheaply is a deceiver, or is himself deceived. He who sells it cheap or offers it as the byproduct of this or that economic system is a knave or a fool. For freedom necessitates infinitely more care and devotion than any other political system. It puts consent and personal initiative in place of command and obedience. It supplants the harsh and oppressive disciplines of dictatorial tyrannies with individual devotion and personal initiative.

All of these qualities are compatible with adherence to our principles, and to the heritage which our honored forefathers gave us.

What a superbly indescribable heritage the men who endowed this country with freedom bequeathed to us.

What a realm for happy living they gave us. Here abide in peace the peoples of all lands. Here no man demands of another patriotism or loyalty. They are willingly offered by Christian, Jew, and Moslem, all of whom are grateful for the benefactions of our wonderful country.

And you can find a reflection of this land of freedom in the eyes of a midwestern farmer, surveying his broad acres of wheat stretching across a limitless plain. You can hear freedom in the voice of a Jewish boy singing the sacred words of the Torah, "Hear, O Israel, the Lord is one. Thou shalt love thy God with all thy heart and mind." In the prayer of a Catholic girl saying "Hail, Mary, full of grace." In the voice of a Protestant boy singing, "A mighty fortress is our God, a bulwark never failing."

Yes; freedom, accepted so lightly but loved so deeply, is an integral part of the pattern of our life.

We say little about it, but most of us, like Peter Zenger and Ann Hutchinson, would as soon forsake life as be without it.

Ours is a great land, but we must respect other men and women who love their native lands. Ours is a great and opulent country, but if we are to enhance it, we must be willing to do our fair share in its behalf.

One thing is certain, in this confusing world, we have much to be grateful for, and we must never lose heart. Ours is a land rich in blessings. Ours a tradition bright as a star. All of us must ever be grateful, for out of gratitude for freedom flows patriotism, and loyalty undying.

The American Library Association: Its Purposes, Its Policies

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. BRADEMAS. Mr. Speaker, on June 25, 1959, I was pleased to join other Members of Congress as guests at a luncheon in Washington sponsored by the American Library Association. The ALA, founded in 1876, is an organization of libraries, librarians, library trustees and others interested in the responsibilities of libraries in the educational, social, and cultural needs of society.

The purpose of the ALA is "to aid in making books and ideas vital forces in American life; to make libraries eas-

ily accessible to all people; to improve professional standards of librarianship; and to develop and publish professional books, periodicals, and pamphlets useful in rendering library service."

Dr. Emerson Greenaway, president of the American Library Association and director of the Free Library of Philadelphia, delivered an excellent address at the congressional luncheon which my distinguished colleague from Indiana, the Honorable J. RAY MADDEN, has inserted in the CONGRESSIONAL RECORD of June 26, 1959, on page A5524.

Mr. Speaker, as Dr. Greenaway's remarks make clear, librarians are very much interested in the role of the Federal Government in improving library services for the citizens of our country.

I believe, therefore, that Members of Congress will find useful as they consider legislation in this field the following summary of Federal legislative policy of the American Library Association which was adopted this year by the council of the ALA. The summary follows:

FEDERAL LEGISLATIVE POLICY OF THE AMERICAN LIBRARY ASSOCIATION, ADOPTED JANUARY 29, 1959, BY THE ALA COUNCIL

FOREWORD

The American Library Association—founded in 1876 and incorporated in 1879 under the laws of Massachusetts—is an organization of libraries, librarians, library trustees, and others interested in libraries and in their contributions to the educational, social, and cultural needs of society.

Its development has paralleled that of the popular library movement and of the growth of librarianship as a profession in America. With members in every State, in every Canadian Province, and in many other countries, it is the chief spokesman for the modern library movement in North America. It is affiliated with more than 50 other library associations in this country and abroad and works closely with many other organizations concerned with education, research, recreation, and public service.

Government at all levels is becoming increasingly aware of the educational and social services that libraries provide. To facilitate library cooperation and to assist in interpreting library needs as they relate to the Federal Government and its agencies, the association maintains an office in Washington. Similar work with State and local bodies is carried on by State and local library associations; but at the national level, the American Library Association is the only nongovernmental organization representing all libraries.

OBJECTIVES

The association aims to promote library services throughout the United States by increasing the accessibility of books and libraries to all, by improving the professional standards of librarianship and thereby assisting in making books and ideas vital forces in American life. It endeavors to improve the services of our public, school, college, and university libraries and those of the special libraries serving government, the armed services, commerce and industry, hospitals, and other institutions. It promotes the coordination of all library resources for research, the establishment of library services for special groups, the improvement of the role of libraries in the education of adults, and the raising of professional standards through better professional education, working conditions, salaries, and the enactment of State certification laws. It encourages the creation, production, and distribution of books and other library materials to meet the needs of the people.

These objectives are rooted in the belief that an informed citizenry is essential to our democratic society, that only through a continuing educational process can we attain our maximum competence and satisfaction as individuals and as citizens of our community, State, and Nation, and that the free, ready access to the accumulated knowledge of man is basic to our way of life.

Libraries, as integral institutions in the total educational structure in our democracy and as the primary depositories of man's knowledge and idea, have direct responsibilities in making good books and other materials of communication available in quantity to all Americans of all ages, races, creeds, and circumstance. In performing this essential work, libraries require and deserve adequate public support.

Peace among nations is dependent upon mutual understanding, and understanding, upon information. Important contributions to world peace, therefore, can be made by promoting the development of libraries in other nations, by encouraging the interchange of ideas, informational materials, and persons with all nations, and by advancing research and scholarship which know no national boundaries.

FEDERAL LEGISLATIVE PROGRAM

As one of the means through which it can achieve its objectives, the American Library Association is concerned with Federal legislation which relates directly to these objectives or which establishes a climate favorable to their promotion, principally in the following areas:

I. Direct services to libraries

A. The Library of Congress: The Library of Congress, one of the principal libraries of the world, performs services which are essential to the activities of other libraries and to research in the United States, particularly the catalog card distribution service and other publication programs which may be subscribed to and paid for by individual libraries. The association supports the improvement and extension of these important services.

B. Library Services Branch, U.S. Office of Education: Adequate educational services and facilities, and the equalization of educational opportunities are essential to our national welfare. As a primary agency in promoting the cause of education, the U.S. Office of Education, including its Library Services Branch, should receive annual appropriations adequate to carry out an effective program. The library services branch gives advisory and technical assistance on extending and improving the resources, services, and facilities of school, college, university, research, State, special, and public libraries; prepares valuable statistical compilations and other essential library publications; and administers the Library Services Act program. This important national library service, begun in 1938 at the request of the ALA, has never had adequate funds and staff to reach its full potential. The association is vitally interested in and gives support to a fully developed program by the library services branch.

C. Library Services Act: More than 25 million Americans do not have access to local public library service and some 50 million more receive only inadequate service. The passage of the Library Services Act, in June 1956, was a significant step toward improving this situation. The annual appropriation of $7,500,000 authorized under the act is urgently needed to permit the States to demonstrate effectively the value and importance of good library service to their rural inhabitants.

D. Depository libraries for Federal publications: The depository library system makes certain Federal documents available free to those libraries of the country designated as depository libraries. These depositories, in turn, maintain a network of information centers through which citizens may request and use Federal documents. This is a sound program. Its improvement and extension is essential to an informed citizenry.

E. Library services to the blind: Substantial progress has been made in the development of specialized library service to the blind. The association will support legislative proposals to strengthen and expand these services not only to the blind but to other handicapped groups as well.

F. Public works: As a means by which library facilities may be extended and improved, the association favors the inclusion of libraries in legislation providing for programs of public works.

G. Surplus property: The association urges that libraries, like other educational institutions, be made eligible to receive Federal surplus property, such as books, shelving, desks, chairs, vehicles, and other items of equipment.

II. Indirect services to libraries

A. Postal rates: The association favors the widest possible dissemination of information to achieve the well-informed electorate essential to our Nation's welfare. For this reason, the association believes in low postal rates on all informational, cultural, and educational materials. It recognizes the assistance given by Congress in establishing the educational and cultural materials rate and the special library materials rate and in designating these rates as public service functions of the Post Office Department.

B. Customs regulations: The easy importation of foreign books and other library materials for scholarly and research purposes and the continuance of customs policies which permits library materials to enter duty free under simplified customs regulations should be continued.[1]

C. Internal revenue taxation: The present narrow definition of an educational institution by the Internal Revenue Service as "an educational institution having a faculty and a student body" affects some libraries adversely. It discriminates against the public libraries in terms of charitable contributions because a prospective donor is more likely to make his contributions to a school or college when such a contribution will permit a larger personal deduction. Since this ruling tends to serve as a precedent for other Federal agencies, it deprives the public library of benefits and services to which it is properly entitled; e.g., public works, surplus property.

D. Copyright: The U.S. copyright law should be adapted to changing techniques of communication in the interest of interposing the fewest possible obstacles to the communication of ideas consistent with preserving the fundamental constitutional purpose of encouraging creative endeavor.

E. Federal aid to education: Federal aid to public education is needed to assist the States and their local subdivisions in establishing and maintaining adequate educational services and facilities and in equalizing educational opportunity. This assistance should also include school and library construction.

1. School libraries: The association believes that library service is an essential and integral part of every school program, whether at the elementary, junior, or senior high school level and that the Federal and State governments have a responsibility to

[1] See also reference to "Agreement on the Importation of Educational, Scientific, and Cultural Materials," under sec. IV.B. UNESCO.

stimulate greater effort and support at the State and local levels so that all school children may have adequate school library service.

2. College and university libraries: Libraries are a vital part of higher education. Federal scholarships and loans, special grants, research contracts, aid to college building programs, and tax exemptions for educational institutions benefit the whole country by raising the general level of support for college education. Increased support of college and university libraries must be a part of, or a corollary to, increased support of higher education.

3. Public libraries: The public library is a vital part of our total educational structure and supplements the program of formal education at all levels. The success of the Library Services Act clearly demonstrates the value of Federal stimulation grants to improve library service. The association recommends that Federal assistance be provided to the States to stimulate public library development, not only in areas having less than 10,000 population, but also in all areas where library service and facilities are below standard or do not now exist.

F. Social security: The association supports a strong Federal social security program as an important contribution to, and as a basis for, actuarially sound retirement programs for libraries.

III. Policies and activities of the Federal Government affecting its libraries and library employees

A. Personnel policies:

1. General: In order to fulfill the library's function of serving as an unbiased nonpartisan bureau of information, the association supports a library personnel program based on the following: (1) a sound position classification plan; (2) selection and promotion based solely on merit, with persons chosen for their educational, professional, and personal qualifications; (3) well-organized plans for inservice training and merit rating; (4) conditions of employment, including vacations with pay, paid sick leave, and provisions for group insurance, to promote job satisfaction and high morale; (5) an equitable and adequate pay plan to attract and hold men and women of marked ability; (6) an actuarially sound retirement plan supplemented by, or including, Federal social security; (7) security of intellectual freedom; and (8) tenure with protection against discharge and demotion without adequate cause and a fair hearing.

2. Civil service: The effects of a strong, flexible Federal civil service system extend beyond the Federal system. It establishes a standard for library positions everywhere. Continuing efforts should be exerted toward professionalization of the Federal library service.

3. Recruiting of librarians: Along with a strong, flexible civil service system there should be an aggressive recruiting program for librarians on the part of the Federal Government. The Government should not be content to fill library positions with unqualified employees through default.

B. Federal libraries: Certain libraries in the Federal Government, namely, the Library of Congress, the Library of the Department of Agriculture, and the National Library of Medicine, are recognized as having a national responsibility for collecting, organizing, and servicing research materials in their fields. Adequate funds should be provided to permit these and other Federal libraries to carry out their national responsibilities.

IV. International programs

A. United Nations: The association supports participation by the United States in those programs of the United Nations and of its specialized agencies which, in fulfillment of the objectives of the Charter, relate significantly and constructively to books, reading, and libraries. The association will support legislation implementing U.S. participation in the United Nations and its specialized agencies toward these ends.

B. Unesco: The association supports the principles of Unesco as stated in the Unesco constitution and endorsed by the Government of the United tSates. Through its representation in the U.S. National Commission for Unesco and through the work of its various committees and individual libraries and librarians, it seeks to assist in the implementation of the Unesco program in this country and abroad, particularly those aspects of it involving the development of library services and bibliographic activities throughout the world. It favors adequate support for the Unesco Relations Staff in the Department of State to facilitate this work.

The American Library Association favors the early ratification by the United States of the Agreement on the Importation of Educational, Scientific, and Cultural Materials.

C. Exchange of persons: The international exchange of persons program which has done much to better international understanding should be continued, and foreign visitors under the program should be given the opportunity to observe our libraries and to understand their contribution to American life. The exchange of librarians between this and other countries should be encouraged.

D. Exchange of publications: The interchange of publications between the United States and other countries is important for the friendly interchange of ideas and for international understanding and should be fostered in every way possible.

E. International copyright: The establishment of reciprocal copyright relationships with other countries through appropriate international arrangements such as the Universal Copyright Convention should be encouraged.

F. International postal policy: The optional provision in the Universal Postal Convention permitting reduced rates on educational and cultural materials should be adopted. The several proposals made by UNESCO for the modification of the Universal Postal Convention to encourage wider and easier international distribution of educational and cultural materials should be supported.

G. U.S. information libraries: The American Library Association believes that American libraries abroad are one of the most effective means of providing information about the United States to other peoples and that they should be administered by professionally trained, experienced American librarians. The association, therefore, urges that the U.S. Information Services program receive sufficient support to carry on an effective program.

H. Technical assistance programs: The program of technical assistance to underdeveloped countries should be continued and should include professional library assistance.

V. Intellectual freedom

The association believes that the freedom to read, guaranteed by the Bill of Rights of the United States, is essential to our democracy and must be preserved. The association's position is clearly set forth in its library bill of rights adopted by the ALA Council in 1948:

Library Bill of Rights

The council of the American Library Association reaffirms its belief in the following basic policies which should govern the services of all libraries:

1. As a responsibility of library service, books and other reading matter selected should be chosen for values of interest, information, and enlightenment of all the people of the community. In no case should any book be excluded because of the race or nationality, or the political or religious views of the writer.

2. There should be the fullest practicable provision of material presenting all points of view concerning the problems and issues of our times, international, national, and local; and books or other reading matter of sound factual authority should not be proscribed or removal from library shelves because of partisan or doctrinal disapproval.

3. Censorship of books, urged or practiced by volunteer arbiters of morals or political opinion or by organizations that would establish a coercive concept of Americanism, must be challenged by libraries in maintenance of their responsibility to provide public information and enlightenment through the printed word.

4. Libraries should enlist the cooperation of allied groups in the fields of science, of education, and of book publishing in resisting all abridgment of the free access to ideas and full freedom of expression that are the tradition and heritage of Americans.

5. As an institution of education for democratic living, the library should welcome the use of its meeting rooms for socially useful and cultural activities and discussions of current public questions. Such meeting places should be available on equal terms to all groups in the community regardless of the beliefs and affiliations of their members.

By official action of the council on February 3, 1951, the library bill of rights shall be interpreted to apply to all materials and media of communication used or collected by libraries.

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the June 29, 1959, edition of the Medford Mail Tribune:

GOODBY, TARIFF LEAGUE, HELLO

After nearly three-quarters of a century, one of the best-established of political leopards is undertaking to change its spots. On Wednesday, July 1, the redoubtable American Tariff League becomes the Trade Relations Council of the United States.

The change, no doubt, is partly perfumery. Over the years, the word "tariff" has taken on an archaic, faintly disagreeable air, redolent of celluloid collars. It conjures up the titanic clashes between free trade and protectionism which used to rock Congress to its heels every few years.

But the renaming also reflects shifting realities. The great issues have gone lower case. Advocates of free trade and tariff protection still go at it hammer and tongs, but the battlefield has shifted.

Today, as League President Ralph A. Butland conceded recently, "tariffs as such are a joke" (though, of course, a notably unfunny one both to advocates and contemners). President Eisenhower's Commission on Foreign Economic Policy estimated in 1954 that eliminating all U.S. tariffs in one fell swoop would displace no more than 400,000 American workers and probably fewer than 200,000.

The real fence against foreign competition now is the import quota system—this and the political horsetrading in which the White House must engage to win periodic renewals

of the reciprocal trade program. For example, insiders say President Eisenhower was forced to barter quotas on lead and zinc in exchange for votes to put over the 1958 extension.

These quotas may have serious effects on the economies of friendly countries. And they may be illogical from a strictly economic view. (Harvard Economist Sumner Slichter thinks eliminating all restrictions on imports would be an effective brake on inflation.) But they are nonetheless attractive to companies bucking cheap foreign imports and to workmen whose jobs might otherwise disappear.

So Tariff League or Trade Relations Council, the battle still is joined.

Address by Miss Frances Knight at Opening of Passport Agency in Miami

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. FASCELL. Mr. Speaker, we all know of the outstanding efforts of Miss Frances Knight, Director of the Passport Office of the Department of State. During the time this agency has been under her direction great savings have been made in money and time; and all Americans who have traveled abroad have come to appreciate the efficiency and courtesy exemplifying the U.S. Passport Office and its field agencies.

Miami, Fla., has recently been established as a field agency in view of the ever-increasing amount of travel through that port. I want to present the following speech made by Miss Knight on the occasion of the opening of the Miami office:

This is, indeed, a happy occasion for the Passport Office, as well as for the city of Miami. Needless to say, we are delighted with this generous and sincere reception. We like the idea of being identified with what is certain to become one of the world's largest and busiest and probably the most popular, year-round international tourist and travel center.

Some of you may remember that we had a Passport Agency in Miami during the war years, from February 1942 through April 1946. It was located in the U.S. Post Office Building and was established primarily to to assist American citizens traveling between the United States and the South and Central American countries. After the war there was a quiet spell in the travel business. People were staying close to home, and our records show that less than 200 persons a month were applying for passports from this locality. Obviously, the cost of maintaining the Agency could not be justified, so it was closed.

It has been noted that the more people that come to visit Miami, the more return to live here permanently. And this is true of the Passport Office. Our war years with you could be described as a visit, and now we have come to live here with you, on what I hope will be a permanent basis.

We have been watching the growth of Miami with a great deal of interest and anticipation. In 1955, there were over 3,000 applications for passports from metropolitan Miami and 7,100 from the U.S. district courts in southern Florida. By 1958, these figures rose to 6,700 from metropolitan Miami and 10,000 from southern Florida. We estimate that by 1960 there will be a total of 26,000 passport applications handled by this new Agency which we are opening today.

There is no need for me to spell out the phenomenal growth of Miami. You are all well aware of the facts. I have no crystal ball but it seems quite obvious to me that, with the construction of Miami's exceptionally fine International Airport, the eventual establishment of a new deepwater port, together with your greatest blessing—the possession of the finest climate in the United States—you just can't miss on becoming one of the busiest and most popular crossroads of the world. And I don't mean the cloverleaf variety, a bypass or a transfer station. I mean a crossroads where travelers take a breather and linger awhile.

A tremendous amount of thought, study, and planning goes into the opening of a passport agency. We are loaded with statistics, as we should be, because this is a costly undertaking. Our responsibility is to see to it that we give the traveling citizen prompt and efficient service, and at the same time return to the U.S. Treasury as much revenue as is consistent with rendering that service. In the past several years we have concentrated on learning where travel originates; who is traveling; what age groups are traveling; where are they going and why; how do they travel; how long is the average trip; is another trip being contemplated in the future; how many persons are traveling on a passport and many other related data. All such information is vitally important in planning for the future.

In considering the establishment of an agency in Miami, I have given weight to one very interesting statistic—important and significant to Florida as well as to the travel industry—that is the year by year increase in the oversea travel of retired persons. In 1958, there was a 31 percent increase in this category over 1957. These men and women range from 50 to 76 years of age, and with the trend toward retirement to Florida, or at least prolonged vacation in Florida, it is likely that a Miami Passport Agency would service a large percentage of the applications from this group.

Now, what does the establishment of a passport agency mean to the Miami area?

Up to now passport applications have been received and executed by the very cooperative office of the clerk of the district court. The applications have been forwarded to Washington where they are checked over, cleared across our master index, and then processed. Due to major improvements in the processing of passports, we have maintained over the past 2 years a record of issuing passports within 4½ days of the receipt of the application, provided, of course, that the application was properly made out and in good order. Add to this mailing and delivery time and it generally took 10 days to get the passport to the applicant.

With the inception of the Miami agency, clerks of court throughout the State of Florida will be advised to forward passport applications directly to Miami. As the capacity of the agency increases, it will be possible to send similar instructions to clerks of court in adjoining States. The Miami agency is already linked with the national office in Washington by teletype. As applications are received at the agency, pertinent information will be teletyped to Washington, and at our end we are geared to make immediate verification of this information and to teletype clearance within 48 hours. The agency is thus authorized to issue the passport. As a matter of fact, it will be possible for applicants from the Miami area, to file their applications, take a leisurely stroll around the block, and return to pick up their passports.

The Miami agency is thus designed to provide prompt and efficient passport service to the citizens of Miami as well as to citizens of the State of Florida and citizen visitors from other States. The agency will have a staff of five persons, supervised by an agent-in-charge, Mr. William Nerren, who has had 20 years of service with the Passport Office. Mr. Nerren is knowledgeable in citizenship law, and I can't think of a question regarding passports which he could not answer.

The agency is located at 320 South East First Street, in the new First National Bank Building. We have tried to furnish it in a manner which will compliment the friendly, casual atmosphere of so many of the modern offices in this area. Our color scheme has been selected with care. We hope that you will find it informal and inviting.

In the past week, as we completed the arrangements for the opening of this Agency, a strange thought passed through my mind, engendered, no doubt, by the news accounts of the current conditioning of a group of men for space travel. Perhaps the Miami Passport Agency will process the first application for a passport into outer space.

I want to express sincere thanks and gratitude to our many friends in Miami; the civic, municipal, county, and commercial representatives who by their encouragement and advice and enthusiasm have made this celebration possible.

Your two Senators and all your Members of Congress have kept in close touch with this project. We couldn't have had better cooperation. Everybody pitched in to make this successful. I wish they were all here to take a bow and participate in this happy occasion.

I started out by saying that we liked the idea of being identified with the growth and aspirations of such a forward looking community. Miami will continue to grow in all directions and we are mighty proud of the opportunity to grow with you.

The Flint Idea Is Catching On

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, recently I took occasion to describe to my colleagues in the House the community schools program of Flint, Mich., a bold concept which makes the public school facilities available to the entire community with the double-barreled benefit of enriching the adult population while stimulating their interest in their public school system.

It is my pleasure to report the Flint idea is catching on. Under leave to extend my remarks in the RECORD, I include an editorial from the Flint Journal of July 1, 1959, commenting upon the adaptation of this educational concept at the University of Chicago. The editorial follows:

A GREAT IDEA NOW CAN GROW

Flint's famed concept of developing better citizens and better urban living through community education is due for more widespread imitation in years ahead.

The source of that expansion of the Flint idea is on the campus of the University of Chicago. It is the new industrial relations center, dedicated last week before leaders of education, industry and business.

It was fitting that Charles Stewart Mott should be on hand to witness the dedication ceremonies and to turn over the structure, which was dedicated to him, to the chancellor of the University of Chicago.

It was Mr. Mott who made possible the fulfillment of the community-education dream in Flint and it was "Mr. Flint" who gave the money for the $1,300,000 Industrial Relations Center.

Over the years the community-education program of the Mott Foundation and the Flint Board of Education has grown until few in this community can confess that they have not participated in some degree.

Because the value of the program was recognized by community leaders all over the Nation, it became apparent some years ago that the idea should be shared with other communities. The IRC at the University of Chicago is the result.

Leadership is needed if other communities are to benefit from the kind of human progress so evident in Flint. The function of the IRC is to train and assist leaders who will go out into other colleges and develop the personnel needed to implement the Mott system in cities all over America.

Who can predict the benefits which can come from this project for human and community achievement? We know Flint has gained immeasurably in many ways from community education. There is no reason other communities, given the tools through the facilities of the IRC, cannot also become mighty forces for personal development and education of their citizens.

Flint is proud to be the cradle from which has grown a great program for community good.

Poison in Your Water—No. 139

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Bellingham (Wash.) Herald of April 13, 1959, entitled "Cities Must Pay":

CITIES MUST PAY

As the city of Bellingham adds up the sums that must be spent on trunk sewer installations and sewer disposal plants, citizens should be interested in the plight of Chicago.

Our fair city must face some rather costly projects in order to meet requirements of the State pollution commission and appease the health department. But these two departments have not been complaining without just cause. The installation of septic tanks in many of the residential areas has created a serious problem. And the discharge of raw sewage into Bellingham Bay is an archaic practice.

In Chicago a plea has been made to permit it to take more water from Lake Michigan to flush the sewage into the Chicago River and then down the Mississippi.

This metropolis already has spent some $425 million for treatment plants, but in spite of that great amount, raw or partially treated sewage goes into the river. One can imagine that cities below Chicago are not happy about conditions.

Several years ago the Windy City reversed the flow of the Chicago River as a means of discharging the vast accumulation of sewage. Now the problem involves the entire Nation, as well as Canada. As explained a short time ago by the Portland Oregonian, the Pacific Northwest also is anxiously watching the decision on whether Chicago should get more water from Lake Michigan. "This region and its representatives in Congress are worried because the waters of Lake Michigan are involved. Canada officially has protested, but also has said that diversion is Chicago's business. But this may mean only that Canada would then feel free to divert water from the Columbia River into the Fraser River, to the great detriment of hydroelectric power potential at dams in Oregon and Washington on the Columbia." Thus sewage disposal problems can even involve a continent.

Now we know it is spring. The dandelions are begininng to pop out.

Military Housing Is Big Factor in Service Morale

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. BRAY. Mr. Speaker, as a member of the Committee on Armed Services I have been particularly interested in the various factors which incline capable young men to remain in the service and give us the career-minded specialists we vitally need. We have found that one of the most important areas in which the Government can provide incentive to these men is that of dependents' housing.

The Capehart housing program, started in 1954, has proved eminently successful in meeting this need. The program is described in an article by Senator HOMER E. CAPEHART in the July issue of the VFW magazine:

HOUSING FOR OUR ARMED FORCES

(By Hon. HOMER E. CAPEHART, U.S. Senator, Indiana)

In the World War I era only 20 percent of the men in the service were married. Wives and sweethearts occasionally visited them in camp but were able to be with them only when they were on pass. Now it is estimated that more than half of the men in all four branches of the service are married. In the Air Force alone, about 80 percent of the men are married. It is generally agreed that countless thousands of these men can be persuaded to remain in the service if we can give them the chance to live in typical American homes with their families.

An increasing number of men in the Armed Forces today, particularly those in the highly specialized grades, are finding military life as attractive as anything industry has to offer and are making a career of it—mainly because of the growing availability of adequate housing. It is estimated that this factor has saved Uncle Sam at least a billion dollars a year in the turnover of trained personnel. It takes money to train today's soldier, a good $200,000 for a B–52 pilot. To have him remain in the service after he has received his costly training is that much net saving to Uncle Sam.

Increased pay, of course, has had its inducements, but the availability of adequate housing on or adjacent to the reservation has tended to make military life more attractive. The wives are happier. Where no housing is available near the station, servicemen often have to find living quarters as far as 10 miles away.

Aside from helping the morale of the men, this on-the-site housing will serve well in time of an emergency. It obviates the necessity of their having to fight traffic in an effort to get to their stations, whereas the probability would be thousands of people moving in the opposite direction. Like firemen they can now slide down the greased pole, so to speak, and report for duty immediately.

Congress originally set a ceiling of $13,500 on each house but has since raised it to $16,500. The average cost per unit has been approximately $14,850. It is estimated that comparative homes in lots of 5–50 units sold on today's market for private sale would cost on an average of $23,000.

It was in the summer of 1953 that I came face to face with a problem that, in my opinion, required immediate attention if America was to keep pace with what everyone agreed was to be a long and tedious struggle to maintain our superior strength in the cold war. I was well aware that our forces, to achieve success in our effort for survival, must be the leader in the development of new and fantastic weapons. It was easy to understand that to maintain our superiority in effective manpower, our servicemen must have pay scales somewhat comparable to equally responsible positions in private industry. But, only after a number of visits with my daughter, Pat, and her husband, Lt. Jim Pearson, and talking with their friends, did I realize the tremendous importance of improved housing for our key military personnel if we were to prevent a turnover that some day might make less prolific any hot war efforts that might become necessary.

So, some 15 months later, along with Congressman ALBERT RAINS, of Alabama, I became the sponsor of legislation to ease this problem.

The Capehart housing legislation was designed for the purpose of building family housing units on our principal military bases. They were to house the families of enlisted men as well as officers. Key assignments were to receive priority in the occupancy of these homes. The housing was to be sufficiently attractive to stimulate the morale of our soldiers and, equally important, the happiness of their families.

Capehart housing is built by private industry after competitive bidding and financed by private capital. Mortgages on the properties are insured by the Federal Housing Administration and guaranteed by the Department of Defense. The mortgages carry an interest rate of 4½ percent, a return which has attracted investments by various pension and retirement organizations. Plans are now being worked out to permit participation in these issues by investors who now are excluded because of the size of the mortgages. The Defense Department is reimbursed from the quarters allowances of the occupants.

The Department of Defense, the various military services, and the Federal Housing Administration each share a part of the responsibility in guaranteeing the delivery of good homes to our key military people without any undue delay.

In the spring of 1956 the first families began to move into Capehart homes at Eglin Air Force Base, Fla. Since that time some 41,000 units have been occupied, and an

additional 39,000 units are in various stages of processing and construction. This total of 80,000 units is still a long way from the number of homes actually needed, but we are at least making an approach toward the goal that should be reached.

More than 70 general contractors and approximately 1,000 subcontractors have participated in these developments. No military bases where construction has actually begun have been either disestablished or reduced in activity. Labor relations have been outstanding, and even in the Deep South the races have been integrated in these projects without difficulty.

There is little question that this program has achieved the desired and expected results. In a statement recently released for publication, Assistant Secretary of the Army Dewey Short stated: "Despite all the wonderful advances that have been made in weapon development and in better organization and cooperation throughout our Armed Forces, in my opinion there has been no progress of more long-range value to the overall strength of this country than the long overdue provision of attractive housing for our enlisted men and officers."

It has been estimated that the drop in turnover among the military services as a direct result of better housing has saved the American taxpayers something over $1 billion.

In pinpointing a specific instance where good housing is essential for the morale of the serviceman and his family, Secretary Short called attention to Loring Air Force Base in northern Maine, one of our most vital outposts, located 120 miles from the nearest town of any size. He said, "I am sure that this base and many others of this remote character could not possibly be staffed in the manner necessary for our strategic defense if attractive housing were not available on the base." It is Secretary Short's opinion that Capehart housing is one of the most unsung yet vitally important contributions to our national security.

The value of this program has been further enunciated by the good reception of those officers and men now occupying these homes throughout the country. Gen. Donald Yates, commander of the all-important Cape Canaveral operation in Florida, said that in his opinion the addition of Capehart housing at Patrick Air Force Base was one of the principal reasons why he was able to keep intact the type of personnel he so sorely needed to carry out his responsibilities.

A group of Federal housing officials recently visited various defense areas in an effort to determine (1) what impact title VIII housing was having on the local real estate markets; (2) on the economy of the various nearby communities; and (3) if the results of this better housing was consistent with the purpose for which the houses were designed.

Here are some of the answers they were able to obtain:

Henry Tallmadge, president of the Brevard County, Fla., Builders Association, said "We were quite skeptical when we first heard that 1,000 new homes were to be built at Patrick Air Force Base, thinking it might decrease the value of the land for miles around; however, now that we have seen these homes we have found that—because of their design and layout—nearby land has actually increased in value. We have no doubt that should be base ever be disestablished, these homes would be sold promptly and at a good strong price."

Richard Muldrew, president of the Melbourne, Fla., Chamber of Commerce, commenting on the same project, stated that the very attractive Capehart project at Patrick is "a very wholesome addition to the development of Brevard County and one of which the citizens of this community are extremely proud."

Many homes were visited without notice by the housing officials, including those of Lt. Col. J. H. Mosley at Fort Story, Capt. Harold Smith, Capt. Robert Schwartz, and Sgt. C. H. Preston at Ft. Eustis. The families of these people, without qualifications, felt that these desirable homes had enhanced their standard of living and given them a complete new outlook toward an Army career.

Lt. John McCaens, housing officer at Langley Air Force Base in southern Virginia, commented that since construction began on their Capehart project a few weeks ago, his office has been literally swamped with requests to occupy these homes. The wives especially have implored consideration with the hope that they might occupy these quarters.

During the past few months Commissioner Julian Zimmerman of the Federal Housing Administration has been traveling throughout the country, helping local people celebrate the 25th anniversary of this fine self-sustaining agency. In each of these visits he has emphasized to his audiences the importance of this military housing program. He recently said, "FHA is proud of the part it has played, and is playing, in this vital field of housing on behalf of national defense and honestly believes that this program has been so carefully administered as to have had no appreciable effect on the private market where units have been built."

The Commissioner told me a few days ago that he feels title VIII housing is one of FHA's most important programs. He added that once the people understand its purpose and objective and the dedicated interest with which it has been administered, they will readily appreciate its necessity in accomplishing a very important job for the welfare of the Nation.

I like to feel that any opposition to the continuation of this program is either of a political nature or stems from a deep misunderstanding. To be very frank, I am delighted with the results and will continue to fight for good housing for our military personnel as long as I am in the U.S. Senate. There will always be sniping at minor mistakes in the program, but I am sure that when the overall results are in, the purpose will have been well served and our boys will be getting more and better houses and getting them on time.

Inflation and Deficits

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include editorials from the Flint (Mich.) Journal and the State Journal, Lansing, Mich., of Sunday, July 5, 1959.

That the two daily newspapers, which are in no way related, in my district, should happen to editorialize in such similar vein on the same day only emphasizes the deep concern with which the American public—as both taxpayers and consumers—are viewing the cycle of increased Government spending, budget deficits, and inflation.

I commend these thoughtful editorials to anyone who feels that limited inflation is a healthy sign or that "we only owe this money to ourselves."

The editorials follow:

[From the Flint Journal, July 5, 1959]

DEFICIT HARMFUL TO ALL AMERICANS

The Federal Government wrote an unhappy financial chapter last week when it closed the fiscal year with a deficit of between $12 and $13 billion, largest in peacetime history.

Running a deficit of that size is certain to have serious consequences on the financial stability of the people as well as the Government. A deficit acts as a stimulant to inflation.

The red ink has forced the Treasury into extremes of borrowing to provide the Government with money to pay its bills. It has forced Congress to approve a higher ceiling on the Federal debt.

It will affect the budgets of future years. The loans will have to be paid some day, and borrowing charges will appear quickly, adding to the interest load which already amounts to $8½ billion a year.

The huge 1958–59 deficit was the result of the recession and the efforts of the administration and Congress to end it by speeding programs that required more spending than had been expected.

The recession reduced Federal revenue because lower incomes of individuals and the profits of business cut down the Government's collections from personal and corporate income taxes.

Fortunately for Federal financing, the prospects for the fiscal year which began last Wednesday are much brighter. President Eisenhower submitted to Congress a precariously balanced budget. The threat of veto of rash spending measures is keeping the budget reasonably close to the limits of prospective revenue.

Unless the budget is kept within the bounds of income this year, the red ink will have to come out again, and Congress would have the choice in 1960 of again raising the debt limit, an inflationary step, or raising taxes.

More taxation is a development which Americans do not want. They are being beset from all sides for more and more revenue. State and municipal governments all over the Nation are authorizing a bigger grab on the pocketbooks of the taxpayers, and they don't like it.

Furthermore, officials involved in tax-supported programs are insisting that more spending is needed. That means more taxes. As an example, the Educational Policies Commission, a joint undertaking of the National Education Association and the American Association of School Administrators, claims another $8 billion should be spent annually for public schools to provide a good educational program.

Education is not the only seeker of more funds. Even if the Federal Government practices strict economy during the next decade, budget officials report, its budget will climb to $87 billion for the 1969–70 fiscal year.

The budget for the current fiscal year would be at least as high as the 1969 prediction if the Nation had not experienced a surprising shift in public sentiment after last November's election.

The voters then elected a heavily Democratic Congress. The liberals were in ecstasy. They predicted quick congressional approval of spending programs which would add importantly to the services Government provides for its citizens.

It hasn't worked out that way because President Eisenhower insisted the Nation could not jeopardize its economic future by adding to the budget.

He threatened to veto excessive "gimme" measures and warned that he would carry his fight to the people. To the surprise of the liberal spenders, the public shied away from the liberal promise of its November vote and supported the President's demand for a balanced budget in 1959–60.

Aware that there wasn't enough spending sentiment in Congress to override vetoes, the conservative leaders of the Democratic Party in Congress have kept the spenders leashed. The final budget will be almost what Mr. Eisenhower recommended.

But the seeds of continued red ink and approval of every kind of spending program are there. They will sprout if the public doesn't continue to resist a system that would erode further the present low value of the dollar.

People concerned about a budget which ends deficit financing, permits a gradual reduction of the current tremendous debt, and holds out eventual hope of lower Federal taxation must make their sentiments known to their representatives in Congress. Their votes will determine America's future financial direction.

[From the State Journal, Lansing, Mich., July 5, 1959]

INFLATION: EVERYBODY'S ENEMY

President Eisenhower's statement last week that inflation will be one of the main issues in the 1960 presidential campaign is regrettably true.

It is regrettable because inflation is something that everyone should be against. Unfortunately, not everyone is, although almost everyone recognizes the terrible consequences to a nation when uncontrolled inflation develops.

Proponents of government spending argue that "a little inflation is a good thing," and, unfortunately, the supporters of this viewpoint have been in control of governmental pursestrings more often than not in the past 25 years. The result is that the American dollar today is worth less than half of its 1939 value.

The national debt is at an astronomical alltime high of $286 billion. Much of this, of course, was accumulated as an inevitable consequence of World War II, but it also is true that Federal spending exceeded revenues in all but a very few years from 1933 to the present year.

Federal deficits were accumulated even in the years of greatest national prosperity and despite the highest peacetime tax rates in American history. Federal debt is not the only force that creates inflation, it is true, but it is an important factor and it is a sign of the times.

A Trendex News Poll, published in this issue of the State Journal, reveals that 40 percent of the public blames labor unions most for U.S. inflation, with 25 percent putting the blame on Government and 11 percent on private industry. Labor unions are blamed because of the pressure they exert for higher wages which, of course, forces higher prices.

Actually, the never-ending wage-versus-price issue is much like the argument concerning which came first, the chicken or the egg. All segments of our economic society must share in the blame for inflation and this includes the public that constantly demands more in the way of governmental services at extravagant costs.

Inflation is an erosion of a nation's economic strength. To combat it effectively requires the cooperation of everyone and a complete rejection of the theory that a little inflation is a good thing.

Everyone is hurt by inflation. It lowers the value of insurance, bonds, and all things tied to the dollar. The effect of inflation upon those persons living on fixed incomes, such as pensions, is tragic.

The Cabinet Committee on Price Stability, headed by Vice President NIXON, in a report just released by President Eisenhower pointed out, "resistance to inflation is bound to cause temporary inconvenience to some and to limit the gains of others, but price stability will powerfully promote the welfare of all."

The alternative to voluntary public action to check inflation is Government control of prices and wages, and this is a case where the cure may be worse than the disease. Wage and price controls serve to stymie production which in turn creates scarcities, the ally of inflation.

Inflation constitutes not only an economic danger to the Nation but a serious threat to national defense as well. A nation weakened by economic erosion would be a susceptible target for Russian aggression.

Government, labor, private industry, and the general public have a mutual obligation to work together to halt the threat of inflation in the national interest.

Reforms, in Communist Doubletalk, Means Repression—Another Painful Lesson in Tibet—Where Next?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 6, 1959:

PATTERN OF CONQUEST

There is something all too familiar about the Chinese Communist announcement of a program of "reforms" for Tibet. Stripped of the usual doubletalk it all comes down to the same pattern of conquest. Kill, rob, terrorize, rule with iron, and then call it reform.

The first stage, necessarily, must be suppression of rebellion. Then comes the confiscation of land holdings and redistribution of the land. This is to be coupled with a campaign "in the temples and monasteries to oppose rebellion, privileges and exploitation." Naturally, say the Communists, they will follow a "policy of firm adherence to freedom of religious belief." But not of course, if it involves loyalty to the religious head of the Tibetans, the Dalai Lama, now driven into exile. Such loyalty would be rebellion, and would be intolerable, especially since the Buddha himself has already been branded as a "reactionary element."

Peiping's current overlord in Tibet was joined by the Panchen Lama, the captive puppet, in mouthing this pious buncombe. The fiction of legality is thus preserved in the usual Communist manner.

An interesting sidelight is the fact that the Dalai Lama, in his first official statement to the free press of the world two weeks ago, told of his program of real reform for Tibet and how it had been frustrated by the Chinese Communists at every turn. He outlined in detail how he had proposed to put an end to serfdom and to get the land into the hands of the tiller. But he did not propose to murder the landlords and monks, and so the Communists would not allow it.

But the Communists propose to establish, now, peasants' asosciations that will represent mass rule. Presumably this means that the horrors of the Chinese communes will be extended to Tibet.

There has never been one shred of evidence that the leaders of the Communist hierachy—in Russia or in Red China—have had the slightest interest in human welfare and human happiness for its own sake. Their contempt for human life has been characteristic. But the pattern of Red conquest must be followed and that pattern calls for compounding felony with persistent hypocrisy. One would think that by this time the more intelligent of the Communists might realize that free men cannot watch their deeds and listen to their false words without nausea.

The Realization of the Golden Age of Senior Citizenship

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. CRAMER. Mr. Speaker, I had the privilege of attending the third annual national convention of senior citizens at Lakeland, Fla., on June 13, and addressed them at their principal banquet, attended by some 1,200 persons from all over the Nation, and had the privilege of reflecting on what is becoming an increasing national problem, the problem of providing security, health, and happiness for the estimated 15 million citizens over age 65 in this Nation.

The remarks received such a fine reception that I felt they might be of interest to other Members of Congress, and for that reason I am submitting them for the RECORD:

SPEECH OF CONGRESSMAN WILLIAM C. CRAMER BEFORE THE THIRD ANNUAL NATIONAL CONVENTION OF SENIOR CITIZENS ON JUNE 13, 1959, LAKELAND, FLA.

Ladies and gentlemen, I am indeed honored to have the pleasure of addressing this senior citizens national convention, and wish to thank your leadership for inviting me and for affording me this privilege.

I have a very devoted interest in the problems of senior citizens, particularly in view of the fact that my district, the First District of Florida, has more senior citizens percentagewise than any other congressional district in the United States. I have thus had an opportunity to gain firsthand, through correspondence and personal contact, a working and living knowledge of what some of the problems of senior citizens are and have devoted many hours of my tenure in office in an effort to meet the challenge offered by some of these problems.

I subscribe to the more recent view with regard to growing old, which is that it is a pleasant social achievement not to be feared, but rather to be anticipated. As Bernard Baruch says, "It is the greatest achievement arising out of our scientific culture." Or to express it in a different way, Robert Browning once wrote, "Grow old along with me, the best is yet to be, the last of life, is for which the first was made." Of course, since those words were written in 1860, life expectancy was only about 40 years and in the United States there were fewer than 3 percent of the population over 65. Today, of course, life expectancy is approaching 70 and, thanks to the advances in medical science and the other emoluments of modern-day living, more than 1 of over 12 in

our 176 million population are over 65, and the ranks of the senior citizens are still growing. Further, since the turn of the century, our total population has a little more than doubled, but in the same period senior citizens increased 3½-fold with there being in excess of 15 million people in this country over the age of 65. In addition, the shortening of the hours of work of today's workingman and the increased life expectancy of Americans combined have given us each 45,000 hours or 22 years of newly found free time as compared to the citizen of less than a century ago. Medical science has made such great strides that many of the killers of 10 and 20 years ago no longer ravage the population and even such dreaded diseases as heart and cancer are experiencing breakthroughs that offer hope for recovery in the not too distant future to many additional millions of Americans.

On the side of financial security today, social security, Government and private pensions and annuities are coming into full force for the first time in the history of the country and millions of retirees find themselves on a fixed income, but a guaranteed one which was a condition unheard of some 20 years ago.

Thus, we see some of the blessings of today's senior citizens. But a statement of the aforementioned facts also leads us into a discussion of some of the problems that senior citizens face today. Some of the major problems are that of having an adequate income which involves the problem of the increased cost of living or the curbing of runaway inflation, the present status of existing Government and private pensions as well as social security, the income plight of those who have no such pension programs, the need for continued extensive medical research in the conquest of the remaining diseases, adequate housing for those who cannot acquire it today under present circumstances, the need for making full use of their skills and technological know-how in the field of employment, the happy and full use of spare time, and the continued participation by senior citizens in social and community affairs.

It is my belief that the senior years should be golden years, years which we anticipate in our youth. To make it so it is necessary that many of these problems be effectively faced and that long-range programs to accomplish such a golden age be developed.

To me the expression golden years means a maximum of happiness and security which results from the assurance that senior citizens will have equal opportunities with others to engage in gainful employment. It means senior citizens must have sufficient income to pay for the essentials of food, clothing and shelter, and for the maintenance of a standard of living with dignity. It means an opportunity for participation in community life as self-respecting and self-sustaining citizens. It means providing of adequate housing suited to the needs of senior citizens and available at prices that they can afford to pay. It means that senior citizens should have the opportunity to make preparation, develop skills, interests, and social contacts that will make the gift of added years of life a creative reward and satisfaction. It means the avoidance of unnecessary social costs of premature deterioration and disability. It means relieving senior citizens of some of the burden of sickness and mental breakdown.

I am one who also believes that this golden age is within our reach and there is a greater awareness today than there has been at any time in the last century of the problems of senior citizens. More is being done presently to serve their welfare and attain this goal of the golden years than at any time in our history.

It will be my objective to review some of the things that are being done presently as well as to outline some of the objectives and goals which I believe we must concentrate on achieving if the golden years are to be realized.

It is interesting to note that one of the most significant efforts ever taken got underway just this week with the meeting of the Advisory Committee of the White House Conference on the Aging. This Conference was authorized by legislation which passed the Congress last session and which I actively supported. It is presently being implemented with the appointment of some 130 outstanding citizens from all over the country, from every walk of life to serve on the National Advisory Committee. I was proud when Mr. Edward A. Turville of St. Petersburg was appointed from Florida to serve on this very important committee, which met this week in Washington.

To bring you an up-to-date report on that meeting, it is interesting to note that the theme that has been adopted for the Conference is "Aging with a future every citizen's concern." The Advisory Committee further set 2,800 as the number of delegates to attend the Conference some time in January 1961. These delegates are to be appointed by the States. Each State has been requested and encouraged to turn in reports as soon as possible on the problems of senior citizens within the State and action taken by the States in solving these problems.

I have already discussed with Robert Kean, Director of the Conference and former Congressman from New Jersey for some 20 years, some of the subject matter which I think should be considered by the Conference, some of which I have outlined above.

It is further worthy to note that the administration appointed an Executive Committee on Aging. It has been elevated to Cabinet level and has representatives from all branches of the executive Government serving on the board in order to coordinate and plan programs immediately for senior citizens. As I see it, this Conference on the Aging is to deal with long-range problems. Thus, the administration is tackling the problem on a present as well as long-range basis. I find this most encouraging.

For some time I have felt the problems of senior citizens sufficiently significant that I have introduced, during the last 4 years, legislation establishing a Bureau of Senior Citizens within the Department of Health, Education, and Welfare, which would give the Director sub-Cabinet status and would establish a permanent agency that can do the actual planning and directing as well as administration of the program for senior citizens. I still think that this approach will eventually be accepted, and these other two approaches give substantial support to my contention that the bureau is needed.

This administration has taken action in many fields to indicate a very sincere interest in the senior citizen and has enacted legislation to provide FHA loans on the same favorable terms as for younger persons to senior citizens that can acquire a third signature. Of course, this is not the true solution of the overall problem, but it is a step in the right direction. Further in the field of housing, the FHA has a very active program of multifamily housing for the elderly and has a $20 million special assistance fund to purchase mortgages on houses for the aging from the Federal National Mortgage Association to be insured by FHA. The FHA is now armed with an impressive arsenal of new weapons with which to accept the challenge of providing our senior citizens with the kind of free-enterprise housing for their needs and wants. Just as the Nation rose to the need of housing for the veterans returning from World War II in 1946, so now the Nation must rise to the needs of our senior citizens today. Significant steps in this direction are being taken, but much remains to be done.

I am not going to be satisfied until legislation is passed that will result in senior citizens getting FHA loans on the same basis as the younger people, that is without the penalty imposed on senior citizens of substantial down payment. I was a stanch supporter of the senior citizen program written into the 1956 Housing Act, but it is acknowledged that it must be expanded to be effective and, of course, I have strongly supported the nursing home proposal, as contained in the housing bill before Congress this session and as recommended by the administration. It would permit private enterprise to construct nursing homes with FHA guaranteed loans, whereas previously such authority existed only for charitable or governmental bodies. This amendment to the housing act would require approval of mortgage insurance applications by the State or local body which regulates nursing homes and would require a certification by the Secretary of Health, Education, and Welfare that there are in effect in the locality involved minimum standards of systems for licensing and regulating nursing homes. Of course, Florida in the last few years has taken giant strides in the enactment of nursing home legislation and setting much higher standards directed toward protecting senior citizens against some unscrupulous operators and against the safety hazards inherent in unsupervised facilities, that too often was the experience in Florida.

Having started to bridge the subject of housing and medical attention with a discussion of nursing homes, I will discuss for a minute some of the problems with regards to sickness and medical care.

This session of Congress, on the House side at least, has appropriated $346 million for medical research in the field of chronic diseases which I think indicates substantial interest on the part of Congress in this field. I would like to give you some idea of how this $346 million is to be spent: $36,404,000 has been designated for general research, $83,308,000 has been designated for cancer research, $60,400,000 has been designated for mental health research, $54,744,000 has been designated for heart research, $3,725,000 has been designated for dental research, $37,790,000 has been designated for arthritis research, $30,286,000 has been designated for infectious disease research, $33,613,000 has been designated for blindness research.

Of course, I acknowledge that a great many senior citizens do not have sufficient income to bear the burden of the ever-increasing cost of medical care and drugs. I was most encouraged to read the President's speech before the American Medical Association in Atlantic City, N.J. He asked that the medical profession join in the fight against inflation by setting fees that would be within the range of what the patients could reasonably pay. I believe that he could have gone a step farther and suggested that if we are to avoid socialized medicine, which I believe each and every one of you, as well as myself, are dedicated to avoid, then of course the medical profession should acknowledge its responsibility of coming up with a free enterprise solution to the problem. In the legal profession there are legal aid societies that make available legal assistance to those who are unable to pay. It seems to me that some similar approach on the part of the medical profession would do much toward avoiding Federal action in the field, which of course customarily is justified on the basis of inaction by local government or private enterprise itself. The medical profession, in this, I believe is offered a great challenge and an opportunity of service to the Nation. It is

my hope that the medical profession will come up with an answer.

The Federal Government has to some extent acknowledged the problem of providing adequate medical and doctors' care for senior citizens by permitting tax deductions for all such costs for persons over 65, but no deductions are permitted for the cost of drugs up to 1 percent of the person's income. I have introduced a bill this year which would permit a tax deduction for total amounts of medicine and drug costs to a person age 65 and over, it being difficult for me to understand why such provision has not already been enacted into law. This is just a small step in the right direction.

It is interesting to note that in the State of California, an experiment is underway by one large drug chain whereby drugs are sold to retirees of the State pension programs at a substantial discount, that is at only 15 percent profit to cover overhead for the druggist. This means that a considerable reduction in the cost of drugs results. It is a most interesting experiment which I am sure you, as well as myself, will watch very closely, hoping that it will prove successful as a free enterprise approach to the problem and that it might even spread to Florida.

The administration has this matter of medical care under consideration presently and I am sure it is one of the matters that the conference on aging will give great study to. The administration recommended some 3 years ago a Federal program to encourage the extension and development of voluntary health prepayment plans or policies which would assist private enterprise companies in developing programs for such insurance at a reasonable cost to groups of greater risk people. This was not enacted into law but indicates again the considerable interest being shown and the study being given to this problem.

No more serious threat could be offered to the security and well-being of the person on fixed income, which is the vast majority of persons that are retired, than that of inflation. This pocketbook bandit has robbed all people, but particularly with more aggravated results, those on fixed incomes of some 50 cents of the value of the dollar over the last 20 years.

Again the President made particular note of inflation in his address before the Medical Association and particularly with regard to senior citizens when he said:

"Inflation is not merely a threat, it is a robber and a thief. It takes the bread out of their mouths, the clothes off of their backs, and it limits their access to the medicine, care, and facilities they need."

The President went on to say: "We must work together (meaning the medical profession, industry, Government, and the broad body of our citizenry) to make possible for our senior citizens meaningful activity so that they can become, as they all hope to, independent, useful, and creative members of our society."

He went on to call for judgment, and restraint in the operation of the Government and its economy and stated that if the Government spends foolishly, it can only result in higher taxes and inflation. He suggested that we must live within our means, if we as a people are to prosper.

I believe this brings into focus one of the chief contributors to inflation, and that is unbridled Federal spending. I am sorely disturbed about the many tens of billions of dollars in proposed legislation that has either been passed by the House or the Senate or in the alternative is awaiting a rule for congressional action which, if enacted as proposed by some of the liberal Members of Congress, would have the effect of unbalancing the budget to a completely irresponsible extent.

I believe this to be one of the major issues facing Congress, that is, the question of whether the budget busters are going to prevail or whether fiscal responsibility and a balanced budget is going to prevail. I, of course, have voted against the $5 billion housing bill, the airport construction bill which exceeds the President's recommendations by $100 million, and led the floor fight in the effort to avoid spending an additional one-half billion dollars for additional Federal grants to sewage treatment plants as examples of my contribution toward a balanced budget.

There could be added to the list of budget-busting proposals, the Federal aid to school construction and teachers' salary bill, costing $4 billion, the aid to depressed areas bill that passed the Senate, costing $3 billion, the $6 billion highway reimbursement for toll roads and freeways bill which was voted out of my Public Works Committee last week. If these prevail, it is easy to see how many more billions of dollars will be added to deficit spending. Our national debt already stands at the staggering amount of $286 billion and is costing a billion dollars a year in interest alone.

Of course, this administration has invoked its full executive authority in an attempt to control interest rates and national bank discounts as well as making an open appeal to labor and management to try to prevent a wage increase spiral and in order to avoid inflationary effects.

In addition, inflation is also eroding away the pension and social security programs and other fixed incomes of senior citizens insofar as Federal pensions and annuities are concerned. It means that to keep up with this increased cost of living, increase in all of these has been inevitable and particularly in the last 6 years.

The other side of the coin an the restrictions that have been placed on outside earnings of those on social security and veterans' pensions toegther with certain other Federal programs. I have introduced legislation to permit increases in outside earnings to help meet the increased cost of living. In addition, I have introduced a bill which would exempt Civil Service retirement from income tax as well as a bill to reduce the age at which beneficiaries of social security are no longer subject to restrictions on outside earnings, the present age is 72, and I have proposed reducing this to 70. Again this is merely stopgap legislation to meet the immediate situation in certain given areas acknowledging that the over-all problem of considering pension adjustments and adequate outside earnings is one that must be given lengthy and careful consideration, and I am sure it will be by the President's Executive Committee as well as by the Conference on Aged.

A discussion of some of the aforementioned programs and proposals on the part of the Federal Government, as well as free enterprise, offers some food for thought and certainly indicates that things are really stirring insofar as the development of the program to assure senior citizens happy and secure lives during the golden years is concerned. It is obviously necessary that long, as well as short-range programs be devised and carried out. It is my hope that the Conference on Aging will give consideration to some of the problems and suggestions which have been made, and further, that it will thoroughly consider some of the following as well:

A complete analysis of all Federal taxes and their effect on this group with the objective of making recommendations as to where tax adjustments would be justified in easing the strain of the tax burden on those who are on fixed incomes or who have insufficient income;

A study of the advisability of removing all limitations on outside earnings from all Federal laws such as social security, and veterans' pensions, in order that the elderly might be gainfully employed and make useful to society his unusual skills, as well as providing adequate security for himself;

A serious question as to the proper approach to providing adequate medical and hospital treatment and care, as well as stepped-up research in the field of chronic diseases as well as in the field of geriatrics and gerontology;

A planned program for employment of senior citizens and to overcome the employer resistance to hiring a person over age 50, as well as the possible rehabilitation for senior citizens where needed;

A thorough study of how leisure time can be filled with the joy of living with adequate recreation and the opportunity to develop friendships;

The means of combatting inflation on the one hand, or providing for some type of adjustment to offset the increased costs of living, if and when that develops, in order to relieve the senior citizen of the financial pinch for which he has little or no remedy being on fixed income, which results from the devaluation of the dollar or, in other words, the goal of economic security;

And, the availability of adequate housing which is the basis for the feeling of security so essential to basic happiness.

These are some of the suggestions which I have recommended to the White House to be included on the agenda of the Conference. Although they are certainly not exhaustive, they point the way to a long-range program that I think gets at the heart of some of the problems, as well as giving hope for the realization of the golden age.

Thus, in closing, I can say that real progress is being made and great interest is being generated in this field, more so today than at any time in recent history. Not only is long-range planning getting underway through the White House Conference on Aging, but immediate steps are being taken and the problem is receiving immediate consideration through the President's Committee on Aging within the executive branch of the Government. In conjunction with the national conference, State participation and interest is essential if it is to succeed. Thirty-five States have some form of official senior citizens organization as appointed by the Governor, through which the Conference's activities will be channeled and suggestions will be received. The Governor of the State of Florida has established the interdepartmental commission on aging and also the Florida Development Commission as a retirement section headed by Mr. J. M. Buck. These agencies, I am sure, will work hand in hand with the White House Conference on Aging, to help select delegates, make studies of the problems peculiar to Florida, and to make available information to the Conference, as well as to Florida governmental and civic bodies in the State. I also believe that the local governments, likewise, should have advisory committees to deal with this problem on the local level, thus giving us a three-pronged attack, Federal, State and local, and a broad basis for attacking the problem at all levels.

Thus, when it comes to a program with the goal of securing for senior citizens the golden opportunities of senior years, I propose as a minimum starting point the following:

1. The establishment of a bureau of senior citizens in the Department of Health, Education, and Welfare, with sub-Cabinet status, to concentrate on senior citizens matters.

2. Decreasing, if not eliminating, the limitations on outside earnings for social security, veterans' pensions, and other Federal

annuity and pension programs where such limitations exist.

3. Legislation to permit all medical expenses to be deducted for income tax purposes for senior citizens and the immediate planning on the part of private enterprise to meet the challenge of making available medical services and drugs to senior citizens who are unable to pay for them;

4. An all-out fight against continued inflation which means this session of Congress a determined effort to balance the budget and to turn back the budget busters.

5. An immediate thorough study of all taxing fields including national, State and local, and the effect of such taxes on persons with fixed incomes to determine what adjustments, if any, can be made to relieve this burden wherever it is reasonably possible to do so.

6. The passage, this session, of an improved senior citizens' housing program as well as the nursing home provision to permit private enterprise to acquire FHA guaranteed loans and to require minimum standards for such nursing homes.

7. Immediate studies to determine how the skilled and semiskilled employment capabilities of senior citizens can be made use of and how such citizens can continue their participation in the life of the community.

As I said before, this is a very minimum where immediate activity programming and planning is essential and, of course, the long-range goals rightfully should be established by the White House Conference on Aging and I have high hopes that such will be the case. So, as this organization meets, I think it is fitting to say that it does so in a year of great hope, great expectations, and a year in which the way is being charted for the realization of the truly golden age of senior citizenship.

Philippine-American Friendship

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. JUDD. Mr. Speaker, these are days when our friends should know that we appreciate their friendship. We should not make them feel that we are in any way taking them for granted. That is why I wish to call the attention of the Members of the House to the messages exchanged on July 4 between the President of the United States and the President of the Philippines. As you will recall, Philippine independence was proclaimed on July 4, 1946, and this date was chosen by the Filipino people in grateful acknowledgment of American friendship and good will.

The two brief but meaningful messages exchanged by radiogram reveal the mutuality of ideals and interests of our two peoples. It is an inspiring note that it is gratifying to be able to emphasize in a world torn by frictions and irritants.

President Eisenhower's message to President Garcia follows:

The people of the United States join me in extending to Your Excellency and to the people of the Philippines felicitations and best wishes on the national anniversary of the Republic of the Philippines.

President Garcia's message to President Eisenhower is the following:

In behalf of the Filipino people and of my own, I wish to convey to Your Excellency and to the great American people my most sincere greetings and felicitations on the anniversary of your Independence Day.

It is quite meaningful that our two countries have a common independence day because we share the same ideals of freedom and democracy for which our gallant soldiers have fought and died. It is my fervent hope that the special relationship between our two countries be further strengthened as we rededicate ourselves today to the continuing defense of the dignity and the liberty of man.

Mr. Speaker, I also wish to call attention to a recent press interview that President Garcia gave to the United Press International datelined from Manila on June 27, 1959.

Because of an approaching election in the Philippines this coming November at which eight Senators, all the Governors and mayors will be elected, an electoral campaign is now going full blast. As we in the United States are well aware, during a campaign charges and counter charges are made against the party in power. We in the United States have nothing to do with the Philippine election. That is their own domestic affairs as a sovereign nation and we Americans are the first ones to respect Philippine sovereignty.

However, since a certain sector of the American press has published statements to the effect that President Garcia has been showing signs of anti-Americanism in his official acts, he has vigorously denied the charges in the following interview:

(By William Miller)

MANILA, June 27.—Philippine President Carlos P. Garcia strongly asserted today his friendship for the United States and accused his political enemies of attempting to alienate the Americans from the administration.

"When these critics of mine were collaborating with the Japanese during World War II, I was a guerilla leader in the hills of Bohol with a Japanese price on my head," President Garcia said in an interview with the United Press International.

Visibly irritated by reports that he had become discouraged with the United States, the Philippines President lashed out at his political critics as "idle talkers who are fence-sitting." He suggested that Gen. Douglas MacArthur, World War II Philippines and Pacific commander, set the record straight on who stood by the Americans during the Japanese occupation of the Philippines. He urged that letters between Garcia, then a guerilla leader in the southern Philippines, and MacArthur in Australia be released.

"I was and am a friend of the American people because I believe in the principles of which they stand. I staked my life for the cause once and I believe that I would do it again if necessary," Garcia said emphatically. * * * The President said that members of the opposition had deliberately misguided Americans in a campaign to drive a wedge between the Garcia administration and the United States.

"I will stake my record of friendship for the United States against anyone in the opposition anytime. When others in Manila were doing business with the Japanese I was in the hills of Bohol fighting with the American," he said.

There were actually only two irritants at present in Philippine-American relations, he said, and they were the military bases issue and the old Philippine claims against the U.S. Government.

"I still hope that we can have a meeting of the minds on the bases issue," he said. Progress had been made in talks with U.S. Ambassador Charles E. Bohlen, he said, and the only snag was the jurisdictional issue. The recent U.S. congressional appropriation for an old Filipino gold devaluation claim dating back to the 1930's was gratifying, he said, and there were expectations that an additional $130 millions in war damage claims would be approved.

"The United States could also help us with the updating of our defenses, particularly air defenses and additional strength for our navy," President Garcia said.

He felt that U.S. Pacific Chief Adm. Harry Felt's reported criticism of Filipino air defense thinking, which stirred up a minor Manila storm, had been clarified.

"We have in fact been pressing for the updating of these very things. We appreciate the importance of airpower. I, myself, had personal experience, in World War II, in the resulting demoralization when the Japanese gained air supremacy over the Philippines," he said.

Turning again to "these professional critics of mine," the President said that they had painted a picture of gloom that "was exaggerated by about five times."

"The opposition paints a picture of gloom, while in truth, by and large, this country is progressing much faster than its contemporary nations—much faster than most," he said.

The President admitted that there was graft and corruption in the Philippines today, but he added that his administration was carrying out an active drive against it which had resulted in the suspension of 77 officials during the year 1958. "That 1 year's record, 1958, cannot be equaled by 8 entire years of the opposition," he said.

"Graft and corruption is an old problem in the Philippines. Even Jesus Christ had His problems with corruption amounting to 30 pieces of silver. The United States also has the problem, but, fortunately, unlike here in the Philippines, the President of the United States is not blamed for every municipal or State corruption," he added.

President Garcia said that the Filipino First movement had been misunderstood. "The Filipino First is an effort to increase the participation of Filipinos in the economy of the country," he said. "At present much of the nation's economy is in the hands of aliens. Now that we are independent, we wish to frame economic policies advantageous for our own people—the same as any other country would do," he said.

President Garcia denied that Filipino First was antialien particularly in its application to Americans. He pointed out that Americans would enjoy preference up until 1974 under the parity agreement, "and even after that time Americans will have preference, although, of course, it would require a new agreement at that time," he said. Garcia emphasized that there was a considerable degree of political stability in the Philippines today and that his Nacionalista Party enjoyed the biggest majority in Philippine history—83 out of 102 representatives and 20 out of 24 senators.

Mr. Speaker, we should approach questions affecting our country abroad with balance. Certainly it cannot be considered anti-American for another nation to defend its enlightened self-interest just as it is our duty as Americans to defend and uphold our own interests.

In a recent speech in New York, Gen. Carlos P. Romulo, Philippine Ambassa-

dor to the United States, whose friendship for our country no one can question, said:

Why should it be called anti-American for our people to insist that our rights as a sovereign nation be respected? The British do not consider it anti-British for the Canadians to demand that they be treated as sovereign equals. My people are growing into maturity, they are seeking new values, in quest of new goals, reassessing our standards and engaged in searching national introspection. We cannot escape the evolution of mankind. America no doubt is our best friend and we are grateful, but it is not because we love our old friend less when we have to prepare for an inevitable future because knowing America as we do we are sure she would not begrudge us our loving our people more.

Mr. Speaker, we cannot quarrel with that statement. That is how we feel toward our own country. If we are to maintain our position in the world it must be based on the respect that other nations have for our moral leadership to the extent that our actions command such respect. Moral leadership includes a sympathetic understanding of other peoples' feelings, attitudes, ideals, and traditions. Again, quoting from our good and true friend General Romulo:

I do not fear for America nor for her continued preeminence as a great power. My concern, our common concern, is rather that her greatness will rest not merely upon her demonstrated superiority in economic power and naked might but upon her steadfast adherence to freedom and justice and upon the faith which the world's peoples have in the essential goodness of her heart and in the soundness of her principles.

Winning Essay in the Civitan Club's International Essay Contest

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the winning essay in the Civitan Club's international essay contest.

The sponsorship of such a contest by this outstanding civic club is entitled to the highest commendation.

It is an annual affair, and high schools throughout the United States and Canada participate in it. The subject of the essay is "Citizenship," and any high school senior is eligible. The winner is awarded a $1,200 scholarship.

This great international Civic Club is making a substantial contribution to the youth of the land, and I very heartily congratulate this fine civic organization.

I am especially proud of the 1958–59 winner, and honored, too, in being privileged to call to the attention of the Nation this outstanding achievement of a young man from Nashville, Tenn., David Ray Hunter. He is the winner of this award.

David Ray Hunter is a graduate of a fine high school in my home city, the East Nashville High School. I am sure that all Nashville is proud of this young man. His essay is entitled "Citizenship—A Process of Gradual Achievement." I congratulate young Hunter on his success and wish for him future successes in his chosen field.

Our city board of education, the principal and teaching staff of East High, the Civitan Club of Nashville, and all our people are proud of this young man, and I recommend the reading of his essay to the Members of the Congress.

It follows:

CITIZENSHIP—A PROCESS OF GRADUAL ACHIEVEMENT

(By David Ray Hunter, East Nashville High School, 110 Gallatin Road, Nashville, Tenn.)

"'Tis education forms the common mind:
Just as the twig is bent the tree's inclined."
—*Pope.*

One of the greatest lessons I have ever learned was taught me by a wise, but uneducated, old countryman who by diligent, devoted labor had transformed a rundown, barren tract into a beautiful productive farm. This transformation had evoked recurrent comments in neighboring homes and as crossroads stores. One day as I watched him lovingly prepare his soil for spring planting, I said with a childish burst of confidence, "Mr. Newell, grandpa says yours is a fine farm." His tanned and furrowed face broke into a happy smile as he said quite simply, "It ought to be fine; I live here. But, son, I have had to keep everlastingly at it—everlasting at it."

Good citizenship, like all other worthwhile things like wisdom, human charity, and Christianity, results only if we "keep everlastingly at it." It is a process of gradual achievement. Citizenship is like a plant: first there is the planting season, followed by the growing season, which in turn, is succeeded by the period of maturity and reproduction, and climaxed by the harvest.

The planting season is the most important period. Seeds of citizenship become rooted when children's minds are in their embryonic stage before they start attending school. During this period they develop many important character traits necessary for good citizenship, such as honesty, truthfulness, and industry. Children have echoic minds and tend to imitate the lessons and the actions of their parents. They should early be taught both self-reliance and family cooperation. Parents should teach them not to be selfish, to love other people, never deliberately to hurt anyone in mind or body, and many other small but essential lessons which form the roots of the plant, serving as the foundation for citizenship. Later they attend nursery school or kindergarten where they learn to work and play with others. This lesson is very important, because citizenship is based upon teamwork, and a team can function properly only if the members of a team work together toward one common cause, as the cells in a plant work independently yet as a unit to provide nourishment for the plant. Next children enter the first grade and begin intellectual development. At this crucial period, they come under the influence of persons not related to them. The important lessons learned in our educational institutions and churches must be applied with the greatest care as a young plant must be handled gently and intelligently.

The growing season begins with early adolescence and extends into young manhood. Ideals of citizenship previously planted in their minds now sprout beyond the protective soil of home environment and flourish or die as the elemental forces of outside influences beat upon them. Life-long habits are formed. These habits result largely from outside influences just as the growth of a plant is affected by the elements. Many organizations such as the Boy Scouts, Junior Civitans, Hi-Y's, Key Clubs, YMCA, and youth groups in various churches, teach responsibility, concerted effort, desirable character traits, high moral standards, and good citizenship by instilling in them a desire to be better individuals and a desire to improve their country. High schools of America are perhaps the greatest institutions for developing the growth of citizenship. Most high schools have student governments which make possible the exercise of citizenship on a small scale. Here students have a chance to be junior citizens and to practice good citizenship. Elections of student officers provide the chance to vote for the person best qualified for office regardless of personal feelings. Actual courses in high school develop responsibility and the willingness to take part in class discussions and carry their loads by making good grades. Teachers offer inspiration and guidance. Students learn that the security of the Nation depends upon their mental ability and their citizenship. Their future determines the future of their country. Their citizenship, good or bad, determines their country's citizenship.

Our plant has now reached maturity; it has been subjected to the good and bad influences of nature and now it begins to bear its fruits. At this period of development, opinions are stabilized; manners and customs are established. If the environment and development have been good, people will participate in various civic activities without being prompted. They will enjoy knowing that they are taking an active part in their government. Those who have not taken advantage of the lessons taught through good citizenship training become parasitic weeds of society. Those who have taken advantage of conscientious training and who have practiced good citizenship consider citizenship a privilege, for they realize that Americans have more individual rights than the people of any other country. To protect these great gifts, all of us must be good citizens by practicing good citizenship, lest the "apple become rotten at the heart." We must protect ourselves and the future of America against corrupt governments, our own and that of others.

The plant has matured at last. It has been planted, cultivated, fertilized, and kept free from weeds. The time has now come to harvest the fruits of the labor. The rewards of the plant are many: we have faithful voters, people who will take an active interest in civic affairs, better individuals, people who will help others as they help themselves and as a result of their influences and labors we will have a better government. Unlike their barren bulimic brothers who take much but give nothing in return, such citizens bring forth bountiful harvests—some 5, some 10, and some 20 fold.

If America can continue to produce such vigorous, alerted, dedicated citizens in sufficient numbers, this Nation, like Mr. Newell's farm, "ought to be fine" because they live here. In the wise, but prosaic, words of this old countryman, however, America in nurturing successive generations of citizens must also 'keep everlastingly at it," for citizenship, no less than effective farming, is a never-ending process of gradual achievement.

I have used no reference material of any kind in writing this paper except my subtitle which is a short quotation from Alexander Pope's "An Essay on Man." This quotation is properly enclosed in quotation marks.

Facts and Figures on the Farm Program

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, unfortunately a lot of folks have the mistaken impression that the $5.4 billion appropriated last year for the agricultural budget went to the farmer. Actually, two-thirds of the money was used for programs which benefited all of the citizens of this country—as well as people abroad. Mrs. Eleanor Roosevelt included Minnesota Congressman FRED MARSHALL's breakdown of the Department of Agriculture budget in her column, "My Day." Under leave to extend my remarks, I would like to have this column printed in the RECORD:

FARMER GETS SMALL SHARE OF PROPS FUND

(By Eleanor Roosevelt)

HYDE PARK.—There has always been a great discrepancy between the price received by the farmer for his product and the price paid by the consumer. As far back as I can remember this has been the case, but, instead of improving, the situation seems to grow worse.

I have a letter from the wife of a dairy farmer in Minnesota enclosing some rather interesting facts which Congressman FRED MARSHALL of Minnesota lately brought to the public's attention. Here, in part, is what Representative MARSHALL said:

"Five and four-tenths billion dollars were appropriated for stabilization of farm prices and income. Most people assume that farmers get that money * * * about two-thirds of it does not go to the farmer.

"Twenty-one million dollars goes for meat inspection, a general public health measure. One billion dollars is for commodities sent to other countries, a State Department and Army program. Another Army program of supplemental defense stockpiling uses $129 million. The State Department foreign relations program gets $65 million for the international wheat agreement. Thirty-six million dollars goes into financing military housing in Europe.

"Even in the $3 billion charged to price supports, less than one-third ($989 million) is properly charged to farmers. More than a third of the total is of primary benefit to business, such as $633 million for storage, handling, and transportation, $203 million for export charges, $102 million in interest charges, including $48.4 million for Federal Reserve bank charges.

"Many people would be surprised that farmers get so small a part of the money going into the farm stabilization program. And so far as dairy farmers are concerned, less than 1 percent of the Government's investment in agricultural price supports last year was chargeable to dairy products."

MIDDLEMAN PROFITS

Now to go back to my farm wife's letter. She says: "We receive 6 cents a quart for grade A milk; we pay to have it hauled to the creamery, also pay for the city milk inspector to come out and inspect our barns and milkhouses.

"A certain percent is taken out for advertising. It takes a big investment to get started in farming. Machinery is so high and with so little profit a lot of farmers on family-sized farms have to look for work elsewhere.

"The milk is handled many times before the consumer buys it in the store, and each one has to have wages or a profit. So, by the time the consumer buys it, it is hard to know who is worse off—the farmer who gets little or nothing for his product or the consumer who has to pay such high prices."

This is an old, old story. It could be repeated about many food products, but it is particularly hard perhaps on the dairy farmer just now. So, in the hope that those who can do something about this will someday make a real study of how to eliminate some of the middleman's handling, I urge everyone to give some thought to this situation.

Mr. Butler's Blowoff

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following editorial in the Washington Evening Star today expresses well the thinking of the American people concerning our Democratic leadership in the Congress. The overwhelming majority of the people and the Congress have confidence in our congressional leaders. They resent the untimely comments and schemes of Mr. Butler.

MR. BUTLER'S BLOWOFF

It is surprising that Democratic Chairman Paul Butler should openly criticize the Democratic leadership in Congress. For this is a poor way to go about satisfying Mr. Butler's consuming ambition—to garner votes, votes, and still more votes.

What this blowoff really exposes is a basic conflict in political philosophy between Mr. Butler and the Lyndon Johnson-Sam Rayburn congressional leadership.

It is Mr. Butler's job to win elections, and he is not too squeamish about how he does it. Thus, criticizing his party's leaders in Congress for toning down legislation to avoid a veto, Mr. Butler urged passage of bills opposed by the President even though the measures might be vetoed. In such event, he declared, "we will take the issue to the American people." In other words, as a matter of political strategy, he would prefer to have issues, or what he thinks would be issues, than to place his political bets on the best legislative program which can be pushed through Congress with the President's approval.

Messrs. JOHNSON and RAYBURN do not agree. They also are interested in winning elections. But they think it is smarter politics to skip the manufactured issues and, instead, to present the voters with the best possible record of legislative accomplishment.

We think they are right, and that the Democratic sweep in last year's congressional elections proves them right. Mr. Butler, of course, thinks differently. He says the Democrats won in 1958 not so much because of the Democratic record in Congress, but rather as the beneficiaries of a negative vote against an administration which lacked positive and aggressive leadership.

He is entitled to his opinion and there is little likelihood that anyone will change Mr. Butler's mind. He is inclined to be set in his ways. The same thing goes, however, for LYNDON JOHNSON and SAM RAYBURN. It will be the surprise of the century if they are converted to the Butler brand of thinking—especially with the latest Trendex poll showing 71.3 percent of the voters favoring a freeze on the debt ceiling with spending reduced, if necessary, to stay within the ceiling.

Meanwhile, the Republicans must be sitting back and enjoying themselves. For a real knockdown Democratic family fight is just what the doctor would order for an ailing GOP.

A Report on the First Inter-American Parliamentary Conference in Lima, Peru

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. BRADEMAS. Mr. Speaker, a few weeks ago I had the privilege of participating with two other Members of the House of Representatives in the First Inter-American Parliamentary Conference, which was held from May 10–17 in Lima, Peru.

The Honorable W. R. POAGE, of Texas, and the Honorable JOSEPH M. MONTOYA, of New Mexico, and I served as delegates from Congress at a meeting of some 85 members of national legislatures from 16 nations throughout the Western Hemisphere.

The Inter-American Parliamentary Conference in Lima was the first to be held by Western Hemisphere member-nations of the Inter-Parliamentary Union, an association of legislators from 55 nations throughout the world.

The parent Inter-Parliamentary Union was organized in 1889 by legislative groups from nine nations. Its objectives are to foster personal contacts between members of national legislatures and to encourage common action toward strengthening democratic government all over the world.

Mr. Speaker, I should like to take this opportunity to report on some of the highlights of the conference in South America as I saw them.

LATIN AMERICANS WANT ECONOMIC COOPERATION

The Conference unanimously passed a resolution offered by the Argentine delegation aimed at the No. 1 goal of the Latin Americans: a resolution to encourage the economic integration of South and Central America and to establish a Latin American common market.

The high priority given by the Latin American delegates to economic problems is illustrated by what a Chilean senator told me: "we in Latin America should be our own best customers. But we need a common market without trade barriers just as you in the United States have among the States. We also need a common economic plan for all of Latin America, not for just one country."

U.S. FARM PROBLEM DISCUSSED

A discussion in one of the several study committees to which the delegates were

appointed dramatized the obstacles to cooperation between the United States and Latin America. The debate also illustrated the opportunities provided by the Inter-American Conference for useful exchange of views between elected officials.

An Argentine senator, urging abolition of trade barriers in the Western Hemisphere, attacked U.S. farm subsidies which, he said, forced our surpluses on the world market in unfair competition with other food-producing nations.

In response to this statement, Representative POAGE, the distinguished chairman of our delegation and vice chairman of the House Agriculture Committee, declared that the U.S. delegation strongly supported the removal of barriers to trade and the development of economic unity in the Western Hemisphere but added that these goals could not be achieved in one step.

I do not think you in Latin America completely appreciate—

Said Mr. POAGE—

that if all controls on U.S. farm production were removed the result would be a tremendous expansion of output in the United States and a resulting drop in our farm prices which would be disastrous for you.

He added:

The farm problem is a very hard one for us to solve, and, before you condemn us, we would be grateful if you would tell us how to solve it.

REPRESENTATIVE MONTOYA TALKS OF U.S. INVESTMENT IN SOUTH AMERICA

Plenary sessions of the conference were held in the Peruvian House of Representatives. On the first day Representative MONTOYA, speaking in Spanish, touched on one of the most sensitive issues between the United States and Latin America.

The Latins feel that American economic aid has gone to Europe and Asia while they have been neglected.

Mr. MONTOYA, in a very frank speech, carefully listed the substantial amounts of U.S. economic assistance, in both aid and trade, to Latin America in recent years. Total U.S. Government aid and direct U.S. private investment in Latin America has now reached the level of nearly $2 billion annually. U.S. private investments amount to over $10 billion, more than in any other region in the world.

The fact that Mr. MONTOYA is of Spanish descent and that he speaks the Spanish language fluently meant that his remarks were given very close attention by the Latin American legislators at the conference.

Mr. Speaker, I should like at this point in the RECORD to include an English translation of the text of Representative MONTOYA'S speech on the opening day of the conference:

REMARKS OF REPRESENTATIVE JOSEPH M. MONTOYA AT FIRST INTER-AMERICAN PARLIAMENTARY CONFERENCE, LIMA, PERU

My colleagues and I are particularly pleased to be in Lima, the beautiful and historic City of the Kings, attending the First Inter-American Parliamentary Conference.

The United States has been interested in conferences of this sort since the first days of our independence. It is therefore extremely gratifying to see the increasing interest on the part of other countries in this hemisphere in such a joint meeting of the representatives of the legislative branches of our neighboring countries.

I should like to assure you of the deep desire of the United States to cooperate with our Latin American neighbors in the political and economic fields.

We have, for example, contributed greatly to the development of Latin America and we shall continue to do so. The public and private North American dollars invested in the development of Latin America have reached the incredible amount of $2 billion annually. The immensity of this sum can be appreciated if one realizes that the total requests for economic assistance presented to the United States from throughout the world for the year 1960 amount to $1.6 billion. Nor do I include in this figure the hundreds of millions that we have contributed to the World Bank and the newly established Inter-American Bank, the latter of which will grant all its loans to Latin America.

These figures also do not include private capital from the United States invested in Latin America to stimulate its economic growth and development, a sum which exceeds $10 billion. If we add to this figure the $7.5 billion in annual trade between the United States, I think you will understand why we are proud of the great contribution we are making to the economic development of Latin America.

I can assure you, nonetheless, that the United States will be seeking new methods of assistance to aid in hastening the economic development of Latin America. Our resources for cooperation in this direction are not, however, unlimited. There are vast areas in the United States which also need Government funds for their own development. The representatives of these people, moreover, cannot forget that whatever aid we give comes from the taxes paid by these same people.

I do not think I need to remind you of the great opposition to taxes and the desire of people to see this weight lifted from their shoulders. The average taxpayer of the United States pays over 20 percent of his income to the Federal Government. So while we are on the one hand eager to cooperate, we are on the other limited by the tax burden on the American citizen.

I should be less than frank with you if I did not say that the prospects for obtaing additional financial assistance from the American taxpayers, who are clamoring to be relieved of the heavy taxes they have to pay, are very limited. In addition, the private investment which amounted to a figure over $1 billion in the past year for economic development in Latin America had to compete in the money market and I must impress upon you that the underdeveloped areas within the United States which want economic development are strong competitors in this struggle for economic assistance. In the United States there are several communities that offer to private investors stable political and labor conditions, freedom from Communist agitation, reasonable governmental regulations justly applied, tax advantages and a satisfactory return on the investment. If a Latin American country is interested in obtaining the substantial sums available from this source for economic development, it must compete with the communities in the United States and with other countries that are also anxious to obtain such capital and are willing to offer all kinds of advantages to the American investors.

Conferences such as the one in which we are participating are providing us, as members of the legislative branches of our governments, the opportunity to discuss such problems in an open and frank way, and so contribute to a mutual understanding of these problems as well as to the fulfillment of our common goals and needs.

Let us hope that this first Inter-American Parliamentary Conference will help in the encouragement of personal relationships among the members of our respective legislative branches and will contribute as well to the development and progress of our parliamentary institutions and keep us united in a common action in our objective of strengthening and developing our democratic institutions in the interest of peace and international cooperation.

PRAISES REPORT OF HOUSE SUBCOMMITTEE ON INTER-AMERICAN AFFAIRS

Mr. Speaker, I should like also to take this opportunity to congratulate the members of the Subcommittee on Inter-American Affairs of the Committee on Foreign Affairs which, under the chairmanship of the distinguished gentleman from Alabama, Representative ARMISTEAD I. SELDEN, JR., prepared an excellent report on United States relations with Latin America which appeared on May 11, 1959, during the conference in Lima.

Because I believe this subcommittee report to be such an excellent summary of some of the major problems confronting our country in its relations with Latin America, I have sent a copy to each of the Latin American delegates attending the Inter-American Parliamentary Conference.

SUMMARY: A VALUABLE CONFERENCE

Mr. Speaker, I should like to conclude this brief report by saying that I believe that the Inter-American Parliamentary Conference was an extremely valuable opportunity for Members of our Congress to emphasize to Latin American legislators the great importance we in the United States attach to our ties with their countries.

Politically, economically, and strategically, good relations between the United States and the other American republics are indispensable to the overall strength of the Western Hemisphere.

Mr. Speaker, as one of the delegates to this first such conference, my own conclusion is that the discussions among the elected representatives of Latin America and the United States were of genuine help in contributing to Western Hemisphere strength and understanding.

One Hundred and Eighty-first Anniversary of the Battle of Wyoming, Pa., Observed on July 4

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Wednesday, July 1, 1959:

MONUMENT EXERCISES

The 181st anniversary of the Battle of Wyoming, which falls on Friday, July 3, will

be observed at the Wyoming Monument grounds on Saturday morning, July 4, in connection with the observance of Independence Day.

These exercises, under auspices of the Wyoming Commemorative Association, constitute the only formal program locally for the occasion. The opening of Swetland Homestead to the public by the Wyoming Historical and Geological Society will provide an interesting sidelight for visitors.

The flavor of Independence Day has disappeared in so many places that Greater Wilkes-Barre is indeed fortunate to have a rare opportunity to participate in this national holiday in the spirit of our forefathers. The fact that the program is scheduled for 10 a.m. will allow ample time for visits to parks or lakes during the day and, for that matter, over the weekend.

The mounting interest in this observance indicates that the public is not lacking in appreciation of the efforts of the Wyoming Commemorative Association to restore the significance of the Nation's birthday. Locally, it has added meaning because of the drama that was enacted on July 3, 1778.

There is no reason why this year's audience should not be numbered in thousands instead of hundreds, with Justice Benjamin R. Jones as the speaker, a concert by the Stegmaier Band and participation of the 109th Battalion and patriotic organizations in the tribute to the hero dead of colonial days.

Rev. John Leo Sullivan

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. MONAGAN. Mr. Speaker, on June 29, 1959, the Reverend John Leo Sullivan, pastor of St. Francis Xavier Church in Waterbury, Conn., celebrated the completion of 50 years of service as a Roman Catholic priest.

Ordained at Lugano, Switzerland, in 1909, Father Sullivan has devoted his entire priestly life to the spiritual care of his coreligionists in various parishes in the State of Connecticut.

I am proud to claim Father Sullivan as a fellow native of Waterbury. He was born in that city on November 10, 1881, of a prominent local family.

In trying to sum up the man that is Father Sullivan, one is confronted with the difficulty of cataloging his amazingly diverse capabilities and accomplishments.

He is a finished scholar with a background of studies at Holy Cross, St. Brieuc in Brittany, France, Piacenza in Italy, and Lugano in Switzerland.

He is a skillful linguist who speaks French and Italian fluently as well as his native tongue.

In his younger years, he was an outstanding handball and baseball player and even today his walking gait and swimming pace outdistance many younger men.

He is a skillful writer with a record of many incisive newspaper articles, and he is a graceful speaker.

His secular civic contributions particularly in World War I are too numerous to detail.

Above all, however, Father Sullivan has been a devoted shepherd for the people whose spiritual care has been entrusted to him. Beyond all his other achievements, that which has surpassed all others has been his devotion to his priestly duties and his loyal service to his parishioners and to his church.

I am happy to join Father Sullivan's thousands of friends and admirers in thanking him for his half century of devoted ministry and in wishing for him many more years of health and service.

Father Sullivan's contributions and the affection and esteem in which he is held in his home community are well described in an editorial from the Waterbury American of June 30, 1959, which I include herewith:

FATHER JOHN L. SULLIVAN

Father John Leo Sullivan of St. Francis Xavier Church was honored by a great turnout of parishioners and friends Sunday. It was indeed a testimonial which the pastor may well cherish as an expression of affection on the 50th anniversary of his ordination as a priest. But as philosophers have said there is no such thing as massed sorrow, joy, or other deep-seated emotions. They belong only to each individual. And in this case Father Sullivan saw a manifestation of the high esteem in which he is held by so many separate souls each of whom has enjoyed, at some time or other, a different facet of his benign nature.

Father Sullivan may point to many accomplishments during his half century of service as a priest. He may well be proud of these for they are in true keeping with the vows he took as fledgling servant of his church. But many a man has done great and noble things and was not cherished as an individual for them. We believe that Father Sullivan is a man who has that added intangible something which makes him appreciated for his intrinsic worth in doing big things in a handsome way and small things in an unobtrusive humble way. Members of Father Sullivan's faith believe that divine grace is a gift that is ennobling to the soul. In his case we believe that inner virtue is reflected to the surface in a worldly grace of person that is enjoyed by all too few.

Fourth of July

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an impressive, direct, and simple statement on the true meaning of the Fourth of July which was prepared by Mr. Morris V. Rosenbloom, president of American Surveys:

This year the Fourth of July has a special significance. It commemorates not only the adoption in 1776 of the most famous document in American history, the Declaration of Independence, but it is also the day on which our Nation's new 49-star flag will be raised officially for the first time at Fort McHenry National Monument in Baltimore, birthplace of "The Star Spangled Banner."

Just as the Declaration of Independence proclaimed the birth of the United States, and set forth with matchless eloquence the basic philosophy of our democracy and liberty, the flying of our new flag this Fourth of July symbolizes the perpetuation of a spirit of independence singularly American—a spirit reflecting our traditions of vision and enterprise, with equal opportunity for responsible performance.

May our hallowed heritage help to lead America on to new horizons—both in our national and international relations—in the difficult and decisive period we now face.

Kansas City's Last Chance

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. GEORGE. Mr. Speaker, in the heart of Kansas City, Kans., is an ancient Indian burial ground. This cemetery is situated between the beautiful Carnegie Library grounds and the Huron and other business buildings. It has been estimated that as many as 720 bodies of the Huron-Wyandotte tribe and 7 chiefs are buried there. It is the only spot of great historical significance within the boundaries of Kansas City.

A law was enacted by the 84th Congress which would authorize the sale of this Indian cemetery. Thereafter bills were introduced to preserve the burial ground and to repeal the provision authorizing its sale. The Secretary of the Interior promised the people of the Greater Kansas City area that an administrative hearing would be held in Kansas City, Kans., before any action was taken in connection with the disposal of this ancient landmark.

No administrative hearing was held by the Department of the Interior, and no action was taken by either the Committee on Interior and Insular Affairs nor the House of Representatives on the measures during the 85th Congress.

Upon the convening of the 86th Congress, measures were introduced looking toward the establishment of the Huron Indian Cemetery as a national shrine and which would stop the sale of the cemetery.

The people of the Greater Kansas City area, many of whom have fathers, mothers, sisters, brothers, and children buried in the cemetery, were lulled into complacency relying upon the promise of the Secretary of the Interior to hold hearings prior to any final action by his agency. The Interior Department filed unfavorable reports, which gave no valid reason for the Department's conclusions, before the citizens of the Midwest realized that they would not be accorded the hearing which they had been expecting. The complacency of the people suddenly ended and petitions and letters poured

in to the Representative of the Second Congressional District of Kansas.

Because of an aroused public and because the people had not been granted an opportunity for a hearing, the Subcommittee on Indian Affairs held a hearing in Washington on May 18 and concluded it in Kansas City, Kans., on Saturday, June 27. Many leading citizens testified and urged that the Indian burial ground be preserved.

President Harry S. Truman submitted a strong statement pointing out the great historical value of the site and urged its retention. Letters were filed with the committee from the other five Kansas Members of the House of Representatives and from the four neighboring Missouri Members whose districts border the State of Kansas. Each of these distinguished and outstanding Members cited the historical value of the ancient burial ground and urged its preservation for the benefit of posterity.

Miss May J. McGuire, one of the many distinguished citizens who testified before the committee, is a past president of numerous county and State civic organizations and is a feature writer for the Kansas City Kansan, one of the great newspapers of the Midwest. In her column for Friday, July 3, Miss McGuire wrote of the committee hearings and of the members of the subcommittee.

The handsome man with graying hair is, of course, the chairman of that subcommittee, the Honorable JAMES A. HALEY, of Florida. The other nice looking men who smoked cigars were the Honorable B. F. SISK, of California; THOMAS G. MORRIS, of New Mexico; and E. Y. BERRY, of South Dakota. Miss McGuire expressed the unanimous opinion of the people of the Greater Kansas City area when she paid tribute to the excellent manner in which the hearings were held and the sympathetic consideration displayed by its members.

Mr. Speaker, under unanimous consent I include the article written by Miss McGuire in the extension of my remarks, as follows:

LOOKIN' AROUND

(By May J. McGuire)

Members of the congressional committee who came here from Washington, D.C., Saturday to hear testimony concerning Huron Cemetery learned that it is a live issue.

These men learned that many of the citizens, who are not descendants of the Wyandots, want the cemetery preserved according to the ancient treaty for "as long as grasses grow and rivers flow."

The hearing was first scheduled for the city hall auditorium but Mayor Paul Mitchum wisely decided the junior ballroom of the Town House Hotel would be a better place, because it is air-conditioned.

The hearing was set for 10 a.m. to noon and from 2 to 4 p.m. Well before 10 a.m. the ballroom was comfortably filled. The distinguished men from Washington came in and took their places at a long table on a platform at the front of the room. On a lower level, at the center front, was a smaller table for the witnesses. There were "mikes" for all speakers.

The word "witness" made me think of a court scene and I was greatly impressed that this was the first time for a congressional hearing to be held in Kansas City, Kans.

Those men were very nice looking—the kind to get votes. Every one of them, except our own NEWELL GEORGE, smoked cigars. Not that they smoked all of the time—just an occasional puff.

The moderator or chairman was a handsome gray-haired man from Florida, who had a very mild way of speaking—sort of informal—leaving off final "g's" and never seeming to be hurried.

But if things seemed to be getting the least bit out of hand he rapped sharply with his gavel. Applause wasn't the order of the day. I wondered if the gavel came from Washington in his brief case.

There was a name plate in front of each member of the committee—just like on TV. There were introductions and then the first witness was called.

He was one of six persons who came for the hearing. He was really the spokesman for that group. He went over the history in some detail and filed a copy of his testimony with the clerk as did all witnesses.

One woman from Oklahoma spoke critically but briefly of the care the cemetery had been given. She based her own remarks on a visit made some years ago.

Later in the hearing, a local woman commented that she felt, since the Oklahoma descendants of the tribe felt it was their property, they might consider paying us or at least being grateful for care that had been given the cemetery.

It was mighty interesting to hear so many of the descendants talk and tell of the history of this cemetery and what it means to them. There were men and women who have children buried there who spoke with deep emotion of the cemetery. It is more than a historic spot to them.

It was 12:30 before the morning session was ended, so that there could be time out for lunch. Most of the people came back for the afternoon session and testimony was resumed. Witnesses were questioned by members of the committee. In the morning it seemed to me the women were being treated like Indian squaws because the men did all the talking—but things changed in the afternoon and women gave their testimony.

No one knows what will be the outcome, but those men from Washington learned that the people of Kansas City, Kans., want Huron Cemetery to remain as a cemetery—the only such cemetery in the United States.

"It Isn't Just My Car, but Everything We Buy"—Protest Against Manufactured Items Which Don't Hold Up

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mrs. SULLIVAN. Mr. Speaker, a few days ago I received a letter from a resident of St. Louis who put down on paper a complaint one hears day after day from friends protesting the shortcomings of today's manufactured goods. Are we cutting so many corners on production costs that "shoddy" is to become the national norm?

This protest was not unique, but the extent of the buyer's troubles seems to be a bit unusual. She bought a new car last fall, with a 90-day service guarantee. As she says, most cars hold together for that period of time, "but mine did not."

"At least three things they had to fix—on the other things they kept telling me nothing was wrong. But after 90 days, then they wanted to fix the things they should have fixed before."

She listed such items as:

1. Gear shift broke off.
2. Horn would not work.
3. Windshield wiper would not work.
4. Accelerator stuck.
5. A new distributor with all the trimmings.
6. Oil leaking from motor—new gasket.
7. Heater would not work—I had to buy a new thermostat.
8. Thermostat was no good, water started boiling out, had to have it taken out.
9. A new sealed beam headlight.
10. Steering wheel had to be worked on.

This woman said she wrote to Michigan, and an adjuster then came around to see her "but they would not do a thing. Anything I had to have fixed they have charged me outrageous prices. When I holler, they tell me it is flat rates."

After some further comments about her less-than-perfect new car, the writer added, "Now, it is not just my car but everything we buy."

It is this woman's feeling we should have a law to require manufacturers to make their goods come up to a standard. I have asked the St. Louis Better Business Bureau to look into the particular incident of this woman's car, but in the meantime, as a consumer, I can feel more than a little sympathy for her plight and that of millions of others who find their new gadgets of all kinds falling apart in use.

A Memorial to James Madison

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. KASTENMEIER. Mr. Speaker, I wish to include in the RECORD, an editorial from the Fourth of July issue of the Madison (Wis.) Capital Times which endorses the proposal to erect a memorial for our fourth President, James Madison, who is best known as the man who authored our Constitution. In lending its editorial support to the campaign, which was initiated by the Washington Post and Times Herald, the Capital Times said:

We feel certain * * * we reflect the wishes of all the people in this city which so proudly bears the name of Madison.

The editorial follows:

CAPITAL TIMES SUPPORTS PLAN FOR MEMORIAL TO JAMES MADISON

Elsewhere on this page is reprinted a letter from Irving Brant, a distinguished journalist and historian, who is now at work on a life of James Madison. Mr. Brant suggests that the country should memoralize in an appropriate way the fourth President of the United States.

In one sense of course President Madison is already memoralized in a way that no building of even the purest marble could hope to rival. That is his enshrinement in our history through his monumental achievement—the Constitution of the United States and the first 10 amendments, the Bill of Rights.

We would also like to believe that the spirit of the Father of the Constitution has been immortalized in the name of Wisconsin's capital city.

We agree with Mr. Brant, however, that there should be a visible marks of respect to his memory in the Nation's capital.

The Washington Post and Times Herald has initiated a campaign to put Mr. Brant's suggestion into effect in a most practical and fitting way.

This is the proposal to use the discarded 24 columns from the Capitol's East Front to compose a Madison memorial situated harmoniously with the existing memorials to Washington, Jefferson, and Lincoln.

It seems to us that James Madison's claim to such high honor from his countrymen is beyond debate. In a phrase that has become famous in history, Gladstone once described the Constitution as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

On this Fourth of July, which celebrates our independence, it is appropriate to rememebr that this independence was given lasting form in the Constitution, that wonderful work. No man was more singularly responsible for the final form of the Constitution than James Madison. He served with unmatched brilliance as the mediator who was able to put it over at the famous Philadelphia convention, and he defended it with irresistible logic as the most famous of the authors of the Federalist papers.

He then crowned this achievement by drawing up the Bill of Rights, the most powerful guarantee of freedom ever conceived by man.

The Capital Times is happy to endorse the proposal for a Madison memorial in Washington. We feel certain that in doing so we reflect the wishes of all the people in this city which so proudly bears the name of Madison.

Rural Development in Florida

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. CRAMER. Mr. Speaker, to those people who are interested in problems connected with area redevelopment and the rural development program, there are now abailable some preliminary statistics put out by the Florida Agricultural Experiment Stations and the U.S. Department of Agriculture in cooperation. The report is entitled "Sources and Levels of Income—Rural Households of North and West Florida, 1956."

Florida contains a part of the low-income area that has persisted in the southeast for several decades. It is with the rural segment of this low-income area that this report is concerned. The successful development and implementation of both local and national programs requires more detailed knowledge than is provided by usual sources. The interest of many people in rural development programs prompted the publication of these statistics as soon as they became available.

In many of the counties in north and west Florida, sources of income continue to be limited largely to an agriculture that includes many subsistence farms, the harvesting and primary processing of timber and forest products, and Government expenditures in the form of payrolls and welfare payments. In 20 counties scientific random sample interviews were conducted. Income records were complete on 730 schedules. The report states that:

Cash income averaged $2,430 for the 730 families. Farm families averaged $2,520 compared to $2,338 for nonfarm families.

Nonfarm employment was by far the major source of income for farm as well as nonfarm families.

Cash income from farming operations accounted for approximately one-fourth of the total cash income reported by farm households. Net cash farm income averaged $657 for the 368 farms. Residential and part-time farms reported negative net cash farm incomes, on the average, while commercial farms averaged almost $1,200.

Nonfarm employment income accounted for 60 percent of the total cash income reported by the survey households. Approximately 59 percent of the families reported income from this source. Nonfarm families averaged some $500 more than farm families. Residential and part-time farm families earned considerably more income from this source, on the average, than commercial farm families.

During 1956, approximately 75 percent of the 730 households had cash family incomes of less than $3,000, with 56 percent reporting less than $2,000. Only 11 percent of the households received cash family incomes in excess of $5,000.

Viewed from the standpoint of the relative importance of the various sources, as family income rose, income from farm operation varied from approximately 10 percent to 13 percent of total income through the $5,000 to $7,499 income class, then increased to 19 percent and 36 percent, respectively, for the two highest income classes. By comparison, as family income increased, income from nonfarm employment became increasingly important from a relative standpoint. It accounted for 17 percent of total income for those households within the $0 to $999 income class and increased to 78 percent of total income for those families receiving from $7,500 to $9,999 income. So far as income from farm wage work and nonemployment sources are concerned, they became less important relative to total income as family income rose.

This is but a sample of the sort of information which can be derived from the report. I commend the report to your attention.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Address by Hon. Estes Kefauver, of Tennessee, Before the National Democratic Women's Club

EXTENSION OF REMARKS

OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, July 8, 1959

Mr. McGEE. Mr. President, I ask to have printed in the Appendix of the RECORD a speech delivered by the Senator from Tennessee [Mr. KEFAUVER] before the National Democratic Women's Club on May 18, 1959. The subject of his speech was the interest of the consumer in the legislative measures passed on by the Congress and the policies of the Government. He proposed the establishment in the Federal Government of a Consumers Department.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR KEFAUVER BEFORE THE NATIONAL DEMOCRATIC WOMEN'S CLUB LUNCHEON, WASHINGTON, D.C., MAY 18, 1959

I appreciate very much this opportunity to address you today on a subject of special interest to you as women, though it is of importance to every one of our 175 million people. It has to do with the question of how best to provide political space for the representation of the consumer interest—how best to insure that the consumer voice will be heard—in the making of Government decisions and policies on economic matters. This I believe is one of the necessary, and belated, steps we must take if we are to protect and strengthen the dynamic character of our economy and keep it expanding in a direction that will bring a higher standard of living for all our families, and a firmer material support for our international policies. This is why I and 23 cosponsors introduced Senate bill 1571, which provides for the establishment of a Federal Department of Consumers.

I ask your support for the general provisions of this bill. I shall be glad to consider any particular amendments which you, from your experience as consumers and as practitioners in public affairs, may think desirable.

Before I outline the bill itself, let me bring two or three aspects of our economic situation to your attention which will help you understand the bill's intent. To the classical economic theorists, society was best served by an economy in which individual sellers were kept on their toes in producing goods of satisfactory quality at reasonable prices, by the hidden hand of competition among themselves; and by the exercise of informed choice by consumers on the other side of the counter. Under these circumstances, Government had only to play the minimum role of enforcing contracts and maintaining order.

But the realities we face today are very different from those envisioned by the classical theorists. Despite our antitrust laws and other policies designed to maintain a free competitive economy we are experiencing a market trend toward concentrated power in many of our basic industries—steel, oil, automobiles, etc. This power is demonstrated in part by their ability to establish and maintain what we have come to be known as administered prices, as distinct from free market prices.

Let me give you an illustration.

For the past 2 years, the Senate Subcommittee on Anitrust and Monopoly, of which I have the honor to be chairman, has been investigating the pricing policies of some of these basic industries, particularly steel and automobiles. This period covered the recent economic recession, characterized by a considerable degree of unused plant capacity, as well as unemployed workers.

What did we find?

In the steel industry, the bellwether of our whole economy, during the period August 1956 to August 1958, when the operating rate ranged from 62 percent down to as low as 48 percent of capacity, price increases to their customers amounted to some $2 billion, and of course these increases were pyramided as the product went through various manufacturing processes. This was a significant inflationary factor in a period when, according to the theorists, prices should have been declining.

And even more disturbing was the fact that each of the steel producers raised his prices by the same amount and to the same level, even though, by their own admission, they had different costs. Representatives of the industry explained to us that when a leading producer raised prices, the others had to follow, to meet competition.

Now I ask you, if that is competition, what is monopoly? It is like saying that competition between Macy's and Gimbel's would be greater if every price increase by Gimbel's was immediately matched by Macy's with a new banner over Herald Square waving the slogan "Our prices are always exactly as high as Gimbel's."

This will illustrate for you the stifling effect of power not only on economic processes but also on men's minds. It explains a statement by the president of General Motors to the effect that a 20-percent return on investment, per annum, after taxes, is just a normal profit.

This type of inflationary factor that we have been witnessing is beyond the reach of the traditional monetary controls by Government. It encourages a speculative psychology, threatens our stable economic growth, and depresses the particular living standards of large numbers of our families with relatively fixed incomes. The cost-of-living index has held fairly steady lately, not because of any significant change in the situation with respect to the concentration of industrial power in large sectors of our economy, with characteristic administered prices, but because of lower returns to farmers for their products. This type of inflation reflects private power rather than economic growth. It is one of our most urgent domestic problems, whether from the standpoint of the individual consumer or of the welfare of the Nation as a whole.

Another matter which I want to bring to your attention, by way of introduction to a discussion of the consumer bill, is the changing role of Government in our economy over the past half century and particularly within recent years. The ramification of Government influence on economic life, direct and indirect, is now far reaching; Government action affects in some way, to some extent, the price, kind, quality, and/or conditions of sale of most of the goods and services made available to us as consumers. The increasing growth and complexity of the economy, its instability, its power pressures, as well as the necessities of national defense in a technological age, have involved Government in an expanding program of economic decision and action.

The hard-pressed Congress has had to extend its authority through the establishment of various regulatory agencies—the FTC, the FPC, the CAB, the FCC, and others; but in too many instances these agencies have become bogged down in controversies between conflicting business interests and have lost sight of the public interest which they were set up to protect and promote. Further, great departments of the executive branch, concerned with various aspects of the economy, have increased their power within the vast complex of Government, particularly in the field of administrative law. And during the same period, private economic groups have organized to exert their influence on this governmental process, to try to insure that public policy promotes their particular ends. Representatives of business, of labor, of agriculture are organized in powerful lobbies and also have found a channel of expression and support through the Departments of Commerce, of Labor, of Agriculture, and other agencies of the Government.

But what of the interest of the vast consumer public that was theoretically served by the beneficent operation of the free competitive market?

We have been told that the emergence of private power blocs "on opposite sides of the market" will provide checks and balances to offset the diminishing role of market competition. But we have no reason to believe that the tug-of-war between organized producer and distributor groups will maximize the public interest, either through the market process or Government action, unless the public interest itself can become a more effective factor in decisionmaking.

Heavily burdened public officials responsible for policymaking tend to be influenced only by the facts and opinions brought directly to their attention. What we propose to do now is to bring the voice of the forgotten consumer into this policymaking complex, through the establishment of a Consumers Department.

Consumers have a great responsibility in spending the family income to maximum advantage. If it is not spent to maximum advantage, much of the labor that went into earning it is wasted and our national resources are not used for greatest satisfaction. It is difficult for the individual consumer—and for the most part that means the housewife—to make an informed choice among the vast array of goods and services which our economy has made available. It is particularly difficult because our educational system

has been oriented toward the problems of production rather than of consumer choices, and because business promotion tends to confuse rather than to inform.

It is a good thing that consumers are beginning to get some help in carrying out their job more effectively through some of their own organizations, notably Consumers Union, Inc.

But however effective individual consumers may become in their market choices, they still cannot reach back of the market to the points where important economic decisions are now being made by industry—decisions for instance with respect to "administered" prices—nor can they directly influence the decisions made at all levels and in all areas of government with respect to economic matters. For this, organization is needed and there is no well-supported, well-financed organization among consumers comparable to that found among other economic interest groups.

There are no doubt many reasons why it has proved difficult for consumers to organize for the effective representation of their point of view, with respect to economic and political action. Most consumer purchases are made by housewives who have a multitude of varied, nonspecialized jobs to do. And the fact that we all spend some money, as consumers, makes the concept of the consumer role, as distinct from a producer role, a rather difficult one to grasp. There is an even greater difficulty when it comes to the matter of finding leadership and soliciting funds necessary to make the consumer voice heard on a sustained basis.

It is, therefore, all the more urgent for the Congress to take the initiative and make provision for consumer representation so that we can have all necessary facts and opinions before us when we make the economic decisions that we have to make.

We must help free the dynamic forces of our economy from its present unwarranted constraints, so we will not have the paradox of prices rising while production and employment fall, with waste of plant and manpower capacity. We must formulate more intelligent and imaginative public policies to encourage creative business vigor in a climate of democratic capitalism, thus checking the present trend toward greater concentration of power and control both in business and Government.

More effective consumer representation will help us toward this goal, and, therefore, as a first practical step that can be taken now, I and my cosponsors have introduced Senate bill 1571.

This bill provides for the establishment of a Federal Department of Consumers with specific powers and functions. Department status is provided to insure that the consumer voice will not be controlled by an agency oriented to other interests, and also that consumer representatives will have appropriate status when making their views known.

The Department will have the responsibility of presenting the consumer viewpoint when economic policies are being developed at the highest levels of government. As I pointed out earlier, people in their capacity as consumers are affected by such decisions, and it is right and proper that the total effect of proposed policies should be brought forcefully to the attention of those who formulate them.

Representatives of the specialized interest groups are heard directly through their lobbies and they also have friends at court in the heads of the producer-oriented departments who hold Cabinet rank. There is no question that when people look at the economic questions from the point of view of those who spend the family income—mainly the housewives—they think differently and in a more generalized way, than those whose business it is to promote the particular interests of producer groups in the economy; and, of course, this is especially true if they are well informed.

A second function of the Department would be to represent the interests of consumers in proceedings before the regulatory agencies and in some instances before appellate courts when economic matters are under consideration (as, for instance, in antitrust suits). The regulatory agencies were set up by the Congress under its power to regulate commerce in the public interest. But though many of their decisions (as for instance those of ICC affecting railroad rates, the Federal Power Commission in setting gas rates, the Federal Trade Commission in its decisions with respect to unfair business practices) are of direct concern to consumers, they are not regarded as a party at interest in these cases; exen if they were allowed to appear, under existing circumstances they would not be in a position, generally speaking, to prepare and present significant data.

Under bill S. 1571, the Department of Consumers would have the right by law to intervene in cases which, in its opinion, affect the consumer interest, and to present such evidence and arguments as it thinks necessary, subject to the rules of practice and procedure of the agency. Of course, as a practical matter, the Department would have to establish priorities, and concern itself only with the more significant cases since it is not likely to have the money or experienced personnel for a general coverage of the field.

The department would also have certain operating responsibilities resulting from the transfer to it of certain units and functions now set up or carried on by other departments or agencies. The bill lists particular units and functions to be transferred, but in this matter I should like particularly to have your suggestions.

The point to keep in mind is that transfer should be made in those instances where consolidation into a consumer-oriented department would lead to more efficient operation, higher morale, and a general strengthening of the overall program through the new focus and unity of purpose.

The transfers proposed in the bill include the Food and Drug Administration, the Division of Prices and Cost of Living of the Bureau of Labor Statistics, the Institute of Home Economics and Human Nutrition, and certain elements of the National Bureau of Standards engaged in research with respect to or testing of consumer goods. In other cases the Department is authorized to establish cooperative relationships with existing consumer services for more effective coordination of programs and policies.

A department set up to represent the consumer point of view must, of course, have channels opened for two-way communication with consumers, consumer groups and consumer agencies—including agencies that have been or may be set up in the States. Provision is made under the bill for the setting up of advisory committees, and particularly the department is directed to hold an annual consumers conference "for the purpose of obtaining information, recommendations, and suggestions necessary or desirable for the effective performance of other functions of the department."

The department will also provide an information service for consumers on the lines that the Departments of Agriculture and Commerce have been serving farmers and businessmen for decades. To this end the Department is authorized to "receive, assemble, evaluate, act upon and disseminate information helpful to consumers of the United States in performing their economic function more efficiently, including information concerning commercial and trade practices adversely affecting their economic interests."

Provision is also made whereby the department will serve as a central clearinghouse for complaints from consumers who presently are baffled by not knowing where to turn for help. If the matter involved comes within the jurisdiction of another department or agency, then the complaint will be forwarded for its attention and appropriate action; if the matter appears to involve a violation of law, or of a judicial decision, it is to be transmitted promptly to the appropriate officer or agency together with "such evidence and information as the department may have concerning such probable violation" and the department is further charged with the duty of ascertaining "the nature and extent of action taken with regard to probable violations so reported."

You are well aware, I am sure, that one of the major problems in consumer protection against unfair and improper business practices, is insuring effective enforcement of existing law, partly because consumers do not know what protection is provided under the law, or how to go about availing themselves of it. And as a matter of fact, not of criticism, agencies responsible for carrying out public policy for consumer protection, are at times heavily involved with other responsibilities to which top priorities are given.

The Department is given broad powers to carry on research, surveys, and investigations necessary for the effective performance of its duties, including the dissemination of useful information to the consumer public.

It is charged specifically with the responsibility and given the necessary authority to conduct economic surveys and investigations in certain broad areas, set out in the bill, of particular significance to consumers.

One of the great contributions which government has made to the growth of our economy has been in and through the research carried out by the United States Department of Agriculture in cooperation with the different land-grant colleges and experimental stations in the various aspects of agricultural production and marketing; indeed, the increase in efficiency has, in many instances, been phenomenal, even to the point of embarrassing us with the problems of abundance.

Consumers, like farmers, are in no position to carry out on their own account, research relevant to their function. But increased knowledge and efficiency in spending the family income and in bringing informed consumer opinion to bear on the making of economic growth, a firm material foundation to the democratic way of life. For this reason I attach great importance to the Department's role in research and the dissemination of information.

I can assure you that the Congress itself would be among the beneficiaries of the proposed Consumers Department. It is usually difficult for legislators to obtain the type of information necessary to evaluate the probable effect of economic proposals on the interest of the consumer public, which is, in fact, an aspect of the public interest. To have an agency charged with the responsibility of presenting such information and of voicing consumer opinion, will I am sure, prove to be of tremendous assistance to the Congress.

For these various reasons I urge that you give active support to S. 1571, providing for the establishment of a Consumers Department in the Federal Government.

There are particular difficulties to be overcome in promoting meaningful legislation in the interest of the unorganized consumer public. The sponsors of such legislation cannot rely on the kind of support that alert, politically-experienced, and well-

financed groups give to proposals oriented toward special interests—the kind of support that helps carry legislation forward over the obstacles presented by the complex processes of our political system.

Consumers are not presently in a position to give this kind of support. But I and my cosponsors know, and I am sure you know, that our average families are becoming increasingly concerned and worried about the position in which they find themselves as consumers, largely as a result of the rising-price trend.

They are looking for a way to give effective expression to their point of view. They will want this legislation, once they learn about it and understand its significance not only for themselves but for the economy as a whole.

So I confidently ask your help in bringing this message to them, as a public service.

Address of Hon. Henry Cabot Lodge at Graduation Exercises, West Point, N.Y.

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. SALTONSTALL. Mr. President, while he spoke several weeks ago, I have just had brought to my attention the very stirring remarks made by my former colleague—our most able and distinguished Ambassador to the United Nations, the Honorable Henry Cabot Lodge, on the occasion of this year's graduation exercises at West Point.

As Ambassador Lodge indicates, West Point's motto—"Duty, Honor, Country"—not only inspires its graduates but is a noble watchword for all Americans. These thoughts expressed at West Point directed to young Americans about to begin their career in the service of their country can well be of value to us who also serve our country. It is fitting that they be placed in the RECORD. Mr. President, I ask unanimous consent that the address delivered by Mr. Lodge be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HENRY CABOT LODGE, U.S. REPRESENTATIVE TO THE UNITED NATIONS, AT THE GRADUATION EXERCISES OF THE U.S. MILITARY ACADEMY, WEST POINT, N.Y., ON JUNE 3, 1959

For 157 years America has looked to the graduates of West Point to lead her through the valley of danger. Whoever is stirred by the recognition that duty is a summoning word; and whoever is moved by the thought of the millions of officers and men who march through the pages of American history under the leadership of Grant and Sherman; of Pershing; and of Eisenhower and MacArthur, must thrill at being in this place where such leadership was forged.

The French essayist Montaigne 400 years ago said:

"I would rather know the truth of the talk the general had in his tent on the eve of battle than the speech he made the next day to his army after the victory."

This statement has vivid meaning for me because I have heard some speeches by generals after the victory and they were good. But I have also been in the general's tent on the eve of battle—which is one place where you appreciate the essence of the West Point tradition.

West Point's motto—"Duty, Honor, Country"—inspires its graduates to be sure. But it is a noble watchword for all Americans because implicit in it is the idea of selflessness, of striving in behalf of something bigger than yourself.

Justice Holmes points out that "The reward of the general is not a bigger tent, but command." Yet there is a state of mind which is interested in getting the credit for what has been achieved, or in getting the perquisites of rank.

But the finer state of mind is that which wants above all to get the job done; which does not ignore danger but refuses to take counsel of its fears. It is expressed in the words of Tennyson which are inscribed over the Antarctic grave of the British explorer, Scott, who died on his way to the South Pole: "To strive, to seek, to find, and not to yield."

This spirit of selflessness and striving commands the respect of Americans. Because of it West Pointers can repeatedly make great demands on young Americans thought by too many to be soft and self-indulgent.

This spirit of selflessness and striving is also a vital part of what makes America unique and admired by the nations of the world.

For I ask you to take it from a man who has spent much of his life in foreign relations, that what the world admires about America is not the angle player or the corner cutter or the smart aleck, but the man with a code, generous and high principled, a code by which he lives. You know that at moments it is as difficult to give an order as to obey one. Yet you are equipped to do both because, as West Pointers, you have such a code.

You are on the threshold of great careers—richer in the true sense of the word than any purely money-making occupation could possibly be. They will be richer in terms of the reward that you get during your life; richer in honor and in satisfaction for responsible work well done; and richer in the meaning which they will give to human life when you measure that life's importance in the scale of eternal values.

The daily grist of talk about missiles, necessary though they are, must never let us forget that missiles can never replace men.

Four hundred years before the birth of Christ, Pericles said this about the soldiers who had died in war:

"They faced the foe as they drew near him in the strength of their own manhood; and when the shock of battle came; they choose rather to suffer the uttermost than to win life by weakness. So their memory has escaped the reproaches of men's lips, but they bore instead on their bodies the marks of men's hands, and in a moment of time, at the climax of their lives, were rapt away from a world filled, for their dying eyes, not with terror but with glory.

"Such were the men who lie here and such the city that inspired them. We survivors may pray to be spared their bitter hour, but must disdain to meet the foe with a spirit less triumphant. * * *

"They gave their bodies to the commonwealth and received, each for his own memory, praise that will never die, and with it the grandest of all sepulchers, not that in which their mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by. For the whole earth is the sepulcher of famous men."

West Point has long had a home in the minds of men. Instead, it still has. For, in spite of all our unremitting efforts, the world is dangerous and catastrophes, large and small, can happen.

We all strive so that no war, large or small, shall occur anywhere. Your military readiness—your ability not to shrink from any possibility, however bitter—is vital to that striving and to all our hopes for freedom. If, despite our striving, war starts to smolder, we look to West Pointers for the leadership which will meet and defeat the shock of violence where it occurs.

And if, in spite of all our efforts, the worst violence should happen, we look to West Pointers to stand up amid the wreckage—even before the fumes of war have cleared away or the wounded have been tended or the dead have been buried—to take command and save our Nation. We count on you for the hard, steely resolve which will never yield.

Yours, therefore, can be the triumph—and the glory—of which Pericles speaks. And because of that our Nation holds you in honor every day of its life.

As you begin your careers of leading America through the valley of danger, I salute you and wish you well.

Oregon Centennial Year Featured by Publication of Epic Volume on Dr. John McLoughlin

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. NEUBERGER. Mr. President, one of the outstanding publication events during Oregon's centennial year is the recent issuance of the new book "The McLoughlin Empire and Its Rulers," by Dr. Burt Brown Barker, distinguished historian and vice president of the University of Oregon. Dr. Barker is a great scholar, who has devoted many years of his life to the accurate and perceptive analysis and portrayal of Dr. John McLoughlin, frontier factor of the Hudson's Bay Co. and a major force in the settlement of the Pacific Northwest.

Dr. John McLoughlin is one of the two Oregon entrants in Statuary Hall, in this Capitol Building, the other being the Reverend Jason Lee. Although a British subject, Dr. McLoughlin made vast and important contributions to the development of the entire Oregon country, which we know now as the States of Oregon, Washington, and parts of Idaho and Montana.

Dr. Burt Brown Barker has conducted tireless and assiduous research into all the many branches of the McLoughlin family, in order to create a book which will stand as an enduring monument to a period of great historic significance in the expansion of the Pacific Northwest. It is fitting that such a volume be published during the period which marks Oregon's 100th year of membership in the Union.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful review of Dr. Burt Brown Barker's book "The McLoughlin Empire and Its Rulers," which appeared in the Oregonian of Portland, Oreg., on July 5, 1959. Author of the

review is Malcolm Bauer, associate editor of the Oregonian and president of the Oregon Historical Society.

There being no objection, the article was order to be printed in the RECORD, as follows:

(By Malcolm Bauer)

The biographies of Dr. John McLoughlin, who ruled the Oregon country in the second quarter of the 19th century, give little attention to things antecedental. There is a reason: Until recently, there was little but speculation to guide biographers in their study of the family life of Dr. McLoughlin and the roots of the rocklike character on which was built a Northwest empire.

Now, thanks to Portland's Dr. Burt Brown Barker, Dr. McLoughlin's early and family life can be documented with a high degree of accuracy. Dr. Barker, who has devoted many years to the study of the McLoughlin life and works and who has already published the letters and financial papers of the Hudson's Bay Co. factor in the wilderness, has capped his research achievements with the publication of "The McLoughlin Empire and Its Rulers."

Here is a rich store of newly discovered, authentic information about the McLoughlin family, of whom Dr. John was just one among members of distinction. Sharing the title role as "rulers" of the McLoughlin empire with the chief factor are his older sister, Marie Louise and younger brother, Dr. David McLoughlin. Marie Louise, as Sister St. Henry, became Mother Superior of Quebec's great Ursuline Monastery. David, who perhaps reached a level of distinction higher than that of any other in the family, became personal physician to King Louis Philippe of France—after having received vital financial assistance in his medical studies from brother John.

Proof of David McLoughlin's high position in Paris is among the many valuable revelations in the McLoughlin family letters, which Dr. Barker was instrumental in bringing to light and preserving. Most of these letters are here published for the first time, giving historians access to historical materials which until a few years ago were not known to exist. Certain key papers—such as Dr. McLoughlin's petition to practice medicine and his permit to practice—are reproduced in facsimile.

"The McLoughlin Empire and Its Rulers" is a solid addition to the Oregon history shelf. Copies may be obtained from the Oregon Historical Society.

Brown Compiles Notable Record

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. ENGLE. Mr. President, the New York Times in an article by Lawrence E. Davies on Sunday, July 5, gives an excellent report of the outstanding record Gov. Edmund G. Brown has made in the first 6 months of his term as Governor of California. The article correctly reports, I believe, that Governor Brown has had notable success.

I was glad to note that the article gives recognition to Frederick G. Dutton, who is the Governor's executive secretary, as well as his campaign director. Mr. Dutton was also the southern California campaign director in the presidential campaign of Adlai Stevenson in 1956. I was the State chairman in that campaign and came to hold a very high regard for Mr. Dutton's capabilities.

I note also that the article makes it very clear that Governor Brown is primarily concerned with consolidating his position and the position of the Democratic Party in California. I am sure that in that effort he will have the support of all the Democratic Party leaders in our State.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 5, 1959]

BROWN COMPILES NOTABLE RECORD—ONCE INDECISIVE, CALIFORNIA GOVERNOR STICKS TO POLICY AND AVOIDS ANY TRAPS

(By Lawrence E. Davies)

SAN FRANCISCO, July 4.—The new Edmund G. Brown moved this week into the second semester of his freshman year as Governor.

He was self-confident, with his first successful legislative session behind him. His score sheet showed 35 victories against 5 defeats on major issues.

He seemed more determined than ever, as an open-ended favorite son for the Democratic presidential nomination, to keep control of the State party against any bids from outsiders.

Governor Brown's performance has surprised Californians. Politicians elsewhere have been asking, "How come?"

The State's second Democratic Governor since the start of the century came into office last January with a reputation as an amiable, indecisive politician, who had often become trapped between conflicting viewpoints.

ENJOYS MAKING DECISIONS

In 6 months, close associates insist, he has arrived at the point where he enjoys making a decision and sticking to it.

"It's partly the office, partly a realization of what his own image was in the public mind," one said. "Now, he is not only more decisive but he is willing to move into situations. Why, he's almost ready to throw down the gauntlet on an issue."

The 54-year-old Governor does not reach decisions without study and accepting advice. He has picked advisers in whom he has confidence, and, according to one, he has "little pride of authorship."

His closest administrative adviser is a 36-year-old attorney who has been in politics only 3 years.

Frederick G. Dutton was a corporation lawyer in Los Angeles in 1956, after service in the Korean war and a period of private practice. He left his post as assistant general counsel of the Southern Counties Gas Co. to become southern California chairman for the 1956 presidential campaign of Adlai E. Stevenson.

MAKES IMPRESSION

Mr. Dutton's initial efforts impressed Mr. Brown, then State attorney general. The following year Mr. Dutton became his chief assistant. Before the year was over he had begun charting the 1958 campaign of "Brown for Governor."

Throughout the bitter fight between Mr. Brown and the former Senator William F. Knowland, the Republican nominee, observers sought vainly for a major mistake in the Dutton-directed Brown campaign. The Governor named him his executive assistant. He has described him as "one of the finest governmental political analysts I have ever known."

Mr. Dutton, a graduate of the University of California and Stanford Law School, discounts any appraisal that he is chiefly responsible for keeping the Governor "on the track." He avows that he is not in politics as a career, regardless of Mr. Brown's political future.

"I'm having a good time now," he said this week, "but I'm not staying in politics. I have not set a cutoff date specifically. It is not, however, a matter of weeks or months."

AIMS AT PARTY UNITY

Governor Brown is represented as having two immediate objectives. One is to maintain unity in the California Democratic Party while it gains stability after the long reign of Republicanism. The other is to plant himself as California's top Democrat, so that he may have an influential voice in demanding a liberal national party.

"He is aggressively pinning down his California base," an associate said. "We figure he has 99 percent of the Democratic leadership with him now."

Looking back over the 1959 legislative session, the Governor points to two issues on which he believes he recorded his biggest victories. One was a compromise settlement of the controversial water program, which still has to hurdle the opposition of many voters.

The other was the enactment of legislation to set up a fair employment practices commission, after more than a decade of fruitless attempts.

In some tax measures, and on the water program, he was criticized by organized labor, which had supported him in his gubernatorial campaign.

THREAT BY LABOR

Labor threatens to try to defeat his $1,750 million water bond issue in November 1960, unless the legislature next year changes the law to prevent big landowners from gaining enrichment from the water development program.

Some observers picture Governor Brown as having imposed his will on the legislature to a greater degree than any California Governor of the era. Others say that if this is true, it is because of a change in the political climate, with party government increasingly stressed. For years legislatures were wont to divide on progressive and conservative lines.

California Governors traditionally have had representation on the floor of the assembly and senate. Mr. Brown has had floor leadership, especially in the assembly. He has Democratic majorities in both houses to give him partisan advantage.

The Strauss Defeat

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials—one from the Laramie Daily Boomerang of June 17, 1959, and one from the St. Louis Post-Dispatch of June 21, 1959. Both of them deal with the importance of the separation of powers between the legislative branch and the executive branch and the importance of the power of the Congress to

preserve its right to check and to work in accordance with the people's right to know the facts.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Laramie (Wyo.) Daily Boomerang, June 17, 1959]

THE CASE OF STRAUSS AND LAWS

Despite charges and countercharges and seemingly petty hassles, the case of Adm. Lewis Strauss has been an enlightening affair.

In some respects, the actual confirmation or refusal of confirmation, of Admiral Strauss as Secretary of Commerce has been relegated to the back seat.

Wyomingites should be proud that their Senators have helped take the lead in examining closely the relations between the legislative and executive departments of the Federal Government.

When Senator JOSEPH O'MAHONEY speaks on the Constitution and what it means, other Senators and responsible officials listen carefully.

They did that when Senator O'MAHONEY helped them take a new look at the Constitution last week. "The only right given to the President of the United States with respect to the selection of Cabinet officials is the right to nominate," O'MAHONEY emphasized on the Senate floor.

The citizens of Wyoming should be pleased to know that Senator O'MAHONEY and Senator GALE MCGEE are taking the lead in safeguarding the rights of the Senate, and consequently the people of the State and Nation.

It's time to assess our Government carefully when people become alarmed that the Senate doesn't rubber stamp the President's wishes. Under no circumstances, should the President rise above the Constitution of the people of the United States.

[From the St. Louis Post-Dispatch, June 21, 1959]

THE STRAUSS DEFEAT

Now that the sound of administration tooth gnashing has died away, it is possible to perceive that the defeat of Admiral Strauss in the Senate was on the whole a healthy thing.

Not only did the Senate, by a close vote of 49 to 46, keep out of the Cabinet a man whose record called for precisely such a repudiation. More important, in the long run, is the fact that the Senate has broken the old taboo against closely examining the qualifications of Cabinet appointees.

The notion that a President is entitled to pick his own official family had been stretched to the unreasonable point of almost nullifying the Senate's constitutional power of confirmation. Now as before the Strauss controversy, it is true that a President's appointments start with a presumption in their favor. But the Senate should not abdicate its responsibility to examine them closely.

In the Strauss case, a perfunctory hearing would not have disclosed those qualities of character, the official arrogance and the cavalier attitude toward truth which were brought out by the Commerce Committee's extensive consideration of his appointment. Just because the committee did delve so deeply, it elicited from Strauss conduct which in large measure confirmed the charges of his opponents. Undoubtedly his own testimony proved his undoing; it changed a few crucial minds and tipped the balance of the Senate vote against him.

That there was also plenty of politics in the affair is obvious—and not surprising, since this was a political issue. It is most difficult to believe that Majority Leader LYNDON JOHNSON finally decided to swing against Strauss strictly on the merits of the case. Senator JOHNSON was all too plainly in need of bolstering his leadership with the liberal wing of his party, which from the beginning had carried the burden of the fight. The Strauss vote gave him an opportunity to mend fences on that side, and should be worth a good deal to him in persuading Democrats to back his compromises on the budget and other issues. It also enabled him to keep his franchise, so far as the liberals are concerned, as a Presidential candidate.

Once the majority leader had made his decision, all the other Democratic Presidential candidates in the Senate were able to leap on the bandwagon. By voting against Strauss in a body, they removed the issue with all its implications from the contest for the nomination. This convenient arrangement must have been particularly gratifying to Senator SYMINGTON.

On his record, Senator SYMINGTON should have been a strong supporter of Strauss. He and Strauss have long seen alike on most issues of atomic bombs, nuclear testing, and national defense; and we imagine that Strauss' feat of driving J. Robert Oppenheimer out of Government service had the Senator's full sympathy at the time. Yet it might have been gravely injurious to the SYMINGTON Presidential campaign had he been compelled to vote his sympathies.

Though politics of this sort played its part, it was not the decisive element. The decisive element was the courage, persistence and independence of a little group of Senators who were deeply convinced that Admiral Strauss' record at the Atomic Energy Commission disqualified him for Cabinet service. To such men as Senators ANDERSON, of New Mexico; MCGEE, of Wyoming; MONRONEY, of Oklahoma; ENGLE, of California; MAGNUSON, of Washington; MORSE, of Oregon; YARBOROUGH, of Texas; and O'MAHONEY, of Wyoming, goes the credit for insisting that the Senate face the Strauss issue headon. Finally it was by the margin of the two Republican Senators who broke ranks and voted against Strauss that he was rejected—the first Cabinet rejection in 34 years. To MARGARET CHASE SMITH, of Maine, and WILLIAM LANGER, of North Dakota, the country owes a debt of gratitude for placing independence of judgment above party regularity.

Observance of National Catholic Youth Week

EXTENSION OF REMARKS
OF
HON. JOHN O. PASTORE
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. PASTORE. Mr. President, National Catholic Youth Week will be observed October 25 to November 1, 1959. I have noted the theme of this ninth annual observance. It is "Spiritualize Youth—Vitalize Nations."

The observance is sponsored by the National Council of Catholic Youth, an organization of over 7 million youth, under the guidance of Rt. Rev. Msgr. Joseph E. Schieder, the director of the youth department of the National Catholic Welfare Conference.

I ask unanimous consent to have a statement regarding this observance printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The theme of this year's Youth Week—"Spiritualize Youth—Vitalize Nations"—aptly summarizes what it is that the family of nations most needs. In order that each member of the family be assured of his individual dignity, and be accurately informed of the source from which will derive his positive contribution to the common interests about which turns the opportunity for meaningful existence—the youth of that country must prize the power of spiritual motivation.

I would hope that this message—that spirituality is a source of vitality—will be brought to the attention of civics classes and courses in government.

Herein lies the answer to the quest for the source of greatness in each individual and in the nation he must assist in guiding.

Corrupting influences can so easily destroy the power and life of a nation. On the contrary, each nation must be infused with high moral and civic virtues in order to conquer the forces of evil which are so apparent and to meet the several challenges which lead to greatness.

Our young people, then, must be enlightened on this truth. Their ideas and ideals must be set on solid foundations so that they may find the answers being sought and, in return, establish a basis for those who will follow them.

In this manner, vitalized nations, such as our own must indeed be, will be receiving that stabilizing and energizing force from an inexhaustible source—spirituality. Indeed, through such a process, our young people will see the reality of the dreams they so properly dream.

World Refugee Year

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. MCNAMARA. Mr. President, July 1, marked the beginning of World Refugee Year.

Gov. G. Mennen Williams, of Michigan, who also is chairman of the nationalities division of the Democratic National Committee, has issued a statement describing the meaning of this designation. I ask unanimous consent that Governor Williams' statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON WORLD REFUGEE YEAR BY GOV. G. MENNEN WILLIAMS, CHAIRMAN, NATIONALITIES DIVISION, DEMOCRATIC NATIONAL COMMITTEE

World Refugee Year, starting July 1, is for Democrats a worldwide extension of what we have long been working for, through the Democratic Party, and particularly through the nationalities division.

It was the Displaced Persons Act of 1948, and the firm leadership of President Harry S. Truman, which enabled Americans to truthfully say that we, in our generation, had carried forward the great traditions of the founders of our Nation, who came here themselves as refugees from tyranny abroad,

and vowed that America should always hold out a helping hand to victims of injustice from whatever place they might come.

Our party has been traditionally the party of the immigrant. That is as it should be, and as it always will be. Our national platform commits us to keeping America a nation that shall ever be the land of hospitality and asylum for those seeking freedom, opportunity, and escape from oppression; and the coming months, set aside for observance as World Refugee Year, should be a time of challenge for us, as we work to enact new immigration laws that will not erect unfair and discriminatory barriers against the people of any race or nation, to provide opportunity for admission of our fair share of the thousands of new refugees from Soviet and other tyrannies, and to appropriate funds to contribute to the relief of those for whom we cannot find homes.

It is only through such action that we can live up to the high standards of Thomas Jefferson or a Franklin Roosevelt, and make of our land a place where, as the Psalmist wrote centuries ago, brethren may dwell together in unity.

Address of Hon. Grant Sawyer, Governor of Nevada

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. CANNON. Mr. President, the Disabled American Veterans of the State of Nevada have one of the best records in the country of conscientiously working for the interests of so many of our unfortunate former servicemen. Their work is well known throughout my State, and their services are recognized beyond the borders of Nevada.

Recently I was fortunate to attend the 11th Annual Convention of the Disabled American Veterans in Reno, Nev. I ask unanimous consent to have printed in the Appendix of the RECORD the speech made to this gathering by the Honorable Grant Sawyer, Governor of the State of Nevada.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GRANT SAWYER, GOVERNOR OF THE STATE OF NEVADA, TO THE DISABLED AMERICAN VETERANS, DEPARTMENT OF NEVADA, 11TH ANNUAL CONVENTION BANQUET, HELD ON JUNE 13, 1959, IN RENO, NEV.

It is a distinct honor to be here this evening as the guest speaker before this State convention of one of America's outstanding veteran organizations.

As I shall explain in a few minutes, I also feel indebted to you for extending to me this courtesy. I should like to talk, in general terms, about the philosophies and principles, and the problems and accomplishments of the Disabled American Veterans. First, however, I should like to make a few observations on the subject of ideals and responsibilities.

Patriotism, in the minds of millions of Americans, is a rather vague ideal. Few can define it in concrete terms, but most, nevertheless, believe that they have it within them, and I am sure that most do. But like many ideals, patriotism exists in various forms and to varying degrees, and because we recognize this, we naturally tend to classify patriotism into the different levels to which it is evident. As an example, throughout our country we recently held commemorative services. The day was, of course, Memorial Day. I pose this question: Why do we hold such services? Many might answer, "To honor our war dead," or "Because it is part of the customs and traditions of our Nation, a part of the heritage of a freedom-loving people." These would be correct and acceptable answers. However, those answers really tell us what we are doing, not why. I suggest to you that the real motivation stems from our recognition of the fact that the Americans whom we are so honoring exhibited the highest and greatest degree of patriotism possible: to die for, and in defense of, one's country.

We and our Government recognize that our responsibility to those great Americans can never be adequately and completely discharged, and that perhaps the most we can do is pay homage to them and provide for their loved ones, for they themselves are now in the care of the greatest benefactor known to man.

In view of the fact that we can never meet fully our obligation in this respect, we must then, in the interests of moral conscience and good government, determine related aspects or obligations which can be fully met and which are equally vital to the development and preservation of the American ideals and principles upon which our Nation is founded, and then proceed to meet such obligations.

This evening we need not dwell upon the determination of such obligations, however. Over the years, much of this groundwork has been laid for us, and for this evening I have selected one area of responsibility which meets the criteria I have just outlined. It is the area of mutual responsibility which exists between the American citizen and his Government. More specifically, I shall describe it as the Government's responsibility to protect the citizen and promote his welfare, and the citizen's responsibility to support his Government and to protect it against any and all aggressors.

Some of the greatest living examples of citizens who have met their part of this responsibility are before me this evening—Disabled American Veterans; an organization of distinguished Americans who, having recognized that they had fulfilled their obligation to the best of their ability, founded the Disabled American Veterans on the principle that this Nation's first obligation is to its war disabled veterans, and their dependents. This organization plays a vital role not only in services to veterans, but of perhaps even greater significance, in the preservation of good government through its continuous vigilance in seeing that the Government accepts and discharges its part of the mutual responsibility.

Perhaps we should examine that vital role for a moment in order to clarify the problems involved and to understand the interrelationship between a better America and the solutions to such problems.

One of the principal methods the Government uses in discharging its part of the mutual responsibility is the passing of legislation which will provide for the common defense or which will promote the general welfare, as expressed by our Founding Fathers in the preamble to the Constitution. We must remind ourselves that although we speak of the Government as an entity, we really mean elected Government officials, who, of course, are people. They must have, in order to make judicious decisions with respect to legislation, as much valid information as possible. For example, in the case of proposed or pending legislation the purported object of which is to promote the general welfare, a legislator needs to know the answers to several questions, such as, "Will it promote the general welfare? How will it? What is the ultimate objective? Is there a better way to accomplish the same objective?" The record readily shows that the DAV long ago recognized that through its organization it could provide the Government with valuable advice on legislation concerned with that segment of the general welfare which I shall call veterans' welfare, historically, the DAV has advocated, and correctly so, that the primary purpose of providing governmental benefits to service-connected disabled veterans is to enable them and their dependents to live in the American way. These very words were most recently spoken by your national commander, Judge David B. Williams, in a statement before the House Committee on Veterans' Affairs.

The basic point here is that the DAV has been instrumental in convincing the Government, and also private industry, that the disabled veteran does not seek, nor does he want, Government benefits which can be classified as charity. He seeks and wants only those benefits which will enable him to supplement his disability compensation through useful and suitable employment. In the last 10 years great strides have been made in educating private industry to recognize the principle that it is ability, not disability, that counts. Impetus in this respect has been given by the President's Committee on Employment of the Physically Handicapped, by similar Governors' committees in the several States, by procedures and programs in public employment offices, and of course by the veterans' organizations.

The efforts have not all been successful and the results are far from 100 percent satisfactory, but we must remember that education of the general public is usually a battle—a different kind of battle, yes—but the toughest kind, because even when you have all the weapons, all the supplies, all the transportation, all the communications, and all the strategy you need, you still can't expect immediate victory. You need patience, greater patiencee than you've ever known, because your objective is more difficult than the destruction or capture of a seemingly impenetrable enemy position. You have to change human thinking—thinking that is being done by minds affected, or perhaps I should say infected, with unwarranted fear.

But the battle is progressing, and the fear is being overcome. A few daring, pioneer employers, some of them themselves physically handicapped, began experimenting in a practically unexplored field—hiring physically handicapped employees in an effort to restore them to their former, and rightful, place in society as useful citizens who could once again accept their full share of responsibility and once again contribute their full share of production to the economy. From that point to today is history, and to you undoubtedly old history, but, as you know, better than I, the battle must continue. Even with an estimated 7 to 8 million handicapped gainfully employed in American industry today, there remain approximately 2 million more, who are capable of being employed.

I grant you that the battle is properly the battle of all Americans; but as in many battles, you must continue to fight, as you have always done, with or without adequate support. Replacements are beginning to arrive, but the front line must still be held in the interim.

In reference to my introductory remarks on patriotism, I should like to point out an interesting observation. You may recall that I said few people can define patriotism in concrete terms. I am not one of the few. I merely pointed out that we classify it in different levels, and I then proceeded to dis-

cuss the higher levels—the levels in which great personal sacrifice is involved. My observation is this: You have attained the higher levels of patriotism, as evidenced by your presence at this convention. Yet you did not stop there and say, "I have made my personal sacrific. My obligation is fulfilled." You continued unfalteringly to show, and you are still showing, your love of country. By advising the Government and by dispelling the general public's fear, you are actually helping the Nation to fulfill its part of the mutual obligation I mentioned earlier, and what else can this be called but another form, or level, of patriotism?

There is still another great accomplishment of your organization which I have not yet mentioned. I hesitate to classify it as patriotism because it is broader in scope and more profound in depth. It is the very core of moral, mortal life on earth. I am referring, of course, to your unlimited devotion to your less fortunate brothers. The 90 percent of you who are fighting your own battle for the right and the opportunity to become and remain gainfully employed, are at the same time fighting unselfishly to obtain the benefits necessary to provide the comforts of the American way of life to the 10 percent who gave their capabilities in order to preserve that very ideal.

Up to this point I have been speaking in general terms about this organization, its philosophies and principles, and its problems and accomplishments. I should like to make a few specific comments within the same framework.

I stated earlier that I felt not only honored to have been invited here this evening, but indebted to you as well. Had it not been for this invitation, I might not have had the pleasure and the opportunity to become informed with respect to much of the valuable, specific information about the disabled American veterans.

I hope I have not been presumptuous in talking about patriotism to this organization—the one organization composed exclusively of Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. I knew that the DAV was not the largest veteran organization, and that it never would be because less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities, but I did not know that your national headquarters in Cincinnati maintains the largest staff of any veteran organization of full-time trained national service officers. The fact that they have ready access to the official claim records of those claimants who have given them their powers of attorney should be of vital interest to the disabled veterans in Nevada, as well as to those thoughout the United States. On this very point, it is interesting to note that most of the 37,200 veterans whose disability compensation payments have been discontinued, and most of the 27,300 other veterans whose payments have been reduced since the institution of the claims review program of the Veterans' Administration, were not represented by the DAV or by any other veteran organization. During the next 3 years, the probable time required for completion of the review program, it is logical to assume that many more such unfavorable adjudications will occur. I therefore urge every disabled veteran in Nevada to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, as a protective measure.

The efficiency of your national service officer system is certainly worthy of note. For each dollar spent by the DAV on this system the return has been approximately $14.10 of direct monetary benefits for claimants. Of equal significance is the fact that although DAV costs over a 10-year period amounted to over $12 million, the organization defrayed these costs with no subsidy from the Government.

Another point, with respect to your national service officer system, which typifies your sincere interest in all disabled veterans is the fact that in the many thousands of requests received by your national service officers, expert advice was given in all cases, although only 10 percent came from DAV members.

I mentioned earlier that the DAV had long ago become aware of the sage advice it could give in the field of veteran legislation. This year for example, through various congressional delegations in the several States your organization has submitted recommendations on such important issues as hospitals, widows' pensions, protection of service connection after 10 years, the VA review program, disabled veterans preference in Federal employment, and reinstatement of national service life insurance, this latter issue being one which I feel particularly warrants consideration.

There are several brief conclusions which I should like to draw this evening. Every American, in Government and out, should become aware of the tremendous accomplishments of veterans and veteran organizations in fostering Americanism and good government, and every American can assist in the preservation of our heritage by supporting actively at least one organization which reflects his thinking and interests, whether such organization is a trade association, labor union, fraternal, religious, or civic association.

Veterans, in the interest of their own welfare and in the interest of the preservation of our democratic ideals, should belong to one or more of the service-giving, patriotic veteran organizations. All of America's disabled defenders who are receiving disability compensation have derived great benefit themselves, and have made innumerable valuable contributions toward better Government and a better America, through their official voice—the DAV.

Three Hundredth Anniversary of the Hopkins Grammar School of New Haven, Conn.

EXTENSION OF REMARKS

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. GIAIMO. Mr. Speaker, in October 1960, the Hopkins Grammar School of New Haven, Conn., will complete its 300th year of successful operation. This school is an institution renowned in New England, and throughout the United States, for its 300-year tradition of educational achievement. Indeed, the Hopkins School is almost unique in having maintained a near-continuous existence since 1660.

This continuity derives from a self-perpetuating board of trustees appointed in regular succession from the original trustees. For three centuries, the trustees, as named by Edward Hopkins or his successors, have endeavored to carry out the wishes of the founder by holding property in the name of the school and by providing high quality education for many hundreds of boys. Except for an occasional lapse of a year or two during the first century of the school's existence, New Haven has always had a school of some type founded on the Hopkins bequest.

Since 1660, Hopkins has grown from a simple colonial grammar school into the complex institution it is today—a school embodying the most advanced educational experience. In the beginning, the principal and almost only aim of the school was to prepare the boys of the New Haven Colony for college and, more specifically, for the ministry. The curriculum and equipment were equally limited. The colleges of the period required only a rudimentary knowledge of Latin and Greek, and these were the only classes offered at Hopkins. Furthermore, its facilities and equipment comprised only one bare room, a series of benches for the scholars, one teacher, and a motley collection of books.

In the years from 1660 to the present, the course and character of the Hopkins School have been adjusted to meet the greater requirements for college entrance, and to fulfill the broadening concepts of modern education. Although the founders and early schoolmasters might find it difficult to recognize their creation today, it is noteworthy that the Hopkins School has grown to maturity without losing either the identity or the characteristics of Edward Hopkins' original purpose.

The Hopkins Grammar School traces its origin to a bequest of Edward Hopkins, seven times Governor of the Colony of Connecticut and twice president of the New England Confederation. In his will, dated March 7, 1657, Edward Hopkins established an educational foundation, part of the funds from which were to be used for the establishment and support of a grammar school in New Haven.

Long a friend of John Davenport, the pastor and spiritual leader of the New Haven community, Hopkins shared his interest in education, and was sympathetic with the early attempts to develop a complete educational system.

Following the death of Hopkins in 1657, the terms of his bequests became involved in prolonged legal entanglements. In 1660, however, John Davenport, acting as executor of the estate, issued an order employing one Jeremiah Peck to teach the young boys of the Colony in a Hopkins Grammar School.

On the basis of New Haven Colony records, the school's historians have determined June 14, 1660, as the founding date. The first classes actually began in October 1660.

From the beginning of the Connecticut settlement until 1798, grammar schools were required by law. The New Haven leaders believed that opportunities for education should be made available to everyone, but theirs was not the modern idea of universal education. The early educators held that society was divided into something like classes and that within those classes, individuals could move from a lower level to a higher level. They maintained that elementary instruction must be given the average person and that he must be brought up to some lawful calling or employ-

ment. Hopeful youth, that is, those with ability and social status, were entitled to receive a higher education to fit them for leadership and public service.

The Hopkins School was not the only institution of its type founded in colonial New England, nor was it the only school founded upon a share of the Hopkins estate. It is unique, however, in that, unlike other schools founded under the will, it did not become a part of the city public school system.

During the century and a half which embraces the first period in the educational history of Connecticut, there was no great fundamental change in educational policy or action. After 1798, grammar schools were no longer required by law in the State, and Hopkins entered the second period of its history—a period of about 50 years. There was at that time a general movement to provide educational facilities which offered something more than the traditional Greek and Latin courses of the grammar schools. Numerous academies and schools were opened, but Hopkins, with only minor changes, continued as a private Latin or classical school and continued the use of its original name, "Grammar School." Continuance of the established system at the time when responsibility for higher education was being abandoned by the State was important in two ways: Such institutions as Hopkins may be said to have kept alive the interest in classical subjects, and to have preserved an important educational form. The public schools, which developed more from the old common schools than from the grammar schools, gave primary emphasis to the current popular conception of practical subjects. In the midst of this changing environment, Hopkins continued for some time as a one-man classical school. Perhaps one reason for the continuance of the classical curriculum was the presence of Yale University in New Haven, furnishing an immediate demand for boys educated in the classics.

During the last half of the 19th century and the early part of the 20th, the curriculum offered at Hopkins underwent a gradual but important transformation. More and more of the so-called modern courses were added, although much of the classical program was retained intact. It is interesting to note that the catalog of about 1860 states:

> The classical and modern studies are so arranged that at the end of 4 years the student may find himself prepared to enter college and "no more."

The emphasis on "no more" is in the catalog. The 1915 catalog, however, includes a statement almost revolutionary as compared with the earlier attitude:

> Yet any real fitting school must also be a finishing school. The courses at Hopkins therefore aim to fit boys for life as well as for college. To this end it provides for a threefold training: physical, mental, and moral. This training is based on the fundamental principle that the ultimate goal of all education is to train the individual for a life of service to the community which he may be privileged to serve.

Several attempts to integrate the Hopkins School with the New Haven High School were made during the latter part of the 19th century. The various committees were unable to reach agreement, however, and Hopkins retained its independent position outside the New Haven public school system. This is the curious and unique result of the history of a colonial grammar school started as a town enterprise. Perhaps it is due to the union of two conditions: an endowment, and its close association with Yale in New Haven.

In 1925, there was what one might call a refounding of the Hopkins School: first, the adoption of a country day school idea, made possible by the new location acquired in that year; and second, the adoption of the contract assignment plan for individual work. In making these changes in educational approach, Hopkins joined a group of private schools whose endowment and position enabled them to lead the way in testing and applying the best educational thought of the time.

The contract system of study was designed to provide a method by which each boy might progress at his own rate. Necessity for such a development was recognized in 1857 when the rector, Mr. James Whiton, provided for a flexible course of 3 or 5 years depending upon a boy's ability and previous training.

Throughout all the changes brought by the 300 years of its existence, Hopkins has kept the original and primary character that it inherited from its founders—that of a school to prepare boys for college. Terms in which its aims are expressed and methods by which they are accomplished have been modified many times. As long as the school retains its vitality and vision they will probably be modified again and again to meet the changing conditions of social and economic life.

In the early days educational training emphasized means to ensure salvation, obedience to the law, and preparation for public service. Today, Hopkins Grammar School emphasizes social leadership, character training, development of the reasoning powers to the individual's fullest capacity, all based on a foundation of cultural training. The Hopkins School today is a place to learn the great end and real business of living. In preparing young men for the serious business of life, it is faithfully carrying out the injunction which Edward Hopkins gave in his bequest:

> Breed up hopeful youths for public service of the country in future times.

Our New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial about the wonderful area of New England which appeared in the Chelsea (Mass.) Record on July 2, 1959:

OUR NEW ENGLAND

New England is a wonderful area which, all too frequently, is taken for granted by New Englanders. Many companies and industries in the six States hide their shining light under the proverbial bushel basket instead of sounding a Yankee bugle call to signal the unmatched, abundant resources and achievements of all New England.

Like all progress, New England advancement cannot come by itself. It must be promoted and it will continue only with concerted efforts by all facets of our society.

To that end, the Record is joining with scores of New England daily newspapers in an unusual cooperative effort to boost our region. Each month during the second half of 1959 the newspapers will publish an advertisement with the theme "The new New England" to inform our readers about the national importance of the region's leading industries.

The public service advertising campaign was prepared by the New England Council regional economic organization, in cooperation with the New England Daily Newspaper Association and the New England Weekly Press Association.

Connecticut Gov. Abraham A. Ribicoff, chairman of the New England Governor's Conference, has issued the following statement:

"Your organizations are to be commended strongly for cooperating with the New England Council in promoting the new New England advertising program.

"A program reminding the citizens of New England of the many positive aspects of the economy of the six-State area can have far-reaching benefits. This series should give New Englanders a better understanding of the importance of our industries, and I hope that other advertisements dealing with other aspects of the New England economy will be prepared.

"The Governors of the New England States salute the New England Council for initiating and preparing the advertisements, and we are grateful for the public service attitude shown by the New England Daily Newspaper Association and the New England Weekly Press Association."

The Record is proud to participate in promoting New England. But in the final analysis, each citizen must be a salesman for his community and State and the great region in which he lives.

Let's "talk up" New England. And while you are at it, sell yourself on your region, if you need to.

Young Democrats Support Home Rule

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. EDMONDSON. Mr. Speaker, President Nelson Lancione of the Young Democratic Clubs of America has called to my attention a resolution passed unanimously at the most recent meeting of the National Committee of the Young Democratic Clubs of America placing that fine organization on record in support of home rule for the District of Columbia.

Mr. Lancione points out that Young Democrats throughout the Nation have supported the principle of home rule in the District of Columbia just as they were in the vanguard of those who, for many years, campaigned for statehood for Hawaii and Alaska.

Mr. Speaker, I believe that every Democrat will be interested in this Young Democratic Clubs of America resolution on home rule for the District of Columbia, and I should like to make this resolution a part of the RECORD at this point.

RESOLUTION ON HOME RULE FOR THE DISTRICT OF COLUMBIA UNANIMOUSLY PASSED BY THE NATIONAL COMMITTEE OF THE YOUNG DEMOCRATIC CLUBS OF AMERICA, MIAMI BEACH, FLA., APRIL 1959

Whereas the residents of the District of Columbia are denied both a voice in their own local governmental affairs; and in the choice of a national Government; and

Whereas this works an unfair denial of the basic rights of citizenship to these residents and, furthermore, place an unfair burden on the whole United States by requiring an already overburdened Congress to devote time to purely local legislation; Now, therefore, be it

Resolved, That the National Committee of the Young Democratic Clubs of America favors the granting of self-government and of voting in national elections to the residents of the District of Columbia; and be it further

Resolved, That the National Committee of the Young Democratic Clubs of America specifically urges the Congress of the United States to enact in substance, the Bible bill (S. 659), during the present session of Congress as the fulfillment of the first step in the full grant of the voting franchise to District of Columbia residents.

The Louisiana Library Commission

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, during my years of service with State government in Louisiana, and especially while occupying the position of State budget director, I was able to observe the splendid work and great accomplishments of the Louisiana Library Commission under the directorship of Miss Essae Martha Culver. It has always been a source of great satisfaction to me to have been closely associated with this great work for Louisianans, and I was happy to see Miss Culver's accomplishment rewarded by the recognition granted her by naming her as recipient of the 1959 Lippincott award. I commend the citation to the attention of my colleagues:

NINETEEN HUNDRED AND FIFTY-NINE LIPPINCOTT AWARD CITATION (APPROVED BY AMERICAN LIBRARY ASSOCIATION AWARDS COMMITTEE)

During a lifetime of service, Essae Martha Culver has provided the world of librarianship with a remarkable and inspired example of library leadership. Her profound influence on library development in the State of Louisiana clearly exhibits the work of a consummate librarian—one who has brought to the task administrative genius, political acumen, and a measureless capacity for sustained effort.

Miss Culver's interest and leadership in all phases of library endeavor are attested by the breadth of her accomplishments. In the public library field she organized a statewide library service, originating for the task a demonstration method which has greatly influenced library development both in this country and abroad. She was instrumental in developing a strong school library program throughout the State and in establishing a library school at Louisiana State University. She built a poor and inadequate State commission library into the highly efficient, effective, and magnificently housed Louisiana State Library of today.

As president of the Louisiana Library Association, of the Southwestern Library Association, of the League of Library Commissions, and, finally, of the American Library Association, Miss Culver has demonstrated a level of library statesmanship which is an inspiration and challenge to all members of the profession.

Today, as the library function becomes ever more essential to the common good, it is significant to note that the life and work of Essae Martha Culver testify to her belief in a philosophy of librarianship dedicated to the living and to her deep understanding of the human heart. It is fitting that her unique and distinguished contribution to librarianship be gratefully recognized in the form of the Joseph W. Lippincott award.

Resolution of William E. Sheridan Police Post No. 1059, American Legion, Brooklyn, N.Y.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the William E. Sheridan Police Post No. 1059, American Legion, Brooklyn, N.Y., at a regular monthly meeting held on May 26, 1959:

Whereas the worldwide Olympic games are conducted to promote understanding and good will among the nations of the world; and

Whereas the International Olympic Committee, at its recent meeting, has voted to disqualify Nationalist China from the Olympic games to be held in 1960, and in its place has accepted application from the so-called Republic of China; and

Whereas Nationalist China is, and has been for many years, an ally of the United States and other freedom-loving peoples of the world; and

Whereas the so-called Republic of China has been known to be, and is in fact, under the direction of a tyrannical regime, keeping millions of people enslaved by brutal force; and

Whereas the same Republic of China has repeatedly refused to reveal the whereabouts of American prisoners-of-war known to be held in Red China; Therefore be it

Resolved, That this convention, through the State and National conventions, petition the International Olympic Committee to reinstate Nationalist China as a participant in the forthcoming Olympic games; and be it further

Resolved, That this convention go on record as opposing the entrance of Red China in the Olympic games of 1960; and be it further

Resolved, That if said petitions are ignored, said county, State, and national bodies of the American Legion campaign to have the U.S. Olympic team withdrawn from the Olympic games of 1960 and to request those persons who normally support the U.S. Olympic team to withhold their support until Nationalist China is reinstated to its former position with the International Olympic Committee and is again permitted to participate in the Olympic games of 1960.

A Statement in Support of a Bill To Extend Benefits to Certain Civilians Who Participated in the Construction of the Panama Canal

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. NIX. Mr. Speaker, in all the history of man there have been few engineering wonders more imposing than the construction of the Panama Canal in terms of obstacles overcome and scope of achievement. The building of the pyramids represented, possibly, an even more miraculous conquest of seemingly insuperable problems; but certainly the erection of monuments to royal conceit was of less enduring popular benefit than the fashioning of a world utility which serves the physical and cultural needs of men of all nations.

In some respects, the difficulties confronting our canal diggers were more awesome than the trials imposed upon the artisans of the Pharaohs. "Yellow Jack" and malaria had made Panama a pesthole for centuries; and when the French Canal Co., under Ferdinand de Lesseps, attempted to cut through the isthmus, the brave attempt was doomed by these twin scourges. But the Americans, armed with new medical and sanitary techniques, damned the mosquitos and ultimately transformed a death trap into a relatively pleasant work area. It was then that American ingenuity and know-how was able to confound the skeptics—who were numbered among the best scientific minds throughout the world—by performing herculean feats of excavation and construction. Some of our own skeptics had conceded that a canal might be built in 20 or 30 or 50 years; to the delighted amazement of most Americans, the project was completed in less than 10.

Just as Casey Stengel could not have won all those pennants without, as he so quaintly put it, "all them ballplayers," the canal would never have materialized without the truly heroic services of thousands of American workers, skilled and otherwise. To date they

have received comparatively little recompense for their magnificent contributions. In 1915 Congress handsomely rewarded officers of the Army, Navy, and Public Health Service—38 Stat. 1190. It was not until 1944—58 Stat. 257—that any appreciable benefits were extended to civilian officials and employees, and these were limited to those civilians who were citizens of the United States and were engaged with, or employed by the Isthmian Canal Commission or the Panama Railroad Company on the Isthmus of Panama for 3 years or more during the construction period from May 4, 1904, to March 31, 1914. For the man who served for as much as 3 years and not more than 4 years, an annuity of 40 percent of his average annual basic salary, pay, or compensation was to be extended.

Such an annuity, it is true, was to be paid for the remainder of the recipient's life; but inasmuch as salaries for foremen, for example, ran as low as $75 per month, Uncle Sam was not going broke in rewarding these men who risked their lives in situations that sometimes were almost as perilous as combat.

In the present bill, we ask only that the time limit be reduced to 2 years. Any 2 years of service, and especially those years before yellow fever and malaria were wiped out, are deserving of perpetual recognition, expressed in tangible form.

Water Development

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the North Dakota Wildlife Federation annual convention on June 7, 1959:

RESOLUTION 2

Whereas the Small Watershed Flood Prevention Act, commonly referred to as Public Law 566 authorizes the Secretary of Agriculture to carry out water development projects designed to minimize flooding of agricultural lands; and

Whereas such development may include land use practices designed to increase water absorption of soil, channel deepening, and straightening, establishment of retention dams, and others; and

Whereas there does exist, in our area, many natural water reservoirs whose potential for flood water storage should be utilized: Now, therefore, be it

Resolved by the North Dakota Wildlife Federation meeting in annual convention in Williston this 7th day of June 1959, That the Soil Conservation Service, designated as the Secretary's agent in this matter, be urged to place more emphasis upon land use practices designed to increase soil permeability and the storage potential of natural reservoirs and less emphasis on development of floodways and costly retention dams; be it further

Resolved, That the secretary be instructed to transmit copies of this resolution to the Secretary of Agriculture, the Chief of the Soil Bank Service (Mr. Don Williams), Gov. John Davis, and to the members of the State's congressional delegation.

The Delaware Story

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. McDOWELL. Mr. Speaker, the part Delaware played in the signing of the Declaration of Independence was interestingly related by Dr. John A. Munroe of the University of Delaware in the Wilmington Morning News, Wilmington, Del., on July 4, 1959.

I include the article here for the information of my colleagues:

THE DELAWARE STORY OF JULY 4 AND DELAWARE'S PART IN THE DECLARATION

(By John A. Munroe)

The Fourth of July has become the center of a number of myths—that is, of a number brought down from the past and not known to be true. In fact, a lot of the Fourth of July myths are known to be false.

The main myth about the Fourth of July is that on this day in 1776, the Americans declared their independence of Great Britain. Actually this event occurred on July 2, when Congress passed a resolution moved by Richard Henry Lee.

The words of it are in the Journals of the Continental Congress under the July 2, 1776, dateline: "*Resolved,* That the United Colonies are, and, of right, ought to be, Free and Independent States; that they are absolved from all allegiance to the British crown, and that all political connexion between them, and the state of Great Britain, is, and ought to be, totally dissolved."

The great debate on independence had occurred in Congress a day earlier—on July 1. The chief debaters were John Adams, for independence, and John Dickinson, against. Dickinson was no Tory. He was then the only Member of Congress with a commission in the Army. His argument was that this was not the time for a declaration. It might cause more bloodshed than was necessary, he thought; it might get in the way of peaceful negotiations.

After the debate on July 1, the Congressmen voted, one vote to a State. Several States opposed the independence resolution or did not cast a vote. Delaware was one. Since its two Delegates present, Thomas McKean and George Read, did not agree, Delaware could not vote. McKean, son of a Scotch-Irish immigrant, was decidedly anti-English and for immediate independence. Read, also an immigrant's son, was a close friend of Dickinson and of a more peaceful disposition than McKean.

There was a third Delaware Congressman who was absent on July 1. This was Caesar Rodney, Kent County landowner, Speaker of the General Assembly, commander of the Delaware Militia, public servant extraordinary.

McKean knew Rodney would also vote for independence. So, he sent a message to him, urging him to hurry to Philadelphia. And thereupon Caesar Rodney took a ride.

Caesar Rodney's ride is the subject of a whole set of myths. They find their expression in the statue in Rodney Square.

For one thing, it is sheer chance if the figure on the statue looks anything like Rodney looked because no contemporary portrait of him exists. As a bachelor, he had no wife and children to demand an oil painting to hang in the ancestral halls.

Besides, he was not very handsome and probably did not relish the thought of looking at himself. "He was the oddest looking man in the world," John Adams said, with "a head no bigger than an apple; yet there was wit, fire, and humour in his countenance."

His appearance was also marred by a cancer of the face. As he grew older he hid the ravages of the cancer behind a patch.

As to the horse—well, Rodney may have ridden a horse to Philadelphia. There is some evidence that he did, and also some evidence that he set out by carriage. Maybe he used a carriage part of the way and rode a horse the remaining distance. Dover to Philadelphia is a long ride by night in a thunderstorm—and we know there was a storm on the night of July 1.

The inscription on the statue has Rodney rising in Congress to vote on July 4. Probably the incident it described occurred on July 2, and Rodney's ride occurred on the night of July 1.

A romantic tale is current which has Rodney setting out from Lewes and involves a flirtation with Delaware's reigning belle, Mary Vining, and the loyalty of an old servant. I read it as a boy in "Once Upon a Time in Delaware," a book I love. So far as I know there is not the least truth in this tale. Someone—probably someone before Katharine Pyle—made up the story to garnish the truth.

Other Rodneys lived at Lewes, but not Caesar. He was a Kent County Rodney. He had been in Sussex—and probably in Lewes recently—at the head of some militia who had put down a Tory outbreak, and this was a reason he was not in Philadelphia at Congress. But he seems to have returned to his Kent farm before going to Philadelphia.

Nor did Rodney's ride decide the question of independence. The independence resolution had enough votes to pass anyway. But mere passage wasn't enough. Congress wanted a show of American unanimity in defying Britain. Other States had also voted against independence on July 1. But in one way or another they were all brought into line by July 2, so that the independence resolution was passed by the unanimous vote of those States present and voting. (One State delegation kept quiet and didn't vote on July 2.)

It was to bring Delaware into line with the other States that Rodney rode to Philadelphia "through thunder and rain" on the night of July 1. Besides the cancer, he also suffered from asthma, and however he rode we can sympathize with the patriotism that led an asthmatic, cancerous Delawarean to take a 75-mile ride on a wild July night.

The Liberty Bell did not ring out—or ring in or ring anywhere—on July 4. Not even on July 2.

Probably it did ring on July 8 when the Declaration of Independence was read aloud to a great crowd of people in the statehouse yard (the park behind Independence Hall). Nobody mentions this bell in particular, but but people did leave record that all the bells in the city rang out, even the chimes in old Christ Church—the only specific reference.

The Liberty Bell had been placed in Independence Hall in 1751. The building was then the capitol or statehouse of Pennsylvania, and the bell did proclaim liberty—the liberty of free-born Englishmen. It was not widely known as the Liberty Bell nor as a symbol of independence until the days of the abolition movement.

The signing of the Declaration of Independence by the Members of Congress probably did not occur on July 4, but later, in

August, after a fine parchment copy was prepared. Some Congressmen signed the Declaration who had not voted for independence; some who had so voted did not sign.

What did happen on July 4, 1776? On that day Congress adopted an explanation of its action 2 days earlier—its resolution that the former Colonies were now free and independent States. The explanation is called by us the Declaration of Independence.

This document, the Declaration of Independence, was written by Thomas Jefferson and adopted by Congress with a few minor changes. Claim that people other than Jefferson (Thomas Paine, for instance) wrote the Declaration seem to be absolute nonsense. Within a year or two the phrases of Jefferson's Declaration had so won the hearts of Americans that the day of its adoption became to them the Independence Day. And so be it.

The strangest fact in the history of July 4 is that the two Congressmen who were most important in the July 1776 decision for independence both died on the same day—and exactly a half century after the original Fourth of July. John Adams, who made the main speech, and Thomas Jefferson, who wrote the main document, both died on July 4, 1826.

Effort by State Department To Renovate Foreign Service

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 8, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article written by Mr. George W. Oakes, entitled "State Department's Efforts To Renovate Foreign Service Finds 55 of 81 Heads of Missions Career Officers," published in the Washington (D.C.) Evening Star of June 28, 1959. I commend it to all my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT'S EFFORTS TO RENOVATE FOREIGN SERVICE FINDS 55 OF 81 HEADS OF MISSIONS CAREER OFFICERS

(By George W. Oakes)

Although reforms are constantly advocated for the State Department's Foreign Service, improvements that have taken place since World War II are substantial.

Today a capable career officer has probably a better chance than ever before to become an Ambassador.

Fifty-five of eighty-one heads of diplomatic missions abroad are now careerists.

The latest effort to improve the caliber of our Ambassadors is a campaign being led by Senator FULBRIGHT, Democrat, of Arkansas, chairman of the Senate Foreign Relations Committee, who feels strongly that outsiders should be appointed only if they possess distinct and obvious qualifications for the particular post.

Senator FULBRIGHT says that unless the United States puts such a policy into effect at once the Russians "will be convinced that we are not really serious about our foreign policy, and they will regard us as amateurs in this most important business of foreign affairs." He points out that two world wars have occurred in this century because Germany did not correctly estimate U.S. intentions.

Therefore it is essential that our ambassadors abroad not give a misleading impression through their own inability to comprehend and carry out our foreign policy. In Senator FULBRIGHT'S view, ambassadors who lack adequate knowledge of the problems with which they are dealing and so cannot gain respect abroad not only encourage Soviet miscalculation but also do tremendous damage to U.S. prestige in the country to which they are accredited.

The Foreign Service Officer Corps of the State Department, from whom career ambassadors are selected, now numbers about 3,500, of whom more than 300 are women.

In the opinion of State Department officials, approximately 80 percent of our ambassadors should be drawn from career officers. Neither the State Department nor Senator FULBRIGHT would wish to exclude qualified outsiders from such posts, because both recognize the danger of the Service becoming too ingrown if all ambassadors were career officers. In addition, such extremely successful noncareer Ambassadors as David Bruce in Germany and Ellsworth Bunker in India have a valuable stimulating effect on the Service.

Senator COOPER, recently an Ambassador in India, believes that his effectiveness was enhanced because his political background enabled him to speak more frankly to the political heads of the government to which he was accredited. Some observers would like the State Department to draw more heavily on the universities for outside ambassadorial talent.

PRIVATE INCOME PROBLEM

Although the financial expense of representing the United States abroad is often cited as a reason for appointing noncareerists, there are at most only half a dozen posts today that require a private income to supplement the Ambassador's salary and allowances. These are London, Paris, Rome, Madrid, Bonn, and Rio. Some career Ambassadors believe that even Rome, or more likely Bonn, could be adequately handled without private means.

However, much depends on the financial housekeeping ability and requirements of the particular individual or family as well as the kind of a job he sets out to do.

In New Delhi, for example, Former Ambassador CHESTER BOWLES returned some of his official expense allowance of $5,000 to the Federal Treasury. On the other hand, one of his noncareer successors had to draw on his own financial resources.

Mr. BOWLES, who is now a Representative from Connecticut, has pointed out that "if the American Ambassador to France were to live within his official budget ($27,500 annual salary plus $20,000 tax-free expense allowance) he would have to close up the 50-room Embassy residence, move into a smaller house and cut his entertainment in half (in 1956 he entertained 7,000 guests at 40 receptions and 3,000 more at 200 luncheons and dinners, plus 8,800 American visitors on July 4). In addition, he would have to refuse invitations from many important diplomats or accept their invitations and not reciprocate and invite visiting Congressmen to go with him 'Dutch treat' to restaurants on the Left Bank."

The problem of making ends meet bothers most foreign service officers, especially the younger ones in the lower grades who have little, if any, expense allowances. In contrast to conditions before World War II, most younger men in the service today are married and have families so they are forced to entertain (often on $100 a year expense allowance) whereas the prewar batchelor wasn't expected to do so.

State Department officials consider that the entertainment allowance of all officers below the No. 2 position in our Embassies is too low. For example, the chief political officer in a major Embassy is likely to have only $500 a year for this purpose. Such an officer must entertain extensively to maintain valuable contacts—an essential part of his job.

SOME LEAVE SERVICE

Although few resign for lack of adequate expense allowances, some of the most competent foreign service officers get out when they are faced with the financial burden of educating their children, especially during the costly college years. In order to meet this problem, the Foreign Service has in recent years established various benefits. For example, if an officer is stationed at a remote post like Khartoum in the Sudan, where his children cannot receive a suitable education through high school, the Government will pay the entire tuition plus transportation charge of sending the child to the nearest adequate school.

It is estimated that about 1 percent of the service, including some of the best men, resign voluntarily—to some extent for financial reasons, but also because many, especially those in their first few years, discover that they or their wives do not like the nomadic and somewhat disciplined life. Some specialists in fields like labor, agriculture, etc., who had been serving in Washington and were forced to enter the service under the Wriston program, integrating all departmental officers into the Foreign Service, find that they are not suited to the more varied duties required overseas and often join academic or research institutions or foundations. Some of the ablest career officers quit because of frustration, a common complaint among Government officials.

In order to weed out the least capable members of the service, the Department is about to put into effect a new policy. Until now, the Foreign Service has not been up to full strength because of its expanding responsibilities since the war and hence had to retain many who have not achieved the desired standards. By practicing up or out, the Department will soon be able to promote more rapidly its more competent officers and thus improve the morale of the service. In general, veteran careerists believe the quality of our ambassadors today is higher than it was a generation ago, when promotion often depended more on social connections and private wealth than ability.

STILL NEED GOOD MAN

There is some question in the minds of top State Department officials who have spent all their working years in the Foreign Service whether the quality of those entering the Service from the universities is higher than it was a generation ago and whether it's harder to get into now. Our Foreign Service is still not attracting as many of the top-flight college graduates as are wanted—the type who before World War II entered the British Foreign Office. But more of such valuable talent is applying to the State Department today than a few years ago.

In the last fiscal year the department appointed 104 new officers. Out of 5,194 who took the written examination in December, 1956, only 191 passed both it and the oral examination. In contrast with 30 years ago when much specific knowledge on varied subjects was required, today's examinations are more general. The best college preparation for the Foreign Service is a liberal arts education.

The State Department has been making a vigorous effort in recent years, by sending experienced foreign service officers to college campuses throughout the country, to recruit applicants on a broad basis so that the incoming officers will be as representative as possible of all segments of the Nation. Officials have found that the increasing number

of college courses in foreign affairs as well as compulsory military service have tended, as have books like "The Ugly American," to encourage young men with a sense of public service to consider a career in the State Department.

Roads, Money, and Politics

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article on the Federal highway program which appeared in the Boston Daily Globe on July 1, 1959:

ROADS, MONEY, AND POLITICS

The opening of the new fiscal year in Washington finds the President and Congress still profoundly at odds over the huge 17-year Federal highway program, which was launched just 3 years ago. The problem is money, which is running short, and where to find it.

If the construction rate on this continent-wide system of interstate roads to meet the Nation's growing traffic problems and strengthen defense communications is to be maintained, there must be either new taxes or possible recourse to Treasury borrowing. For the Highway Trust Fund, set up under the original law to finance the Federal Government's 90 percent contribution to these road costs, is sorely depleted. It no longer keeps pace with the program.

The issue dividing the administration and the Congress assumes sharp immediacy for a very simple reason. In July and August, contracts have to be signed for the parts of the 41,000-mile interstate system scheduled for construction during 1960–61. This becomes impossible without prior assurance of the availability of Federal allotments to the various States for that period. Until the President and Congress reach agreement on the method of raising the money, no such allotments are possible. There are not sufficient funds.

This impasse has not arisen suddenly. Thrice within the past 2 months the President has urged Congress to accept his own solution, which is to raise the Federal gas tax from 3 cents to 4½ cents. The White House has even gone to the length of publishing statistics from the States, showing what the monetary loss would be for each of them were the Federal highway program to bog down for lack of money.

The President has also reminded Congress that the pay-as-you-go plan, written into the original law for these roads, was accepted by both Houses. The Highway Trust Fund is financed by receipts from Federal gas, oil, and tire taxes. That method of financing was suspended during the recession, a year ago, and the scope of construction was expanded to meet unemployment problems. The President insists upon a return to the original plan for the new fiscal year.

Though Mr. Eisenhower is finding strong support for his position among highway officials in the States, the Congress, attentive to the political implications of adding another 1½ cents to the Federal gas tax at a time when an election year looms and public sensitiveness to new taxation is only too obvious, refuses to agree with the administration plans for replenishing the trust fund.

"There will be no increase in the Federal gas tax," declares Speaker SAM RAYBURN, of the House, where revenue bills must originate. Given the power exercised by Speaker RAYBURN, and the strong Democratic majority behind him, it is fairly obvious that the hurdles blocking the President's plan are close to insurmountable.

What the majority party in Congress proposes, briefly, is that the temporary suspension of the pay-as-you-go policy last year, to counter recession, be extended over the new fiscal year also; and that shortages presently afflicting the Highway Trust Fund shall be met out of the general fund during the period. In the event that there is no budgetary surplus, this would mean deficit financing.

Whatever the political realities involved in this dispute, and they are admittedly genuine, the counsel of sound policy is clear enough. The citizenry wants and needs these roads. National defense requires them. The Congress found a pay-as-you-go policy completely acceptable for 1956 and 1957. If it was sound then, why isn't it now?

UNCLE DUDLEY.

Why I Am Casting My First Vote for the GOP in 1960

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. MUNDT. Mr. President, the South Dakota young Republicans recently conducted their 1959 essay contest on the subject "Why I Am Casting My First Vote for the GOP in 1960." David Olsen, of Rapid City, S. Dak., was judged the winner and received an all-expense paid trip to the National Young Republican Convention in Denver on June 17. Because he so ably outlines the goals of the Republican Party, I ask unanimous consent that his essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY I AM CASTING MY FIRST VOTE FOR THE GOP IN 1960

Decision 1960 will be good for our people if we cast our vote Republican. In the Republican Party I see the best possibility for conserving the formula of greatness for our Nation. What then is the formula of greatness and its test for the success of any political system?

The true conservative believes in the conservation of the system under which the individual may grow and prosper, and where government may answer the legitimate needs of the people through progressive action. The essence of progress is improvement, not mere change. Change without improvement inevitably weakens the system under which greatness of our people has evolved. Unfortunately, many political charlatans prescribe our salvation irresponsibly in the name of political expediency without regard to the formula of greatness.

The standard to be applied to any program was established by the philosopher of Springfield on the threshold of greatness in 1854: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves."

The formula and its standard must be consistently employed by our party to insure real progress and to conserve our system. It must be applied with confidence in the people and respect for their ability to make proper decision at the polls. When the Republican Party has met this challenge, it has won. When it has failed and has used the standard of Lincoln as an excuse to prevent change, it has lost.

As practitioners of government Republicans understand the formula of greatness. They are in stride with the people. I'm voting Republican in 1960.

America's Role To Maintain World Peace

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address which I made at the 72d annual convention of Brith Abraham, national fraternal order, on June 30, 1959, at the Concord Hotel, Kiamesha Lake, N.Y. The address follows:

AMERICA'S ROLE TO MAINTAIN WORLD PEACE

Gratefully, I accept the American Public Service Award of Brith Abraham. I say gratefully because we understand each other. The words I use will have the same meaning to you as they have to me. I need have no fear that here my words will be twisted and tortured to serve a purpose alien to my own mind and soul. Thus, it is an honor and a happy moment for me. We have had good fun, good companionship, good food, and consequently, it would be a very simple matter to turn away from the issues—the terrible issues—of war and peace that lie before us. But face them we must, with the knowledge that no peace can be built on a foundation of golf balls. We, all of us, wish we had the answers that we could place neatly on a platter and hand around like souvenirs. But I do know where the answers do not lie. They do not lie in ambition, political intrigue, greed, deprivation, of civil liberties and civil rights. The answers do not lie in a world split into fragments of "haves" and "have nots." The answers do not lie with the timid, the self-hunters, and the smug. Perhaps the answer does lie in the sum-up of freedom. I mean to include in such a word greater freedom in international trade; greater freedom of immigration and emigration of people; greater freedom in travel; greater economic freedom in the world of finance; greater freedoms in individual liberties. These are positive and possible goals. All of these, and more, are contained in Franklin Roosevelt's "freedom from fear." This I believe to be the most important, the most significant role the United States can play in maintaining peace. There have been times within the last few years when the United States has seemed to be caught up in a paralysis of fear. The administration bespeaks its fear of and distrust in our expanding economy within our land, and the symbol of its fear has been the budget. We have been afraid to face the race issue squarely; we have been afraid to face our own needs in housing and in education; we have been afraid to face our needs for an ade-

quate defense; we have yielded again and again to expediency in international relations. And all these fears add up to a public image here and abroad of a country, though the richest in the world, both in a material and a spiritual sense, whose muscles have grown flabby and whose tissues have shrunk.

I have been laboring incessantly to liberalize our immigration laws with its abominable taint of national origins, that races from northern and Western Europe should be favored over races from southern and Eastern Europe. In my book, one race is as good as another, one man is inherently as good as another. Why should Italians, Poles, Hungarians, Roumanians, Greeks be punished with low immigration quotas, whereas the British, Irish, and German are favored with high quotas. And the irony of it all is that Britain and Ireland get most of all permissible quota numbers and do not use them. Those numbers go to waste.

But why do we fear the Latins and Slavs and welcome the Nordics? They all make good citizenry. In debates on immigration one often hears the hollow boastings of one's forebears from England or Ireland. I say, "He who serves his country needs no forebears."

In the conventions of the Daughters of the American Revolution, the ladies prate of their nobler blood. I say, "Take your nobler blood to the marketplace and see what it will buy." Indeed those who seek to make their place in the sun had better not bask too much in the shade of the family tree. I am not so much interested whether you were born in America. I only ask, "Was America born in you, America with its deals of the freedom and dignity of man?"

And see how we cringe and fear when some of our citizens refuse to conform. Let one speak out and utter the unorthodox and he is immediately castigated and labeled a pariah. Instead of welcoming differences, we demand conformity. We fail to heed that only on the anvil of debate and discussion can the truth be forged. Nature has no more made flowers in the garden alike than she has molded the minds of men alike. Justice Oliver Wendell Holmes said, "The theory of our Constittuion * * * is an experiment, as all life is an experiment. * * * While that experiment is part of our system, I think we should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death."

There are many colors in the spectrum. Thus men can be no more forced to think and speak alike than you can compel all colors to become black or white or beige.

And, unfortunately, there is developing in this country a mob psychology of fear against anyone who avails himself of what the Constitution guarantees to him, freedom from enforced self-incrimination by pleading the fifth amendment.

It is these types of fear which barricade the road of progress; that build up walls that keep out the light.

Then there is the timidity in the White House in facing up to responsibilities anent civil rights. I can assure you that kind words and benign sentiments will never cause the Southland to accord the Negro his due.

Before my committee appeared many witnesses actually testifying to the evil my civil rights bill would create. Not a single attorney general and Governor of a Southern State, not a single officeholder of any Southern State, not a single southern Congressman or Senator who appeared was willing to admit that the Brown desegregation decision of the Supreme Court was the interpreted law of the land. Each one claimed the 14th amendment guaranteeing equal rights was a nullity and need not be obeyed. Coupled with such intransigence, we have had the so-called southern manifesto signed (with a few exceptions) by every Member of both Houses of Congress from the Southland, in effect declaring resistance to integration and tearing into tatters the Constitution's 14th amendment. State after State in the Bible Belt passed laws requiring closing all public schools rather than integrate them. Clinton and Little Rock still stick in the Nation's eye like cinders. The South remains unregenerate. Southern gentlemen hold their traditional way of life sacred and will not change. They thumb their noses at the Constitution.

Assuredly the Constitution cannot mean one thing in the North and something else in the South. Citizens at all points of the compass must respect that document, otherwise we have chaos.

The White House must, in no uncertain terms, tell our southern friends that civil rights are color blind.

Despite this brooding darkness of fear at the White House, I, as chairman of the Judiciary Committee, have already had approved by my subcommittee a strong civil rights bill with teeth in it. I expect the full Judiciary Committee to approve the Celler civil rights bill of 1959 on July 9 and have it up for debate in the House soon thereafter.

If we seek stability and the status quo, then we have surrendered to delusion though we have, since 1949, spent $22 billion, in joint military effort. Going back still further, since July 1940, including the new Mutual Security Act which has passed the House, we have spent $49 billion through World War II, and $75 billion since then in one form of foreign aid or another, and yet we cannot rest secure. While this foreign aid is one channel toward peace, I fear most strongly that it is by no means the only one. We have ignored to our own danger and to that of the countries allied with us the example we could have set before the world of a thriving, self-confident democracy which would have stilled a lot of rattling sabers. We have supported foreign governments on the fallacious theory of assuring their stability rather than recognizing the natural desire for change in reform that burns alive in every thinking man.

In the new Mutual Security Act which passed the House on June 18, a new opening sentence has been added, a sentence which I believe to be of the greatest significance:

"(a) It is the sense of Congress that peace in the world increasingly depends on wider recognition, both in principle and practice, of the dignity and interdependence of man, and that the survival of free institutions in the United States can best be assured in a worldwide atmosphere of expanded freedom."

It is not enough, I have said throughout the years, merely to be against. We are against communism, yes, with the very best of reasons, but what are we for? And, so, we in the United States in a major bill designed to maintain the peace have said what we are for. Now let's prove it through our own actions at home as well as abroad to insure the greater freedoms of people as individuals. Let no one suppose that our policies on immigration, on civil rights, on civil liberties, on free trade, on adequate housing, on employment opportunities, on education, are not potent weapons in a war, cold or hot; or in a peace, just and honorable. We have seen U.S. policy geared to military aid in a manner that has provoked animosities. I believe that the committeee report which I have cited above of the Foreign Affairs Committee has, with great sensitivity, put its fingers on some of the wrong turnings we have taken:

"On occasion, our military assistance has been granted for political reasons with unfortunate results. These results have occurred when we have tied our prestige and influence to the dubious tenure of a dictatorship subsequently overthrown, helped to burden an unstable new government with an excessive military load, adding to internal economic strains, and helped to inflate the political power of a local military group, handicapping the country's initial efforts toward democracy. It has sometimes diverted internal efforts away from tasks which the committee believes to be essential, such as growing rice, eradication of malaria, building schools, clinics, and roads."

As a result, we have seen mischief grow not only in the Latin American countries; not only between countries like India and Pakistan, but in an area of tremendous strategic value, viz., the Middle East. Relations between the Arab nations and Israel have been exacerbated by the emphasis on military aid to the Arab nations. The results we have seen for ourselves of the internal dissension between the Arab countries We have neither made friends, nor gained respect of the countries we sought to appease. I do not mean by that that the United States has not been a friend of the little democracy of Israel. It has. It has given generously to Israel. It has stood for awhile firm on freedom of passage through the Suez Canal, though we cannot say with certainty that that firmness will continue.

In March of 1957 the President reassured President David Ben-Gurion that: "Israel will have no cause for regret having thus conformed to the strong sentiment of the world community." These words were said after Israel withdrew from Sinai. How will it be now when the United Arab Republic has resumed seizure of Israeli cargo? The prestige and the authority of the United Nations, as well as the United States, are now at stake. And as one commentator has put it, "Where does a nation go if the United Nations is powerless to defend it from attack?"

The Secretary General, Dag Hammarskjold, is now at Cairo trying to persuade that megalomaniac Nasser to allow that Danish vessel to proceed through the Suez with its Israeli cargo. I hope he will succeed. I doubt that he will. Israel is prepared to send through an Israeli ship under the Israeli flag.

I'm convinced that Israel will be compelled to bring the matter before the Security Council. Our State Department does not wish the matter to boil over into the Council. It still thinks it can diplomatically resolve the difficulties. I doubt that—you can no more make Nasser see reason than you can make hair grow on my bald pate. You can no more make Nasser abide by the previous ruling of the Council that the Suez must remain free to the traffic of all nations and free of political controversy than you can make a tiger eat grass or a bull eat meat.

Nasser is brash enough to claim that Israel is still at war with Egypt and he can seize Israeli property as a prize of war. Of course, two can play that game. Israel can and will seize Egyptian ships if Nasser persists in his brigandage and piracy, and in so doing, world public opinion would applaud Israel.

Again, I thank you for the privilege of being with you and for this opportunity to speak my mind and heart.

Gen. Walter Washington Williams, Lone Survivor of the War Between the States

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. DAVIS of Georgia. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following telegram sent pursuant to a resolution adopted by the Georgia State Convention of the Veterans of Foreign Wars meeting in Atlanta recently to the lone survivor of the War Between the States, Gen. Walter Washington Williams, of Houston, Tex.

JUNE 29, 1959.

Gen. WALTER WASHINGTON WILLIAMS,
United Confederate Veterans,
Houston, Tex.:

In compliance with unanimous action by resolution of the Georgia Veterans of Foreign Wars of the United States, in 17th annual convention assembled in Atlanta, Ga., June 28, 1959, it is an honor and a privilege to send you expressions of our fraternal admiration and comradeship. Many of our members are grandsons and great-grandsons of those who wore the gray and some who wore the blue.

CHARLES A. MORAN,
Americanism and Loyalty Chairman.

American Legion To Withdraw Support of 1960 Olympic Games

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Preston J. Moore, national commander of the American Legion, on their position regarding the recent action of the International Olympic Committee:

WASHINGTON, D.C., June 17, 1959.—"The apparently Communist dominated Membership Committee of the 1960 International Olympic Games, now meeting in Geneva, has made suckers out of the U.S. group on that committee, headed by Avery Brundage," said National Commander Preston J. Moore here today.

"The Reds for the third time within a week have accomplished just what they wanted in dealing with the National China Olympic group. This time Brundage has indicated that not only has National China been rejected, because they quite properly insist on using the word 'China' for group identification, but that the admission committee is now entertaining the North Korean team, as possible participants in the 1960 games," the commander continued. Here is conclusive proof.

"The Korean Ambassador to the United States charged today that the International Olympic Committee plans a secret meeting with representatives of the North Koreans in Hong Kong to arrange their participation in the winter Olympics here next year.

Ambassador You Chan Yang said his government heard rumors of the proposed Hong Kong meeting from refugees and recently sent Yong Shik Kim, its Minister to France, to Switzerland to check with IOC President Avery Brundage of Chicago. He said Brundage told Minister Kim he "intended to meet with North Koreans in Hong Kong and our protests were useless."

Yang said he had written Brundage this would be "a slap in the face to the 16 nations" which fought for the U.N. in Korea and would constitute "de facto recognition" of the Pyongyand regime.

Commander Moore made the stand on this issue of the American Legion quite clear.

"Unless the Chinese Nationalist Olympic team is admitted to participation it will be necessary for me to request the 17,200 American Legion posts to cease cooperation and financial support for this series of games. The American Legion was proud to cooperate with Gen. Douglas A. MacArthur and solicit its 2,756,000 members to help in every way, with money, and individual aid, to send our Olympic team into action. This we cannot do, if by doing so we expose U.S. amateur athletes to Russian and Red satellite subsidized performance, with no hope of equal competition," said Commander Moore, adding, "This is no new move by the commies. Why and how Brundage and his group continue to ignore the storm signs is beyond me. In January 1959, in Lima, Peru, during the amateur international basketball tournament the Reds had a taste of blood, they apparently haven't forgotten, and we have. They beat a pick-up U.S. Air Force team, that had been sent down to Lima, as the collegiate period prevented a regular college group from participating. And here is what completely baffles me about the stand Brundage is making now. After winning over the U.S. Air Force team the Russians refused to play the National China basketball team and thus lost the series by default. No, a man in Avery Brundage's position, should be alert enough to the wiles of the commies, to meet such a threat in the Olympic games, head-on, without aiding and abetting such obviously a Russian ruse.

"Brundage, and perhaps his team, should be pulled out of the game. This is standard procedure in any sport. During the past week they have dropped the ball three times:

"First, by permitting National China's Olympic team to be rejected because they used the word "China" to identify their group.

"Second, by permitting a second rejection after the National Chinese resubmitted 'The Republic of China Olympic Committee,' as their games name symbol. This is itself a terrific concession as 'Nationalist China' is accepted by the United Nations.

"Third, by standing aside while the membership committee makes solicitious overtures to the Red Chinese government, for obviously subsidized athletes from North Korea to participate in the 1960 Olympic games.

"It is because of these reasons I regret that it will be necessary for the American Legion to withdraw all support and active participation in raising funds for the 1960 International Olympic Games."

Here's Your Report, Mr. President

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. WILEY. Mr. President, we recognize that in our legislative processes, it is important that we keep "tuned in" to the thinking of the public on issues confronting the country.

We all appreciate that it is not possible, with the heavy congressional schedule, to keep as close to the grassroots as would be desirable under conditions more ideal.

Nevertheless, it is most helpful, from time to time, to review polls of public opinion that reflect a consensus of what the American citizen is thinking about the issues confronting the Nation and about his future.

Recently the magazine This Week conducted a poll of its 45,000 readers from all over the United States. The poll was designed to encourage individuals to select national goals for the next 10 years. The results of such a broad cross section of American thinking, I believe, merits the attention of Congress.

The July 5 edition of This Week contained an article entitled "Here's Your Report, Mr. President."

According to the article, the idea behind the poll was to obtain an idea of what the American public is thinking about long-range goals—as suggested in the President's state of the Union message.

At this time I would like to quote briefly the 10 major goals selected by Mr. and Mrs. John Q. Public.

They are as follows:

1. Control inflation.
2. Raise human standards.
3. Reduce crime and labor racketeering.
4. Improve international relations.
5. Reduce taxes.
6. Provide stronger national defense.
7. Improve interfaith and interracial relations.
8. Provide college education for all gifted students.
9. Stabilize population.
10. Conserve our natural resources.

In addition, the article contained reflections of grassroots thinking on a variety of these and other aspects of our way of life.

I ask unanimous consent to have excerpts of the article printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

HERE'S YOUR REPORT, MR. PRESIDENT

Reduce crime and labor racketeering: "Gangsterism, corruption—our citizens know these evils exist but pretend all is well and do nothing." (S. M., Atherton, Calif.)

Improve international relations: "We need a real effort to understand other nations which do not agree with us. We need greater faith in God—and in humanity." (Rev. F. D. B., Green Lake, Wis.)

Reduce taxes: "I am bothered by * * * the attitude of spend, spend, spend, without thinking of who has to pay for the spending." (A. R., Sharp Park, Calif.)

What troubles America: Here are some typical comments on "the thing that bothers me most about America today" in the opinion of This Week readers.

"A lowering of moral and ethical standards in business, labor, and social life." (Mr. and Mrs. H. P. W., San Jose, Calif.)

"* * * The preference for the inferior: ignorance over knowledge, superstition over fact, bigotry over fairness." (V. M. W., Houston, Tex.)

"* * * Lack of national discipline and moral responsibility." (L. S. LaF., Hollywood, Calif.)

"* * * Lack of national purpose." (R. S., Rapid City, S. Dak.)

"• • • How much we have progressed in science and how little we have progressed in dealing with each other." (Miss W. S. B. Warrensburg, Mo.)

Of all the general comments, the one that cropped up most often expressed irritation at the philosophy of "something for nothing" Many readers used this phrase.) H. B., of Chicago, puts it this way. "Too many people want the good life without exerting the effort to earn it."

One of the shortest comments is also one of our favorites: Under "the change which would do most for a better America," this reader wrote, "Less luxury, more work." It was signed simply, "Old lady."

Scenic Wonders of the State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. NEUBERGER. Mr. President, a most impressive communication about the scenic marvels of the State of Oregon was published in the Oregon Daily Statesman, of Salem, on July 3, 1959. The author of this letter is Mr. Howard D. McGeorge, of New Jersey, who has been visiting his son's family in Oregon. Mr. McGeorge compares Oregon in grandeur and majesty to Switzerland with its celebrated Alps. Yet, Mr. McGeorge actually claims that, to compare Oregon with Switzerland, is a greater compliment to Switzerland than to Oregon.

In this centennial year of Oregon statehood, I ask unanimous consent to have the communication on the editorial page of the Oregon Daily Statesman by Mr. Howard D. McGeorge printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EASTERNER TERMS OREGON "SWITZERLAND OF AMERICA"

To the EDITOR:

For the past month I have been visiting my son's family here and have been given an opportunity to see something of Oregon. Perhaps you would be interested in hearing some of my impressions of your State.

Two facts concerning it have particularly impressed me: (1) That nature has been extraordinarily—to me unsuspectedly—lavish in its gifts to Oregon. (2) That the people of Oregon have done so little to exploit these gifts.

My own home is in the east—the "far east" I might say, for I live in New Jersey. New Jersey has no apologies to make in the way of beauty; but for grandeur our people have to go elsewhere. Switzerland has been their first choice. Switzerland's grandeur—its Mount Blanc, over 15,000 feet high; the Jungfrau and Matterhorn only slightly less; Switzerland's lovely lakes and its lovely valleys cannot be belittled. We think it the ultimate in praise to say of any place that it is "the Switzerland" of its region. This summer hundreds of thousands of Americans will flock to Europe and few, whatever their limitations of time or money, will omit Switzerland from their itinerary.

I hope I will not be thought to exaggerate when I say I think that to call Oregon the Switzerland of America would be a greater compliment to Switzerland than to Oregon. There is little that Switzerland has that cannot be found in Oregon, and Oregon has much, certainly, that cannot be found in Switzerland.

Oregon, to be sure, could contain six Switzerlands and still have space to spare, though this in itself, from the standpoint of attractiveness, is, of course, no special advantage. But there are other respects in which Oregon greatly surpasses Switzerland.

Its mountains, almost as high as Switzerland's tallest, are infinitely more beautiful. Of all the world's mountain's only Fujiyama can be classed with Mount Hood or Mount Jefferson for sheer beauty, and there are many others in or near this State no less impressive. None of Switzerlad's rise into the blue sky with such breathtaking loveliness of form and color.

And Oregon's forests. Where in Europe can such trees be found—and in such numbers? Where else in the civilized world is there such a procession of mountain ranges—of range after range, forest clad, rising almost perpendicularly from lovely valleys? Where else, plunging down between walls of these giant trees, is there another Koosah Falls? Where is the fertility of soil to nourish such trees, to produce flowers of such unparalleled size and variety? Where will you see fields of lava, recalling so vividly the pyrotechnics nature once lit up the heavens with?

I ask myself, how comes it that Oregon has failed to acquaint the rest of their countrymen and the world with the marvels of their State—with all these wonders and such others as the river that bursts from the side of a mountain as the goddess Minerva is said to have done, full grown, from the head of Jupiter?

Disregarding the pleasure and inspiration of which their countrymen would be the beneficiaries, do your people not realize the wealth that would pour into Oregon if its treasures were better known—the multitude of tourists who would come here to enjoy their loveliness, many to stay? Where, Mr. Editor, is Oregon's Chamber of Commerce, to let these extraordinary attractions go unsung?

HOWARD D. MCGEORGE.

Pacific Coast Tuna Industry in Serious Trouble

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. ENGLE. Mr. President, one of the country's most colorful maritime enterprises, the Pacific coast tuna fleet, is being put out of business because of the mounting importation of frozen tuna from Japan. In fact, Japan is in a position to completely flood our market. This is a result that no one wants to see occur. The canners who buy their tuna from the Japanese fishing fleet are sensible enough to realize that if our own tuna fleet goes out of existence they will be at the mercy of the Japanese fishing fleet. I know that they do not want to see that happen. Efforts are going forward now to find ways and means to keep this important and useful industry in California alive. The situation is described in some detail in an article in the Wall Street Journal of July 7, 1959, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, July 7, 1959]

MOUNTING IMPORTS FROM JAPAN, MINIMUM PAY GUARANTEES KEEP U.S. TUNA FLEET IN PORT

(By Ronald J. Ostrow)

SAN DIEGO, CALIF.—One of the country's more colorful maritime enterprises—the tuna clipper fleet—is being buffeted by financial storms.

Because of mounting imports of frozen tuna from Japan, prices canners offer for the domestic catch fall well below the wage guarantees demanded by unions that man the U.S. ships.

As a result, San Diego's tuna clippers are dwindling. The vessels currently number 125, down from 170 in 1955 and 214 ships in 1952, according to the American Tunaboat Association, which has headquarters at No. 1 Tuna Lane of the waterfront here. The vessels are also known as bait boats because they use the hook-and-line method of fishing.

As far as the rest of the country is concerned, the plight of the clippers has only limited importance. In fact, the price of a can of tuna is nearly 22 percent lower than the price 10 years ago, thanks largely to the flow of fish from foreign ports. But passing of the clipper in this harbor city is a small waterfront tragedy involving what was once a romantic and thriving industry.

Boats are transferring registry to Peruvian and Puerto Rican ports, where they are able to hire cheaper labor to serve as crews. Other boats are selling out to foreign ownership. Still others are equipping themselves for a different type of fishing and few clippers are being built to replace those tuna boats that go down at sea.

Berths available aboard the tuna craft—the industry term for the fleet's total employment at a given date—have fallen steadily from a record of 2,730 in 1952 to 1,880 last year and an estimated 1,550 today, according to the Tunaboat Association. The tunaboats expect to receive between $18 million to $19 million for their catch this year, compared with a record $39.2 million in 1954.

North of here, at Terminal Island, which is close to Los Angeles, the purse seiner fleet also is feeling the pinch.

Purse seiners generally are smaller than the clippers. They use nets to snare schools of tuna, rather than lure the fish with live bait and catching them with unbarbed hook and line, the method of the clipper.

The seiners in the last year have had record catches. But the absence of profit in tuna fishing has kept the purse seiners tied to their Terminal Island berths for more than 7 weeks now.

RED INK OPERATION

Tuna clippers still trying to make a go of it here are falling ever more deeper into the red. "You can safely say that 20 percent of the fleet is operating entirely at the sufferance of their creditors," says Harold F. Cary, general manager of the American Tunaboat Association. There hasn't been a departure in the 125-craft fleet since mid-May.

The tuna industry itself is split as to the basic cause of the clipper demise. Boat owners and the union representing crews that sail the ships and do the fishing con-

tend Japanese imports that force the price down are the chief ill. Cure them through a dose of formal or informal controls, and the industry will thrive again, according to their argument. Tuna canners who buy the boats' product, however, disagree; they assert the tunaboats' troubles are due largely to the fixed wage guarantee demanded by the unions that man the craft.

Figures kept by Uncle Sam show that imports of fresh and frozen tuna, nearly 90 percent of them from Japanese boats, soared to a record 234.7 million pounds last year. This was more than 20 times 1949 imports of 9.9 million pounds. In contrast, the tuna catch by domestic-flag vessels fell to 339.2 million pounds from the record 1950 catch of 391 million pounds. So far this year, imports of the fish are running about double those for 1958, says the American Tunaboat Association.

Five years ago, a ton of yellowfin—the higher priced of the two most common varieties of tuna—brought up to $350 when the clippers unloaded their catch by San Diego. But then the price-depressing inroads of Japanese competition began to be felt. By this time last year, the domestic price had sunk to around $270 a ton.

"In September 1958, the Japanese price f.o.b. Tokyo was $276 a ton; ours was $275," recalls Mr. Cary. This month, the Japanese price has hovered around $220 a ton, while the domestic price has approximated $240 a ton.

A freight and handling charge of about $70 a ton must be added to the Japanese figures for U.S. delivery. Because American-caught tuna carry with them no such freight costs, the Japanese fish are actually selling for more per ton. But both canners and the American Tunaboat Association explain that the Japanese tuna usually is gilled and gutted before delivery, yielding cannery customers 12 to 15 percent more tuna per ton than the American fish. In addition, the Japanese tuna arrives graded according to size, a treatment the domestic catch doesn't receive.

Gilbert Van Camp, Jr., president of Van Camp Sea Food Co., a major canner based in Long Beach, maintains elimination of guarantees demanded by unions that sail the tuna craft would afford the tunaboats a new financial lease on life. "Admittedly, it's pretty tough for the domestic tuna fleet to compete with imports, but they'd have a better chance of survival if they could get their crews to go along without the guarantees," he says.

The two AFL–CIO unions that man the vessels here, the Cannery Workers and Fishermen's Union and the International Association of Machinists' Tuna Clipper Engineers, in September 1957, demanded and received from reluctant boat owners minimum wage-base guarantees.

PAY BASED ON VOYAGE'S OUTCOME

The fishermen's pay is based on the financial outcome of a voyage; they get a specified share of the boat's revenue after deduction of certain trip expenses.

The guarantees—$270 per ton of yellowfin sold and $230 per ton of skipjack, a smaller tuna which sells for about $40 a ton under yellowfin prices—create a minimum price for the seller at fish auctions sales, critics say. If the price the boat receives for its load falls below the guarantee levels, the boat owner is expected to make up the difference out of his own pocket to determine the crews' share of the revenue. If the price tops the minimum level, then the terms of the contract apply, which currently call for the crew to receive 48.13 percent of the revenue, less trip expenses allowed by the contract.

"By simple mathematics, we figure that the guarantees are necessary to give us a decent yearly wage, around $6,000," says Lester Balinger, secretary-treasurer of the Cannery Workers and Fishermen's Union. He emphasizes that the calculation "is based on at least 290 days of fishing a year, which we won't come anywhere near this year."

With the current pre-ton price of $240 for yellowfin falling well below the $270 a ton guarantee, and faced with mounting repair and maintenance bills, the tuna clippers are tying up at the docks here, rather than go to sea for what they believe would be a sure loss.

Address by Dr. Wernher von Braun Before the Greater Boston Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. McCORMACK. Mr. Speaker, Dr. Wernher von Braun, Army Ballistic Missile Agency, U.S. Army Ordnance Missile Command, Redstone Arsenal, Ala., on May 27, 1959, gave a very important and significant address to the members of the Greater Boston Chamber of Commerce, Boston, Mass. In his address, Dr. von Braun said, among other things:

We are confronted by an aggressive competitor whose ultimate objective requires that he exploit his advances to counter and defeat our progress, not only in science, but in every phase of our social order. Those of us who are engaged in missile and space programs feel this challenge keenly.

Dr. von Braun also said:

It would be utterly fallacious to assume that catching the Russians in the race for space will rid us of Ivan's shadow. The Soviet challenge is political, ideological, cultural, economic and educational—it is as broad as human society and social organization. For Communism aims at world domination and nothing short of that.

Dr. von Braun further said:

I believe we must awake America to the danger and then, as a united country, get to work.

He then referred to his own experiences under a dictatorship, when Dr. von Braun said:

Having lived under a dictatorship equally as cruel, equally as ambitious as is the Communist state, I know the price of lost freedom. I don't want my children or yours to pay it because we failed to recognize the real threat in all its proportions.

In my extension of remarks I include the excellent and dynamic address, to which Americans should pay heed, made by Dr. von Braun on May 27, 1959.

ADDRESS BY DR. WERNHER VON BRAUN, ARMY BALLISTIC MISSILE AGENCY, U.S. ARMY ORDNANCE MISSILE COMMAND, REDSTONE ARSENAL, ALA., GREATER BOSTON CHAMBER OF COMMERCE, BOSTON, MASS., MAY 27, 1959

Boston has been called the "Hub of the Universe." It would therefore be logical, it would seem to me, that the citizens of this capital of the solar system should have more than a passing interest in the activity that has been taking place in those regions during the past 2 years. The officials and citizens of this Solar Capital must know what is going on in the wards and precincts if they justify their title as the "Hub," and in this case the wards and precincts are in outer space.

We have another center of space activity in the South that would like to share with you this honor. It is the headquarters of the Army Ordnance Missile Command at Huntsville, Ala., or better known in those parts as "Rocket City, U.S.A." There the missile systems were designed and fabricated which launched the Explorer Earth satellite January 31, 1958, the first launching of its kind in the free world. There the Juno II rocket was built which launched the Pioneer IV space probe March 3, 1959—the probe which passed the Moon and went on to become the first made-in-the-U.S.A. satellite of the Sun.

When I was invited to speak in Boston, my first thought was of the great universities in and around it and of their great teachers and splendid scholars. So naturally, confronted and surrounded as I am here in Boston by such highly educated fellow citizens, and inadequately prepared, I am uncomfortably reminded of the abiding truth of those words that never occurred to Horace but which were uttered by Adlai Stevenson in his Godkin Lecture at Harvard: "Via ovicipitum dura est," or, for the benefit of my fellow engineers: "The way of the egghead is hard."

When we attempt to forecast the dynamic progress of technology the problem is equivalent to measuring a turbulent river whose volume increases geometrically by incessant rainfall. Scientific research is a self-generating and self-multiplying phenomenon. A new discovery contributes to vertical building of the scientific structure. It also brings with it opportunities for still more advances. Each new discovery in fundamental or basic science opens up challenges for the applied scientist and the engineer to interpret the results, to devise means of utilizing them in new products, which enrich our standard of living. Science and technology create the momentum which carries them forward at ever-accelerating rate. Consequently it is extremely difficult to predict in an absolute sense the direction in which developments may occur, the kind of end products which may stem from them, or the magnitude of the industrial effort they may spawn.

Practically everything we utilize is the result of research and development in the past century. Every modern convenience derived from some type of research, usually performed without regard to its application by men who simply wanted to know more about the universe. This was true of the automobile, the airplane, the clothes we wear, the food we eat, the electrical miracles which brighten our homes.

One major area of technological advance which has caught the imagination of mankind is, of course, the development of rocket propulsion and guidance systems which will enable man to explore the limitless reaches of outer space. The field is moving at such pace that the danger is in underestimating the possibilities.

A second major area, dating back approximately 20 years, is that of nuclear energy. Since the first atomic bomb was detonated a little over 13 years ago, many developments have taken place. Within the year the first American commercial generating station powered by nuclear energy has been put into operation. This should be regarded as the forerunner to the use of power systems which tap the vast resources available in the radioactive process. We have seen nuclear energy applied to the propulsion of submarines and we can expect increasing use both of the direct application of nuclear energy and the

indirect utilization of many of its by-products.

Still a third area is automation, the application of machines to control other machines and so to achieve automatic functioning. In its simplest form automation has been applied in the mass production techniques of the automotive industry. More recently it was introduced in the electronics industry where numerous assemblies utilized in radio, television, and other devices are automatically assembled, tested, packaged, and shipped.

These are but three of the numerous areas of technological advance but they will suffice to emphasize its far-reaching influence and to point up the unpredictability of the scientific future.

Now I will attempt to relate the technological and the human equations because of my sincere belief that we are so mesmerized by our successes we may overlook, and therefore fail to prepare, for the satisfactory resolution of human problems generated by our progress. If we forget man in our enthusiasm for science and technology inspired by their awesome achievements, we shall not long survive to enjoy them.

One of the major differences between the demands of space, nuclear, and automation industries from our industrial environment of the past lies in the quality of labor force that is needed. The textile industry I cited earlier required labor capable of learning certain routine operations. Very little understanding of principles was involved. With the introduction of automation, more and more routine processes will be performed by machines. These machines need to be controlled and maintained. Their operators must be prepared by a higher level of training—the requirement is more technically and scientifically educated men at the lower levels of industrial strata.

Another difference will be found in the kind of scientists and engineers required. There is evil in over-specialization; there is basic need for broad, general scientific training. The man trained in a narrow scientific or engineering field may find himself by the technological developments of tomorrow. Flexibility has become the must in professional preparation. We shall require increasing numbers of men thoroughly trained in the fundamentals of science so that they can adequately pursue the developments of the future and adapt themselvevs to new and unforseen requirements as they arise.

As automation replaces unskilled labor the productive capacity of the individual will expand. Inevitably this will lead to a shorter workweek and more leisure time. We must assure that leisure time does not become wasted time, a trend that is all too apparent at present. Almost every individual who is to feel at home in the world, who is to function as an intelligent member of society, will in the coming years require a broad basic understanding of the physical sciences as surely as the adult today must know how to drive an automobile and twist the dials on a TV set. This knowledge will be fundamental to the art of technological living. We must reach out to the largest possible segment of our population and create an understanding of the literature, philosophy, history, and sciences which form the foundations of our culture.

I believe there is a great challenge in this situation confronting the people of Boston. If, against these readily foreseeable requirements, we pause to take stock and determine what we are doing now and its relation to what will be required of us, I suspect that we will discover some problems which should be attacked with a sense of genuine urgency. By defining the problem, we can set about developing a solution before it becomes overpowering. There is an equally valid, perhaps even more pressing reason for action now. We do not enjoy a monopoly on technology. We are confronted by an aggressive competitor whose ultimate objective requires that he exploit his advances to counter and defeat our progress, not only in science, but in every phase of our social order.

Those of us who are engaged in missile and space programs feel this challenge keenly. The implications have not been thoroughly grasped by all of our people if we are to judge by the apparent disinterest they manifest. Evidently they are happily convinced that we are supreme in all fields and will assuredly overtake the Russians in their bid to exploit outer space for the purposes of communism. We enjoy superiority in many areas, to be sure, but we must ask how long that situation will continue and look into those areas where the assumed superiority does not exist.

It would be utterly fallacious to assume that catching the Russians in the race for space will rid us of Ivan's shadow. The Soviet challenge is political, ideological, cultural, economic and educational—it is as broad as human society and social organization. For communism aims at world domination and nothing short of that.

The threat has become all the more dangerous because of the impressive technological capability built up by the Soviet state through a massive educational program designed to provide an immense reservoir of scientific and engineering skills. While the long-range purpose of the Russian space drive may be shrewdly masked under the guise of scientific effort, I believe they intend to expand their sphere of influence in every direction. If we do not aggressively pursue an equally determineed United States space flight program, with an even greater sense of urgency, we may in the not distant future find ourselves surrounded by several planets flying the hammer and sickle flag.

How much time remains is indeed a moot question. It is not the scientist whose research paves the way, or the engineer who translates his discovery into useful hardware, who decides when, how and for what purpose space will be exploited. Those decisions and their realization depend primarily upon the level of effort committed to the tasks. I can translate that into how many dollars and cents are made available to carry on the work. In the Soviet Union those decisions are made by a few men concerned only with their dreams of expanding Communist influence. In this country we can muster the resources only if the people themselves want such a program, will support it over whatever period of time is required, and will sacrifice if necessary to achieve the desired ends.

I believe we must awake America to the danger and then, as a united country, get to work. Having lived under a dictatorship equally as cruel, equally as ambitious as is the Communist state, I know the price of lost freedom. I don't want my children or yours to pay it because we failed to recognize the real threat in all its proportions.

In sharp contrast with the Soviet scheme is the clear statement of the objectives of the United States voiced by President Eisenhower. He said that "we and other nations have a great responsibility to promote the peaceful use of space and to utilize the new knowledge obtainable from space science and technology for the benefit of all mankind."

A great deal has been done in little more than a year. Two agencies have been established to direct our space programs—the Advanced Research Projects Agency, which is concerned with space programs of military significance, and the National Aeronautics and Space Administration, which promotes the scientific exploration of space. All three of the armed services contributed to the International Geophysical Year by rocket experiments, satellite and space probe launchings.

Each of the vehicles hurled into space by U.S. rocket systems were small scientific laboratories equipped with highly efficient sensing and measuring devices and transmitters which reported back to earth receiving stations physical data about the spatial environment. An outstanding discovery is the Van Allen Radiation Belt, the doughnut-shaped bands of intense radiation activity, made possible by the explorer satellites and the pioneer probes launched by the Army team. We believe it will be possible either to steer a safe course around these bands or to provide the shielding necessary to protect a human passenger in a space vehicle from harmful radiation.

We have demonstrated highly efficient tracking and communications systems. Pioneer IV's signals carried over a range of more than 400,000 miles—the greatest span attained to date by any manmade communications equipment. We have demonstrated relatively simple techniques for the control of temperatures in orbital bodies. We have satisfied ourselves that micrometeorite showers do not pose a serious risk to space flight. More of these exploratory launchings will be undertaken in the coming months by NASA and ARPA.

I might mention one of the interesting aspects of our space investigations. The first Explorer satellite, which will continue to orbit for some years, has traveled approximately 150 million miles since it was injected into orbit from Cape Canaveral. If you weigh the cost of the project against the distance the satellite has traveled and the millions of additional miles it will cover, I think you will admit we have a means of transportation more economical than the family auto. My guess is that Explorer will do better than 500 miles to the gallon—the cost per mile will be reduced to about one-tenth of a cent.

Two major programs occupy the lion's share of attention currently. One is Project Mercury, the NASA man-in-space program, and the other is Project Saturn, the ARPA program to develop a booster supplying thrust energies in the order of 1,200,000 pounds or more—larger, I might add, than anything our competition has yet demonstrated.

The Army's contribution to Mercury will include firing several Redstone and Jupiter missiles to test the man-shielding capsule and we shall, before we complete our phase of the project, give one or more of the carefully selected and highly trained astronauts the benefit of a ballistic missile ride.

We are responsible to provide the Saturn booster, now in the early hardware stage. A multistage rocket system based upon this huge unit could launch a communications satellite providing instantaneous, worldwide relay of messages for the Air Force, the Navy and the Army. Far down the road can be dimly seen even larger vehicles, the stepping stones of a long-range program of human activities in space. There are many intriguing possibilities—a small fleet of satellites equipped with modern electronic recording devices could easily handle the entire mail volume of earth. Worldwide television and radio relay could become possible by the use of satellite relay stations. Weather observation and forecasting can become an exact science, providing savings in lives and property damages that would far exceed the cost of the service. No human mind restricted to earthbound concepts can possibly visualize all the wonders which may reward the intrepid explorers.

These brief glimpses into our present work and the future prospects of space technology

will not serve their purpose, however, if they are accepted as further assurance that all the problems have been eliminated. In my closing remarks, I want to point out some areas which deserve the attention of thinking people:

1. We must look to a solution of the human displacements caused by advancing technology. We must take back into the ranks of the useful and productive those whose preparation is inadequate and who now can find no market for their skills.

2. We must immediately recast our educational philosophy to anticipate the needs of the future, and thus avoid the same kind of dislocation on a much larger scale.

3. We must awaken our people to the total scope of the threat confronting them and the speed with which it is advancing in space.

4. We must refill the well of basic knowledge by increasing our research effort. We are not developing new information at the rate with which we are burning up and reworking our nearly exhausted store.

We are on the verge of a truly golden age of discovery and opportunity if we can proceed in peace without the menace of aggression in outer space. The only sure guarantee against that threat is to advance our programs with redoubled vigor for the purpose of establishing the supremacy of freemen in this new and limitless environment. The time will surely come when the geography of our sister planets will be as familiar as the swan-boat ride in Boston Common or the counter of Filene's basement.

It is disquieting to be asked "But what will all this profit us?" Such questions betray a lack of confidence and, even more serious, the kind of unenlightened approach which has hamstrung our progress in the past. No man can say with assurance what benefits will accrue from our discoveries. With Explorer we made a modest beginning. We have stepped onto a new, high road from which there can be no turning back. As we probe further into the area beyond our sensible atmosphere, man will learn more about his enviromnent; he will understand better the order and beauty of creation. He may then come to realize that war, as we know it, will avail him nothing but catastrophe. He may grasp the truth that there is something much bigger than his own little world. Before the majesty of what he will find out there, he must stand in reverential awe. May God give our Nation the humility and the strength to pass the acid test as man moves into the unknown.

Texas State Bar Opposes World Court

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. CASEY. Mr. Speaker, the Texas State Bar, at its annual convention on July 4, 1959, adopted the following resolution which was submitted by members of the Houston Bar Association:

Whereas a proposal to subject the United States to the compulsory jurisdiction of the Court of International Justice (commonly and hereafter call the the World Court) has recently been submitted to the Senate of the United States (S. Res. 94, CONGRESSIONAL RECORD, pp. 4510-4513), whereby if adopted this Nation would relinquish completely its power to determine unilaterally that any case brought against the United States in the World Court is exclusively within its domestic jurisdiction, and therefore wholly beyond the jurisdiction of the World Court; that power having been preserved to the United States by the Connally resolution of 1946 (S. Res. 196, 79th Cong., 2d sess.); and

Whereas the World Court is composed of 15 members or judges, of which 1 is a citizen of the United States and the others are nationals or citizens of Egypt, Nationalist China, Australia, Greece, Poland, France, Mexico, El Salvador, Britain, Argentine, Uruguay, Norway, Pakistan, and Soviet Russia; that is, 2 are from Moselm nations, 1 is a Chinese, 2 are Communists, 3 are from common law countries, 4 are Latin Americans, and 1 each is from Greece, France, and Norway, the President of the Court being a Norwegian and the Vice President from Pakistan; and

Whereas the World Court is a tribunal in no way bound to or guided by any definite rules or system of law such as the common law or the American system of constitutional law, and it is therefore entirely free, by the statute of its creation to follow to whatsoever judgment they may lead in any particular case, the whims and caprices engendered from time to time by national pride or interest, envy, greed, or actual hostility; in other words, the World Court is clearly subject to the criticism voiced by Thomas Jefferson when he wrote, "Let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution"; and

Whereas the jurisdiction of the World Court includes "all matters specifically provided for in the Charter of the United Nations or in treaties and conventions in force" (Statute, art. 36), and the Charter of the United Nations expressly excludes from its jurisdiction "matters which are essentially within the domestic jurisdiction of any state" (charter, ch. 1, art. 2, par. 7), nevertheless, one of the first actions of the General Assembly of the United Nations was, by vote, to override the contention of France that matters in controversy between its government and the people of Algeria were matters "within the exclusive domestic jurisdiction" of France, on the ground that Algeria was not a colony but was an integral portion of the Republic of France; and there is no reason to expect that the World Court or any other portion of the machinery of the United Nations may not likewise overrule any contention of the United States that any other matter is "essentially within its domestic jurisdiction" if this country should surrender its power, now expressly reserved, to determine that question unilaterally; and

Whereas it has been claimed that the Court's paucity of business (10 or 11 cases decided in more than 10 years) is due to the fact that few if any nations have submitted themselves unreservedly to the jurisdiction of the Court (those not so submitting unreservedly including the United States and all the Communist nations), although it may as readily be inferred that few if any countries are sufficiently imprudent, under the circumstances herein recited, to submit to the unpredictable judgments of such a tribunal questions that they may regard as being "essentially within their domestic jurisdiction"; and

Whereas relinquishment by the United States of the power to determine unilaterally that any case brought against it in the World Court is exclusively within its domestic jurisdiction would—

(a) seriously impair the sovereignty of the United States and of the several States composing it;

(b) effectively vest the power to amend the Constitution of the United States in a tribunal essentially foreign, not necessarily competent, probably political rather than juridical in its attitudes and decisions, possibly dominated by our enemies and therefore likely disposed to be hostile to the major interests of the United States; and

(c) unnecessarily and dangerously weaken and impair the ability of the United States to defend itself against enemy aggressors; and

Whereas, the proposal so made, and now pending before the U.S. Senate, is being vigorously supported (without, we think, an adequate understanding or appreciation of its reach on dangers) by many influential public officers, individuals and national organizations, who may succeed, in the absence of determined opposition, in having the said proposal adopted by the Senate; and

Whereas, the members of the State Bar of Texas are not only devoted to our State and National Constitutions and forms of Government, but are bound by oath to support and defend those Constitutions:

Now, therefore, the State Bar of Texas, in annual session assembled at Dallas, does hereby resolve:

1. That it does hereby condemn, as unwise, un-American, and extremely dangerous to posterity as well as to American citizens now living, the proposal contained in the Senate resolution mentioned above.

2. That a certified copy of this resolution be promptly sent to the President and Vice President of the United States, to each of the U.S. Senators from Texas, and to the president of the American Bar Association.

3. That each member of the State Bar of Texas is hereby urged to write, as soon as may be, to our Texas Senators urging them, as they love their country, to vote against the proposal, and to use their influence with other Senators to do likewise.

Nuclear Medical Training Program of U.S. Naval Medical School

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 8, 1959

Mr. NEUBERGER. Mr. President, while many people wring their hands over the grim threat of nuclear warfare, other people are actually attempting to do something useful and constructive if this most frightful of catastrophes ever should come to pass.

I have reference to the nuclear nursing and education program undertaken by the Department of Nuclear Medicine at the U.S. Naval Medical School in Bethesda.

We all realize that, if ever there should be wreaked upon the United States a cataclysm similar to that which struck the Japanese cities of Hiroshima and Nagasaki, every city would need skilled people highly trained in how to treat casualties of nuclear bombing—in other words, men and women and children who had suffered radiation burns of varying degrees.

I have been very impressed with the training program in nuclear medicine undertaken by the Naval Medical School at the National Naval Medical Center. Perhaps some of this interest stems from the fact that I, myself, have been treated therapeutically and prophylactically with radiation for cancer. Yet I am aware

that training in nuclear medicine involves not only care of patients who are taking radiation therapy for some disease, but also the possible protection of countless millions of Americans who might be caught in some atomic holocaust of international proportions.

There recently was presented at Chicago a symposium on training in nuclear medicine, nuclear nursing, and allied fields. Those of the Navy who conceived this challenging program were Capt. E. R. King, of the Naval Medical Corps; Lt. Comdr. L. Simon, of the Nurse Corps of the Navy; Lt. A. R. Nice, of the Naval Medical Service Corps; and Lt. T. G. Mitchell, of the Naval Medical Service Corps.

Mr. President, civilian defense will be without substance or meaning unless there are doctors, nurses, and medical technicians to treat the victims of nuclear attack. This means training in a highly complex and technical field. That is why I ask unanimous consent to have printed in the appendix of the RECORD the details of the symposium recently presented on nuclear medicine by Capt. E. R. King and his associates of the Naval Medical Corps.

I feel certain that many of my colleagues will share my favorable impression that such training and education is taking place far ahead of any emergency which might require these skills being put into actual practice.

There being no objection, the symposium was ordered to be printed in the RECORD, as follows:

A SYMPOSIUM ON TRAINING IN NUCLEAR MEDICINE AND ALLIED FIELDS

(By E. R. King, captain, Medical Corps, USN; L. Simon, lieutenant commander, Nurse Corps, USN; A. R. Nice, lieutenant, Medical Supply Corps, USN; T. G. Mitchell, lieutenant, Medical Supply Corps, USN; Department of Nuclear Medicine, U.S. Naval Medical School, National Naval Medical Center, Bethesda, Md.)

TRAINING IN NUCLEAR MEDICINE

During the past 4 years over 60 physicians have been trained in nuclear medicine at the U.S. Naval Medical School, Bethesda, Md. The training period has varied considerably. The candidates have been representatives of the three branches of the Armed Forces, the Veterans' Administration, the Public Health Service, residents in radiology from the medical schools in the Washington-Baltimore area, and physicians from eight foreign countries.

The course was originally planned for residents in radiology, but has been extended to residents in internal medicine and pathology. Physicians training in any other specialty would be favorably considered for admission. Practicing civilian physicians are not accepted as it is believed they may be trained in special civilian training programs in this field.

This discussion is based upon the above experience and presents our views concerning several problems connected with nuclear medicine training programs.

TRAINING IN NUCLEAR MEDICINE—TYPES OF PROGRAMS

1. One week course: For the (little) birds.
2. Two week course: For the (big) birds.
3. One month basic course: OK for introduction to problem.
4. On-the-job training: Inadequate—they get in the way.
5. Part-time course: OK if adequate—suggest 3–4 hours per week for 9 months, including formal training.
6. Full time 4 month course: This appears best to our group.
7. Full-time 1 year course: Too long, unless they take supplementary college courses.
8. Three year residency: Too long, impractical, if not impossible.
9. Two-three year college program, leading to Ph. D.: This is probably OK.

Summary—(1) 100 hours of training with about 25–30 hours in lecture is absolute minimum.

(2) Four months full time is maximum, unless candidate is working for Ph.D.

TRAINING IN NUCLEAR MEDICINE—16-WEEK PROGRAM

Basic science portion (6 weeks)

	Theoretical	Practical	Percentage of total
	Hours	*Hours*	
Radiological safety	0	14	6
Mathematics	30	0	14
Radiologic physics	44	61	48
Radiochemistry	8	10	8
Statistics	7	4	5
Radiobiology	14	0	5
Field trips and review (Saturday mornings)	22	0	10
Total	125	89	
Total hours	214		(1)

[1] Reduction of each 16 percent increment reduces course by 1 week.

Clinical portion (10 weeks)

	Lecture	Laboratory	Percent of total
	Hours	*Hours*	
Thyroid studies (and endocrinology)	16	75	22
Hematological studies	24	75	21
Tumor localization (plus scanning)	10	25	9
Function studies (other than thyroid)	8	25	8
Spaces and metabolism (H^3, Na^{24}, K^{42}, etc.)	7	25	8
Radioisotope therapy (other than I^{131})	8	[1] 40	12
Clinical radioisotope dosimetry	5	0	1
Radiation syndrome symposia	18	0	4
Clinical radiation patient management (reactor and weapon effects)	11	0	3
Instrumentation (includes commercial demonstrations)	0	25	6
Field trips (includes fishing)	0	12	3
Total	107	302	
Total hours	409		(2)

[1] Case presentations.
[2] Reduction of each 10 percent increment reduces course 1 week.

RADIOLOGIC PHYSICS TRAINING

The increase in clinical use of radionuclides in naval hospitals, expanding programs in training of physicians, nurses, and technicians has created a need for more medical nuclear physicists in the Naval Medical Department.

A program has recently been initiated to provide for training of qualified Medical Service Corps officers both on the job and at an approved university.

Prospective applicants from civilian life should write to the address below for further information:

Bureau of Medicine and Surgery, Code 74, Navy Department, Washington, D.C.

MEDICAL NUCLEAR PHYSICS

Naval hospitals licensed to utilize radionuclides in clinical applications:

1948	1
1959	8

Medical nuclear physicists assigned to naval hospitals:

1948	0
1959	1

Medical nuclear physics

Training	Duration	Period of obligated service
		Years
Department of Nuclear Medicine, U.S. Naval Hospital, Bethesda.	1 year on the job.	1
Postgraduate training at an approved university.	1 year	2
Department of Radiology, U.S. Naval Hospital, Bethesda.	6 months	1
Radiation Technology Division, Naval Medical Research Institute.	do	
Total	3 years	4

PAY SCALE

	Pay and allowances	With dependents
Ensign	$338.58	$355.68
Lieutenant (junior grade) (18 months' service)	384.34	401.44
Lieutenant (4 years' service)	548.38	565.48

THE NUCLEAR NURSING PROGRAM

The uses of radioactive and fissionable materials are rapidly expanding. This presents new problems for the nursing profession.

Long-range considerations indicate the need for a formal training program.

1. In medicine.
2. In military nuclear power programs.
3. In national defense planning.

The problem: What is the best way to prepare nurses for current needs?

Specialized courses presented in a formal program will best achieve nursing readiness.

Nuclear nursing functions

1. Provide optimum nursing care for patients receiving radioisotope therapy.
2. Assist with diagnostic and therapeutic procedures in the radioisotope laboratory.
3. Teach principals of radioisotope procedures to nursing service personnel.
4. Participate in research programs.
5. Work with passive defense teams and teach disaster management procedures in nursing in-service programs.

The nuclear nursing curriculum

Aim: To gain knowledge and understanding of the scientific principles underlying radioisotope and disaster management procedures as they relate to medical diagnosis, treatment, and nursing care of patients.
